Children and grandchildren—where were they?
But there stood the stout old one-hoss shay
As fresh as on Lisbon-earthquake day!

Eighteen hundred—it came and found
The deacon's masterpiece strong and sound.
Eighteen hundred increased by ten—
"Hahnsum kerridge" they called it then.
Eighteen hundred and twenty came—
Running as usual; much the same.
Thirty and forty at last arrive,
And then came fifty and fifty-five.
Little of all we value here
Wakes on the morn of its hundredth year
Without both feeling and looking queer.
In fact, there's nothing that keeps its youth,
So far as I know, but a tree and truth.
(This is a moral that runs at large;
Take it—You're welcome—No extra charge.)

First of November—the earthquake day—
There are traces of age in the one-hoss shay,
A general flavor of mild decay,
But nothing local, as one may say;
There couldn't be, for the deacon's art
Had made it so like in every part
That there wasn't a chance for one to start,
For the wheels were just as strong as the thills,
And the door was just as strong as the sills,
And the panels just as strong as the floor,
And the whippletree neither less nor more,
And the back crossbar as strong as the fore,
And the spring and axle and hub encore;
And yet, as a whole, it is past a doubt,
In another hour it will be worn out!
First of November, fifty-five!
This morning the parson takes a drive.
Now, small boys, get out of the way!
Here comes the wonderful one-hoss shay,
Drawn by a rat-tailed, ewe-necked bay.
"Huddup!" said the parson. Off went they.

The parson was working his Sunday-text—
Had got to fifthly, and stopped perplexed
At what the—Moses—was coming next.
All at once the horse stood still.
Close by the meet'n-house on the hill—
First a shiver and then a thrill,
Then something decidedly like a spill—
And the parson was sitting upon a rock,
At half-past nine by the meet'n-house clock—
Just the hour of the earthquake shock!
What do you think the parson found
When he got up and stared around?
The poor old chaise in a heap or mound,
As if it had been to the mill and ground!
You see, of course, if you're not a dunce,
How it went to pieces all at once—
All at once, and nothing first—
Just as the bubbles do when they burst.

End of the wonderful one-hoss shay;
Logis is logic—that's all I say.

—Oliver Wendell Holmes.

THE LITTLE MIRACLES.

I hollered for a miracle, and I argued loud an' long;
I put th' cause before 'em in some statements mighty strong;
I said 'twas no use talkin' if miracles was done
In other days, 'twas easy to show me only one!
I walked off mighty proudlike—an' smiled at th' perfume
That sort o' whispered to me from a lilac bush in bloom.

I set an' made 'em listen, when I'd let 'em have their say;
I showed 'em by cold logick we are livin' in to-day.
We went clear back to Jonah, an' Moses an' the rock—
There was no claim that they made I couldn't set an' mock.
Then when a johnny-jump-up laughed at me from th' grass
I saw my twisted sperrit like in a lookin' glass.

I hollered for a miracle, I dared 'em just to show
One marvel like they talked about of long an' long ago;
And then I saw the orchard—last month all dead an' bare,
An' now a sea o' blossoms that sanctify th' air!
Out yonder in th' medder lot th' dandylions blaze;
Th' tendrils o' th' grapevine reaches out a dozen ways.

I hollered for a miracle! And right before my eyes
Is miracles as wonderful as when th' dead arise!
A tree alive with blossoms, a vine that shakes its leaves,
A swallow that can find its nest again below th' eaves!
I hollered for a miracle—there's one been worked with me,
For I was blind, but in a flash 'twas given me to see.

—Chicago Post.

VIOLATING HOSPITALITY.

It was the cat's fault, darn her skin!
It was cold. I let her in
The stall where I was milkin' at.
An' that ends me an' that there cat!
She rubbed ag'in me an' said: "M'yow!"
While I was milkin' of the cow.
An' leaned upon me with her paws—
She knowed that I could squirt her jaws
Plumful of milk if I'd a mind;
An' so I did, just to be kind!

Say! Maybe that cat wasn't pleased!
She purred around and then she squeezed
Between the milk stool an' my leg,
An' every minute she would beg
In such a tone as if it hurt
For me to give her one more squirt!
An' then, because I let her beg,
She rose upon the cow's hind leg—
Me not a noticin' a bit—
An' sharpened up her claws on it!

Yes, that's the reason I'm so sore!
The stable's got a flimsy door,
An' if it hadn't got one I've
No cause to think I'd be alive.
That cow's foot hit me like a maul!
No brickbat never hit no wall
As hard as I did when I hit
That door and smashed it. Then I lit
Kersplash in the cow's drinkin' tub—
All I could say was just "blub, blub!"
Say, when I crawled back that there cat
Was lappin' where the milk spilled at!
An' the cow horned at me! For she
Had a fool notion it was me
That scratched her leg and made her kick.
Cows is such fools they make me sick!
She pasted me plum through the wall
An' never kicked the cat at all!
That cat can m'ew till she's froze—
But she stays out next time. That goes!

—Atlanta Journal.

The Old Oaken Bucket

Filled to the brim with cold, clear purity—no such water nowadays.

Bring back the old days with a glass or bottle of

Coca-Cola

TRADE MARK REGISTERED

It makes one think of everything that's pure and wholesome and delightful. Bright, sparkling, teeming with palate joy—it's your soda fountain old oaken bucket.

Whenever you see an Arrow think of Coca-Cola.

FRIENDS.

I had a friend,
I loaned him ten.
I haven't seen
My friend since then.

Another one
Touched me for five.
I doubt if he
Is still alive.

Went on a note
To help a third.
He may be dead;
I haven't heard.

I guess it's true
That in the end
A feller is
His own best friend.

—Chicago Journal.

THE SLEEPY SONG.

As soon as the fire burns red and low,
And the house upstairs is still,
She sings me a queer little sleepy song
Of sheep that go over the hill.

The good little sheep run quick and soft,
Their colors are gray and white;
They follow their leader nose to tail,
For they must be home by night.

And one slips over, and one comes next,
And one runs after behind;
The gray one's nose at the white one's tail,
The top of the hill they find.

And when they get to the top of the hill
They quietly slip away.
But one runs over and one comes next—
Their colors are white and gray.

And over they go, and over they go,
And over the top of the hill
The good little sheep run quick and soft,
And the house upstairs is still.

And one slips over and one comes next,
The good little, gray little sheep!
I watch how the fire burns red and low,
And she says that I fall asleep.

—Josephine Daskam.

THE OLD COWMAN SPEAKS.

I ain't a very religious man, though my life on the open range
Has given me a streak of reverence—if it hadn't it sure'd be strange—
But it seems to me I'd lift my hat and make some sort of prayer
If I felt the breath of the first chinook sweep over the prairie there.

There ain't a hint of a tricklin' stream in any coulee or draw,
The sting is in the northern winds that lash your face till it's raw;
The time is past for the first chinook—spring's message is overdue—
And the cattle are weakenin' in the hills where the snowy shadders are blue.

The cowmen ain't the complainin' kind—they ain't so much on the whine—
And kickin' because the cards fall wrong ain't never been in their line.
But I could rustle a maverick prayer—though from me it might be in vain—
If I felt the breath of the first chinook steal over the ice-bound plain.

—Denver Republican.

Old Folks

Young or Old

No matter whether you are a man or a woman, twenty years old or seventy, all you need do is send the coupon with your full name and address and it will be sent to you, without a penny from you. *Age is no barrier to health*, and this offer is open to all *Old People*, as well as middle-aged and young men and women. We want to send every elderly person a full-sized one dollar box of Bodi-Tone on twenty-five days trial, the same as we send it to the young and middle-aged, all at our own risk and expense, to prove how Bodi-Tone acts in ailments of the old as well as the young, to prove what it does for persons suffering from bodily weaknesses and ailments, whether from age or otherwise. *This trial offer is open to all men and women*, freely, generously, without any age limit. Thousands of persons, old and young, have sent for Bodi-Tone on trial, without paying a penny, and found it put new flesh on their bones, new vigor in their minds, new vim in their muscles, and new vitality into every vital function, and we want *you* to try it, to see if it will not do as much for you.

All you need do is to say "I Want to Try It" and a dollar box will be handed out to you.

It makes no difference who, where or what you are, Bodi-Tone takes all the risks, and asks no pay if it does not benefit. You don't need to write a long letter, don't need to fill out any tiresome blanks, don't need to send any money or stamps. We don't ask to know your ailment and you need not write a word about it. All troubles originate in the body, and *Bodi-Tone sets the body right*. All you need do is clip out the coupon, which says "I Want to Try Bodi-Tone," fill in your name and address, and we will send Bodi-Tone to you. This is how Bodi-Tone wants to be tried by old and young, this is how it wants to prove its curative powers. We are glad to send it to you without a penny, glad to give you a chance to try it, to learn about this medicine which has brought new health and vigor to so many sick, suffering and feeble persons, old and young, glad to show you how health can be created at all ages with the right medicine, made from the right ingredients. If Bodi-Tone benefits you as it has benefited thousands, pay us a dollar for it. If you are not satisfied, don't pay a penny. We won't ask for pay or dun you, for we leave it all to you. *Clip the coupon and send for it today.*

Bodi-Tone Does Just As Its Name Means

It cures disease by toning all the body, and we want to show you what it will do for *your* body. Bodi-Tone is a small, round tablet, that is taken three times every day. Each box contains seventy-five tablets, enough for twenty-five days' use, and we send you the full box on trial so you can try this great remedy and learn what it is, so you can learn how it works in the body, how it *cures stubborn diseases* by helping nature to tone every organ of the body. Tone is a little word, but it means a great deal, everything in health. When all the organs are doing their part, when each is acting in a perfectly natural way, when all the functions are healthy and performed with natural vigor, when the energy, strength and power of resistance to disease are all at a natural point, then the body is in proper tone. When disease has attacked any part, when lack of vitality is found and felt, the tone of the entire physical body should be raised to the highest possible point, to make all the body help to cure and restore. This is the power which underlies all of Bodi-Tone's great work for the sick, this is the power it offers you to help you get new health and strength, new vigor and new vitality.

Bodi-Tone is not a patent medicine, for its ingredients are not a secret. It contains Iron Phosphate, Gentian, Lithia, Chinese Rhubarb, Peruvian Bark, Nux Vomica, Oregon Grape Root, Cascara, Capsicum, Sarsaparilla and Golden Seal. Such ingredients guarantee its merit.

Natural Curatives To Make Natural Health

When you use Bodi-Tone you know just what you are using, know it is pure and safe and know you are taking the right kind of medicine to provide real help for the body. It contains nothing that your own family doctor will not endorse and say is a good thing. It does not depend on killing pain with cocaine, opium, morphine or other dangerous drugs. It does not excite the body with alcohol, but it tones the body and cures its disorders with remedies nature intended to tone and cure the body when that power was given them. Thus, Iron gives life and energy to the Blood, Sarsaparilla drives out its impurities, Phosphate and Nux Vomica create new nerve energy and force, Lithia aids in the Kidneys and dissolves rheumatic deposits, Gentian does invaluable work for the Stomach and Digestive forces, Chinese Rhubarb and Oregon Grape Root promote vigorous Liver activity, Peruvian Bark raises the tone of the entire system, Golden Seal soothes the inflamed membrane and checks Catarrhal discharges, Cascara gives the Bowels new life in a natural way, and Capsicum makes all more valuable by bettering their quick absorption into the blood. A *remarkable combination that does wonderful work for the body's health.* Each one of its ingredients adds a needed element from nature to the body, for Bodi-Tone is altogether *a natural remedy*. Each has a certain work to do in the body and does it well, in a natural manner. They are used in Bodi-Tone because of this ability. We claim no credit for discovering these valuable ingredients, each of which has a well deserved place in established medical science. We claim only the credit for our successful Bodi-Tone formula, which is our own discovery, for the way in which we have *selected, proportioned and combined these great natural curatives*, and for the health-making work which Bodi-Tone has so well proven its ability to perform in the body. The curative forces which Bodi-Tone so ably uses are the forces which have always existed in nature for the restoration of the body's health. Many are regularly prescribed by good physicians in combination with such drugs as each doctor may favor, for there are wide differences of opinion among doctors of various schools. The *exact combination used in Bodi-Tone* is what gives it the far-reaching and thorough curative and restorative power that makes possible the remarkable cures experienced by Bodi-Tone users, cures which prove the difference between Bodi-Tone and common remedies, cures which have won the gratitude of thousands.

You Need Bodi-Tone To Set Your Body Right

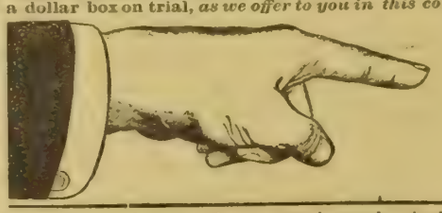
If you are tired of continual doctoring and bad health, if you are wearied of feeling you cannot depend on your body to act right and do its full duty, *you need Bodi-Tone right now*, and this offer gives you a chance to try it without risking a penny. You need it to seek out your weak spots and make them stronger, to stop the leaks which have been draining your vitality, to make your organs capable of giving you the right measure of strength, vigor, energy and full-blooded comfort your body should have. If there is anything wrong in your body, if any organ is act ng in a way which you realize and know is not right, send for Bodi-Tone on this trial offer and give it a chance to set you right. If you do not feel right, eat right, sleep right, weigh right, work right and think right, now and all the time, put Bodi-Tone in command of your body for twenty-five days. Let it marshal your bodily forces, let it line them up and work them into shape, until all are marching along straight, strong and harmoniously, in perfect time, tune and tone, for that is what Bodi-Tone is for and what it is doing for thousands. If the doctor's prescriptions and ordinary medicinal combinations have failed, let this scientific combination of special remedies show and prove what it can do for you. Its greatest triumphs have been among men and women who had chronic ailments, who had used patent medicines and had doctored with their local doctors and out-of-town specialists, all without lasting benefit. It is because of its great work in these cases that all chronic sufferers and persons with obstinate diseases are invited to try a dollar box of Bodi-Tone at our risk.

Why be a Slave To Bad Health?

Why remain in ill-health month after month, why allow your body to make you a slave to ills, humours, distress and discomforts, when it is so easy to procure a trial box of this home treatment which has restored thousands to vigorous health and glorious strength? Why delay another day, when a trial of this proven medicine is yours for the asking? Why keep on suffering, when by filling in your name and address on the trial coupon and mailing it to us, you can get a full twenty-five days treatment of this great remedy which people everywhere are praising and talking about. It just costs a two-cent stamp, and you don't need to pay a single penny for the medicine unless Bodi-Tone benefits you. You have all to win and nothing to lose, no matter what your ailment may be, by thus trying it.

Thousands of Cures

of Rheumatism, Stomach Trouble, Kidney, Liver and Bladder Ailments, Uric Acid Diseases, Female Troubles, Bowel, Blood and Skin Affections, Dropsy, Piles, Catarrh, Anaemia, Sleeplessness, LaGrippe, Pains, General Weakness and Nervous Break-down, have fully proven the power and great remedial value of Bodi-Tone in such disorders. Each one got a dollar box on trial, *as we offer to you in this coupon.*



Its history of success has proven beyond a shadow of doubt how the Bodi-Tone plan of *toning all the body* is a right plan that helps to *cure* these and other disorders, that it is *a real aid to nature*. Many who had for years been in poor health and had tried good doctors and most all of the prominent medicines, have found that *one single box of Bodi-Tone* did more good than *all* other treatments combined. It goes to the root in the body and cures because its work is rational and thorough, the only kind that makes cures permanent. Read the reports, showing how Bodi-Tone makes new health and strength, send for a box on trial at our risk and see if it will not prove the *right thing* for you.

Did More for Him Than Three Specialists.

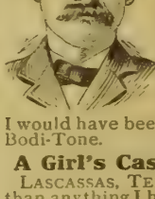
CARTERS, GA.—I have been diseased for the last fifteen years with what the doctors called Catarrh of the Head, or Systemic Catarrh. Some called it one thing and some another. I had pains all through my body, in my Bowels, Stomach and Back, and my Heart would flutter and beat and smother so it appeared that I could not live. I had Indigestion and Constipation, with blind spells. Everything I ate soured on my stomach before I would get through eating. It seemed that I could not stand it much longer. I tried all the doctors in my settlement and three specialists of Atlanta, Ga., and most of the patent medicines and drugs that I heard of, without any relief, until I got Bodi-Tone. By the time I had taken a treatment of Bodi-Tone I could eat anything I wanted, and there was not a pain in my body. Bodi Tone has done more for me than all the doctors could do. I am seventy-five years old. My wife, who is in her seventy-fourth year, has also been greatly benefited by its use. J. F. PETTY.

Free From Pain at Eighty-One Years

GLEN ROSE, TEXAS.—I have been in poor health for thirty years, and at times it seemed I was afflicted with most every trouble flesh is heir to. I had Catarrh of the Head, Asthma, Stomach Trouble, My Liver was bad and Kidneys and Bladder were deranged. At times I would lay in a cold sweat for hours with Bilious Colic. I suffered in this way until a year ago, when I saw the Bodi-Tone trial offer, sent for a box and began to take it. I am now in my eighty-first year, and have been altogether free from pain and any distress since I took the first few boxes. Everybody speaks about how well I have been this year, and all realize the great good Bodi-Tone has been to me. MRS. E. RAMFIELD.

Doctor Said He Had Bright's Disease

DANA, IND.—I doctored for four years for Bowel, Stomach Trouble and Rheumatism and gradually grew worse. One doctor told me at last that I had Bright's Disease and could not be cured; then I went to a specialist at Indianapolis. He doctored me for a long time and finally told me to go to the Springs at Martinsville, Ind. I did so and stayed there for some time, but no cure. I commenced taking Bodi-Tone ten months ago and went to work four days after I commenced its use. I am well now and weigh 210 pounds, for I am a large-boned man. I believe that I would have been under the ground if I had not taken Bodi-Tone. G. M. HILL.



A Girl's Case of Extreme Nervousness

LASCASSAS, TENN.—Bodi-Tone has helped me more than anything I have taken. Since using it I seem like a different girl entirely. So many people say "What have you been doing for yourself, you look so much better!" I couldn't do hardly anything before taking Bodi-Tone. Life was a worry and a dread, now it is worth living. I was so nervous I could hardly sleep at night. My head and back would jerk so we feared I had St. Vitus dance. I had our family Doctor, and I took a lot of medicine. Mother saw the Bodi-Tone advertisement and the offer seemed so fair we could not help having faith in it, so sent for a box. Bodi-Tone has done the work for me as all here know. I shall always praise it. EULA DILLON.

Trial Coupon

Clipped from National Farmer and Stockgrower

Bodi-Tone Company,
Hoyne & North Aves., Chicago.

I have read your offer of a dollar box of Bodi-Tone on 25 days' trial and ask you to send me a box by return mail, postpaid. I will give it a fair trial and will send you $1.00 promptly when I am sure it has benefited me. If it does not help me I will not pay one penny and will owe you nothing. Neither I nor any member of my family have ever used it.

and Stock GROWER

Report on Missouri Apple Crop.

Reports from correspondents to the Secretary's office indicate an unusually large apple crop in sight at this time. The per cent. may fall, due to what is known as "the July drop," and there is always the menace of insects and diseases to the unsprayed orchards.

So far this season there has been but slight injury due to insects and diseases. Some correspondents report scab and blight, also damage from curculio and coddling moth, especially in unsprayed orchards. These do not appear, however, to be widespread, as most reports give no insect or disease injury.

The set has been only fair to good. Some varieties, as Ben Davis, Gano and Winesap, set well and will give the best crop. Jonathan and York set poorly in all sections, while most sections report poor set for summer varieties. As an average for the state, estimated by our correspondents, the apple crop now stands at 72 per cent. This seems to be fairly uniform throughout the state. The lowest average is for Northeast Missouri—64 per cent.—while the highest—Northwest Missouri—has 77 per cent.

At this time last year the outlook for an apple crop was placed at 35 to 40 per cent.

The average number of growers reported spraying is 16 per cent. Northwest Missouri leads with the highest number, 20 per cent.; while Central Missouri reports the least, 11 per cent.—W.W.Chenoweth, Sec'y.

GOVERNMENT CROP REPORT.

Basis of June 1st—Also Giving Prices Paid to Farmers.

The June examination by the Department of Agriculture of the condition of all crops and prices therefor is probably the most important of the year. It was the 11th of June when the report was published, as follows:

Crop conditions in general on June 1st averaged for the United States slightly better (0.3 per cent.) than on the same date last year, but moderately lower (1.7 per cent.) than the average June 1st condition of recent years. Crops as a whole are above the average in the North Atlantic States (due mostly to favorable hay prospects), and in the far Western and Northwestern States, being particularly favorable in Oregon; and below average conditions in the Southern States and in the North Central States east of the Mississippi river. In the North Central States west of the Mississippi river conditions are silghtly above the average.

The condition of various crops compared with their average condition (not normal) on June 1st was as follows:

Apples, 110.2; pears, 108.7; peaches, 108.5; pastures, 104.9; alfalfa, 103.7; hay, 103.5; oats, 103.1; spring wheat, 102.1; cantaloupes, 101.8; cabbage, 101.4; watermelons, 101.3; clover hay, 100.6; barley, 100.3; Lima beans, 100.3; onions, 100.1.

Rye, 97.8; cotton, 96.8; sugar beets, 96.0; raspberries, 95.7; hemp, 92.2; winter wheat, 91.8; sugar cane, 90.7; blackberries, 90.2.

The estimates of acreage compared with last year are, for winter wheat, 88.3; spring wheat, 94.2; all wheat, 90.7; oats, 100.2; barley, 90.3; clover, 86.7.

The general or composite condition of all crops combined, by states, is as follows, on the basis of 100 representing average conditions (for most crops the ten-year average):

Maine, 106.2; New Hampshire, 111.7; Vermont, 112.6; Massachusetts, 108.0; Rhode Island, 100.0; Connecticut, 102.4; New York, 104.8; New Jersey, 106.5; Pennsylvania, 104.4; above division, 104.8.

Delaware, 118.8; Maryland, 111.2; Virginia, 110.9; West Virginia, 115.5; North Carolina, 105.5; South Carolina, 103.1; Georgia, 92.1; Florida, 101.6; above division, 94.8.

Ohio, 88.1; Indiana, 85.8; Illinois, 97.5; Michigan, 94.1; Wisconsin, 99.7; above division, 91.1.

Minnesota, 103.8; Iowa, 99.3; Missouri, 95.4; North Dakota, 101.5; South Dakota, 100.9; Nebraska, 96.0; Kansas, 104.0; above division, 100.6.

Kentucky, 92.7; Tennessee, 97.5; Alabama, 92.6; Mississippi, 90.0; Louisiana, 88.0; Texas, 108.5; Oklahoma, 99.6; Arkansas, 91.7; above division, 97.4.

Montana, 101.9; Wyoming, 102.2; Colorada, 104.2; New Mexico, 102.0; Arizona, 111.4; Utah, 102.4; Nevada, 98.4; Idaho, 103.0; Washington, 104.6; Oregon, 108.5; California, 100.8; above division, 103.4.

Prices paid to producers of the United States on June 1st of 1912 and 1911, respectively, were as follows: Corn, 82.5 cents, 55.1 cents; wheat, 102.8 cents, 86.3 cents; oats, 55.3 cents, 34.7 cents; barley, 91.1 cents, 73.8 cents; rye, 88.1 cents, 77.9 cents; buckwheat, 84.8 cents, 70.1 cents; flaxseed, $2.05, $2.25; potatoes, 119.7 cents, 63.3 cents per bushel; hay, $17.54, $13.16 per ton; cotton, 11.0 cents, 14.6 cents; butter, 24.8 cents, 20.3 cents; chickens, 11.1 cents, 11.0 cents per pound; eggs, 16.7 cents, 14.5 cents per dozen. Prices on May 15 of 1912 and 1911, respectively, were: Hogs, $6.79; $5.72; beef cattle, $5.36, $4.59; veal calves, $6.23, $5.68; sheep, $4.74, $4.51; lambs, $6.16, $5.74 per 100 pounds; milch cows, $45.63, $44.54; horses, $144.20, $146.25 each; milk, 22.5 cents, 20.9 cents per gallon; apples, 128.8 cents, 139.6 cents; beans, $2.52, $2.17; sweet potatoes, 118.6 cents; 103.6 cents; onions, $1.77, $1.29; clover seed, $12.53, $8.74; timothy seed, $7.16, $5.24 per bushel; hops, 37.2 cents, 20.9 cents; maple sugar, 11.6 cents; honey, comb, 13.7 cents, 13.6 cents; wool, unwashed, 17.8 cents, 14.7 cents; peanuts, 4.9 cents, 4.8 cents per pound; cabbage, $2.98, $1.38 per 100 pounds; broom corn, $83.34, $81.05; cotton seed, $19.21, $25.46; bran, $30.18, $25.93 per ton.—Nat. C. Murray, Acting Chief of Bureau.

Some Figures on Hogs.

The growing importance of the Southeast as a pork-producing region is shown by an analysis of the latest live stock statistics of the United States. The estimates of the Agricultural Department show a total of 65,410,000 hogs on farms and ranges in the entire country on January 1, 1912, a decrease of 210,000 as compared with January 1, 1911. On January 1, 1912, the number of hogs in the nine Southeastern States traversed by the Southern Railway was 12,542,000, an increase over January 1st, last year, of 887,000.

Figures for each state are as follows: Virginia, 880,000, an increase of 26,000; North Carolina, 1,405,000, an increase of 54,000; South Carolina, 797,000, an increase of 52,000; Georgia, 2,098,000, an increase of 225,000; Florida, 954,000, an increase of 87,000; Alabama, 1,533,000, an increase of 114,000; Mississippi, 1,577,000, an increase of 156,000; Kentucky, 1,724,000, an increase of 98,000; and Tennessee, 1,574,000, an increase of 75,000.

Large as these figures are, they do not measure the full progress of the Southeast as a hog-raising section, for, with the more extended raising of pure-bred hogs, there is a corresponding advance in the average quality and weight of Southern hogs. —Southern Field.

Study Your Wheat Before You Harvest It

If the yield and quality are bad you must do better. If they are good it will pay you to make them better. A better fertilizer will do it. The usual wheat fertilizers do not contain enough

POTASH

Use 6 to 8 per cent. Potash, instead of 1 to 2, and balance the phosphoric acid of the bone or phosphate.

Tell Your Dealer about this **Now** before the fertilizer salesman arrives. Write us today for our free book, "Fall Fertilizers."

We sell Potash Salts in any amount from 1 bag (200 lbs.) up. Write for prices, stating quantity needed.

Handling Milk Upon the Farm.

During this hot season it seems appropriate to say something concerning the methods of handling milk upon the farm which will put it in best condition for the market and for the home. By market I mean the creamery, the cheese factory, the condensery and the city. I anticipate that many milk producers will wonder why I should want to include in this article a treatment of the milk supply for their own home use, but I consider this important, and will ask them to let the mothers read what I shall have to say on this subject. Cleanliness is the first essential in getting good milk for any use. The loose dirt and hair should always be brushed off from the flanks and udders of the cows and the parts dampened with a wet cloth before milking. This is really a very simple matter, but will keep out about 90 per cent. of the dirt that ordinarily falls into the pail during milking. The covered milk pail will be found a great help in keeping dirt out of milk. Milkers should be required to be clean during milking and milk with dry hands. All the milk vessels must be thoroughly washed and scalded with boiling water.

Next in importance to cleanliness is low temperature. The milk should be cooled as soon as possible after milking to a temperature approximating 50 degrees Fahrenheit. This will materially check the growth of bacteria that have found their way into the milk during milking. Cooling the milk to 46 degrees Fahrenheit will easily keep it sweet for several days, if kept at this temperature. For retail trade it is best to cool the milk as low as possible with uniced water and then finish the cooling with ice water. In order to do this satisfactorily requires special coolers, and these can be had at a very reasonable price. The amount of ice ordinarily required to cool milk to 40 or 45 degrees Fahrenheit can be reduced 50 per cent. by using a force pump to circulate the ice water running back to the ice tnak. The ice should be finely crushed and only enough water kept on it to keep up the circulation. Milk intended for the creamery, cheese factory or condensery can be kept sweet without difficulty if cooled quickly after milking. To set a can of milk in a tank of cold water without any further attention will cool the milk too slowly. The cooling must be hurried by stirring the milk and also the water surrounding the can and further by replacing the water in the tank several times with fresh supplies. Of course, where there is flowing water no attention need to be given to it.

I wish now to say something regarding the handling of the milk in the home of the producer, the milk intended for his own consumption, and what is said here will apply to the consumer in the city. No matter how carefully it is produced, milk always contains many kinds of bacteria. The most common of these are the germs which sour the milk. Putrefactive organisms also are always found; the number of these is dependent upon the degree of cleanliness exercised in the production and handling of the milk. It is these and closely allied organisms which are undoubtedly responsible for a great share of the diarrhoea and dysentery of infants and children fed upon cow's milk. Occasionally milk also contains dangerous pathogenic bacteria, such as cause typhoid fever, diphtheria, scarlet fever, etc., and there is danger from tubercle organisms in all milk coming from cows that have not been shown to be free from tuberculosis by the tuberculin test. With a possibility of tubercle organisms in milk and with the certainty of always having more or less of the putrefactive bacteria present, the only way to render milk perfectly safe for babies and children is to pasteurize it. This consists of a simple process of heating and cooling which destroys the bacteria. The milk is heated to a temperature of about 150 to 160 degrees Fahrenheit, and kept there for about twenty minutes, after which it is immediately cooled to the lowest temperature possible with water. The pasteurizing is best accomplished in a double milk or rice boiler. Such boilers can be obtained from hardware stores for about one dollar.

Milk contains some inactive bacteria (spores) which are not destroyed by the pasteurizing process. To prevent these from becoming active it is necessary to keep pasteurized milk as cold as possible. Much is said about pasteurization, and many producers supplying milk to cities favor the method because it helps to keep milk sweet. Where its only object is to keep milk sweet, however, pasteurization is not likely to afford much protection to consumers. Its real object should be to destroy all actively growing bacteria and especially those of the disease-producing kind. In pasteurizing it is perfectly possible to destroy all of the souring organisms but leave the worst of the disease-producing kinds undestroyed. This is exactly what happens in many cases where milk is carelessly pasteurized on a commercial scale. This state of things is accounted for by the fact that less heat is required to kill the souring germs than is the case with most other kinds present in milk.—William Hardy, Tunnel Hill, Ill.

Centerville, Iowa, Wins Out Over All Competitors.

Our readers will doubtless be interested in the success of Centerville, Iowa, in retaining the factory of the Hercules Mfg. Co., makers of the famous Hercules Stump Pullers. From the most modest possible beginning this firm has rapidly grown to be the largest of its kind in the world. It was quite natural, therefore, that they found it urgently necessary to build a new, modern factory in order to keep up with the demand for their stump pullers. After this step was decided on, a location was the next problem. The citizens of Centerville, realizing what this great industry means to the town, rallied to the support of the company, and in two hours raised the necessary funds, secured a satisfactory site and assured the officers of the Hercules Mfg. Co. that their best future interests were right in Centerville, where they started and where they had grown so rapidly.

The signal victory of Centerville shows what loyal citizens can do. But it goes beyond that and proves the absolute soundness of the Hercules Mfg. Co. The home folks are close to this concern and they know the wonderful field for the sale of Hercules Stump Pullers. They know that nothing equals it for rapidly, safely, effectively clearing land. They know what Hercules machines have done—how they clear an acre of stump land a day—how they pull any size stump in from three to five minutes. They know, too, how confident the manufacturers are of the efficiency of the Hercules Stump Puller because it is absolutely guaranteed for three years against breakage from any cause, flaw or no flaw. Knowing all these things, it is no wonder that the citizens of Centerville joined hands in quickly locating the factory on three trunk lines of that city for the Hercules Mfg. Co.

Any farmer who has stumps on his land ought to get acquainted with the Hercules Mfg. Co., 40 17th street, Centerville, Iowa. Their fine catalogue is well worth sending for and reading carefully. Send for it now—read it evenings. There is no better nor more profitable way to invest a penny postal and a few minutes' time.

Good Business Education.

The Gem City Business College advertised on page 18 is no ordinary establishment. It seems strange that one private institution unaided by government taxation should have given final instruction to 35,000 young men and women, and whenever necessary to do so have found their graduates good positions. But such is the record. Write to D. L. Musselman, President, Lock Box 37, Quincy, Ill., and ask for Catalogue and Year Book.

Too Many in the Party.

A certain knight of Spain, arriving one night at an inn in France, knocked a long time at the gate till he had alarmed the landlord. "Who is there?" said the host, looking out of the window.

"Don Juan Pedro," replied the Spaniard; "Hermandez Rodriguez de Villanova, Count of Malafra, Knight Santiago and Alcantara."

"I am very sorry," replied the landlord, shutting the window, "but I have not rooms enough in my house for all the gentlemen you have mentioned."—Life.

Tools that Give You the "Hang" of Your Work
"The man and the scythe seem to work as one." That is the way you will feel about any Farm Tools you buy if they are Keen Kutter Trade-marked Farm Tools. They have the "hang" that enables you to work easily, naturally, fast. The day's end shows work accomplished and only a healthy "tired feeling."
SCYTHE SNATH No. K50 PRICE $0.35
POTATO HOOK No. K4A PRICE $0.75
KEEN KUTTER
Trade-marked Farm Tools
Here we show only a beginning of a complete line that includes Scythes, Potato Hooks, Spades, Digging Forks—a correct tool for the job to be done.
POTATO HOOK No. K4R PRICE $0.65

Cotton area is 34,097,000 acres this year, or 7 per cent. less than last year.

The Corn Market Situation.

On June 9th, at the St. Louis market, No. 2 corn sold at 78½ to 79 cents a bushel; No. 3 corn sold at 77½ to 78 cents; No. 4 corn at 75 cents; an inferior sample grade at 61½ to 71 cents; No. 2 yellow sold at 79½ cents; No. 3 yellow, 75 to 78½ cents; No. 4 yellow, 75 to 76 cents; No. 2 white, 81 and 81½ cents; No. 3 white, 77 to 79 cents; and No. 4 white, 73 to 75 cents a bushel. A load of white cob corn sold at 78 cents a bushel. On April 30th the cash corn sold at 81½ to 82 cents a bushel, and on May 31st cash corn sold at 79½ to 80 cents; therefore the June closing quotations represent a moderate decline since April 30th.

So far as future expectations are concerned, July corn was quoted at 75¼ cents and September 73¼ cents, and December at 63⅜ cents. In those figures there is an indication that the trade expects a large corn crop and the consequent decrease in price after the corn is pretty well gathered.

In this country a normal corn crop is about 2,600,000,000 bushels. The largest corn crop ever known was in 1910 and amounted to 3,125,968,000 bushels. Nine years ago there was a crop of 2,244,17,000 bushels, and it would be considered a very small crop now. The present expectation is that we will have a corn crop above the normal but not up to the largest total.

Improving the Permanent Pasture.

If one walks through some of our old pastures he cannot fail to be impressed with the ease with which they might be improved and be made to feed many more animals than they do.

The first thing in which a good many of our pastures can be improved is in cutting out the bushes that are growing up and reducing the area producing grass. In passing by some New England pastures the writer noticed that the bushes had been allowed to encroach on the pasture sod till, in some cases, a third of the pasture had been rendered useless for stock. Almost always this brush has no value and will have to be taken out finally or it will become a forest of trees that will require a lifetime to reach marketable size. In many cases alders and like worthless growth constituted the main character of the bush growth. Juniper bushes of low spreading habit snatched large areas from use and in turn yielded nothing.

This bush growth comes in without being noticed and spreads little by little and its effect is not noticed, especially when the bushes are in scattered clumps throughout the pasture. The sooner the work is commenced the easier will it be to get rid of the bushes, because the easier will it be to cut off the stems. In the future an annual inspection of the pasture should be made to detect in time the oncoming of the bush seedling, at which time they may be clipped off with a single clip of a scythe or grubbing hoe.

The second important thing to do in the improving of a pasture is to wipe out the open ditches. These ditches are injurious in several ways. They keep a large area out of use. If one will measure an open ditch with sloping sides he will be surprised to find how wide it is. Then when he measures its length there will be another surprise, for some of these ditches are not straight but winding and their length is far greater than the direct length of the land passed through. At every hard rain the edges of these ditches cave in or wash away. Moreover, for a foot or two, along the edge of the drain, the land is too thoroughly drained to be of most use in the dry time of summer.

Tile draining them and covering the tile is the only permanent way of doing away with the nuisance. This will at once get rid of the erosion and increase the available area of the pasture.

The stones that encumber some of our pastures are a perpetual drawback to our pastures, especially in those sections of the country where glacial drift is common. Terminal moraines are frequently given up to pasturage and nothing done to reduce the number of the stones. Yet there is the same general reason for removing stones that there is on the rest of the farm. If a little work is done each year and the stones picked clean from each acre, the work will appear to progress more rapidly than where the work is without system. In picking stones out of a pasture the task is easier than picking stones from arable land, as on the arable land each plowing brings more stones to the surface.

Hammond's Handy.... Atlas of the World.

Is the most recent and authoritative, and, therefore, the most reliable Atlas of its size published.

IT contains a separate Railroad Map of each state and territory; maps of each of our insular possessions, and of every other portion of the globe, printed in colors from new plates. In the maps of our states and territories, and of the provinces of Canada, Railroads are named, and stations are shown, in a very complete manner. These, and all other details, are brought down to as recent date as in any of the more expensive Atlases.

Alphabetically arranged lists of cities' give the latest population statistics.

The maps in this work are not only new and reliable, but they are legible. Every name is lettered in clean-cut type; no indistinct hand lettering is used. Every map is beautifully printed in colors, on high-finish paper made expressly for this book.

Many, if not most, low-priced Atlases are made up of old plates, all but worthless in this era of rapid changes.

Our plates are new, up-to-date and superior in every respect. Contains 96 pages; 6x8 inches; bound in durable, silk-finished cloth.

We are using HAMMOND'S HANDY ATLAS OF THE WORLD as a subscription premium with the best monthly farm paper in the United States.

The National Farmer and Stock Grower

is a nice, clean, ably-edited general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, to dairymen, to vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, to horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. The best live stock illustrations appear in THE NATIONAL FARMER AND STOCK GROWER. There are thirty-two pages, four columns to the page. It is published monthly.

Send us One Dollar ($1.00) and we will send you one copy of HAMMOND'S HANDY ATLAS OF THE WORLD and we will also send you THE NATIONAL FARMER AND STOCK GROWER regularly for two years. Address,

THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

The pictures on the first page will remind you of the Book of Live Stock Champions. See page 22.

The silo is becoming popular.

The "Eli" King of Balers Horse and Steam Power

A train of followers, but no equals. Proves its superiority wherever it goes. Makes tight shapely bales, not loose bundles, works fast, avoids accidents and endures. Little draft, tremendous power. The machine that makes competitors tremble. Eli catalogue free.

Systematic Fertilizing.

Notwithstanding all that is said and done at Agricultural Colleges and Experiment Stations and the valuable information derived from the publication of results of well-directed experiments, the farmer in the end is his own best experimenter and his own farm is the best Experiment Station.

There is no greater opportunity for experimental work in farming than is afforded by the investigation of commercial fertilizers. Starting out by taking the benefit of published results obtained by others, the general farmer can save several years' time by buying and experimenting with the brands which appear to have paid others to use under similar circumstances and for the same crops.

Well-organized fertilizer manufacturers are prepared to deliver certain brands which have been found better than others for wheat, oats or corn, and all other crops, consequently the farmer finds he can start experimenting in a small or large way, as he may see fit, buying much or little fertilizer, as the case may be; but an experiment requires two plots—one that is certainly fertilized and one grown under similar conditions and which is not fertilized. The difference in the value of the crop from each piece of land and the actual difference in the cash result will tell him the story better than anyone can tell it to him who has experimented on another farm or at a State Experiment Station.

The wide diversity of opinion between professors of agriculture upon the subject of fertilizers would alone fill a book. For that reason, if for no other, farmers who wish to be posted have to post themselves in order to be able to appreciate the more difficult work at the Experiment Stations, and exercise their own judgment upon the disputed or undecided points. The work of the farmer can be valuable but simple; the work at the college will be more technical and no less valuable.

No matter how small an experiment may be on the farm, every farmer owes it to himself to do something to increase the productive ability of his soil. In the two states of Missouri and Illinois, besides larger farms, there are 250,000 farms, all less than 100 acres in extent and averaging about 60 acres. These farms cannot be increased in yield profitably except by fertilizing the ground devoted to growing crops. It is up to the farmer to solve that problem by his own experiments. He must do the work under his own observation and he must keep the cash account where the balance is to be shown, and when the first year's experimental work is done, no matter what the result may be, he will find that he has a first-class appetite to start on another.

THE BOOK OF CHAMPIONS.

The Book of Live Stock Champions advertised on page 22 contains the finest collection of pictures of domestic animals ever brought together. There are 750 indexed pictures, and everyone is a true champion, a record maker or by selection in the prize ring. The price per copy is a dollar and the amount pays a two-year subscription to The National Farmer and Stock Grower at the same time.

Snow's Crop Indications.

Snow's Crop Report, one of the agencies employed to inform business men of the general crop indications, makes an estimate that this year's crop will be 648,000,000 bushels of wheat, compared with 664,000,000 bushels harvested last year. Corn acreage increased 1.3 per cent. over last year's harvest; condition, 83.8, against 82.4 last year, and suggests 2,851,000,000 bushels, against 2,630,231,000 bushels last year. Oats condition, 89.5, against 90.7 last month and 67.2 last year. It suggests a crop of 1,138,000,000 bushels, against 817,800,000 bushels last year

The Oats Market Situation.

In our opinion, oats are selling all right, so far as cash deliveries are concerned, but the future quotations are too low.

At St. Louis, on June 30th, cash No. 2 white oats sold at 53½ and 54 cents; standard oats at 53½ cents; No. 3 white at 52½ and 53 cents; No. 4 white at 52 cents; No. 2 oats at 50 and 51 cents; No. 3 oats at 48½ cents; No. 4 oats at 48 cents. These prices are not so bad, but they are neither high nor low.

But the members of the Board of Trade have received information that there will be plenty of oats and consider there is no use buying any in advance at present prices.

Oats for July delivery are quoted at 48⅛ cents; oats for September delivery at 40⅛ cents a bushel; and oats for December delivery at 41 cents.

There may be a very good crop of oats, we are inclined to believe there will be, but two-thirds of the oats are consumed on farms on which they are grown, and the balance don't have to be shipped unless the farmer is satisfied to ship them.

It is all very well for a poor tenant farmer who is deeply in debt for provisions to sell his cotton at the best price he can get, but farmers who raise oats are not so dependent. Farmers who raise oats generally raise something else besides that they can sell while waiting for the conditions to clear up. If farmers simply said: "We have no oats to sell at less than 50 cents a bushel at the railroad station," there would never be any occasion to sell for less. A bushel of oats is only 32 pounds, and yet in considering the weight of the crop people think the bushel of oats is very near the same as a bushel of wheat, that weighs 60 pounds. Oats are worth 50 cents a bushel to feed to cattle at present prices for cattle.

In February, 1911, at St. Louis, cash oats were sold at 30 cents a bushel, but in February, 1912, cash oats sold at 53 cents a bushel and later reached 57 cents. Farmers who do not sell below 50 cents will never have to do so, and all it requires is that each man should act for himself. Those who desire to sell oats cheap should not be prevented.

Russian Egg Export.

Russia exported in 1911 to England 109,000 dozen at 11.1 cents; to Germany, 93,166 dozen at 10.08 cents; to Austria, 66,086 dozen at 9.45 cents; to Denmark 6,500 dozen at 10.4 cents; in all 274,752 dozen.

Testimonial For Empire Fertilizers.

Empire Carbon Works, 421 Locust street, St. Louis Mo.:—Dear Sirs:—In reply to your letter regarding fertilizer, will say that the best example we have is as follows: Three miles from our farm we rented fifty-five acres to two men to put in corn on shares. One man put in corn in due time, and cultivated it in the usual way, but did not fertilize. The other man happened to an accident late in the spring, and, after everyone else was through planting, we were informed that he would not be able to use the land. We sent out four teams and plowed it and planted it. One day we sent out four cultivators and gave it one, and only one, cultivation during the entire season, In planting we put in 150 pounds of "Empire" Fertilizer to the acre; the other man used none. Result—With only the one cultivation we took off nearly twice as much corn as the other. This, we think, tells the whole story. Respectfully, J. R. CRAIG, Bentonville, Ark. (See page 7.)

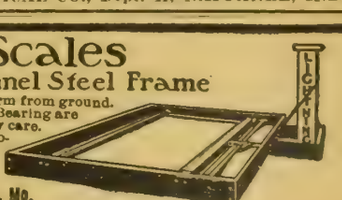
Lightning Pitless Scales

New Pattern. Solid Channel Steel Frame

Channels are seven inches which is the height of platform from ground. Levers are octagon in shape giving greater strength. Bearing are Toolsteel. This scale will last a life time with ordinary care. Equipped with compound Beam Free. Furnished absolutely complete except platform planks. Guaranteed accurate and tested to more than its capacity. Write for our prices and description before buying.



KANSAS CITY HAY PRESS CO., 425 Mill St., Kansas City, Mo.

The Study of Rural Economics.

One of the encouraging signs of the times is the introduction into our agricultural colleges of the study of rural economics. This study has doubtless already been placed on the curriculum of some of our high schools located in rural communities, and it is destined to receive recognition practically everywhere in the agricultural world.

But the study of rural economics needs to be carried onto the farms as well as into the schools. The problem connected with our farm living needs to be considered from the scientific and practical standpoint by the farmers themselves.

We are all of us painfully ignorant of a good many things close at hand. We go on from age to age making the same mistakes, because annually we reach the same point in the circular rut in which we are running.

All the books that are published on rural economics and that are for use in the schools should be on the shelves of the library of the farmer and should be frequently in his hands for study purposes.

The battle to get farm products has been such a fierce one that we have overlooked the necessity of considering the other things connected with our lives. Even after the produce is obtained, it is often largely lost to the farmer by having to be sold at a great disadvantage.

The disposal of farm crops is one of the things with which rural economics has to do. Certainly the producers of food are getting only a very small part of the price the consumers have to pay for the food. There is something wrong when the farmer gets too little for a thing and the consumer has to pay too much for it. The farmer is not going to get out of his predicament by dreaming about it. He must make a thorough study of this problem and form an opinion as to what measures ought to be taken to remedy the evils.

There is the question of the purchase of supplies for the farm and supplies for the family of the farmer. It is one that must receive from the farmers themselves more attention in the future than it has received in the past. It is worth a great deal of study.

There is the great problem of educating the sons and daughters of the farmer. This is a problem that must and will be given the consideration it deserves. Rural education is exceedingly poor at the present time. The educational possibilities for the farmers' sons and daughters do not compare with the possibilities provided for city children. In the country, the whole drift of conditions is to induce the children to leave school when they reach the age of thirteen or fourteen years. They are ashamed to go longer. In the city, the whole drift of the tendency is to induce pupils to continue their schooling till they have passed through high school and into college. The farmers' children should have as good opportunities as the children of the city resident. It is a problem that should receive the best thought of the farmer.

Social life on the farm has received too little attention. Play is now being recognized in the city as one of the greatest forces in the development of the children. It is no longer looked on as something that represents sheer waste of time. What has been done on the farm or in the rural communities to give the boys and girls healthy recreation?

Numerous other problems go to make up the mass of things that must be given consideration before our rural life will be what it should be, and this consideration must be given by the farmers themselves.

Lime on Acid Soils.

Because men did not know that acid soils could be sweetened with lime, much land has lain only partly used for generations. This same ignorance led to the abandonment of the attempt to grow clover and other legumes in many important agricultural areas.

The application of lime to acid soils is a very simple thing, because lime costs little and is exceedingly abundant in the earth.

It is surprising to find that some of the most acid soils are in localities where lime rock is cropping out of the soil. It seems almost the irony of nature that lime stone and forest growth should be found where the soil is too acid to produce much. It is as if nature were mutely saying: "Here, cut down some of these dead trunks, build a fire of them, throw onto the fire some of the lime rock jutting out of the soil and take the resulting lime and scatter over your soil to cure its acidity."

But now the discovery has been made and multitudes of farms have already been improved by the application of lime. There are several counties in a great agricultural state where the farmers said that clover could not be grown. A new farmer, up in scientific knowledge, bought a farm in the midst of that area and put lime on it. Then he sowed clover. The clover made a growth of twenty-two inches the first season by the time it was headed sufficiently to cut. The clover stood a solid mass and was a beautiful sight to behold. Farmers came for miles around to look at it and to see contradicted the assertion that clover could not be grown in that county. The man that did that had applied about a ton of ground lime rock to every acre of land, the lime rock being the natural form required by the soil. The cost for rock and freight was about $2.00 per acre plus the cost of hauling and distributing.

There are two general forms in which lime is used on soils. One of these is in the form of burnt time—the lime of commerce. This is good, but has the objection that it works too quickly and helps to liberate into the soil plant food more rapidly than it can be taken up by the roots of plants. The balance of the plant food often goes off into the drainage water and is thus lost. The ground lime rock liberates the plant food but slowly, or, rather, makes conditions suitable for the liberation of plant food. It is thus liberated only as the plants can utilize it.

The business of grinding lime rock for use on land has increased very greatly, till now ground lime rock is easily obtainable. Even some of the states have put machinery into their state prisons, where lime rock is ground and sold to farmers at near the cost price.

Every farmer that has soil that for some mysterious reason does not grow clover and other legumes should consult his Experiment Station as to treatment. In many cases he will be informed that the state has already made a soil survey of his locality and that his soil contains too much acid and should be treated with lime in some form.

Often putting on the land $2.00 worth of lime per acre will increase the value of the land many times the cost of treatment.

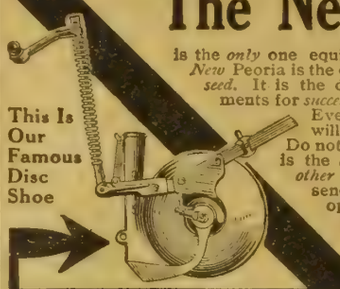
Difference Between Slop and Swill.

"There is a wide difference between slop and swill. Slop is properly a hog's relish, while swill is too frequently nothing more than water polluted with unhealthful refuse. The term swill may embrace a wide variety of feed or drink, ranging from ordinary dishwater to a mixture of milk, table scraps, soapsuds and other kitchen refuse, while slop is a combination of a ground feed or feeds, with water or milk. A supply of wholesome swill in connection with other feeds may be extremely valuable, but in a condition of decay, rancid and mainly filth, it may result in a loss of high-priced animals. Slop, however, may be considered as always in order."—From Coburn's "Swine in America."

The Only Drill With a Perfect Furrow Opener

Here's the drill that will greatly increase *your* crops and profits, just as it has done for hundreds of *other* progressive farmers. It is equipped with our wonderful DISC SHOE FURROW OPENER, the *only* one that combines *every* advantage of the *single disc* for cutting trash and penetrating hard ground, with every advantage of the *shoe*, for forming the furrow and depositing the grain. It's the only furrow opener that *packs* the seed bed after the *disc* has *opened* the furrow. The *shoe* carries the seed to the *bottom* of the *packed furrow*. Every seed counts. Every seed is sown at a proper, *even* depth. So *every stalk* comes up and ripens *evenly* and the grain *grades* up best. The shoe prevents any dirt from falling into the furrow until *after* the seed is deposited.

The New Peoria Drill—



This Is Our Famous Disc Shoe

is the *only* one equipped with this *Disc Shoe Furrow Opener*. So the *New* Peoria is the drill that is sure to *increase* your *crops* and *save* your *seed*. It is the drill that insures *every* seed the three *essential* requirements for *successfully* growing small grain—Heat, Air and Moisture. Even if you have a new drill of some other make, it will pay you well to discard it and buy a New Peoria. Do not think that the wonderful Disc Shoe Furrow Opener is the *only* advantage of the New Peoria Drill. Every *other* part is just as superior. Let us *prove* it. Let us send you a *booklet* and all the *facts* and *figures*, also opinions of *men who know*. Send your name and address on a postal *now*. It's worth money for you to know all the details.

PEORIA DRILL AND SEEDER CO.
2430 North Perry St., Peoria, Illinois

Grand Prize For An Invention.

The Great Western Sugar Company, with general offices at Denver, Colo., and factories at eleven different beet-growing centers, has offered a prize of ten thousand dollars to be awarded for the complete solution of a practical sugar-beet puller and topper that will meet the reasonable and necessary requirements of a committee appointed for the purpose of adjudging the designs and inventions.

General Conditions.

1. The motive power required for different soil and weather conditions must not be excessive; that is, not to exceed four horses per beet row if animal power is used.

2. The device must pull and top all the beets and separate beets and tops and leave beets and tops convenient to load. It is especially understood that the work may be done by two machines, of which one does the topping, the other one the pulling, or vice versa, although a combined machine is preferred. The pulling and topping must be done in a satisfactory manner.

3. The steering and turning of the machine or machines must be easy and practical. The beet puller and topper must be adjustable for rows spaced from sixteen to twenty inches apart.

4. The operation must be such that damage to the beets or tops will be avoided as much as possible.

5. The machines must fulfill the above conditions, regardless of the size of either beets or foliage, and be practical in the varying types of beet lands.

6. The machines must be durable and reasonably simple, and the different parts easily replaced.

7. The selling price of the machine or machines to the public by the local dealer, whether combined or otherwise, shall not exceed $300.00 if the motive power is animal, and shall not exceed $500.00 if self-propelled.

8. The Committee of Judges shall have the right to alter, modify or set aside the above specifications, in their discretion.

Any further information can be had of the Great Western Sugar Company, Denver, Colo.

Not Up to Date.

Visitor—"Is your rival village, Swamptown, an up-to-date town?"

Native—"Naw. They're forty years behind the times. They ain't got a building over there that's nicknamed 'The Monument of Graft,' or 'The Tower of Waste,' or 'The Temple of Folly.' "—Judge's Library.

Little Willie overheard his father speak of a man who was weighed in the balance and found wanting. "Maybe he forgot to drop a penny in the clot," suggested Willie.

SUBSCRIPTION PREMIUM—A POCKET COMPASS.

This is a true 1¾-inch Pocket Compass purchased from a reliable house. It is a fancy, nickel-plated, open-face, watch-shape Compass, with a silvered dial, and it weighs less than one ounce. Every farmer or ranchman should have one in his pocket. Send us One Dollar and we will send you The National Farmer and Stock Grower for one year, and we will also send you this Pocket Compass by mail postpaid. Address, THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

A Few Facts About Weeds.

Weeds will be with us always, and when we are not using a piece of ground it had better be covered with weeds than with nothing. We can generally keep out the weeds by covering the land with a better crop, even if it be nothing more than sweet clover, melilotus.

The weeds are most destructive when they are allowed to grow with other crops and choke them out. One of the very worst cases of this choking out the writer ever saw was a great onion field in which the weeds had been allowed to grow unchecked. The field covered many acres of ground, and when the onions came up in the spring the outlook for a good crop of onions was excellent. But in the course of weeks a thick mat of weeds developed around every onion plant. A few weeks more and the weeds overtopped the onions. In the course of time a mowing machine was seen going through the field, which was a notice to the neighbors that the whole onion field had been abandoned on account of the weeds. In that case, the weeds had wiped out the entire season's profit.

We have laws against weeds, but such laws are of little value on account of the impossibility of enforcing them. The real protection against weeds comes from the farm operations themselves. The thorough farmer never worries about weeds. The writer spent some years ago on a farm surrounded by Canada thistles. These thistles lined the roadside that bordered the farm, but they were never given a second thought. The cultural operations were so thorough that thistles never got a start in the cultivated areas or in the grass ground, with the single exception of a little patch that got a start close to one of the buildings and had to be fought every year for several years before the thistles were exterminated. Good farming is an antidote for the weeds.

Many weeds are a blessing in disguise. There is the melilotus or sweet clover. It takes possession of the worst pieces of hard ground and drives in its powerful roots. It is a great collector of air nitrogen and feeds this same nitrogen into the soil through its roots. In a few years, when the soil has been improved by it, and the grass has come in, it disappears. It could be used as an exterminator of other weeds. The seed is now frequently purchased for sowing for various purposes. It may be designated a sod-builder.

It might not be a bad scheme where the roadsides are covered with thistles and other noxious weeds, to sow the seeds of the sweet clover and thus encourage the growth of a beneficial weed rather than permit the growth of injurious weeds.

Canada thistles spread both by seeds and by underground root stalks. When a system of underground root stalks has been found and been filled full of plant-growth material by being allowed to grow for a year or two, the extirpation of the thistles is a very slow process and will often require years to accomplish. The time to attack the thistles is when they appear the first year, coming from the seeds. They then have no reserve to fall back upon, and a man or boy with a hoe can kill a great many of them in a short time. This is the reason that well-cultivated farms near great highways full of Canada thistles will thus be found free from thistles. The cultivation has killed the little thistles coming from the seed and they have never been given time to develop growing root stalks.

Fine Handy-weight Cattle.

Fred Achenbach, of Carrollton, Ill., was on the St. Louis market on June 24th and received $9.30 per 100 pounds for steers of his feeding that weighed 1,210 pounds. They were Aberdeen-Angus cattle, nicely finished, and brought the highest price of the year for handy-weight cattle. The quality was superior, which indicates that they were the beef-cattle type and fed to the market standard.

Large Sale of Range Cattle.

On June 22d, at Fort Worth, Texas, a well-known ranchman, Tom Waggoner, sold to Charles and Hayes McFarland, cattle feeders in Parker county, 8,000 head of three and four-year-old steers at $50 a head. This was said by cattlemen to be the highest price every paid for range cattle in such numbers. The cattle sold are on the Waggoner Wilbarger County Ranch, not far from Electra, a station on the Fort Worth and Denver Railway, in Wichita county.

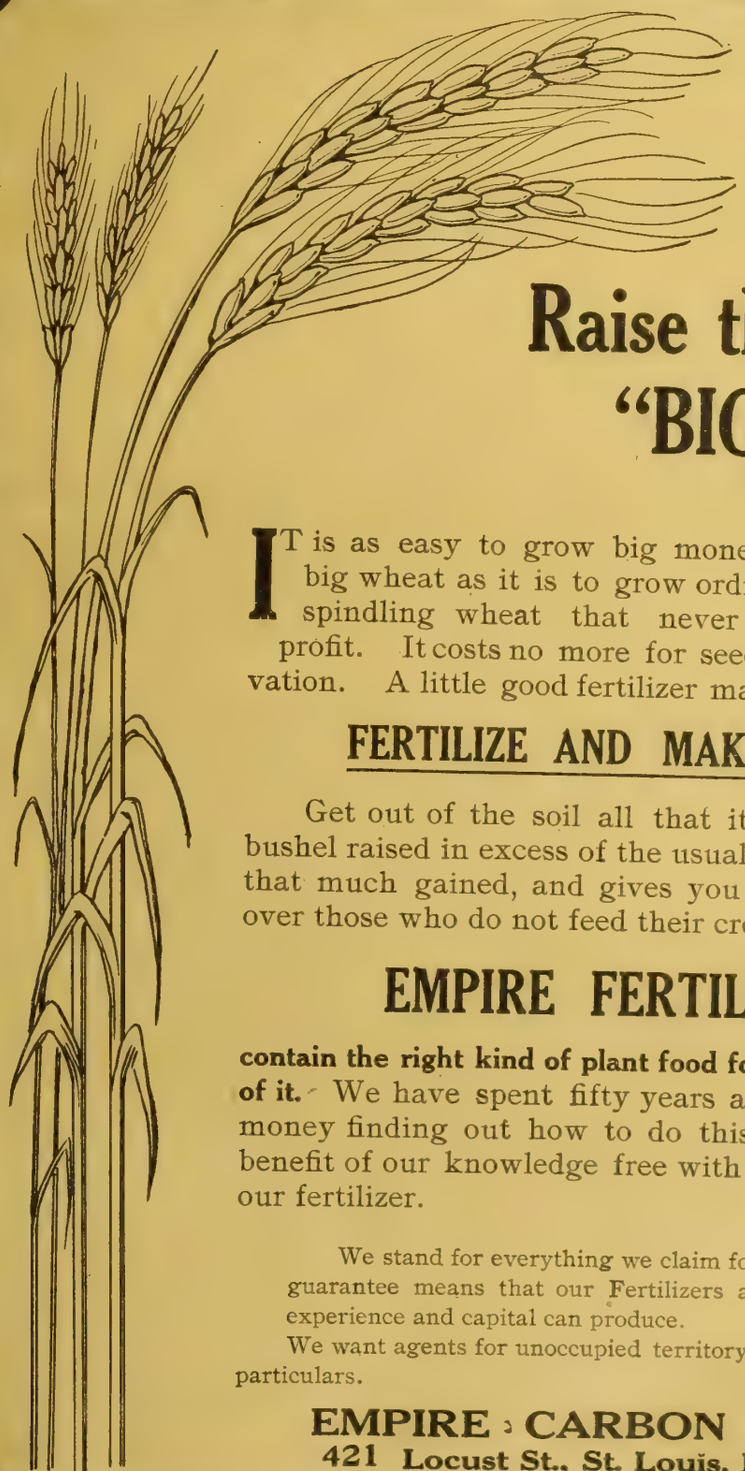
Good Feed Into Meat.

"No animal on the farm is better adapted to turning good feed quickly into marketable meat than the hog, and none can better repay from a market standpoint a discriminating system of feeding. This is particularly true as to first costs, for the hog is by nature planned to utilize the least expensive feeds and will manufacture into toothsome pork much that might otherwise be reckoned of little value, if not waste. In any phase of farm economy the hog is a feature, and his proper feeding has in innumerable instances been the factor that kept a farm's profit on the right side of the ledger."—From Coburn's "Swine in America."

Record-price Cattle.

On Tuesday, June 25th, Mr. E. M. Berry, of Calloway county, Missouri, marketed twenty head of prime 1,488-pound steers which sold to Armour & Co. at the St. Louis National Stock Yards at $9.50 per 100 pounds, the highest price ever paid at the St. Louis market for beef cattle outside of the Christmas beef trade.

Look up our several premiums.



Raise the "BIG" Wheat

IT is as easy to grow big money-making crops of big wheat as it is to grow ordinary crops of small spindling wheat that never pay anybody any profit. It costs no more for seed, planting or cultivation. A little good fertilizer makes the difference.

FERTILIZE AND MAKE MONEY

Get out of the soil all that it can bear. Every bushel raised in excess of the usual production means that much gained, and gives you a great advantage over those who do not feed their crops.

EMPIRE FERTILIZERS

contain the right kind of plant food for wheat, and plenty of it. We have spent fifty years and a great deal of money finding out how to do this, and you get the benefit of our knowledge free with every purchase of our fertilizer.

We stand for everything we claim for our Fertilizers. Our guarantee means that our Fertilizers are the best that skill, experience and capital can produce.

We want agents for unoccupied territory. Write us at once for particulars.

GOOD BOOKS AND PAPERS.

THE POTATO.—A great book on potatoes has just been issued. Eugene H. Grubb is one of the foremost agriculturists of Colorado. With him the potato has been a great and interesting study at home and abroad. W. S. Guilford is Director of Agriculture, Sacramento Valley Irrigation Company. He makes bushels of money raising potatoes. These two men have obtained information about the potato from every available source and it is now in book form, constituting the most practical, up-to-date and authoritative books ever published. Hon. James Wilson, Secretary of Agriculture, specially recommends this book as containing much valuable matter that ought to be in possession of every farmer in the country. Farmers may not think this book concerns them, but it does. The potato is an essential part of intensive farming, and this book contains just exactly what a farmer desires to know; the origin, history; importance of; how to grow, harvest, market the potato. Think of it! 550 intensely interesting and instructive pages, handsomely bound, on the potato! Issued at $2.00 a copy by Doubleday, Page & Company, Garden City, N. Y.

FERTILIZERS AND CROPS, or the science and practice of crop feeding by Dr. Lucius L. Van Slyke, Chemist of the New York Agricultural Experiment Station. This is a book for farmers who have reached an earnest determination to understand their business. It is one of the grandest books ever issued relating to agriculture. There are four distinct parts: Factors in soil fertility; sources and composition of fertilizers; how to select fertilizing materials, the last being the handling of individual crops. The pages in the book are 5½x7¾ inches, 710 pages, and the price is $2.50 per copy. The binding is elegantly done. There are 1,500 indexed subjects in the book. Send $2.50 to Orange Judd Co., Ashland Building, 315 Fourth Avenue, New York, N. Y.

BEGINNERS' GUIDE TO FRUIT GROWING is the right kind of a book at last. It is a simple statement of the elementary practices of propagation, planting, culture, fertilization, pruning, spraying, etc. It is, therefore, a sort of primer for beginners. The same plain and definite purpose is set forth in all the chapters. It is fully illustrated. It is by Prof. F. A. Waugh, Horticulturist and Landscape Gardener at the Massachusetts Agricultural College. It is bound in cloth, 120 pages, 5x7 inches, and the price is 75 cents per copy. No farmer or fruit grower ought to be without this book. Anyone who will send $1.00 to the Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo., will be credited with two-years' subscription to The National Farmer and Stock Grower and the **BEGINNERS' GUIDE TO FRUIT GROWING** can be selected as a free premium. Otherwise send 75 cents for a copy of the book.

Young Cattle at a Strong Price.

On July 1st, at the St. Louis National Stock Yards, one of the features of the day's trade was the sale of 103 head, 714-pound yearling steers sold at $8.00 per 100 pounds. These cattle were fed and shipped by William Miller, one of Stoddard county, Missouri's, most prominent farmers and cattle men. He told a Reporter representative something of his feeding.

"I bought this string of cattle in the West last October," said Mr. Miller, "At that time they averaged 330 pounds and cost me $20 per head. I put them on a feed of corn and cotton-seed meal and to-day they averaged 714 pounds and brought me $57.12 per head. Turning to the crop situation," continued Mr. Miller, "I must say that in our immediate vicinity things are looking A No. 1. I have my wheat harvested and sold at $1.00 per bushel, and it won't be many days before I get a corn crop."

In regard to the young cattle marketed by Mr. Miller, our readers will remember that it was The National Farmer and Stock Grower that indicated what light, fat, young cattle would bring. We discovered the tendency in that direction five years ago, before anyone else gave thought to the subject.

The National Farmer and Stock Grower ought to be read at a desk with a bundle of postal cards at hand. We usually mention a number of valuable booklets which are well worth having, although free for the asking, and a postal card is very handy to ask for anything that is desired.

The Duty Came Off.

Over one hundred millions of dollars' worth of hides and skins were received duty free by the United States during the commercial year just closed. A few years ago such an importation of hides and skins would have paid fifteen millions of dollars duty to the government. When the duty was taken off hides it was supposed to be done to put down the high cost of living; but it was a mistake. The hides and skins are higher in price than ever and every shoe house in America is forced by the increased price of hides and skins to raise the price of shoes. The United States treasury is fifteen million dollars short in one item and the legislation that placed hides on the "free-from-duty list" was only playing into the hands of the trusts, combinations and "predatory interests" of other countries.

This statement applies just as well to one hundred and twenty million dollars paid by the United States for coffee imported free of duty. The foreign countries have put up the price. The United States is short so much revenue and the people are paying more money for less coffee than before.

The statement that our foreign commerce has made a new and remarkable record will make the cats laugh in such protected countries as Canada, Australia, France, Austria, Germany, and, above all, in Brazil and Argentine, the principal beneficiaries of American lunatic legislation.

The National Farmer and Stock Grower is one of the few farm papers that as a steady policy are in favor of tariff protection to American interests, and we so state in every edition. See page 22.

The High Rate of Interest on Farm Loans.

An American committee is to start for Europe to investigate the co-operative systems of extending loans to farmers upon farm securities; in other words, to find a way to reduce high rates of interest on farm loans and to study other matters of rural co-operative credit.

The initiative of this movement is credited to a meeting of the Southern Commercial Congress held on April 1st of the present year at the Hermitage Hotel, Nashville, Tenn. But it is not the first time the subject has been brought up. The editor of The National Farmer and Stock Grower made an investigation of the rates of interest upon farm loans and found in the East and Central States that farmers were able to borrow all the money they required at commercial rates. Not being in need of money and not having anything to complain of, they were not interested in the subject.

In the West it was entirely different. The farmers could borrow money at less than commercial rates of interest, and commercial rates were pretty high. Land values were low and interest rates at 8 to 12 per cent. were the rule. Any farmer who could borrow money liberally was sure to fail because he could not pay running expenses, support his family, accumulate anything towards paying the principal sum and the interest thereon.

We had petitions signed, asking an investigation of the subject, which were forwarded to the Secretary of Agriculture, Washington, D. C., in the summer of 1905 and duly acknowledged. Since then we have seen some literature on the subject, showing that the Hon. Secretary of Agriculture had done all he could then do under the circumstances. Now, fortunately for us, the postoffice savings banks have been started, and it is possible that much of the money deposited could be put out through organized agricultural banks or trust companies to farmers for the development of their properties. That the subject has been revived is gratifying, because some conditions have changed for the better and many difficulties formerly standing in the way have become inoperative or set aside.

Good Results From Fertilizer.

Empire Carbon Works, 421 Locust street, St. Louis Mo.:—Dear Sirs:—My brother and myself have been experimenting for several years in fertilizing corn on our farms. We find that the use of your 2½—8—1½ gives us a faster even growth, a better stand and pushes our crop ahead so that we can get the crop in first-class condition before harvest. It makes a difference of about fifteen bushels per acre in favor of the fertilized corn. We know that we get better results from your fertilizers than any other we have tried. Yours truly, CHAS. H. CLANCY, Baryties, Mo. (See page 7.)

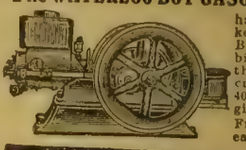
Waterloo Boy

The Power That Pays

This engine is a double bargain—a bargain in quality and a bargain in price.

It has always been the lowest priced high-grade gasoline engine on the market and has now been proven the BEST by defeating all other makes in two world's competitions. Two Regular Stock Engines won the gold medals at the International Expositions, Budapest, Hungary, July 1911, and Turin, Italy, September 1911.

The WATERLOO BOY GASOLINE ENGINE



has been on the market for over 19 years. Built in one of the biggest factories in the world, with a capacity of nearly 40,000 Gasoline Engines a year. Frost proof, starts easy in winter. Parts interchangeable. Free catalog.

5 Year Guarantee

Waterloo Gasoline Engine Co.
228 W. 3rd Ave.
Waterloo, Iowa.

Some splendid subscription clubbing propositions will be found on page 5.

The Boys' Magazine

is unquestionably the finest magazine in the world for boys. Each issue is filled with clean, fascinating stories and instructive articles, all of intense interest to every live boy. Also each issue contains departments devoted to the Boy Scouts of America, Electricity, Mechanics, Photography, Carpentry, Stamps and Coins. A big Athletic Department edited by **WALTER CAMP** is a regular feature. This department is of great value to every boy who wishes to excel in athletic sports.

A new handsome cover in colors each month. Beautifully illustrated throughout.

Special Offer: For only 50c. we will send you THE BOYS' MAGAZINE for six months and a copy of the most practical book you ever read, "Fifty Ways for Boys to Earn Money," and this splendid baseball fielders' glove. This glove is made of finest tan leather, felt padded and LEATHER LINED, web thumb and deep pocket.

Your money will be promptly refunded if you are not more than pleased with your investment. Address THE SCOTT F. REDFIELD CO., 873 Main Street, Smethport, Pa. (The Boys' Magazine at all news-stands, 10c. a copy.)

Free Magazine Subscription Guide

Subscriptions taken by special authority for American periodicals, magazines, and especially for farm papers. Every possible clubbing arrangement to give the subscriber the benefit of the rock-bottom co-operative rates.

Address, THE EVANS SUBSCRIPTION AGENCY, 3552 Vista Ave., St. Louis, Mo.

E. Myers, President, E. Myers Lye Co.

I Can Double Your Pork Profits Merry War Powdered Lye Prevents and Cures Sick Hogs

It is no idle boast, on my part, to say that *Merry War Powdered Lye*—the greatest hog remedy, conditioner and fattener the world has ever known—will double your pork profits.

My own personal experience, for more than 20 years, and the experience of thousands of hog raisers has amply demonstrated the fact that *Merry War Powdered Lye* will kill intestinal worms, positively prevent and cure hog cholera and keep your hogs absolutely immune to all hog diseases.

I invite you to read some of the enthusiastic letters I have received from thousands of farmers and hog raisers all over the United States (and which are published in my *free* literature) who feed *Merry War Powdered Lye* regularly every day with their hog rations—and with wonderful results—proving beyond all shadow of doubt that *Merry War Powdered Lye will do the work—and that nothing else will.*

Convincing Testimony Well Worth Reading

A. W. Davis, Hamlin, Iowa, says; "Merry War Powdered Lye is the stuff to put hogs in a thrifty condition. I will never be without it while I raise hogs."

H. F. Gustoff, Cedar Rapids, Iowa, writes; "Best destroyer of worms in hogs I ever used. It is all right."

Adam Schultz, McLouth, Kans., says: "I have given Merry War Powdered Lye a good trial and it has made a marked improvement in my herd. I consider it the best and cheapest remedy I ever used. I never got the results from any of the so-called hog cholera remedies as I have from Merry War Powdered Lye."

And that's the general testimony of Hog Raisers—and I just want to say to you that the very best way you can insure big, fat profits is to

Feed Merry War Powdered Lye Every Day

—and begin today—for the sooner you begin, the sooner I will be able to prove to your complete satisfaction that *Merry War Powdered Lye* makes good every claim—and 10c will make the test.

Follow These Directions

Mix one tablespoonful *Merry War Powdered Lye* with slop for 10 hogs, or a half can with barrel of swill. Stir well and feed *every day.* If your hogs are on a dry feed ration, mix a half can *Merry War Powdered Lye* to each barrel of drinking water.

Important Warning

Some commercial lye makers are trying to persuade dealers and hog raisers that any lye will do what *Merry War* will for hogs—but it will not, it can't—because no other lye maker knows the secret process that makes *Merry War Powdered Lye* safe to use in hog feed—they don't know the combination in *Merry War Powdered Lye* that produces the fat, healthy hogs. *Merry War* is the only lye which is absolutely safe to feed your hogs and hog raisers who make the mistake of thinking that any lye will do as well as *Merry War Powdered Lye*—fail to obtain results—pay the penalty in loss of hog profits.

At All Leading Dealers

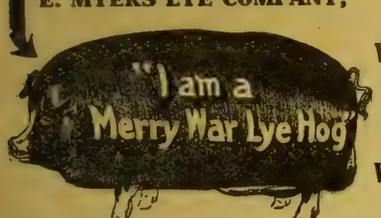
Merry War Powdered Lye is *not only the best* protection against hog losses ever discovered—*but* it is the *least expensive as well.* It comes in 10c cans; full cases of 4 dozen cans for $4.80—at Grocers, Druggists and Feed Dealers. Don't allow yourself to be talked into a substitute for *Merry War Powdered Lye*—because there are no substitutes.

Most dealers handle *Merry War Powdered Lye.* If yours can't supply you, write us, stating dealer's name—we will see that you are supplied and will also send you, free, a valuable booklet on "How to Get the Biggest Profits From Hog Raising."

Kettle Powdered Lye for Soap Making

If you want the best lye, exclusively for Soap-Making, scouring, cleaning, disinfecting, etc., use my famous Kettle Powdered Lye—it makes the best soap you ever used—but DON'T feed it to your hogs. FEED ONLY MERRY WAR POWDERED LYE TO YOUR HOGS.

E. MYERS LYE COMPANY, Dept. 22 St. Louis, Mo.



Which Kind Do You Want?

CURED SPLINT WITHOUT LEAVING A MARK.

St. Louis, Mo., May 11, 1911.

Dr. B. J. Kendall Co.:

Gentlemen:—Please send me your **Treatise on the Horse.** I have purchased a bottle of your Spavin Cure and cured one splint without leaving a mark. Yours respectfully,

FRED. G. BICHT.

De Laval Cream Separator.

Write to the De Laval Separator Company at the office nearest you and you will soon be in possession of the separator best suited to your means and requirements. Placing a De Laval Cream Separator upon the average dairy farm is like adding several cows to the barn and acres to the farm. See page 11.

New Peoria Drill.

Attention is invited to the New Peoria Drill and it is worth reading about. It is the only one equipped with the disc shoe furrow opener. Read about it on page 6. These so-called little inventions have a wonderful influence towards the saving of seed and the increase of small grain crops. See page 6 and write for booklet to Peoria Drill and Seeder Company, 2430 North Perry street, Peoria, Ill.

Highland Park College.

Read about the splendid business and trade courses at this great college. It is practically nine colleges in one. The card on page 27 gives particulars of the school terms, expenses, etc.

ONLY A MATTER OF PRICE.

Unlimited Supplies of Nitrogen From the Air—Phosphoric Acid From Rocks—Potash From Mines or Sea Weed.

It is now well known that the leguminous plants obtain nitrogen from the air and holding it in their roots, thus insure our farmers an emergency supply of one of the three great plant food essentials; but it is not demonstrated to this time that a supply of nitrogen when obtained through leguminous plants comes any cheaper than nitrogen obtained from the principal source of supply in South America.

People who are interested in agricultural pursuits commenced to calculate how long the world's supply of nitrogen, phosphoric acid and potash would last, and the results of the calculation at first were alarming. It develops later, however, that not only has nature provided plant food for many thousands of years, but has arranged matters admirably in the saving of transportation. Not only can potash be obtained from the German mines; it can also be obtained from immense quantities of sea weed which are in the Pacific ocean, close to our western coast, and, whether we use one supply or the other locally, will finally be only a matter of price. Then, again, phosphate rock, the greatest source of phosphoric acid, another primary plant food, has been discovered lately to an almost unlimited extent, and by subjecting it to acid treatment it becomes at once an available plant food.

Again referring to nitrogen—it is well known that it can be taken from the air more surely by machinery than by leguminous plants. The first demonstration of this kind was at one of the great water power headquarters in Norway, and now we are informed that another demonstration has insured the success of collecting nitrogen from the air in the United States. We were notified what to expect by a circular from the United States Department of Agriculture, but the actual news item comes from the daily press.

It appears that in a twenty-four-hour test undertaken in July, 1912, on the Catawba river, near Charlotte, N. C., free nitrogen was taken from the atmosphere by electric power.

The wresting of this valuable product from its place in nature was effected by means of the high voltage electric current, a method which in late years has already worked many wonders in the world of chemistry.

The Southern Electro-Chemical Company, of New York, organized some time ago to test the process of Dr. Albert Pauling, of Germany, who had previously tested the process in his own country, working in concert with representatives of the Southern Power Company, secured a site and made the necessary arrangements for beginning work on a 4,000-horse-power plant near the Great Falls development of the Southern Power Company.

This plant is now practically completed, and recently it was determined to make a twenty-four-hour test of the plant and ascertain if the process would work satisfactorily, and if the various apparatus and processes were properly provided and adjusted. The result of the tests made were all that had been dreamed of.

The product showed up almost perfect, and everything that had been claimed for it and from the limestone and the atmosphere brought together the full process, the final product came forth, nitric acid and then nitrate of lime.

While the experiment was in progress, trained men, chemists and electricians watched every step in the process and every part of the outfit of the new plant, and valuable notes were secured indicating where improvements or changes might be made to advantage.

The result of the experiment is indeed very gratifying; it was already ascertained that the manufactured nitrate from Northern Europe could hardly be delivered at American ports at prices they could afford to charge and the price the farmers could afford to pay, and this American success may obviate that difficulty. It appears, then, there are sufficient sources of fertilizer supplies and in the end obtaining all plant foods for the improvement of agriculture will only be a matter of price.

Controlling Food Products.

There is a considerable merging of retail meat and grocery companies, just the same as if there was no hereafter. The retailers last reported as "doing it" is the Maurer-Remley Meat and Grocery Company of St. Louis and the Kroger Grocery and Baking Company of Cincinnati. The capital stock of the combined companies, including the water, is stated to be $2,500,000, and they immediately will own 180 stores in St. Louis, Cincinnati and in various parts of Ohio and Kentucky. The intention is to buy the food products cheap and to sell thm dear, concentrating their force on smaller concerns in order to compete them out of business. The state governments should pass laws to prevent the incorporation of retail food stores with larger capital than fifty thousand dollars. The incorporation of retail companies dealing in foods is simply incorporating a trust in the first place and creating a monopoly in the second. All such organizations are against public policy and against what we are told is the law of the state of Missiouri.

Texas has in twice as much cotton as Georgia, the next largest cotton-growing state.

FARM AND RANCH LANDS.

FARM AND RANCH LANDS can be advertised effectively in The National Farmer and Stock Grower in small space at a reasonable price. The best land advertising in a general farm paper is classified and arranged by states. The National Farmer and Stock Grower will obtain for an advertiser more substantial inquiries in a ten-line advertisement than any other farm paper will give for five times the space or money. Send in your advertisement and let us quote you a price. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

ALABAMA.—2,240 acres fertile farm land. Thirty-three tenant houses. 900 acres fenced. Fine land for alfalfa, corn, cotton or cane. One-fourth mile from station. Buy from owner and save commissions. **D. Vaughan,** Catherine, Ala.

ARKANSAS.—Near Arkansas City; 1,000 acres, with 350 of it in cultivation. Will be sold with live stock and work stock and crop started. The plantation is on the Mississippi river, at good landing; has on farm new gin, twenty tenant houses; two miles west of county seat, where there is a fine high school. All cultivated land is protected from overflow; also 300 acres rich land not under cultivation. The soil is rich sandy loam; makes plenty of hay and corn; good water; fine pasture for stock; has hay sheds, corn cribs, tool houses, commissary building and nice pecan grove. Price, $16,000; half cash; balance in payments at 6 per cent. interest, if desired. **J. S. Ross & Son,** Arkansas City, Ark.

FLORIDA.—A real bargain in good land. One of the best sections of land just west of Jacksonville. I need some money quick and will sell this fine section for $30.00 per acre. Adjoining sections sold for $60.00 per acre. **Miss N. Ryan,** 2627 Clifton Ave., St. Louis, Mo.

MINNESOTA.—Farms for sale. Send for my list of CHOICE FARMS for sale, the best in the United States, considering location, terms, etc. Ask for my FREE BOOKLET, telling about the country, crops, markets, etc. **Geo. W. Elder,** McGinn Block, Thief River Falls, Minnesota.

MISSISSIPPI.—ALFALFA LAND FOR SALE. In the famous black prairie alfalfa belt of Northeast Mississippi you can buy rich soil from one-fourth to one-third of the price of land in the North. This soil is naturally adapted to the growth of alfalfa and produces three to five tons per acre annually. Read Jos. E. Wing's article in Breeders' Gazette of June 5th, 1912. We invite the closest personal inspection and guarantee every place as represented. For free booklet and price list write **J. Walton Murfee,** Okolona, Miss. Reference: Okolona Banking Co., Okolona, Miss.

MISSISSIPPI.—800 acres of land, in one body, for sale, located 1½ miles from the I. C. Railroad, south of Corinth. Good soil; no rocks; plenty of timber. Price, $10.00 per acre. Fine place for settlement. Every ten acres would make a good truck and poultry farm. Address, **Owner,** care National Farmer and Stock Grower, St. Louis, Mo.

TEXAS.—We have for sale 5,502 acres in the famous Pecos Valley, near Pecos City, Texas. Shallow water belt; inexhaustible supply of water. This land lies in three tracts, but close together; three sets of houses, barns, wells, windmills, tanks, gardens, fruit trees, etc. All fenced and cross fenced. Schools, telephone, auto road. Dark chocolate loam. As fine land as the sun shines on for alfalfa, fruits, grapes and general crops. Ideal for dividing into small farms. Will sell in a body or in sections of 640 acres cheap for one-half cash, balance easy terms. Don't delay, if interested, as this land must be sold at once and is a real bargain. For full particulars address **Robt. H. Rinehart & Co., Box 98, El Paso,** Texas.

FARMS WANTED.—We have direct buyers. Don't pay commissions. Write describing property, naming lowest price. We help buyers locate desirable property FREE. **American Investment Association, 55 Palace Bldg., Minneapolis, Minn.**

CASH FOR YOUR FARM OR BUSINESS. I bring buyers and sellers together. If you want to buy, sell or trade any kind of property anywhere, write me. Established 1881. **FRANK P. CLEVELAND, 7910 Adams Express Building, Chicago.**

WHITMAN AGRICULTURAL CO., 6901 S. Broadway, St. Louis

DAISY FLY KILLER placed anywhere, attracts and kills all flies. Neat, clean, ornamental, convenient, cheap. Lasts all season. Made of metal, can't spill or tip over; will not soil or injure anything. Guaranteed effective. Sold by dealers, or 6 sent prepaid for $1. HAROLD SOMERS, 150 DeKalb Ave., Brooklyn, N. Y.

PROFITABLE DAIRYING.

A very elegant, illustrated, cloth-bound book of 200 pages is called **Profitable Dairying.** It is all good, satisfactory reading matter relating to the successful management of the dairy business under all circumstances, including the management of the cows and construction of the barn. We have discovered this book lately and we find that there is a better demand for it than for all other dairy books combined. For one dollar we will send

The National Farmer and Stock Grower for two years and we will send the book, **Profitable Dairying,** as a premium. Address,
HALE PUBLISHING CO.,
3550 Vista avenue, - St. Louis, Mo.

Holstein-Friesian Records.

At the annual meeting of the Holstein-Friesian Association of America Mr. Malcolm H. Gardner, Superintendent of Advanced Registry, reported the tests of 5,074 cows for seven-day records. In these tests 1,416 full-aged cows averaged: Age, seven years, nineteen days; days from calving, 22; milk, 474.5 pounds; per cent. fat, 3.56; fat, 16.892 pounds. Three hundred fifty senior four-year-olds averaged: Age, four years, nine months, seven days; days from calving, 22; milk, 452.3 pounds; per cent. fat, 3.58; fat, 16.194 pounds. Four hundred junior four-year-olds averaged: Age, four years, two months, thirteen days; days from calving, 21; milk, 442.2 pounds; per cent. fat, 3.61; fat, 15.962 pounds. Four hundred sixty-three senior three-year-olds averaged: Age, three years, nine months, seven days; days from calving, 24; milk, 422.5 pounds; per cent. fat, 3.57; fat, 15.069 pounds. Five hundred twenty-seven junior three-year-olds averaged: Age, three years, two months, twelve days; days from calving, 22; milk, 398.7 pounds; per cent. fat, 3.58; fat, 14.260 pounds. Five hundred eighty-four senior two-year-olds averaged: Age, two years, nine months, six days; days from calving, 27; milk, 350.5 pounds; per cent. fat, 3.51; fat, 12.319 pounds. One thousand three hundred thirty-four two-year-olds averaged: Age, two years, one month, sixteen days; days from calving, 27; milk, 316.3 pounds; per cent. fat, 3.50; fat, 11.668 pounds.

This herd of 5,074 animals, of which over one-half were heifers with first or second calves, produced within a period of seven consecutive days 2,039,479.2 pounds of milk, containing 72,122.516 pounds of butter-fat, thus showing an average of 3.55 per cent. fat. The average production for each animal was 401.9 pounds of milk, containing 14.273 pounds of butter-fat, equivalent to over 57.4 pounds or 27.3 quarts of milk per day, and 16.65 pounds of the best commercial butter per week. It will be seen that there was a decided gain over the preceding year in milk for all of the classes except the junior three and junior two-year, and that all the classes but the junior two-year gained from two to three-tenths of a pound fat. The average milk for the herd was raised 1.1 pounds and the fat over two-tenths of a pound; while the average per cent. fat was raised from 3.51 to 3.55 per cent.

In Favor of the Silo.

By means of the silo the cow feeder is rendered independent of the seasons. He can by its help accumulate enough succulent (juicy) food to last a part of two seasons. Then if a drouth comes, he has nothing to fear.

The silo is a great help on some farms, when the summer dry spell comes. The writer knows of one dairyman that systematically provides for this dry spell. He has several silos and fills them in the fall with enough silage to last for more than a year. Then when the next summer comes around he still has enough old silage left to feed the cows when the pastures are short. The cows never discover that there is a dry spell. As the feed in the pastures grows less succulent, the amount of silage fed each cow is increased and the milk flow is never diminished.

A great feeder of silage tells the writer that old silage is better than new silage, and that it is far better than the green corn stalks and is more digestible. He says that when in the fall of the year he changes from the old silage onto the new silage, there is a considerable letting down of the milk supply. This should encourage farmers to build silos to put up enough silage to have a good supply of old silage on hand whenever there is use for it.

Good, clean silage does not affect the milk except to improve it. One of the farms in Illinois that for many years supplied certified milk to exacting customers in Chicago at fancy prices produced that milk very largely from silage. Rotten silage is always useless or worse, as a feed, but sour silage is good. The souring is only the same as we get in sour-kraut, which is one of the best forms in which cabbage can be used as food for human beings.

Silage is a cheap feed for cows, and to-day, more than ever, it is necessary to provide a cheap feed, if there is to be profit from milk production. The great problem of the day in the feeding of the cow is the production of feed at a reasonable cost. Mill feeds have so enormously advanced in price that they can be fed profitably only under exceptional conditions. It is certain that at the present time much of the mill feed being fed is so fed at a positive loss.

Corn makes the best silage and can be grown for silage over a wide extent of territory. Far north of where it can be grown for the grain it can still be grown for the purpose of silage making. It produces an enormous amount of food to the acre and thus forms the basis of a cheap food.

The increasing price of land is making it difficult to maintain large pieces of land in pasture. Land that sells at $100 per acre is too valuable to be used for pasture, unless the pasture be an exceptional one. An acre of land in corn will produce several times as much feed as an acre of land in pasturage. This is because corn is a kind of grass that grows much larger than any other kind of grass with which we are familiar.

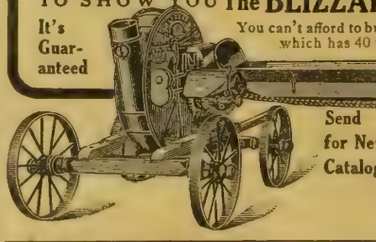
Farmers have been too slow in realizing the great value of silage for the feeding of dairy cows. There should be a good silo on every farm where dairy cows are kept.

During the month of July for milk shipped to New York City the shippers were receiving 12 cents a gallon net, and the receivers were obtaining ten-gallon cans at $1.51.

ASK YOUR DEALER TO SHOW YOU The **BLIZZARD** RAPID RELIABLE **ENSILAGE CUTTER**

It's Guaranteed



You can't afford to buy any ensilage cutter until you have examined the Blizzard which has 40 years of success behind it. Equipped with improved wind elevator, knives that can be adjusted while running. Self-feeding table. Tested by 50% greater strain than is ever called for in actual use. Fully *guaranteed*. Sold ready for use. Only 3 pieces. Write for "Why Silage Pays" and "The Evidence." Sent *free* together with latest catalog of Blizzard cutters.

BUTTER PRODUCTION IN THE UNITED STATES.

More Than One and a Half Billion Pounds, Valued at Over Four Hundred Million Dollars, in 1909.

Washington, D. C., May 6, 1912.—There were 1,620,766,000 pounds of butter, valued at $405,000,000, produced on farms and in factories in the United States during the census year 1909, according to a statement issued to-day by Director Durand, of the Bureau of the Census, Department of Commerce and Labor. It was prepared under the supervisiion of Le Grand Powers, Chief Statistician, and John Lee Coulter, Expert Special Agent, for agriculture. It gives the totals for the geographic divisions and states, separately, and gives notice that the figures of production on farms are preliminary and subject to change in the final tables.

Of the grand total reported, the quantity produced on farms was 996,001,000 pounds, valued at $225,544,000. Factories produced 624,765,000 pounds, valued at $179,510,000. Butter manufactured by farmers' co-operative creameries is included in the figures for factories.

The largest total quantity, 446,352,000 pounds, valued at $112,201,000, was produced by the West North Central Division. The next largest, 424,102,000 pounds, valued at $108,020,000, was reported by the East North Central Division. These two divisions produced slightly more than half of the total quantity and earned about the same proportion of the total value. Although the first-named division led in total quantity and value, the other area showed a greater quantity of butter from the farms, 230,931,000 pounds, valued at $59,055,000, as compared with 202,801,000 pounds, valued at $45,169,000, reported from the West North Central Division. On the other hand, the latter division had a factory production of 243,552,000 pounds, valued at $67,032,000, as against 193,171,000 pounds, valued at $54,965,000, for the East North Central.

The other divisions, in total quantity and value each, ranked as follows:

Middle Atlantic, 165,399,000 pounds, $46,323,000; East South Central, 136,792,000 pounds, $26,156,000; West South Central, 134,634,000 pounds, $27,710,000; South Atlantic, 125,255,000 pounds, $26,628,000; Pacific, 84,780,000 pounds, $25,703,000; New England, 68,699,000 pounds; $20,231,000; and Mountain, 34,758,000 pounds, $10,078,000.

Among the states, Wisconsin ranked first in total production with 131,049,000 pounds, valued at $36,628,000. It was first also with 103,884,000 pounds, valued at $29,547,000, produced in factories. The difference between the figures given, which is 27,165,000 pounds, valued at $7,081,000, represents Wisconsin's farm production.

In total production, Iowa ranked second, Minnesota third, Pennsylvania fourth, Michigan fifth, Ohio sixth, Illinois seventh, New York eighth, Texas ninth, and Indiana tenth.

Texas, Ohio, Pennsylvania, Michigan, Illinois and Indiana showed a much greater farm production than factory output and ranked in the order written. Minnesota, Iowa and New York, in the order named, ranked after Wisconsin in showing a factory production much larger than credited to their farms.

The Tabular Summary.

Additional details can be drawn from the complete tabular summary which will be found on page 10.

Cowpea Hay For Dairy Cows.

What about the hay crop? Will you have plenty of forage for next winter or will you be forced to fall back on straw or crab grass hay? Cows cannot maintain their milk yields unless fed liberally of the right kinds of feeds. These feeds must contain a relatively large amount of protein. This is furnished most cheaply in forage. It is not found in sufficient quantities for milch cows in timothy, prairie grass, crab grass, sorghum or straw, but is found in cowpea, soy bean, alfalfa or clover hay.

Cowpea hay has about the same feeding value as alfalfa and is some better than clover. Cowpeas can be sown after wheat or oats, and will generally mature enough to cut for hay before frost. As soon as the crop which they are to follow is removed, the stubble land should be double disced and then harrowed to make the best possible seed bed. The seeding can be done with an ordinary grain drill, using the oat cups wide open. This will sow at the rate of four or five pecks to the acre.

It is best to cut the peas for hay when the first pods ripen, shocking them in narrow, high shocks the day after cutting, and allowing to cure in the shock for a couple of weeks. With favorable weather the hay will be ready to bale, stack or mow away at the end of that time. Rains do not harm the hay very much when in the shock.

On average soil sown as indicated above in an average season, cowpea hay makes about a ton per acre. Farmers with dairy cows or any other live stock should sow as much as possible on stubble or any other vacant land. Now is the time to sow is the advice of the Department of Dairy Husbandry, University of Missouri, Columbia, Mo.

The Game We All Must Play.

E. P. Dunne, writing an editorial in the July American Magazine based on the Titanic disaster, says:

"The game we are all playing is a losing game at best. Yet we must play. We cannot get up and leave the table knowing the dice are cogged and the cards marked against us. We must play on, losing our principal stake little by little or in splendid rouleaux, as chance or our disposition may urge, but knowing well that in the end, soon or late, whatever remains of it will be swept from the board. Lucky the man who is tempted to play but the one stake. Happy the man who in Death loses only his life."

How to Avoid Colds.

"People are careless about catching colds, not realizing that one cold predisposes to another and that successive colds injure the mucous membranes of the air passages so that they will never be the same again and their functions will be impaired.

"To avoid colds should always be the object to be sought. This can be achieved by rendering the skin less sensitive to the conditions which produce colds by living in the open air, sleeping in the open air, having equable clothing, and not changing from very thick to very thin clothing without regard to season or temperature; above all, no matter what occurs, by keeping the spirits hopeful and buoyant and being optimistic."—Dr. Grace Peckham Murray, in Harper's Bazaar.

DE LAVAL
CREAM SEPARATORS

Best Time To Buy One

There never was a better, if indeed as good, a time to buy a DE LAVAL Cream Separator than **right now.**

The hot weather is at hand when the use of the cream separator frequently means most as to quantity and quality of product, while cream and butter prices are so very high that waste of quantity or poorness of quality means even more now than ever before.

This is likewise the season when DE LAVAL superiority is greatest over other separators—in capacity, ease of running, sanitary cleanliness and every other way.

Cost need not be a consideration because a DE LAVAL cream separator is not only the best of all farm investments but may be bought either for cash or on such liberal terms as to actually pay for itself.

There never was a better time than right now to buy a cream separator and there can be no possible excuse for any man having use for a separator delaying the purchase of one at this time.

Look up the nearest DE LAVAL agent **at once,** or if you don't know him write us directly.

Public Flattery.

"She had him arrested for kissing her forcibly and he was fined $20."

"Yet, they are good friends now."

"Yes; he announced in open court that it was worth the money."—Washington Herald.

Unanimous Election.

One year, when the youngsters of a certain Illinois village met for the purpose of electing a captain of their base ball team for the coming season, it appeared that there were a number of candidates for the post, with more than the usual wrangling.

Youngster after youngster presented his qualifications for the post; and the matter was still undecided when the son of the owner of the ball field stood up. He was a small,, snub-nosed lad, with a plentiful supply of freckles, but he glanced about him with a dignified air of controlling the situation.

"I'm going to be captain this year," he announced, convincingly, "or else father's old bull is going to be turned into the field."

He was elected unanimously.—June Lippincott's.

Effective Fertilizer For Corn and Oats

Empire Carbon Works, 421 Locust street, St. Louis, Mo.:—Gentlemen: I used one ton of Empire Brands bought of E. Falkner, part of it with oats. I feel assured that the oat crop where I used fertilizer was doubled. After gathering the oats, the land was sown in cowpeas, which produced a double crop. Part was used on corn, and the corn crop was increased in fully as satisfactory proportion as the cowpeas. I expect to want double the amount next season that I used this year, and feel assured that my experience will aid you in selling several tons next season. W. F. BEDFORD, West Point, Tenn. (See page 7.)

In Use For Forty Years.

The Jos. Dick Manufacturing Company have now been engaged in the manufacture of ensilage cutters for forty years, and during this nearly a half century they have grown to be one of the leaders in this field of manufacture.

The Jos. Dick Manufacturing Company have very properly called their machine the "Blizzard," because it is particularly effective in blowing the ensilage into the highest silos. The improved wind elevator carries fodder any height and in any direction with less power than is usually required. The self-feeding table saves the operator work and time, and the knives are adjustable while running at any speed.

The Jos. Dick Manufacturing Company have not been satisfied with leading the field in manufacture. They have set in to educate the few remaining farmers opposed to ensilage, to the fact that ensilage is valuable to the dairyman and stock breeder. To accomplish this end they have edited and published an interesting and attractive book entitled "Why Silage Pays." They are distributing this booklet free of charge to anyone writing for it.

This booklet explains why so many farmers have found silage of indisputable advantage, and wherein those who oppose silage are in error. It tells of the food value of silage, why it is economical and beneficial, and concludes with letters from practical farmers and scientific men who have found that silage pays. Write at once to Jos. Dick Mfg. Co., 1416 West Tuscarawas street, Canton, Ohio, and ask for copy of booklet "Why Silage Pays."

The Wheat Market Situation.

On June 29th, 1912, the cash wheat transactions included No. 2 red, $1.11 to $1.12 per bushel; No. 3 red at $1.09; and No. 4 at $1.08; No. 2 hard, $1.11 to $1.15; and Turkey was quoted at $1.17½; No. 3 hard wheat was quoted at $1.08 to $1.15. We quote St. Louis cash market because St. Louis is the center of our circulation.

June is the month in which first arrivals of new wheat are noted. On the 17th a load of No. 2 red, weighing 58 pounds to the bushel, arrived at St. Louis and sold at $1.08 per bushel; another load equally as good arrived on the 20th and sold at $1.05½ and came in on a declining market. Both loads were from Oklahoma. Every year the first shipment of wheat attracts as much attention as a new baby in a family, but as receipts increase the novelty wears off.

The month of June is not generally an excitable time in the grain trade. The excitable May option is passed and gone and there is no other general delivery until July 31st, and that is not the option to which any great importance is attached.

The information regarding growing crops has been gathered from day to day and minute to minute, and is always reflected by the long-time quotations. No need for any grain man returning to the market to receive written report. Last evening's closing quotations and this morning's telegrams will set him to work well fortified to judge if the market ought to go up or down.

The May wheat option at Chicago was closed out May 31st at $1.10½ per bushel. The July option was then quoted at $1.10⅛, and by June 29th the July option had declined to $1.08⅝. The September option, quoted at $1.06 on May 31st, was quoted at $1.06⅛ on June 29th, and the December wheat option, quoted at $1.06¼ on May 31st, was quoted at $1.06¾ on June 29th.

Bringing this down to the real expectation of the wheat market on the part of those whose business it is to deal in wheat, that expectation is there will be no reason or occasion for high prices, and that up to the end of the year the range of market values may be above the dollar mark, but not above $1.10. That was the general opinion on June 29th, and the reason there was no market on the 30th is because that day was Sunday.

Articles on the Automobile.

With their usual vigor and unusual knack for doing things R. M. Owen & Company have just issued the summer number of the **Reo Echo.** It is a beautiful 7x10 brochure of forty-eight pages, filled with timely articles on motoring and bright half tones illuminating the scenic gradeurs within the four corners of America. Among the articles contributed by writers of national reputation are "The Growth of the Motor Car," "The Automobile as a Solution to the Farm Problem," "The Ideal Motor Truck and Its Place in the Commercial World To-day," all of which bristle with interest throughout and must needs prove invaluable to the farmer and business man who are seeking the latest and most reliable information on pleasure and commercial motor vehicles. Wit, humor, science and patriotism also come in for their just share in the rare exhibit. A limited number of these handsmoe brochures are being mailed free by R. M. Owen & Company, 1759 Broadway, New York, to readers of The National Farmer and Stock Grower if the request be mailed promptly. Don't fail to send for it and mention this paper.

THE CEMENT WORKERS' HANDBOOK.

THIS book is designed to teach anybody how to work with cement. How to mix mortar of all kinds for all concrete purposes. How to make building blocks. How to build walls, floors, ceilings, walks, posts, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers.

The National Farmer and Stock Grower

IS a nice, clean, general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, to vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, to horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. The best live stock illustrations appear in THE NATIONAL FARMER AND STOCK GROWER. There are thirty-two pages, four columns to the page. It is published monthly.

Anyone who sends in One Dollar to pay in advance a three-year subscription to The National Farmer and Stock Grower can select the CEMENT WORKERS' HANDBOOK as a free premium, or one-year's subscription and the book for Sixty Cents.

ADDRESS,

The National Farmer and Stock Grower,
3550 Vista Ave., ST. LOUIS, MO.

HE HAD USED VISIO.

You will find enclosed $2, for which please send me one bottle of VISIO. I have used it and know it is good and don't want to be without it. J. L. WALKER, Laomi, Ill. See Visio advertisement in this paper.

LABORATORY TESTS ON ABSORBINE,JR.

Our readers are familiar with the veterinary remedy Absorbine, which has been extensively advertised for years, but are you aware of the remarkable efficiency of Absorbine, Jr., the antiseptic liniment for mankind? Exhaustive tests have been made to determine the value of Absorbine, Jr., in killing various germs, and their results have been more than satisfactory, and prove conclusively that Absorbine, Jr., is a germicide of value. Write for copies of these reports and pamphlet "Evidence," telling more about this antiseptic, germicidal liniment. Absorbine, Jr., is part of the household equipment wherever it has been tried, as its efficiency is a positive fact. Price, $1.00 and $2.00 a bottle at druggists or delivered. W. F. Young, P. D. F., 106 Temple Street, Springfield, Mass.

GENERAL FARM NOTES.

During the month of June, 1912, there were 3,213 horses and mules bought upon the St. Louis market that were shipped East; also 2,922 head that were shipped South.

In the month of June the city and county of St. Louis, Mo., received nearly nine inches of rain. The total was 8.8 inches, against 4.76 inches, the average for June.

St. Louis Evaporated Fruit.

At St. Louis, July 1st, evaporated fruits were quoted as follows: Evaporated apples, rings—Fair at 5½ to 6 cents; choice at 6½ cents; and fancy for facers worth more; prime evaporated quarters, 6 to 6½ cents; cores, peelings and chops, 1 to 1½ cents. Sun-dried apples — Prime quarters, 5 cents; fancy worth more; poor to fair, 3 to 4½ cents; rings and irregular cuts less. Peaches—Prime to choice sun-dried halves, 5½ to 6 cents per pound.

The corn cure advertised by Otto Ude is well established in St. Louis. It was originated forty years ago. See page 21.

Voting Population of Cities.

A preliminary statement of the male population twenty-one years of age and over, distributed according to color, nativity and parentage, for each state as a total and for each of the cities of over 25,000 population, as shown by the returns of the thirteenth census, taken as of April, 1910, was issued by Director Durand, of the Bureau of Census, Department of Commerce and Labor. The statistics were prepared under the direction of William C. Hunt, Chief Statistician for Population in the Census Bureau, and are subject to revision.

Distinction is made in the statement between white males of native and foreign birth, respectively, and also for the native white with respect to parentage. Those having both parents native of the United States are classed as of native parentage; those having either both parents born abroad or one parent native and one parent born abroad are classed as of foreign or mixed parentage. Foreign-born white males who have been naturalized are also separately classified.

The potential voting strength of each state and city is expressed by the number of its males twenty-one years of age and over, excluding the foreign-born who have not become naturalized, but by this is not meant the actual number of voters. It represents, rather, the number of males who from the standpoint of age alone are eligible to vote, aside from any qualifications based upon education, length of residence, or considerations of a like nature imposed by the national or state government.

There are in all 229 cities which had in 1910 more than 25,000 inhabitants, with an aggregate population of 28,543,816. These cities together contained in 1910 a total of 9,004,422 males of voting age, or 31.5 per cent. of their combined population. For continental United States as a whole, males of voting age numbered 26,999,151, and constituted 29.4 per cent. of the entire population (91,972,266) in 1910.

Of the whole number of males of voting age in the 229 cities taken together, native whites of native parentage number 2,900,244, or 32.2 per cent.; native whites of foreign or mixed parentage, 2,040,907, or 22.7 per cent.; foreign-born whites, naturalized, 1,557,795, or 17.3 per cent.; foreign-born whites, not naturalized, 1,920,816, or 21.4 per cent.; negroes, 519,444, or 5.8 per cent. The equivalent numbers and percentages for continental United States as a whole are: Native whites of native parentage, 13,211,731, or 48.9 per cent.; native whites of foreign or mixed parentage, 4,498,966, or 16.7 per per cent.; foreign-born whites, naturalized, 3,035,333, or 11.2 per cent.; foreign-born whites, not naturalized, 3,611,273, or 13.4 per cent.; negroes, 2,450,327, or 9.1 per cent.

The 9,004,422 males of voting age in the cities of 25,000 or more inhabitants constitute almost exactly one-third (33.4 per cent.) of the entire number of males of voting age in the United States. In the case, however, of native whites of native parentage the males of voting age in these cities constitute only 22 per cent. of the total for the United States, while for native whites of foreign or mixed parentage the proportion is 45.4 per cent.; for naturalized foreign-born whites 51.3 per cent. and for foreign-born whites not naturalized 53.5 per cent. For negroes the percentage is 21.1.

There are twenty-five principal cities in Massachusetts which together have 646,783 males of voting age, out of a total for the state of 1,021,669. The twenty-one cities in New York together have 1,922,500 males of voting age, out of a total for that state of 2,864,773; and of these 1,433,749 are in New York City alone. Of the other large cities Chicago has 700,590 males of voting age; Philadelphia, 468,873; St.Louis, 221,913; Boston, 208,321; Cleveland, 177,286; Pittsburg, 166,224; and Baltimore, 163,554.

Highest in Forty-two Years.

At Chicago, on Friday, June 21st, W. Ham, shipping from Chamberlain, S. D., marketed through the firm of Clay, Robinson & Co. thirty-two head of mixed Shorthorn and Hereford dehorned steers, averaging 1,553 pounds, which sold on the open market for $9.50 per 100 pounds, the highest price paid for beef cattle in forty-two years.

The Good Old Way.

The Countess of Warwick, advocating votes for women at a dinner in New York, smiled and said:

"The old-fashioned, Victorian idea that only bluff, masculine, coarse things are worth while is dying out. The world realizes to-day that women—and men as sensitive and refined as women—also have their place.

"The old-fashioned preference for the bluff and coarse reminds me of a sea captain. This sea captain caught a sailor one morning cleaning his teeth with a toothbrush. The old man seized the brush, snapped it in two, and tossed the pieces overboard. Then, his eyes flashing fire, he said:

" 'What are ye tryin' to do—corrupt the ship with this here effeminacy? Cleanin' yer teeth with a toothbrush! Why, ye swab, don't ye know that when an honest sailor wants to scrape the tobacker off his grinders he does it like a man with a marlinspike or a link of chain cable dipped in cinders outen the cook's galley?' "—St. Louis Globe-Democrat.

Wooden Teeth.

Japanese dentists have introduced wood as a substitute for porcelain and rhinoceros ivory. The wooden teeth used by the Japanese dentist are remarkable natural in appearance and in the fine bluish color peculiar to the teeth of the Malay race. The teeth are fastened in place by a secret process jealously guarded by its inventor.—Harper's Weekly.

"A Awful Good Dog."

Ben Strickland, Assistant Clerk to the State Bureau of Printing and Binding, said when he lived in Greenfield there lived there also a family composed of a man, his wife and a dog that was claimed by both of them. The family was nomadic, wandering about the country with a decrepit horse in the summer time, and the dog was their constant companion. Finally the dog lived its allotted days and was buried with as much pomp as the man and his wife could command. Next day Strickland saw the woman, and she was bewailing the loss of the dog. As a crumb of comfort Strickland offered:

"Now, dear Martha, you shouldn't feel so bad about that dog. What if it had been Uncle Billy (the husband) instead?"

"That might a been purty bad," responded Aunt Martha, "but, Ben, I tell you, that was a awful good dog."—Indianapolis News.

May Have Been Cook's Cannon.

Much interest has been aroused in Australia by the finding of a cannon, which is supposed to have been jettisoned from Captain Cook's ship, the Endeavor. The relic was found on the Queensland coast.

Fall Fertilizers.

Attention is invited to the advertisement of the German Kali Works on page 2. Potash is now within reach of the farmer in almost any quantity to be applied direct to the land or to mix with fertilizers that do not contain sufficient for self-mixing, etc. Any farmer who will write to the German Kali Works for a copy of a booklet entitled "Fall Fertilizers" will receive something that is worth reading and studying. Address the nearest office mentioned in the advertisement and mention The National Farmer and Stock Grower.

Read about the United States farm acreage on page 2.

Don't Wear a Truss!

Brooks' New Scientific Appliance--Adjustable to Any Size Person--Easy, Comfortable, Affording Instant Relief--Made for Men, Women and Children.

SENT ON TRIAL.

No risk in ordering--Money will be refunded if not satisfied.

After thirty years' experience in curing rupture, I have invented an Appliance which will absolutely hold the rupture and never slip, yet is light, cool and comfortable. It conforms to every movement of the body without chafing or hurting, and costs less than many common trusses. There are no springs or hard, lumpy pads, and yet it holds the rupture safely and firmly without pain or inconvenience. I make it to your measure, and send it to you on a **strict guarantee of satisfaction or money refunded**, and I have put my price so low that anybody, rich or poor, can buy it.

DOUBLE RUPTURE CURED.

Lecompton, Kans.,
R. F. D. No. 2, Feb. 7, 1911.

Mr. Brooks.

Dear Sir:—I drop you these few lines to say I am well pleased with your Appliance, as it has effected a permanent cure in my case. I have been ruptured eighteen years. Am now forty-two and wore a great many trusses before I got your Appliance. The ruptures disappeared after wearing the Appliance a few months. Mr. Brooks, I will do all in my power to recommend your Appliance, not only for your benefit, but to help others who suffer from rupture.

Your True Friend,
W. F. BUCHHEIM.

The above is C. E. Brooks, inventor of the Appliance, who cured himself and who has been curing others for over 30 years. If ruptured, write him today.

"COMPLETELY CURED."

Hebron, Douglas Co., Mo.,
June 12, 1911.

C. E. Brooks.

Dear Sir:—Some time ago I purchased an Appliance from you and am now pleased to inform you I am not wearing it nor will I ever need it again, for to my great surprise, it has completely cured me. I hardly hoped to be cured at all, but the cure was effected in about seven months. Many thanks for the kind way in which you have treated me.

Yours gratefully,
S. B. LITTELL.

I have received thousands of letters like these from grateful patients the world over. This appliance gives **instant relief**, and effects permanent cures when everything else has failed. Remember, I use no salves, no harness, no lies. Fill out the attached coupon and mail today, and I will send you free my illustrated Book on Rupture and its Cure, showing my Appliance, and giving you the names of many people who have tried it and are now permanently and soundly cured. Remember, I send my appliance **on trial** to prove what I say is **true.** You are to be the judge. Send free coupon **now.**

C. E. BROOKS,
59-A State St., Marshall, Mich.

FREE INFORMATION COUPON.

C. E. BROOKS, 59-A State St.,
Marshall, Mich.

Please send me by mail, in plain wrapper, your illustrated book and full information about your Appliance for the cure of rupture.

A MODERN MILK PLANT.

The Walker-Gordon Farm at Plainsboro, New Jersey, Visited by Farmers and Scientists.

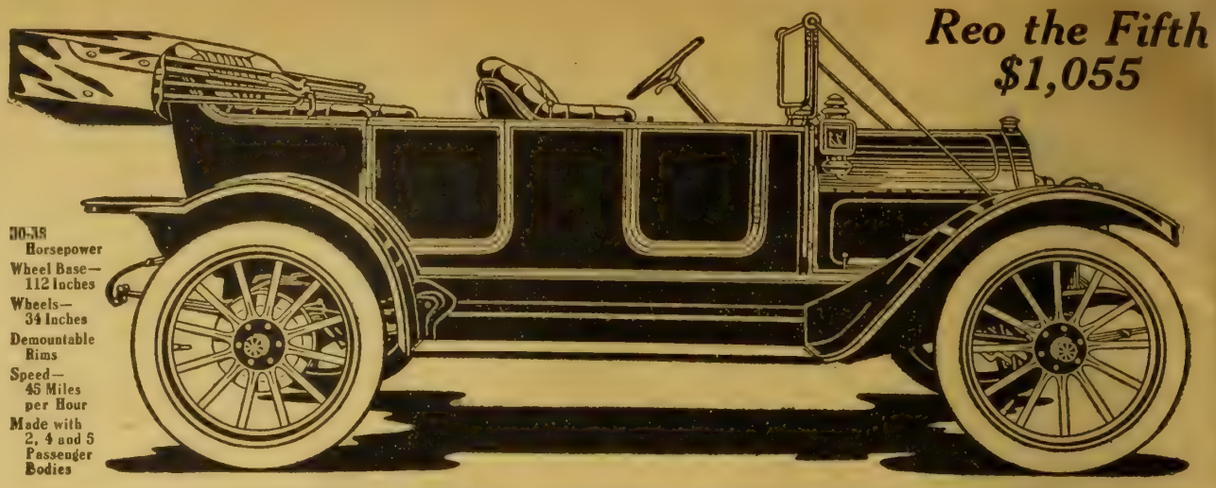
The Walker-Gordon milk farm has been in operation now for about twelve years. It is located at Plainsboro, in Mercer county, New Jersey. The Bureau of Farm Management has been assisting them in systematizing their operations and has also been carrying out other experiments. On Wednesday, May 29th, the farmers of the state were invited to an all-day meeting on their farm. Nearly six hundred people were present and a most profitable day was spent listening to addresses by men of reputation and visiting all parts of the farm. Prof. Billings, of the United States Department, introduced Mr. Jeffers, the manager of the farm. In a brief and modest manner Mr. Jeffers told how the place was started, some of the failures and successes and some of the hopes for the future.

The farm is purely a business proposition. The Walker-Gordon Company, in supplying customers in the large cities with modified milk for babies, realized that to get good, pure milk of a uniform quality, they would have to produce it themselves. Plainsboro was selected because of its good railroad facilities and because it was about half way between Philadelphia and New York and near the largest center of population in the country. Mr. Jeffers told about the gradual growth of the farm from the fifty cows at the beginning to the four hundred kept at present. The most perplexing problem has been to supply milk as nearly free from bacteria and as pure as possible and yet not to allow the cost to be prohibitive. This brought out the necessity of systematic management. They endeavor on their nine hundred acres of tillable land to raise their hay crops on the fields farthest removed from the center of activity. On the fields near the cow farms are grown the soiling crops, silage corn, etc. The hay is stored near where it is grown, thus saving long hauls when the teams are overworked.

A one-man unit system of labor has proved very effective. Every laborer works just ten hours and no more. The cow barn attendants work in two five-hour shifts, beginning at one in the morning and working until six and the same hours in the afternoon. Alfalfa has been grown for several years, but until two years ago never gave entire satisfaction. In the fall of 1910 a large acreage was seeded after the silage corn was removed. This gave such returns in 1911 that a larger area was put down that fall. This summer there are over one hundred and eighty acres of thrifty alfalfa on the farm. Mr. Jeffers says the success depends on a thorough preparation of the seed bed, a liberal use of lime and fertilizers and successful inoculation. He raises potatoes as a money crop not only because they do unusually well in that vicinity but also because they leave the soil in ideal condition for alfalfa seeding. For fertilizer Mr. Jeffers believes in the commercial form for alfalfa. He uses about six hundred pounds per acre of a mixture of one thousand pounds acid phosphate and five hundred pounds muriate of potash. At one time after cutting or early in the spring if the field does not look productive he finds the use of a spring tooth harrow beneficial. After last winter's severe test Mr. Jeffers thinks that seeding or cutting after the middle of September is very apt to be injurious to the following crop. A good growth gives protection to the roots and prevents much heaving during the winter. Inoculation by the means of soil from an old field has given the best results.

Labor-saving devices are found in every department. There is no manure pile on the place. It is conveyed from each barn in carriers and dumped directly into the spreader. Probably much of the prosperity of the farm is due to the high productiveness of the herd. Registered bulls of the best breeding to be obtained are used; Holsteins predominate perhaps, but Guernseys, Jerseys and Ayrshires are used also. A herd of nearly a hundred yearling heifers was out on pasture. These and dry cows are the only animals allowed to graze. The barns, eight in number, all in a row, have small paddocks in the front, where the cows are allowed to exercise for an hour or so every day.

The milk is secured in the most modern method. The cows are clipped closely every two weeks and the inside of the barns whitewashed frequently. Several men keep busy ahead of the milkers. The first man removes the manure and spreads fresh shavings. The second washes the cow's belly, flanks, switch and udder. A third follows and rubs vaseline into every cow's udder.



Top and windshield not included in price. We equip this car with mohair top, side curtains and slip-cover, windshield, gas tank and speedometer—all for $100 extra. Self-starter, if wanted, $20 extra.

The 1912 Sensation

By R. E. Olds, Designer

Five Times Oversold in May

I have built automobiles for 25 years. Reo the Fifth is my 24th model.

I have watched all the ups and downs of Motordom—all the comings and goings, the successes and failures.

But I never saw a demand like that which developed for Reo the Fifth this year. In April and May we could easily have sold five times our factory output.

My Final Car

Month after month I have told you the story, so you know why this call has come.

I built this car as my final creation, as the capsheaf of my career.

In this car I embodied the best I had learned from 25 years of car building.

This car marked my limit. Every detail showed the best I knew.

I analyzed all steel that went into it. I tested the gears in a crushing machine with 50 tons' capacity.

I used Nickel Steel axles—Vanadium Steel connections. I equipped the car with 13 Timken bearings.

To every part I gave big margins of safety. The carburetor I doubly heated for low-grade gasoline.

I Watched It

Then I took personal charge of the building, for I pledged my good faith on this car.

I saw that the parts were ground over and over, until we got utter exactness. I saw that each car got a thousand inspections.

The engines were tested for 48 hours. Each finished car was tested over and over, until it proved utterly perfect.

We did all this with every car, in the midst of the April rush. We do it today, and shall always do it so long as I build this car.

The Center Control

Then we equipped this car with my new center control. All the gear shifting is done by a small, round lever between the two front seats. It is done by moving this lever only three inches in each of four directions.

I got rid of all side levers, so the front doors were clear. Both brakes are operated by foot pedals.

In these ways I made possible the left-side drive.

Now nearly all makers announce for next season the center control and the left-side drive. But none can use my center control. They still use the old time levers.

The Amazing Price

Then we offered this car—the best I can build—for $1,055. And nothing on the market could begin to compete with it.

The car is long, roomy and powerful. The wheels are big. The body is finished in 17 coats. The upholstering is the height of luxury.

The demand for this car will grow and grow as the facts become better known. I believe that each car will sell twenty.

But the price of $1,055 can't last long. The price is too low for profit, and materials are advancing. Before very long advancing costs will compel us to ask something more for this car.

1,000 Dealers

Reo the Fifth is shown by dealers in a thousand towns. If you will write for our catalog, showing the various styles of body, we will tell you where to see the car. Address

R. M. OWEN & CO., General Sales Agents for REO MOTOR CAR CO., Lansing, Mich.

Canadian Factory, St. Catharines, Ont.

(94)

[Please mention National Farmer and Stock Grower.]

This prevents cracking or drying of the skin from the constant washing. It also acts largely as a preventative to udder troubles after calving. An elaborately-equipped creamery and bottling room located near the milk barns and a chemical laboratory complete the equipment.

Several other instructive lectures were given and lunch was served on the large shady lawns in front of Manager Jeffers' house. Dr. J. G. Lipman, Director of the State Experiment Station, received a generous applause from the audence. He gave a very comprehensive outline of the history of milk production in the United States. Prof. Rawl, of the Bureau of Dairy Industry of the United States Department, gave a practical talk on "Economic Milk Production." About three o'clock a shower came up and the farmers dispersed to their homes. Every county of the state was well represented and the intelligence and interest manifested was certainly very pleasing to the entertainers. The sad feature of many such meetings is the fact that the wide-awake, prosperous farmers turn out every time, but the satisfied stay at home, the ones that need the benefits most, are lacking. It is to be hoped that every State College will soon be enabled by an "Extension Work" Department to take modern farm methods and new practices to this kind of men and demonstrate right on their own land the value of business methods in farming. If such a large, successful farm as the Walker-Gordon farm teaches anything it teaches just that—the importance of business principles and business methods in farming. All the scientific knowledge and college training will never take the place of business methods.—A. L. Clark, in New York Produce Review and American Creamery.

Pigs Upon the Skim Milk.

"Where dairies or butter factories are, or where the milch cow is a factor for other purposes than the sale of milk as such, the pig is a most useful and profitable adjunct. Upon the skim milk judiciously used with other and more substantial foods, he thrives, grows and fattens, utilizing a by-product of tremendous volume which without the pig would represent little of available value. It is said that the skim milk from the butter factories of New York alone amounts to nearly a billion pounds in a single year. The use of this skim milk does much to give relief from monotony so common in the hog's feeding, besides adding to the returns from the other or main foods with which it is given, and every hog raiser is glad to have it."—From Coburn's "Swine in America."

The National Implement and Vehicle Show.

Last year the exhibition by the National Implement and Vehicle Manufacturers was remarkably successful, and Peoria, Ill., has been selected as permanent headquarters. This year the show will be held on 136 acres bought for the express purpose of holding this Exposition. This year the show will be open from September 27th and continue to October 5th, inclusive. This show will interest every farmer and it will pay him to travel miles to see it. There is ample show ground for every sort of demonstration.

Frisco Railroad Agriculture.

The Agricultural Department of the Frisco Railroad has established a number of demonstration farms along its right-of-way, and has furnished seed for these farms, together with a full line of instructions for planting and cultivating crops.

A cash prize of $100 will be given by the Frisco for the best conducted of these demonstration farms on the following basis: The greatest gross returns to count fifty points; success with the greatest number of varieties furnished, twenty-five points; and the best written report, twenty-five points.

Besides the demonstration farms the Frisco has established a number of ten-acre crop farms and has furnished seed to plant these farms, as well as a full line of instructions for cultivating the crop.

A cash prize of $100 is offered for the best conducted of these corn farms, provided the instructions of the Commissioner are fully complied with. The prize will be awarded on the following basis: The greatest gross returns, fifty points; best bushel of ears of corn, twenty-five points; best written report, twenty-five points.

The work is in charge of F. S. White, Agricultural and Horticultural Commissioner of the Frisco, who reserves the right to visit the farms from time to time and of giving the managers of same advice and instructions. His headquarters are in St. Louis.

Below is a list of those who are competitors for the premium:

Ardmore, Okla—Mr. Graham is in charge of a demonstration farm.

Ada, Okla.—A. L. Kennedy is in charge of a farm.

Billings, Mo.—Fred Wren, editor of the Billings Times, has charge of about 300 acres of crop for which the Frisco furnished seed. These crops are being grown for seed purposes, the seed to be distributed to farmers next year.

Republic, Mo.—M. L. Howard, Postmaster, has charge of a ten-acre demonstration farm; and B. B. Adams has charge of one of the ten-acre corn farms. Up to this date Mr. Howard's ten-acre farm is second best of all the farms, being excelled only by E. C. Bellamy, of Mammoth Spring, Ark.

Fordland, Mo.—C. C. Sherman has charge of a ten-acre corn farm.

Seymour, Mo.—J. C. Peightel, Secretary of the Commercial Club, has charge of a ten-acre demonstration farm; also of a ten-acre corn farm.

Diggins, Mo.—Dr. M. E. Broaddus has charge of a ten-acre corn farm.

Mansfield, Mo.—Dr. F. H. Riley has charge of a demonstration farm.

Mountain Grove, Mo.—R.F.Baker, Secretary of the Commercial Club, has charge of a demonstration farm; also of a corn farm.

Cabool, Mo.—C. S. Jackson has charge of a corn farm.

Willow Springs, Mo. — Hardin Smith and Mr. Holloway each have charge of a corn farm.

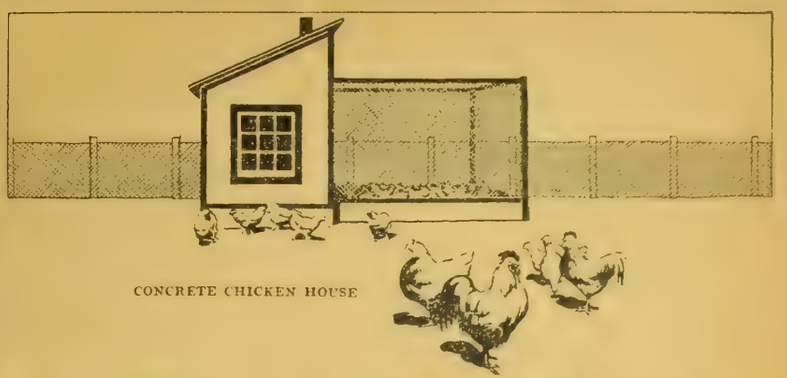
Brandsville, Mo.—G. D. McMahon has charge of a demonstration farm.

West Plains, Mo.—Two ten-acre corn farms, one demonstration farm and about 300 acres planted to seed crop is being conducted under the supervision of the Commercial Club, being directed by M. B. Clarke, Banker.

Marionville, Mo.—E. M. Hendrix is growing a large line of field seeds, such as different varieties of corn, grasses and clovers.

Condition of Foreign Crops.

A cablegram, dated June 22, 1912, from the International Institute of Agriculture, Rome, Italy, has been received by the United States Department of Agriculture, giving the following information:



CONCRETE CHICKEN HOUSE

ATLAS PORTLAND CEMENT

"THE STANDARD BY WHICH ALL OTHER MAKES ARE MEASURED"

When your Uncle Sam wants to make a good job of concrete work, he buys Atlas. The brand that was good enough for the Panama Canal—the greatest concrete job in the world—is good enough for you. Cement cannot be too good. There is none as good as Atlas. Farm buildings everywhere, permanent, durable, lasting, made by farmers, with this powerful cement, are witness that the wise farmer buys the best—Atlas—the cheapest in the end. The lasting way to improve your farm is to build with Atlas-made concrete.

Our free book

"Concrete Construction About the Home and on the Farm"

tells you how to build everything that you need. It tells why Atlas Portland Cement is the best cement to use. The success of concrete construction depends largely upon the quality of cement used. Atlas has the quality which makes concrete work successful. Write for this free book today.

If your dealer cannot supply you with Atlas, write to

THE ATLAS PORTLAND CEMENT COMPANY, DEPT. 165, 30 BROAD ST., NEW YORK

Largest productive capacity of any cement company in the world. Over 50,000 barrels per day

[Please mention National Farmer and Stock Grower.]

The areas of the crops below specified which will probably be harvested this year in each of the countries named, expressed in acres, are as follows:

Wheat.—Hungary (including Croatia and Slavonia), 9,404,000; Italy, 11,738,000; Canada, 9,926,000; Japan, 1,248,000; Algeria, 3,372,000; Tunis, 1,263,000.

Rye.—Belgium, 642,000; Denmark, 682,000; France, 2,998,000: Hungary (not including Croatia and Slavonia), 2,949,000.

Barley.—France, 1,869,000; Hungary (including Croatia and Slavonia), 2,804,000; Canada, 1,429,000; Japan, 3,123,000; Algeria, 3,159,000; Tunis, 1,102,000.

Oats.—France, 9,896,000; Hungary (including Croatia and Slavonia), 2,724,000; Canada, 9,486,00; Algeria, 506,000.

The estimated production of the crops below specified in each of the countries named, expressed in bushels, is as follows:

Wheat.—Spain, 117,374,000; British India, 366,371,000; Japan, 24,453,000.

Rye.—Spain, 27,960,000.

Barley.—Spain, 63,481,000; Japan, 95,587,000; Tunis, 6,146,000.

Oats.—Spain, 25,105,000.

The estimated area planted to corn this year in each of the countries named, expressed in acres, is as follows:

Spain, 1,147,000; France, 732,000; Hungary (including Croatia and Slavonia), 7,188,000; Italy, 4,066,000.

The estimated area planted to rice this year in Japan is 7,317,000 acres.

The condition of the crops below specified, in each of the countries named, compared with an average condition, is as follows:

Wheat.—Belgium, 108; Hungary (including Croatia and Slavonia), 105; Roumania, 133; Canada, 101.

Rye.—Belgium, 107; Denmark, 90; Hungary (including Croatia and Slavonia), 102.

Barley.—Hungary (including Croatia and Slavonia), 100; Japan, 113.

Oats.—Belgium, 105; Denmark, 100; Hungary (including Croatia and Slavonia), 100; Roumania, 120; Canada, 98.

Corn.—Spain, 100; Hungary (including Croatia and Slavonia), 110; Roumania, 120.

Cotton.—Egypt, 100.

Take note of the potash advertisement on page 2.

St. Louis Live Stock Receipts.

At the St. Louis National Stock Yards, during the first six months of the year 1912, the receipts were 363,016 cattle, 1,377,284 hogs, 456,555 sheep and 89,219 horses and mules. During the month of June receipts were 85,778 cattle, 187,440 hogs, 111,597 sheep and 6,970 horses and mules.

Tennessee Lambs at St. Louis.

On July 1st, at the St. Louis National Stock Yards, Wharton Buchanan, a prominent shipper from Tennessee, was on the market with a string of lambs, 1,027 head, that averaged 63 pounds, and brought $7.90 per 100 pounds. This was the top of the local market, and, considering the sheep trade in general, a good, strong price.

St. Louis Horse Trade.

Holland, Nugent & Maxwell Bros. had 350 horses on sale at auction on July 1st at the St. Louis National Stock Yards, and sold all that were fit for work at strong prices. Young, thin, half-broke horses were sold for considerably less. This firm is buying horses five to seven years old, from 950 to 1,100 pounds, good heads, necks and sound. They are to fill a contract for cavalry horses and must have substance and quality. All horsemen handling car-loads of stock and who wish to better their selling facilities will find it to their advantage to communicate with T. H. Holland, of Holland, Nugent & Maxwell Bros.; Postoffice, National Stock Yards, Ill.

St. Louis Mule Trade.

In advising their customers in regard to the trade during the first week in July, Messrs. Holland, Nugent & Maxwell Bros. said: "The mule trade is quiet. Nothing but good miners and good, big mules and pit mules selling to advantage. All other kinds are hard to sell at satisfactory prices." This sounds like a quiet trade, but quiet trade at St. Louis, where 15,000 horses and mules are bought and sold in a month, would look like activity elsewhere.

What Are You Doing to Safeguard Your Lambs?

Already sheep raisers are asking what to do for the little spring lambs which are not thriving as they should and in some instances are dying off. The symptoms generally are droopy heads, dull eyes, gaunt, thin, sickly conditions, colic and scours, indicating bad, wormy infection. The trouble with both lambs and ewes is that they are infested with stomach and intestinal worms, and if preventive measures are not taken by the farmers who are raising sheep this season there will be an unusually heavy loss a little later on when these parasites get in their deadly work.

Now is the time stomach worms begin to breed and they are most prolific breeders. As they develop to maturity they become more destructive, finally reaching the fourth stomach, infecting the lining to which they adhere tenaciously, sucking the blood which sould nourish the animal, thus practically starving it to death. That's why the animal grows thin, scrawny, sickly and finally dies, and this applies to grown sheep as well as to lambs.

So we wish to sound a word of warning to our readers and urge them to take precautionary methods now. It is easier to conquer worms at the start than when they have gained a foothold. We have had good reports regarding the merits of Sal-Vet, a medicated salt, and a specific for not only destroying and dispelling worms, but for aiding digestion and conditioning the animal completely, that we have no hesitancy in recommending our readers to try it, particularly so when manufacturers having such implicit confidence offer to prove its merits on your stock before you pay them a cent. On page 21 you will find their advertisement in this issue, which gives special information with regard to worms in the lambs. Read it and send for a supply. You run no risk; if not satisfied, you are not obliged to pay.

Care of the Suckling Colt.

There will be a difference of from twenty-five to fifty dollars in the selling prices of horses determined by the management they have received when they were colts. The colt that three or four years ago was allowed to follow its dam to town or church, or to drag its weary limbs back and forth after the mare from one end of the corn field to the other from morning till noon and from noon till night has not developed as it should and sells at anywhere from twenty-five to fifty dollars less than it would have brought had it been properly cared for.

We do do not know what the price of horses will be when the sucklings of this year are put upon the market, but whether that be high or low, it will pay to give them christian treatment. They are young, their bones are soft, and while they like to play and have a good time, they are easily tired out, and hence should not be allowed to follow the mare farther than the stable door or barn yard. She will probably fret and worry about her baby for the first day or two, but the farmer can afford to unhitch her at about ten o'clock, give her a drink of water, let her cool off, supply the wants of her baby, and then go back to work.

If the colt is kept in a roomy stall, or, better still, in a paddock, or in a hog pasture well fenced, preferably with some other colt or idle horse to keep it company, it will soon be content to stay at home; in fact, will not know that it can go outside of the enclousre in which it is confined, whatever that may be.

After it is three or four weeks old it will begin to get hungry; but a little fresh grass, if there is a pasture convenient, or a little bran, oats, clover, timothy hay, will stay its stomach until feeding time comes. In fact, the well-bred colt will always pay a good price for anything that is fit for it to eat. Hence no farmer should stint his suckling colts.

Remember, that in the first year, particularly in the first six months, you are laying the foundation, building the frame work, so to speak, on the lines of architecture you laid out while mating the dam. No matter how well bred the colt, it must be developed. The plan of the architect must be carried out, and this can be done only by proper feed, shelter and care.

Teach the colt that you are its master—omnipotent so far as it is concerned—whose will cannot be resisted, and yet though powerful and kind, disposed to be friendly, even generous. All this takes a little time and trouble, but it is time that is well spent and trouble that pays.—Stock Farm, Lexington, Ky.

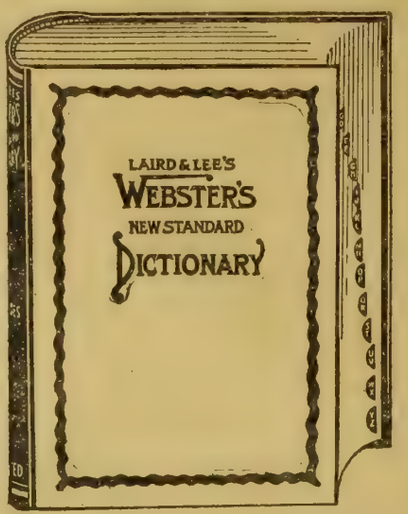
The Webster's Dictionary, advertised in The National Farmer and Stock Grower on this page, is certainly one of the best books we have ever sent out.

Greatest Value Ever Offered For $1.00

THE VERY BEST MONTHLY FARM PAPER FOR TWO YEARS AND A COPY OF LAIRD & LEE'S

WEBSTER'S NEW STANDARD DICTIONARY

WHICH IS THE MOST COMPACT, USEFUL, HANDY, INSTRUCTIVE BOOK EVER ISSUED BY THE AMERICAN PRESS.



LAIRD & LEE'S Webster's New Standard Dictionary of the English Language — a wonderful book, 756 pages in all, 840 illustrations, substantially bound, gilt title, red edges, patent thumb index. Special edition for office and general use on farms, estates, ranches, etc.; massive but handy; contains ten encyclopedic features, supplement of new words, dictionaries of biography, geography, musical terms, Biblical, classical, historical and mythological names, foreign phrases, English word-building, rules in orthography, current abbreviations, metric system with conversion tables; weighs twenty-eight ounces. We are using WEBSTER'S NEW STANDARD DICTIONARY as a subscription premium to the best monthly farm paper in the United States.

The National Farmer and Stock Grower

is a nice, clean, general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, to dairymen, to vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, to horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. The best live stock illustrations appear in THE NATIONAL FARMER AND STOCK GROWER. There are thirty-two pages, four columns to the page. It is published monthly.

SPECIAL INDUCEMENTS.

Our offer to you: Send us One Dollar and we will send you THE NATIONAL FARMER AND STOCK GROWER for two years, and we will also send you, postage paid, safe delivery guaranteed, one copy of this great WEBSTER'S DICTIONARY. We also agree to refund money and pay return postage to anyone who is not satisfied with the bargain. Address,

THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

For Canvas Covers of all sizes and weights, of best quality, and at right prices, order from Weber Imp. & Auto Co., 1900 Locust st., St. Louis.
Please mention Nat. Farmer and Stock Grower.

The top of the St. Louis wool market, July 1st, was 25 and 26 cents for year's growth choice medium; bright medium, 20 to 24 cents; heavy and inferior wools, 15 to 18 cents.

Rules For the Care of Horses.

The Boston Work Horse Parade Association has just issued for distribution among teamsters a series of rules relating to the care of horses in hot weather as follows:

1. Load lightly and drive slowly.
2. Stop in the shade if possible.
3. Water your horse as often as possible. So long as a horse is working, water in moderate quantities will not hurt him. But let him drink only a few swallows if he is going to stand still.
4. When he comes in after work, sponge off the harness marks and sweat, his eyes, his nose and mouth, and the dock. Wash his feet, but not his legs.
5. If the thermometer is seventy-five degrees or higher, wipe him all over with a wet sponge. Use vinegar water if possible. Do not turn the hose on him.
6. Saturday night give a bran mash, cold; and add a tablespoonful of saltpetre.
7. Do not use a horsehat, unless it is a canopy-top hat. The ordinary bell-shaped hat does more harm than good.
8. A sponge on top of the head, or even a cloth, is good if kept wet. If dry, it is worse than nothing.
9. If a horse is overcome by heat, get him into the shade, remove harness and bridle, wash out his mouth, sponge him all over, shower his legs and give him four ounces of aromatic spirits of ammonia, or two ounces of sweet spirits of nitre, in a pint of water, or give him a pint of coffee warm. Cool his head at once, using cold water, or, if necessary, chopped ice, wrapped in a cloth.
10. If the horse is off his feed, try him with two quarts of oats mixed with bran and a little water and add a little salt or sugar. Or give him oatmeal gruel or barley water to drink.
11. Watch your horse. If he stops sweating suddenly, or if he breathes short and quick, or if his ears droop, or if he stands with his legs braced sideways, he is in danger of a heat or sun stroke and needs attention at once.
12. If it is so hot that the horse sweats in the stable at night, tie him outside. Unless he cools off during the night he cannot well stand the next day's heat

Western Range Horses.

At the St. Louis National Stock Yards, on Thursday, June 27th, the first sale of Western range horses for the season of 1912 was held with great success and about 2,000 head

were sold at auction to the highest bidder. The top price was $120 per head for a load of 1,250-pound mares of superior quality and in good condition. Several loads sold at upwards of $100.00 per head, and twenty to thirty loads of mares and geldings sold at $50.00 to $75.00 around. To appreciate these offerings and to understand what is being sold and obtained for the money the best way is to attend the auction. The sales are conducted by Campbell & Reid and Western Sale Stables Company. Keep in touch with these sales by writing to J. J. Searcy, Sale Manager, National Stock Yards, Ill. The July sales will be on Thursday, the 11th, and Thursday, the 25th.

St. Louis Hog Market.

On July 1st, with 5,750 hogs on sale, the St. Louis market sold the best loads, averaging 240 and 280 pounds, at $7.80 per 100 pounds. Fair to good mixed hogs sold at $7.25 to $7.60, and strictly good butcher hogs sold at $7.65 to $7.77½. Best lights, 160 pounds and under, brought $7.00 to$7.50; fair to medium grade lights, 120 pounds and over, brought $6.25 to $6.90; best quality pigs, 110 pounds and under, $6.25 to $6.85; fair to medium pigs, $5.25 to $6.00; and the throw-out, rough hogs, $7.00 to $7.25 per 100 pounds.

The Hay Market.

On the last day in June the first crop of this season's timothy was received at St. Louis. It was choice in quality and sold at $22 per ton on track. On the same day the sales were one car clover-mixd at $15. Timothy—One car No. 2 at $18; one car at $19; one good car at $19.50; one car scant No. 1 at $10; 3 cars at $20.50; two cars No. 1 at $21; one car at $22; one car choice new timothy also at $22. Clover—One car new No. 1 at $12 to arrive. Prairie—One car Arkansas at $12; one car at $13; one car No. 2 at $13.50; two cars scant No. 1 at $15.50; three cars No. 1 at $17. Alfalfa—No. 1 quotable at $14 to $15; choice at $15 to $16.

Every Soldier a Dead Shot.

Every soldier who has been in battle knows that the vast majority of bullets never find their mark. It has been estimated that in the South African war it required more than five thousand bullets to hit one of the enemy.

This is due chiefly to the difficulty which soldiers have in finding their distance range in the heat of battle. However good they may be at target shooting at Bisley, it is a very different thing when they have to fire at an unknown distance at living targets which are answering their shots. The boldest and bravest man is excited, and it is a supreme test of nerves and skill to make that cool calculation which is necessary to judge the distance between himself and the enemy—not an easy thing, however steady a man's pulse may be.

But now there comes an invention which promises to make every soldier a dead shot. The inventor is H. Ommundsen, known as king's prizeman at Bisley.

By the applicatıcn of a simple geometrical law—very simple, like other things, when you happen to know it—he has produced a new rifle sight which does away altogether with the difficulty of finding the range of distance. The soldier simply has to judge the apparent height of the object which he desires to hit, which by experience is known to be absurdly easy, and to shoot, according to a fixed sight, below the object equal to its height.

If he does that he "drops" his man. Naturally, the nearer he is to the object the taller it looks, so that the point at which the rifleman aims varies to exactly the same degree.—London Chronicle.

Premature.

An "Uncle Tom's Cabin" Company was starting to parade in a small New England town, when a big gander from a farm yard near at hand waddled to the middle of the street and began to hiss.

One of the double-in-brass actors turned toward the fowl and angrily exclaimed:

"Don't be so quick to jump at conclusions. Wait till you see the show."—Lippincott's.

Sorghum shipped to the wholesale market at St. Louis is again selling at 40 cents a gallon.

WESTERN RANGE HORSE SALES.

Horse raisers are advised that sales of the very best Range Horses in the country are being conducted twice each month by

Campbell & Reid and Western Sale Stables Co.,
NATIONAL STOCK YARDS, ILL.,
As usual, during the season of 1912. The Second and Third Sales will be held

Thursday, July 11th, and Thursday, July 25th,

And every two weeks thereafter until the close of the season. We will be glad to hear from Ranchmen having Horses for sale. The demand is very good this season, especially for well-bred Mares and Geldings in good condition, and every class is in demand, from yearlings up.

Please address
J. J. SEARCY, Sale Manager,
NATIONAL STOCK YARDS, ILL

Office, 302 N. 12th St., - ST. LOUIS, MO.

GET TOOLS READY FOR HARVEST

Look Over What You Have and Get What New Ones You Need.

These hot, growing days for crops should not be lazy days for the farmer. Right now is a good time to look over the tools you will be using the next few months. Get them into shape for use. See what you are needing in new tools, and then go to town and get them. Within a month you will be mighty busy and not have time to do so. There are not many farmers who put off the important things connected with running a farm. They will buy a reaper in plenty of time, but if they have one they don't always see to it that bolts are tight, gears in perfect condition, wheels oiled or knives sharp. The trifles seem so little that even the best of us are apt to overlook their importance or the expensive delays that a number of trifles can cause. Not long ago I heard the head of a department in a large manufacturing plant say: "Well, I haven't accomplished a thing to-day, and I have been busy every moment." He had been busy he explained, straightening out trifles that had been overlooked by others.

To mention some of these trifles—do you need corn knives, hay knives, hatchet, axe, hammer, tools for repair work, or for new buildings, hay or header forks? Of course, one could easily make the list much longer, but these will suggest others.

A catalogue of good tools is something that ought to be part of the working library of every farmer. One of the handiest that we have seen is the 104-page book of Keen Kutter goods made by the Simmons Hardware Company, Inc., St. Louis and New York. Your hardware dealer can probably supply you, but if he will not, write to the nearest address and one will be sent you.

Probably every reader of this paper is familiar with the famous wedge-shape Keen Kutter trademark. He knows, too, that every tool bearing that label is quality goods, yet reasonable in price. E. C. Simmons, founder of the Simmons Hardware Company, never spoke more truly than when he said: "The recollection of quality remains long after the price is forgotten," nor was a more sapient policy ever adopted for any firm.

Poultry and Farm Paper Club.

Two first-class papers can be had for the price of one. **The National Farmer and Stock Grower** is one, and the **American Poultry Journal** is the other. There are other excellent poultry papers, but the one we take home to read and one the family is determined to read is the **American Poultry Journal**. We have made arrangements whereby we can send **The National Farmer and Stock Grower** and the **American Poultry Journal**, both papers, one year, for fifty cents. This is a bargain that is good now, but this advertisement may not appear again. Address, HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

BIG POULTRY SHOW AT MISSOURI STATE FAIR.

Twenty-five Pens of Hens to be Entered in a Great Laying Contest.

For liberal premiums, uniform exhibition coops, high-quality birds, a clean show, good judges, fair and just treatment of all exhibitors, large and interested crowds to see your birds, and for good sales, the Missouri State Fair at Sedalia, Mo., ranks among the very best in the United States. On practically all standard varieties the following liberal premiums are paid: First, $3.00; second, $2.00; third, $1.00. Pens—First, $5.00; second, $3.00; third, $2.00. All birds are entered free, only a coop and feed charge of 25 cents per bird or $1.00 per pen.

One of the big attractions of the Poultry Department of the Fair is going to be the egg-laying contest. These birds will be placed in one of the most prominent places on the Fair Grounds, in the coops formely occupied by the Game Department.

State Fair Egg-laying Contest.

In order to give poultry breeders the opportunity to demonstrate the utility qualities of their flocks as well as the fancy points, this new feature has been added. Thousands of farmers visit the Fair each year. Most of them are interested in good poultry and all are interested in good egg producers. It will also give you an opportunity to do a lot of valuable advertising, and this pen can be used as a sales pen for your flock. Your name and address, and the variety of poultry, and also the record for each day will appear on the pen if you wish it. It will also give the visitors an opportunity to see how fowls are fed for egg production, the use of trap nests and various other useful poultry appliances in actual operation.

The contest will be in charge of T. E. Quisenberry, who has charge of the National Egg-laying Contest at the Experiment Station at Mountain Grove, Mo. Even though you do not win a prize, the advertising feature will be worth many times the cost to you.

1. Each pen must be composed of six females of pure-bred poultry, all of the same variety.

2. Pen fee, $1.00 per pen of females, and one male if you wish it.

3. The fowls will all be fed alike, given the same care and treatment and will be under the exclusive care and direction of the superintendent.

4. Birds intended for this contest must be so specified on your entry, giving the numbers of leg bands of each, and the entry must reach the Secretary of the Fair on or before September 20.

5. Fowls entered in the egg-laying contest will be received and cared for at the Fair Grounds on and after the date of September 25. We advise sending the birds early, so they will be accustomed to their new quarters, the new method of feeding and recover from the effects of shipping.

6. Competition is open to the world. Number of entries limited to twenty-five. If the entries are all filled without it, no party can enter more than one pen of one variety.

7. Cash premiums will be paid as follows: For the pen laying the greatest number of marketable eggs from the date of the opening until the date of closing the Fair: First, $10; second, $8.00; third, $6.00; fourth, $4.00; fifth, $2.00; sixth, $2.00; seventh, $2.00; eighth, $1.00; ninth, $1.00; tenth, $1.00. For the greatest number of marketable eggs laid by one hen or pullet: First prize, $5.00.

8. The Directors of the Fair or the Superintendent has the right to reject any and all pens if they are diseased or for any other good reason.

9. The contest will begin Saturday, September 28, 9:00 a. m., and close Friday, October 4, 5:00 p. m.

It is our purpose to make this exhibit grander and better than ever. Write to the Secretary of the Fair, John T. Stinson, Sedalia, Mo., for a copy of the premium list.

Henry Steinmesch, Director.
T. E. Quisenberry, Superintendent.

Protecting Poultry From Disease.

Disease among poultry is one of the great factors that often tend to make poultry unprofitable. If the damage done by disease be eliminated, often the loss will become a profit. The successful poultry raiser is the one who has learned how to guard his flock against disease. The farmer who is successful in his poultry operations is the one who has also learned what must be done to prevent losses from sickness and disease.

On a visit to the Maine Experiment Station the writer was impressed with the effectiveness of the measures taken to keep the fowls healthy. The Maine Station is one in which a great deal has been done in poultry culture. Large sums of money have been invested there in poultry equipment, and the annual outlay in maintenance is large. The problems worked out are of great value to the poultry interests of the country.

At that Station the first great defense is against the parasitic insects that are found on most farm flocks. So effective are the measures against lice and poultry mites that these two pests are not discoverable. There is this first great gain, that contagious diseases are not transmitted easily from bird to bird, for there is no doubt that these insects act as inoculators and are largely responsible for the rapid spread of diseases that break out in flocks, such diseases as the roup being very rapidly transferred from bird to bird through this inoculation. Lousy flocks will be found much more liable to disease than flocks that are free from parasites.

Nature has provided the digestive organs with germicides of considerable power, and this natural protection will frequently prevent a disease from spreading, if the flocks are free from lice and mites; but if the insects be present, a way is thus made through inoculation by which the germs can get into the system without coming into contact with the germ-destroying factors. We have a parallel illustration of the importance of this in the case of man and the yellow fever. It was found by the experimenters that the germs of yellow fever could be eaten with the food or otherwise be taken into the stomach and were harmless, being unable to overcome the germ-destroying provisions of the digestive system, and it was found that the sole way of spreading the disease was through the inoculation that resulted from the bite of a certain variety of mosquito. So, protecting man against the mosquito protects him against yellow fever, that most terrible scourge of the warm countries.

The second great protection for the flocks must be found in giving the right kind of food, so that the digestive organs will not be too greatly taxed in the performance of their duties. If fed too much grain these organs break down with overwork, or with not being supplied with the elements that keep them healthy.

Therefore, a mixed ration close to nature is best. Green food should, therefore, be supplied at all times of the year, and if it cannot be s applied, then cooked soft food mus be made part of the ration, that th work of grinding and dissolving th food may be reduced to the minimum

But the green food gives bulk an the juices and acids needed for th proper and easy utilization of th food.

The Southern Field.

It is indeed a pleasure to glance through the beautifully-printed pages of a booklet that is being sent free to all National Farmer and Stock Grower readers who request it by M. V. Richards, Land and Industrial Agent, Southern Railway, Washington, D. C. This booklet is a treatise on stock raising in the Southeast. The introduction says that the stockman should look to Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Tennessee and Kentucky for the most profitable fields for raising horses, mules, cattle, sheep, hogs and poultry in the future. Each class of live stock is discussed under a particular head and beautiful pictures are presented to illustrate what is said. The booklet can be had free by writing to the above address and requesting it.

Good News to Stomach Sufferers.

A Chicago chemist is giving away ten thousand bottles of a remarkable stomach remedy that is accomplishing wonderful results for all stomach, liver and intestinal ailments and gall stones. In many cases one dose has accomplished a cure. The discoverer of this remedy, Geo. H. Mayr, 341 Mayr Bldg., 156 Whiting street, Chicago, Ill., has been so encouraged by the good this remedy has been doing that he is making this most liberal offer to those who are in need of a cure. Write him to-day and he will send you a full $1.00 bottle free.

SALESMEN WANTED

Do you want a good position where you can earn from $1,000 to $5,000 a year and expenses? There are hundreds of such positions now open. MISSOURI NATIONAL EGG-LAYING CONTEST.

One Pullet Has Laid For Sixty-four Continuous Days—238 Hens Go Broody in Month of May—Hamburgs Win For That Month.

The clucking of broody hens around the yards of the National Egg-laying Contest at Mountain Grove, Mo., during the month of May would lead a stranger to believe that this might be a hatchery or hatching contest instead of a laying contest. Two hundred and thirty-eight hens went broody in May, but in spite of this fact, a total of 11,478 eggs were gathered. This makes a grand total of 52,609 eggs laid to June 1st.

A pen of Hamburgs from Missouri won the Golden Egg Silver Cup for May. The record made by the five highest pens for May was as follows:

Pen No. 33, Hamburgs, 130 eggs; Pen No. 84, Barred Plymouth Rocks, 129 eggs; Pen No. 18, S. C. White Leghorns, 126 eggs; Pen No. 41, S. C. Black Minorcas, 123 eggs; Pen No. 52, White Wyandottes, 122 eggs.

A White Plymouth Rock pullet from Illinois, No. 717, has laid sixty-four eggs in sixty-four continuous days. We have never heard of anything on record that would equal this. Think for a minute what it means for a hen to manufacture the yolk, the white, the shell and all the matter which an egg contains, and lay a well-formed shell and a good-sized egg every day for sixty-four days. She appears healthy and vigorous and we hope she can continue her good record for at least a few more days. In this connection we will say that we are studying the type of these individuals, we are taking photographs of them to be published later, measurements will also be taken, and we are in hopes we can gain some knowledge which will be of interest and benefit to the industry.

The twelve highest individual records made for the first seven months of the contest are as follows:

No. 541, White Orpington, 156 eggs; No. 341, S. C. Red, 155 eggs; No. 572, R. C. Red, 151 eggs; No. 717, White Plymouth Rock, 150 eggs; No. 79, R. C. White Leghorn, 148 eggs; No. 402, Silver Wyandotte, 148 eggs; No. 601, R. C. Red, 148 eggs; No. 545, White Orpington, 145 eggs; No. 372, S. C. Red, 145 eggs; No. 487, White Wyandotte, 144 eggs; No. 488, White Wyandotte, 144 eggs; No. 525, Silver Wyandotte, 144 eggs.

We do not look for many high pen or individual records, nor do we care for anything startling. Actual results obtained from ordinary care and feed is all we desire. We are housing, feeding and caring for these hens just about as any farmer or poultryman can and should care for his flock. We might possibly get higher records if we cared to do so or would feed, handle and house the birds in a way that was not practical for the average man. What we are doing could be done by the average poultryman without much additional cost or labor. These facts will all be published in bulletin form at the close of the year.

The ten highest pen records to date are as follows:

Pen No. 107, R. C. R. I. Reds, 615 eggs; Pen No. 112, S. C. Black Orpingtons, 615 eggs; Pen No. 52, White Wyandottes, 613 eggs; Pen No. 59, Silver Wyandottes, 588 eggs; Pen No. 118, S. C. Buff Orpingtons, 584 eggs; Pen No. 85, Barred Plymouth Rocks, 580 eggs; Pen No. 117, S. C. Buff Orpingtons, 576 eggs; Pen No. 64, Silver Wyandottes, 551 eggs; Pen No. 13, S. C. White Leghorns, 548 eggs; Pen No. 96, S. C. Rhode Island Reds, 539 eggs.

It will be seen from the above that the two leading pens have tied for first place. Many pens which are not included in the above list are now laying a large number of eggs each month and the above pens will have to hustle to keep their lead. This month's 238 broody hens cut down the standing of several pens, and this is going to be quite a factor from now on. Many of the non-setting varieties have broody hens in their pens.

Last month the manager sent out agreements to be signed for the second year of the contest, if those who had birds in this contest desired to continue their pens or send a new one for a second year. We are indeed pleased to say that practically every contestant stated that they were satisfied they had been given a square deal and nearly every one signed up for another year, should it appear desirable to use their birds.

The egg-laying contest commenced last November and will end October 31st, and the report so far accounts for the work up to the end of the seventh month. Unfortunately for The National Farmer and Stock Grower we receive the May report after our June edition is published, and the June report will arrive after our July edition is published; but it is not considered good policy to count chickens before they are hatched, neither is it worth while anticipating the winning pen of an egg-laying contest until the last few months arrive. Our understanding is that there are 130 pens, five hens to the pen, with substitutes to take the place of any that die or become too sick to remain in the pens. The ten leading pens are about on a basis of 200 eggs per hen per year, and the ten leading individuals are chasing along on a basis of 255 eggs per hen per year, which looks pretty good, although we are not facing the best laying periods of the year.

A Lazy Dog Story.

He was a poor, miserable-looking dog, and the stranger's heart was filled with pity. For the dog was howling and it was only too evident that he was suffering pain. So he asked the tired rustic who lounged near by why the dog howled.

"'Im?" asked the rustic. "He's just lazy, that's all."

"But laziness doesn't make a dog howl, surely?" queried the benevolent one.

"Does 'im," said the tired owner. "Only lazy."

"But how," queried the persistent questioner—"how can laziness make him howl?"

"Well, you see," said the rural lounger, "that pore dog is sittin' on some real tough thistles, and he's too lazy to get off, so he just sits there and howls 'cause it hurts so."

A Coupon Worth a Fruit Jar.

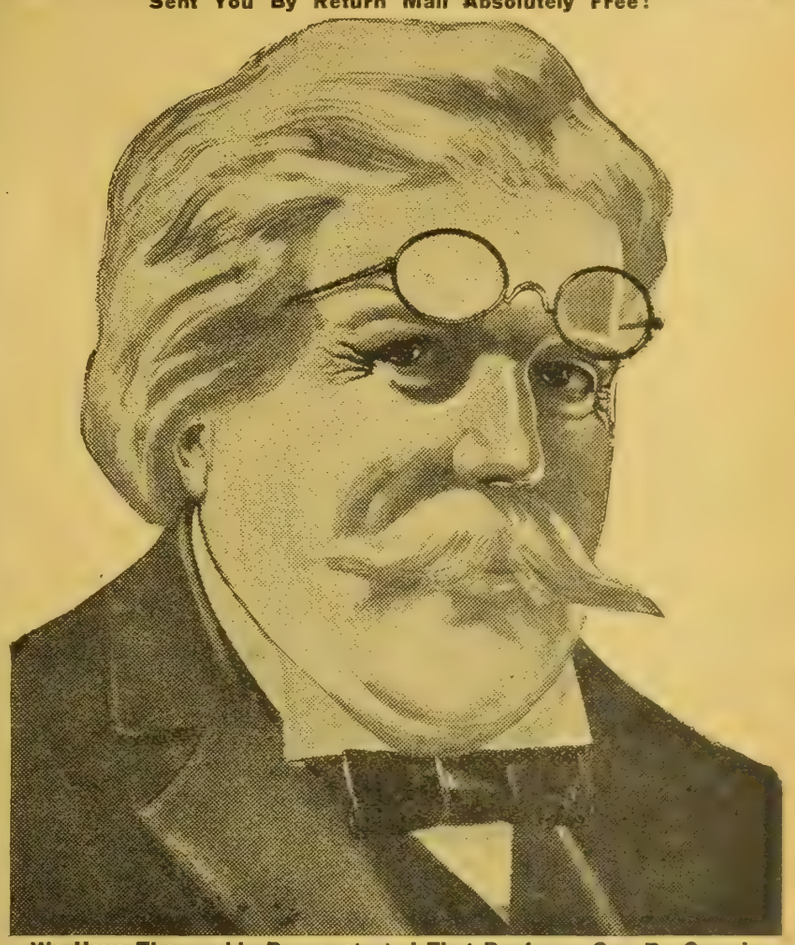
Our lady friends are invited to understand the advertisement of the Hazel-Atlas Glass Company, of Wheeling, W. Va., on page 26. They manufacture the E-Z Fruit Jar and wish to introduce them into families where fruits and vegetables are canned. These jars are kept for sale by grocers, and if you can find the grocer handling their jars he will furnish you with a free sample that when canning time comes around you will buy their jars because you like them. It will do no harm to write the Hazel-Atlas Glass Company, Wheeling, W. Va., and ask for a free book on fruit jars.

Deafness Can Be Cured

The Secrets of the Most Marvelous Discovery for the Positive Cure of Deafness and Head Noises Given FREE.

With This Wonderful, Mysterious Power, People Deaf for Years Hear the Tick of a Watch in a Few Minutes.

Send No Money—Simply Write About Your Case, the Secret Will Be Sent You By Return Mail Absolutely Free!



We Have Thoroughly Demonstrated That Deafness Can Be Cured.

After years of research along the lines of the deeper scientific mysteries of the occult and invisible of Nature-forces, the cause and cure of deafness and head noises has been found and we are enabled by this same mysterious knowledge and power to give to every unfortunate and suffering person the assurance of a treatment that relieves even the most obstinate cases. We say to those who have thrown away their money on cheap apparatus, salves, air pumps, washes, douches, and list of innumerable trash that is offered the public through flaming advertisements, we can almost certainly cure you and cure you to stay cured. We ask no money for our consultation, advice and diagnosis of your case. Our treatment method is one that is so simple it can be used in your own home. You can investigate fully, absolutely free and you pay for it only after you are thoroughly convinced that it will cure you, as it has thousands of others. It makes no difference with this marvelous new method how long you have been deaf, nor what caused your deafness. No matter how many remedies have failed you—no matter how many doctors have pronounced your case hopeless, this new magic method of treatment should prove a beacon light to guide you to a perfect restoration of your hearing.

We prove this to you before you pay a cent for it. Write today and we will send you full information absolutely free, by return mail. Address Dr. L. C. Grains Co., 420 Pulsifer Bldg., Chicago, Ill. Remember, send no money—simply your name and address. You will receive an immediate answer and full information by return mail.

R. F. D. 7, - NASHVILLE, TENN.

Long Distance Phone, Main 1326.

A Magnificent Atlas.

The L. L. Poates & Co.'s Complete Atlas of the World contains maps of the United States, its forty-eight states, its territories, its other possessions, together with the Canadian provinces, and every other country of the world. This Atlas has many points of superiority. Its plates are new, having been made by the best map engravers in the country, and it is attractive in appearance and compact in form—making it valuable in the home, the library, schools, banks and offices.

The maps are printed in five (5) and six (6) colors, which show special features by separate printings. Railroads are shown in red; mountains, in brown; water, in blue; and political divisions are accurately defined, which enables one to readily locate places of interest. The latest geographical changes, such as every county in the United States to date, political changes in Canadian provinces, French and German boundaries in Africa, as well as the late changes in India and China, are shown on these maps.

This Atlas, in octavo, has 193 pages of maps, alphabetical index of states and countries, besides the states with their counties, and important cities and towns with their populations, according to the 1910 United States Census, and the principal cities of the world. It is bound in cloth at $1.50, and in leather at $2.00, and will be sent prepaid to any point in the United States on receipt of price. L. L. Poates Publishing Company, 22 North William street, New York, N. Y.

The Chinchbug and Its Control.

The chinchbug is busy again this summer in West Central and Central Missouri, collecting its annual dues from the farmers. Now is the time for the farmer to rebel; not a week or two later, but to-day. They have already sapped much of the wheat and rye of that region, and are now on foot, the old ones as well as the pesky "red-coats," moving into the corn fields. If they succeed in reaching the corn fields they will continue to lay waste to these and later give rise to a second regiment of young "red-coats," which in turn will continue to feed and mature by frosts, when they hide in rubbish, corn shocks and deep down in the clumps of grass in meadows, pastures and waste lands. Here they sleep until next spring, when they will reappear in even greater numbers than this year.

Now is the time to act! Throw up barriers in front of their line of march. Plow a strip ten or fifteen feet wide and thoroughly pulverize it to form a fine dust mulch. This serves as an excellent barrier, though it is well to run over this each day with a drag to make sure none cross. A deep furrow in which a log is dragged is also good. In case of rain, run a narrow line of tar or road oil as a barrier and trap them in post holes. By all means keep them from the corn. If they have already got into corn and are clustered on the first few rows, destroy them either by spraying with coal oil emulsion or soak cobs in oil, light them and use as a torch to flash up and down the stalks, thereby burning them. In severe cases it may be necessary to give up a portion of the field and establish a barrier some distance in front of them out in the field. Don't throw up your hands and give over the corn field to them without a struggle. Forget about the chinchbug disease, for it cannot help you unless the weather is favorable, and the spores of the disease are present by the millions in your field already waiting for warm, rainy weather. Then this fall co-operate in carrying out a systematic burning of all fields and waste lands where the bugs are collected for the winter. — Department of Entomology, University of Missouri.

The Best and Cheapest Spraying Mixture.

With so many spraying mixtures on the market, each loudly claiming to be the "best," it is a difficult matter for the average fruit grower to select the one which is best adapted for his particular needs. Many such mixtures really do more harm than good because, while they unquestionably kill the insect pests, they also sear and blight the buds and leaves. No such injurious effects as these are possible when a spraying mixture made of one can of Merry War Powdered Lye to fifteen gallons of water is used. Many of the most successful and practical fruit growers declare this to be the ideal spraying mixture.

It means instantaneous death to every form of insect pests, cannot injure the buds or foliage, no matter how freely it may be used, and has the additional advantage in that the drippings around the roots of the trees enrich the soil. This solution will prevent and destroy San Jose scale. This mixture is equally effective for fruit trees, or for garden vegetables, grapevines, etc. If the solution is made a little stronger, in the proportion of one can of Merry War Powdered Lye to about ten or twelve gallons of water, it makes a most effective exterminator of borers. For this purpose it should be applied plentifully around the mouths of the burrows with a brush, so that it will trickle down into the burrows.

Merry War Lye is manufactured by the E. Myers Lye Company, of St. Louis, who have just issued a most interesting booklet, telling of the many practical uses for Merry War Lye on the farm and in the home. A copy will be sent free to anyone writing the E. Myers Lye Company, Dept. 22, St. Louis, Mo., and asking for a copy of Merry War Lye Booklet.

PAINLESS CORN CURE.

To be applied a few times, when you can easily remove the corn. Sent by mail on receipt of 25 cents.

OTTO UDE, Pharmacist, Grand and Gravois, ST. LOUIS, MO.

The Boys' Magazine.

A special offer made by the Boys' Magazine, Smethport, Pa., is well worth reading by parents and guardians as well as by boys themselves. Read it at once and act quickly. See page 8.

The Sheep Market.

The early July market for mutton sheep and lambs was active. Several good loads of fat lambs, averaging 65 to 74 pounds, sold at $7.75 per 100 pounds. Other good lambs sold at $7.00 to $7.60; fair to medium grades went at $6.00 to $7.00; and the culls at $3.00 to $5.00. The favorite price for culls was $4.50 per 100 pounds. Most of the good sheep that sold to the killers brought $4.25 with a few a little higher, but those above $4.25 had had some yearlings in them. Fair grade killing sheep sold at $4.00. Good, thin sheep for stockers brought $2.85 to $3.50; fair grades, $2.00 to $2.75; cull sheep, $1.00 to $2.00; and bucks, $3.00 per 100 pounds.

A Good Lot of Steers.

Clay Bruce, a popular and well-known stockman of Pettis county, Missouri, was on the St. Louis market in charge of five loads of cattle. The consignment included four loads of 1,431-pound steers that sold for $9.00 per 100 pounds, the top of the market.

The Turkish Mohair Supply.

According to a report to the United States Department of Commerce and Labor by the Consul General at Constantinople, the Turkish mohair exports to the United States increased from $390,852, invoiced value in 1910, to $546,880 in the year 1911. In the United States the finest qualities of mohair are chiefly in demand; and the quality in 1911 was not extra, owing to inclement weather, which confined the flocks to their folds, resulting in stained hair. A fair clip of Turkish mohair amounts to about 60,000 bales, against an annual output of 120,000 bales of Cape mohair.

BLOODED STOCK.

John L. Bonnat & Sons, of Coulterville, Ill., in Randolph county, Southern Illinois, raise O. I. C. swine of superior quality and sell them at very reasonable prices, which are stated in the advertisement in our breeders' columns. They are situated at the junction of two railroads and have satisfactory shipping facilities.

Stewart Bros., of Willow Hill, Ill., advertising a pure-bred Clydesdale stallion and a black jack in our breeders' columns, are in Jasper county, Eastern Illinois, upon the junction of two railroads and not far from the Indiana line at Vincennes or Terre Haute. It will pay some of our readers to communicate with them.

At Manilla, Iowa, early in April, C. A. Saunders sold at auction forty-one head of pure-bred Shorthorns at an average of $314.80 per head. It was a very even sale, for the bulls averaged $311.00 and the females $316.15. The top-price bull was a calf, Cumberland's Dictator, which sold to Owens Bros., Homestead, Iowa, for $800; and the highest-priced female was Scottish Cumberland, calved October, 1909, bought by Thos. Stanton, of Wheaton, Ill., for $600.

Top-priced Heifers.

R. R. Hendrix, one of the prominent feeders and shippers of Audrain county, Missouri, had in a consignment of heifers that topped the St. Louis market, July 1st. The lot included forty-eight head, averaging 711 pounds, that sold for $8.10 per 100 pounds. Mr. Hendrix spoke of the feeding of these cattle as follows: "I had these heifers for seven months and put them on full feed the first of March. Their ration included cracked corn and blue grass, with plenty of fresh water."

Easy Way to Drive a Hog.

From long experience I have found the following to be the most satisfactory way to drive a hog, says C. W. Harris, in Farm and Home: Fasten a strap or a rope around one of Mr. Pig's hind legs just above the joint and have the end a yard or two long to admit of holding easily. Then proceed by letting the pig take the lead. When he goes in the right direction, just follow, remembering all the time to hold carefully the end of the rope. When the animal takes a wrong turn, just stop, and he will have to do the same. After one or two experiences of this kind he will readily keep on the right path.

St. Louis Apple Market.

At the time this edition went to press the St. Louis market for new apples was weak. Sound, large, hand-picked fruit well packed in barrels were in quiet demand; inferior fruit dull. First receipts by boat from Calhoun county—quality fine. Illinois in barrels at $2.00 to $2.25 for No. 2 and $3.00 to $3.50 for No. 1, and fancy Transparent at $3.50 to $4.35. Sales: Sixteen barrels fancy Transparent (Calhoun county) at $4.37; seven barrels No. 2 Southern Illinois Transparent at $2.00; three barrels No. 1 do. at $3.50; six barrels No. 2 Redstreak at $2.25; four barrels No. 1 do. at $3.75; two-thirds bushel boxes Illinois at 30 to 40 cents for windfalls to 75 cents to $1.00 for hand-picked; bushel boxes fancy Arkansas Transparent at $1.25 to $1.50; Tennessee hampers Red June, Benoni and Astrakan at 60 to 70 cents; home-grown boxed fruit selling at from 25 to 90 cents, according to quality.

Potatoes and Onions.

Potatoes.—Early July market at St. Louis: Sales loose from farmers' wagons ranging from 65 to 75 cents per bushel, mainly at 70 cents. Demand quiet for Triumphs, but receipts light—quotable at 65 to 70 cents per bushel, delivered, for fancy; small and inferior not wanted. Sales: One car sacked Triumphs at 70 cents, delivered; three loads sacks Triumphs at 60 to 70 cents, delivered.

Onions.—Dull. Home-grown red supplying the trade now, and there is little or no call for Texas onions—latter nearly all showing decay, too. Texas summer crates yellow and white delivered at 25 to 50 cents, according to quality and condition. Home-grown red sold at 40 cents per bushel box loose and at 50 to 57 cents per bushel by weight.

Evaporated Fruit in New York.

Early in July, at New York City, evaporated apples were quiet and unchanged on the spot jobbing trade; quotations range from 3¾ cents to fancy, which are quoted at 9¼ to 10¼ cents; choice, 8 to 9 cents; prime, 7½ to 7¾ cents. Prunes steady, with a small 9½ cents for Californias up to 30-40s, and 6½ to 9½ cents for Oregons. Apricots inactive, but steady in sympathy with the West; choice, 11½ to 12 cents; extra choice, 12 to 12½ cents; fancy, 13 to 14 cents. Peaches quiet and barely steady; choice, 6½ to 6¾ cents; extra choice, 7 to 7½ cents; fancy, 7½ to 9 cents. Raisins quiet but steady; loose muscatels, 5 to 6¾ cents; choice to fancy seeded, 5¾ to 6½ cents; seedless, 5 to 6½ cents; London layers, $1.40 to $1.45.

Watermelons and Cantaloupes.

Just at the opening of July the market at St. Louis for watermelons was not well settled. Included in sales were two loads 20-pound Texas Alabama sweet at 75 cents, and two loads do. at 65 cents per 100 pounds, delivered; and one car 24-pound Texas Alabama sweet sold at 95 cents, delivered. Quote: 24 to 30-pound Georgia Watsons at $1.00 to $1.25 and Texas Alabama sweets at 90 cents to $1.15 per 100 pounds, according to size; and car lots on track at from $175 to $250.

Cantaloupes.—Steady on sound, but lower on soft stock. California standard crates selling at $2.00 in jobbing way, delivered—soft selling at 90 cents to $1.25.

German Officers Angry.

An angry controversy is raging in German military circles about a remarkable entertainment given a few days ago at the "Landwehr officers'" Casino in the Hardenberg strasse. The Kaiser usually attends this entertainment, but this year, owing to the death of the Grand Duke of Luxemburg, he sent his son, Prince Eitel Friedrich.

The chief feature was a "champagne dance." An officer in uniform led in a "lady" and danced with her in a very lively ultra-modern style. The "lady" then disrobed on the stage and turned out to be one of the officers.

Prince Eited Friedrich applauded this entertainment, but some senior officers were highly indignant and complained that the Kaiser's uniform was degraded. They were all the angrier because several privates were present as ticket-takers, doorkeepers, etc., and these, for the first time in their lives, were seen laughing at the antics of their superiors.

S. R. FEIL, President—Registered Pharmacist

No More Losses from Worms!

I'll Feed Your Stock 60 Days Before You Pay

Worms are conquered at last! No more worm-infested, dying lambs and sheep; no more half-starved "boarders"—no more worm losses. I am wiping out the greatest curse of the whole sheep-raising business. I'll rid your flock of worms—prove it or no pay.

PRICES
40 lbs. $2.25, 100 lbs. $5, 200 lbs. $9, 300 lbs. $13.00, 500 lbs. $21.12. No shipment made of less than 40 lbs. Never sold in bulk; only in Trade-Marked Sal-Vet packages.

The Great Worm Destroyer **SAL-VET** The Great Live Stock Conditioner

TRADE MARK
REG. U.S. PAT. OFF.

is a wonderful medicated salt, which I will send you to try 60 days without a penny in advance. Put it where your sheep, lambs, hogs, in fact every animal on your place, can run to it freely and they will doctor themselves. Watch the results—pay if pleased. I take all the risk. Read my offer below.

Here's the Proof:

We keep Sal-Vet before our sheep all the time, both when at pasture and in the barn. The sheep like it, and we can truthfully say that our sheep are free from worms, although we have run sheep in our pastures quite thickly for the past fifteen years. HENRY L. WAINWEIL, Ex-Pres. of Amer. Shropshire Assn., Springfield Center, N. Y.

We find Sal-Vet an invaluable asset to successful sheep farming. Every sheep on our place is in healthy, thrifty condition. GEO. McKERROW & SONS, Pewaukee, Wis.

For their own good, I would recommend Sal-Vet to all sheep men. It will destroy every stomach worm in the flock and keep your sheep and lambs free from them. We have over 1,200 pedigreed Hampshire Downs, and every sheep is absolutely healthy. If our Southern sheep men, or sheep men anywhere, will give Sal-Vet a good, fair trial, they will say the same as I do. "Cannot be without sheep then Sal-Vet." ROBT. S. BLASTOCK, Mgr. Sheep Dept., Walnut Hall Stock Farm, Donerail, Ky.

WARNING!

Like all other good things, Sal-Vet is imitated closely in name. Such imitation is intended to deceive you. Look for the Sal-Vet name and trademark. Take no substitute if you want to be sure of best results at lowest cost. Sal-Vet is the one medicated salt used and endorsed by agricultural colleges and prominent breeders and feeders of live stock.

S. R. Feil, Pres., The S. R. FEIL CO.
Cleveland, Ohio

Send No Money—Just the Coupon

Fill out and mail me the coupon. Tell me how many head of sheep, hogs, horses and cattle you have. I'll send enough Sal-Vet to last all your stock 60 days. You simply pay the freight charge when it arrives and at the end of 60 days report results. If Sal-Vet does not do what I claim, if you are not pleased, I'll cancel the charge—you won't owe me a penny. Costs but one-twelfth of a cent per day for each sheep or hog.

SIDNEY R. FEIL, President THE S. R. FEIL COMPANY
Manufacturing Chemists Dept. NFSG CLEVELAND, OHIO

[86] Ship me enough Sal-Vet to last my stock 60 days. I will report results 60 days, and will then pay for it, if it does what you claim. If it does not, you are to cancel the charge.

Our Industrial Policy.

The National Farmer and Stock Grower is in favor of the United States collecting a reasonable range of customs duties upon all foreign farm products and all foreign manufactured goods admitted into the United States from foreign countries, said duties to be applied to the support of the national government. By this policy fully one-half the money required for the support of the national government should be collected at the custom houses besides furnishing the farmer and manuafcturer the very moderate amount of protection to which they are entitled. We are opposed to the admission of foreign farm products free of duty, because admission of such products duty free always leads to the advantage of the foreign merchant and speculator and causing increased burdens to be imposed upon our own people.

Taking the duty off hides has been entirely in the interest of foreign countries and to the detriment of our own people; admitting coffee duty free enabled the formation of a South American combination that has raised the price three for one, and every time goods are placed on the free list there is the same result. With moderate import duties received by the United States on various products as now collected the total is over three hundreds of millions of dollars a year, and if not collected that way will have to be collected by direct taxes upon our own productions. The admission of foreign goods free of duty results in higher prices to the American consumer and higher taxation also to make up the necessary revenues.

Every farmer in the United States is taxed by his county and by the state; he also pays a share of the taxes collected in various ways for the support of the federal government. We believe that in return for his support in tax money and in time of necessity for his personal service the American citizen is entitled to preference in his home market for his own productions from the laws of the government he supports. We believe that the advantages of our own markets belong to the citizens of the United States, and that all foreign farm productions should pay a duty at the front door as the goods are admitted. By collecting these customs duties the United States government receives part of the income that is necessary for the public service. In times of scarcity, caused by drouth or other unavoidable influences, the foreign farm productions can come in under light duties on a fair basis, and in times of abundance the country thrives better without them.

We believe the farmer as a producer outranks all other people; the manufacturer is next; but without the farmer's products the manufacturer would have to shut his doors. Legislation against the farming interest is the height of folly, and special discrimination against the farmer is a political crime. It will cause more poverty in the cities than most people imagine. The non-producing, so-called consumers in cities will be the first to find it out and the greatest sufferers.

Plows in Southern England.

The two plow factories of this district turn out about 1,500 plows annually, which are sold all over England. One of the concerns makes large sales of plows and other agricultural machinery to Argentina.

The only foreign country selling plows in this district is the United States. A large number of American plows are shipped into Devon and Cornwall. The American firms send representatives to call on the local buyers and establish agencies. No business of any importance can be secured by correspondence alone.

The plow most in demand in this district is the reversible or one-way plow, turning a furrow to either right or left by reversing. The plow, including handles, is all iron and retails for £9 ($43.80). Manufacturers allow wholesale dealers a profit of 25 to 30 per cent.—This is from the report by United States Consul John J. Stephens, of Plymouth, England, to the United States Bureau of Commerce and Labor.

A Page to Look Up.

Be sure to look up page 22 and read about the magnificent Book of Live Stock Champions, which is just issued from the bindery.

Large clips of wool have been sold at Miles City, Montana, at 19½ and 20 cents a pound.

THE BOOK OF LIVE STOCK CHAMPIONS.

Edition of 1912.

Now Ready For Delivery.

True to Life Pictures Reproduced From Photographs Taken in the Principal Show Rings of the American Continent by the Greatest Animal Artists.

ONE THOUSAND CHAMPIONS,

Winners in Annual Live Stock Contests at State and National Fairs and Expositions.

THIS is a new edition of the most valuable book ever published in the interest of high-class stock raising. The pictures in The Book of Live Stock Champions are of famous animals. There are sweepstakes and championship winners at State, National and International Fairs and Expositions. These include individual awards in breeders' competitions, also herds with prize-ring honors; the beef cattle include grand champion steers and car-loads; the dairy cattle include record makers and large producers of milk and butter; the horses include thoroughbred, trotting, coach, draft, hunters, ponies, jack stock, etc. Hogs, sheep and goats are represented by the best in every breed. The book is elegantly bound in blue cloth, 352 pages, with nearly 750 separate and distinct illustrations, one, two, five or more champions to the page.

There is not a second-class animal or inferior picture in the book. Every animal is a record-maker, record-breaker, famous sire, mother of champions, or winner in the prize ring.

Issued as a Souvenir Supplement.

The Book of Live Stock Champions is published as a Souvenir Supplement to The National Farmer and Stock Grower, issued monthly at St. Louis, Mo., a splendid, clean, general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. There are thirty-two pages, four columns to the page.

Special Inducements

To Paid-in-Advance Subscribers--To Old Friends and Patrons.

We offer the first ten thousand copies of this edition at One Dollar per copy, including a two-year subscription to The National Farmer and Stock Grower. The first ten thousand copies are handsomely printed on coated paper and elegantly bound in blue cloth, with gilt title.

This is An Extraordinary Offer.

Here is a Subscription Blank.

HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.:

STOMACH SUFFERERS

Avoid Dangerous Operations.

Free $1.00 Bottle

Don't allow your Stomach Trouble to become so bad that an operation is necessary. Don't permit an operation until you have at least tried this FREE Bottle.

Let Me Send You a of My Wonderful STOMACH REMEDY

and I want everyone suffering from **Stomach, Liver or Intestinal Troubles** and **Gall Stones** to send at once for a **Free Bottle.**

It is a marvelous remedy for

Stomach, Liver and Intestinal Trouble, Gastritis, Indigestion, Dyspepsia, Pressure of Gas Around the Heart, Sour Stomach, Distress after eating, Nervousness, Dizziness, Fainting Spells, Constipation, Congested and Torpid Liver, Yellow Jaundice, Sick Headache, Appendicitis and Gall Stones.

The above ailments are mainly caused by the clogging of the intestinal tract with **mucoid** and **catarrhal accretions,** backing up poisonous fluids into the stomach, and otherwise deranging the digestive system. I want every sufferer of any of these diseases to test this wonderful treatment. **You are not asked to take this treatment for a week or two** before you feel its great benefits—**only one dose is usually required.** I say emphatically it is a positive, permanent remedy and I will prove it to you if you will allow me to, and I again repeat I will send the complete $1.00 treatment to you absolutely **Free** so you can try it in our own home at my expense.

The most eminent specialists declare that a big per cent. of the people who suffer from **Stomach Trouble** are suffering from **Gall Stones.** I firmly believe that this remedy is the only one in the world that will cure this disease. Sufferers of **Stomach** and **Liver troubles** and **Gall Stones** should not hesitate a moment, but send for this **Free** treatment **at once.**

I have watched sick people for years and have reached out my hands to thousands in the great depth of the Valley of Despair and brought them into the light of life and happiness. I want you and each one suffering to know the full joys of living with every part of your system in beautiful accord and in absolute perfect harmony. This is possible if you will take this wonderful remedy. **A FREE BOTTLE** will positively prove it.

Don't Lose Hope

Why suffer with stomach trouble? Why give up hope—and despair of ever being cured? If other treatments have failed and you feel disheartened, don't allow it to discourage you from sending for this **Free** bottle. Don't say to yourself that it will not help you, before you have tried it, as it costs you nothing to take this wonderful remedy and judge for yourself its marvelous powers. You will, like the thousands of others who have been cured, bless the hour and offer fervent thanks for this wonderful remedy that has brought back your health.

Why suffer with those horrid griping pains that cut like a knife? They rob you of all the sweets of happiness. Each morning means another day of torture and agony; each meal is looked forward to with pain. No matter what you eat, you suffer. Life is one continual round of "Don't eat this and don't eat that." You can't sit down to a table spread with necessities of life and know that you are going to enjoy them; that they are going to be turned into rich, red blood and strength which will give you vitality, health and happiness.

Almost every one who takes it declares that they have not felt so well in years **since they have taken the first bottle, and this benefit is an entirely natural one, as the remedy contains no opiate, stimulant or any poisonous or injurious ingredients whatever.** They are able to eat anything they want—even forget they have such a thing as a stomach. No more of the gnawing, aching dull sensations, no more paroxysms of pain, belching of gases, and other symptoms of indigestion that stomach trouble produces.

Don't suffer all this pain; don't dose yourself with every medicine and try every treatment when Mayr's Wonderful Stomach Remedy, which has cured and made thousands and thousands of sufferers happy, is offered to you. Mayr's Wonderful Stomach Remedy is absolutely pure and harmless. It is guaranteed under the Pure Food and Drug Act—Serial No. 25792. This medicine has been successfully taken by children of nine years of age, and by old people of eighty-eight years and will not harm you in any way.

Below we show an exact Photograph—actual size of Poisonous Catarrhal Mucoid and Bile Accretions removed by my remedy. They are the causes of about 99% of all Stomach, Liver and Intestinal Ailments.

A Few Names of People who have taken My Wonderful Stomach Remedy—and who state they have been CURED of various Stomach, Liver and Intestinal Ailments and Gall Stones.

WHAT A PROMINENT PHYSICIAN HAS TO SAY OF MY WONDERFUL STOMACH REMEDY.

Sept. 12th, 1911.

Mr. Geo. H. Mayr, Chicago, Ill.

Dear Sir:—My wife received your letter and treatment a few days ago. She took the medicines as per directions Saturday with wonderful results, as she passed a large quantity of gall stones of various sizes. I will send you a money order herewith for balance of treatment. Have recommended you to several that I know need your treatment. I have practiced medicine 20 years and have used Olive Oil treatments for a long time for my wife, and I can assure you that your combination greatly surprised me. You shall hear from me again soon.

Yours gratefully,
ERNEST VINCENT, M. D.

WHAT A TRAINED NURSE HAS TO SAY.

Aug. 24th, 1911.

Mr. Geo. H. Mayr, Chicago, Ill.

Dear Sir:—To begin with I am a trained nurse and I had two patients that the doctors seemed unable to reach with their medicines and were trying to persuade the patient to submit to the knife. A friend who has tried your Wonderful medicine proposed that I recommend it to my patient, so I did. They agreed to try the medicine if I would try the sample on myself. To please my patients was why I sent for the sample. I know that your medicine is wonderful because it has cured Mrs. Clark Fitzsimmons of Orofino, Idaho and Mrs. Charley Frear of the same place. I am very glad that I was able to recommend your medicine to them.

LINNETTE HAVEL, Trained Nurse,
Box 284, Orofino, Idaho.

CURED AFTER FIVE YEARS SICKNESS.

Mr. George H. Mayr, Chicago, Ill.

I am pleased to inform you that I ordered a full treatment the latter part of March. It cured me after a five years spell of sickness. I ordered a free bottle for a neighbor. Now I must tell you it is through me you are getting so many orders from Willard and Yelton Post Offices. I sojourned through Eastern Colorado and sang your praises and left your address wherever I went. I have not written you at an earlier date as I have just waited to see if I stayed cured before I let you know. Your remedy is surely a wonder. The Doctors told me I had appendicitis and would soon die if I were not operated on, I was lying in bed about all the time with misery most of the time for five years. I took treatment during March, have been busy ever since. It is the only medicine that hit the sore spot.—L. C. MOREHEAD, Willard, Oklahoma.

Doctor Said Cancer of the Stomach

July 22, 1911.

Mr. Geo. H. Mayr, Chicago, Ill.

Dear Sir:—I write you this morning that I took my last drop of medicine yesterday morning and am now free from gall stones. It has made a new man of me. Sleep well, eat what I want and feel fine. No soreness left but I have some large boils. I think it drove them out. The Doctors said I had cancer of the stomach, and nothing would do but to be operated on, but they were mistaken. I have spent lots of money before and only got temporary relief, but I assure you I feel all right now. Passed about 400 gall stones.

Yours truly, WM. CAMPBELL,
Denver, Missouri

More Benefit Than From a $100 Treatment

May 31, 1910.

Mr. Geo. H. Mayr, Chicago, Ill.

I rec'd the treatment you sent and can truthfully say I got more benefit from it than from a hundred dollar treatment I took last winter.

Very Respectfully,
Miss F. A. HARNESS,
1020 Pacific Ave., Bremerton, Wash.

Fill out this FREE coupon now and mail to me. The full $1.00 bottle will be sent you without delay. Send no money—your name and address on the coupon is all—

MAIL IT TODAY—WRITE PLAINLY.

My last word to you—Don't permit a dangerous operation. Not until you have tried this **FREE BOTTLE.** I care not how long you have suffered or how severe your case may be, I am confident my wonderful and harmless remedy will entirely and quickly restore you to perfect health without any ill effect. It has saved thousands from operations. It should you. I believe that eighty per cent. of the operations are unnecessary and the knife could be avoided if the proper method of treatment was administered. Quite often sufferers of Stomach and Intestinal ailments or Gall Stones are told they have cancer of the stomach and other rare diseases.

GEO. H. MAYR, Mfg. Chemist,
341 Mayr Bldg., 156 Whiting Street, Chicago, Ill.

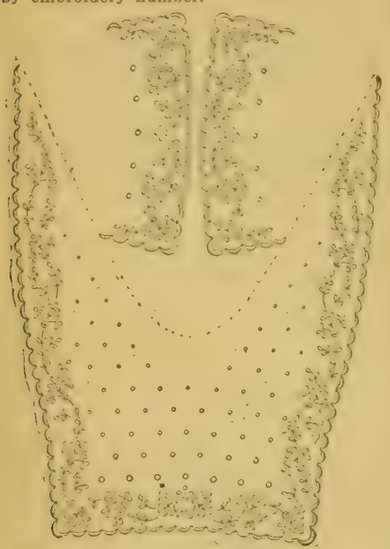
You are not asked to take this treatment for a week or two before you feel its great benefits. One dose is all that is necessary to prove its wonderful powers to CURE.

MAY MANTON EMBROIDERY.

These paper patterns require only a hot iron to insure a perfect transfer on cloth. The way to do it is to lay the material to be stamped on a padded ironing board or table, place the pattern over it with the printed side down, and press over the entire surface of the paper with a hot iron, when a perfect outline will result. Please order by embroidery number.



Sailor Collar and Cuffs.

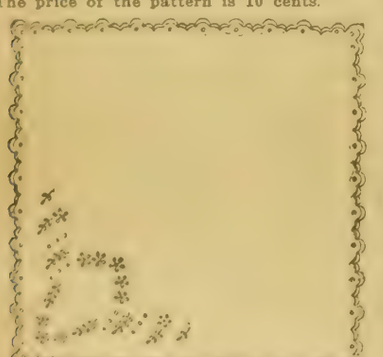
No. 662.—Design for embroidering a sailor collar and rolled-over cuffs, including the outline of collar and cuffs. The price of the pattern is 10 cents.

Infant's Dress Yoke.

No. 661.—Design for embroidering the yoke and panel of an infant's dress. The price of the pattern is 10 cents.

For a Candle Shade.

No. 663.—Design for an embroidered candle shade. Four transfers are given. The price of the pattern is 10 cents.



A Splendid Handkerchief.

No. 664.—Design for an embroidered handkerchief ten inches square. The price of the pattern is 10 cents.

Scalloped Edge Alone.

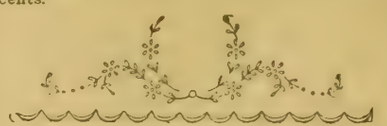
No. 665.—Design for embroidering a scalloped edge. The scallops are three quarters of an inch in width and three-eighths of an inch in length. Four yards and four corners are given. The price of the pattern is 10 cents.

Girl's Summer Hat.

No. 660.—Design for embroidering a girl's hat. Especially adapted to May Manton's Pattern No. 7438. The price of the pattern is 10 cents.

Edging and Dots.

No. 659.—Design for a scalloped edge with dots. The scallops are one and one-quarter inches wide and three-quarters of an inch deep. Four yards and four corners are given. The price of the pattern is 10 cents.



Towel Embroidery.

No. 658.—Design for embroidering a towel fifteen inches in width. The price of the pattern is 10 cents.

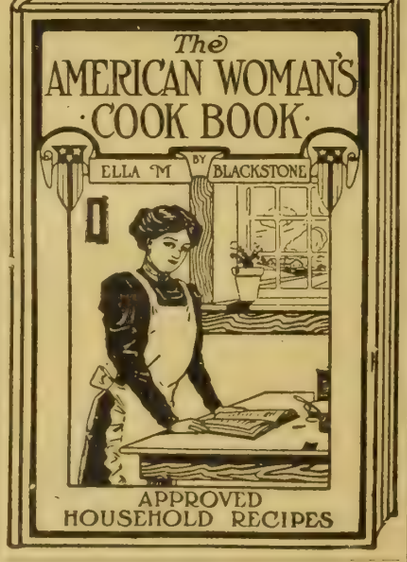
Please send all orders for these embroidery patterns by number to the **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

THE BEST COOK BOOK.

The American Woman's Cook Book.

This is a splendidly-bound book that weighs nearly two pounds. There are three hundred and eighty-four pages of approved household recipes, including many excellent dishes never before presented in a Cook Book.

The American Woman's Cook Book is by Ella M. Blackstone, who is famous for clearing the road for the student of domestic science by giving the reasons for everything. It is easy to learn from her when everything having a bearing on the subject is explained so clearly.



The book includes chapters devoted to foods for each month; time required to digest different articles of food; menus for all occasions; table etiquette; kitchen don'ts; kitchen equipment, and useful hints and recipes for the home in general; specially-drawn articles upon various subjects, such as soups, fish, poultry, beef, veal, mutton, pork, salads, vegetables, and all classes of dishes, besides beverages, candies, pickles and preserves, ice creams and ices; also ruled pages for new recipes to be preserved.

The thorough alphabetical index is a wonderful help to all subjects. A good book is known by its index, which in this case is eighteen pages, three columns to the page.

The publisher's price for single copies of the American Woman's Cook Book is $1.50 per copy and 15 cents postage, but we have contracted for such a large number we have obtained the benefit of a reduced rate. Therefore we will send one copy of the American Woman's Cook Book, postage paid, for One Dollar and include one-year's subscription to The National Farmer and Stock Grower. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

The Army and Navy Needle Book.

A TEN-CENT PROPOSITION WORTH TEN TIMES AS MUCH. The Army and Navy Needle Book contains five packages of Peerless Steel Needles, warranted; sizes, 3 to 9, 5 to 10, 6 to 7. There is no needle in the market better. There is also an assortment of fifteen other cloth-stuck needles, such as darners, mending needles, stitching needles, crewel needles, glove needles, straw-working needles, worsted needles, etc. The book as a whole cannot be beat. We have adopted the Army and Navy Needle Book as a subscription premium with the **Universal Magazine**, our own publication. It is a thirty-two-page, three-column illustrated monthly magazine. It contains interesting reading, stories, poetry, history, and useful information, fashions, patterns, etc. It is a magazine that recommends itself. Send us 10 cents in silver and we will send you the **Universal Magazine** on a trial subscription for three months, and we will send you one Army and Navy Needle Book. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo. TO CLUB RAISERS:**—Anyone who will get up a club of four subscriptions to the **Universal Magazine** in accordance with this advertisement will be credited with an extra three-months' subscription to the **Universal Magazine** and an extra package of needles will be sent for getting up the club. Don't wait. Remember, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Queer Bank Note.

The most inconvenient design for a bank note was undoubtedly George Cruickshank's "Bank Note Not to Be Imitated," published in 1818. It was inspired by the sight of several women dangling from the gallows for uttering forged £ notes. The design included a lavish arrangement of fetters and suspended figures, and there was such a demand for copies that Cruikshank had to sit up all night to etch a duplicate plate. He had the satisfaction also of knowing that no man or woman was ever after hanged for the offense, for his plate led to an act that put a stop to the punishment by death for forgery. —London Chronicle.

Rapid Journey For That Age.

Cardinal Wolsey did not live in an age of rapid transit, but he created it for himself. His capacity for rapid travel was a valuable aid in carving out a career. Wolsey is said to have first won royal favor in this way. He was charged with a message from Henry VII. to the Emperor Maximilian in the low countries and left London in the afternoon. He went by boat to Gravesend, by horse to Dover, then by boat again to Calais, and he was with the emperor the following evening and back to the king in just over two days from the time of starting.

Trusses Like These Are A Crime

Our FREE BOOK tells you why Leg-strap "appliances" and Spring trusses like shown above CANNOT help you and how the famous Cluthe Self-Massaging Pad CURES Rupture. **Sent on 60 Days' Trial** to prove its wonderful holding and curing powers. Universal Magazine Bracelet.

The Gas-vapor Gun.

The bulletless gun has at last made its appearance. It is a German invention, and, instead of bullets, it shoots a gas which temporarily blinds and chokes the victim, says the Cleveland Plain Dealer.

The cartridge used contains several ingredients, which, when exploded, combine to form a vapor of a peculiar character. The gun itself differs very little in appearance and mechanism from the ordinary double-action revolver. It holds five cartridges.

The action of the vapor may best be imagined by considering the position of the person shot at. The appearance of the weapon, the report and the flare of the powder combine to convince the victim that he has been shot at with an ordinary firearm. His eyes and mouth open in surprise, and the gases generated by the combination of the chemicals envelop his head completely, penetrating his eyes and affecting his sight.

For several minutes he is practically blind. Simultaneously the mucous membranes of the nose and throat are irritated and the victim sneezes and chokes. For a minute or two the victim finds it almost impossible to breathe.

It is obvious that no indivdual, even if he were as strong as Hercules, would be in a position to put up much of a fight while in such a condition.

The shotless gun is intended principally for the protection of tourists, commercial travelers, doctors, cyclists, automobilists, bank officials, mail carriers, watchmen and policemen. No one wants to kill a criminal unless it is absolutely necessary for one's own preservation, and this invention is intended to make such a course unnecessary.

Pursued by Redskins.

One day while the late Senator Hearst, father of William Randolph Hearst, the publisher, was a young man and yet had his fortune to make, he and a few companions were on a prospecting tour. Along in the afternoon they sighted a band of Indians, and as in those days all Indians were hostile, Mr. Hearst and his friends naturally wanted to get away from there. All the prospectors except the future Senator were mounted on horses. Mr. Hearst was on a retired army mule and soon found himself in the rear.

The Indians were on his trail and things began to look serious when he called out to his rapidly-disappearing companions: "Hold on, boys; there's only a few of them—we needn't be afraid."

Just then the mule scented the approaching Indians and with a wild snort started out with a gait that soon left the horsemen far behind. When Hearst was about a quarter of a mile in advance, he turned in his saddle and yelled at the top of his voice:

"Hurry up, boys; you'll get scalped. There's more than a hundred of them."—Kansas City Journal.

The Apprehension.

"What is your objection to me as a son-in-law?" asked Baron Fucash.

"Well," replied Mr. Cumrox, "I haven't any objection to you as a son-in-law, excep' that I'm afraid you wouldn't be real kind of sociable and considerate in your treatment of us folks as your father and mother-in-law."—Washington Star.

Bright Definition.

A teacher asked a boy the difference between an island and a peninsula. The boy replied: "Take a glass of water and a glass of milk. Catch a fly and put it in the water; it will be an island, because it is entirely surrounded by water. Put it in the milk and it will be a peninsula, because it is nearly surrounded by water."

When Women Talk.

"So she was led to the altar at last?" remarked the girl in blue.

"Led!" repeated the bride's dearest friend. "Led! I fancy you didn't see her. She didn't have to be led. When she started down the aisle you couldn't have driven her off with a regiment of cavalry."

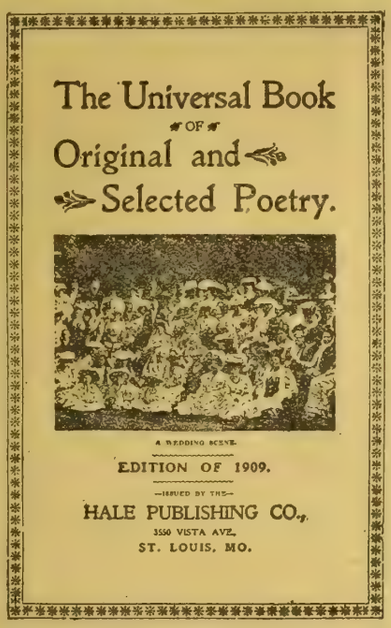
Not Hollering Now.

Church—"What's become of that fellow who started in business and who was continually hollering that he was in business to stay?"

Gotham—"Oh, the sheriff shut him up."

Some land bargains on page 9.

The Universal Magazine



and the Universal Poetry Book.

TWO EXCELLENT PUBLICATIONS.

The Universal Poetry Book

CONSISTS of One Hundred Pages, containing three hundred and ninety beautiful, interesting, pathetic, descriptive, humorous and delightful poems. These poems have been selected from the very best of the ancient and modern authors and the occasional pieces which have attracted favorable attention. It is a book to be kept by the bedside to compose one to sleep, a book to carry in the satchel or to read on the train and street car. It is a book for all people at all times. We issued the UNIVERSAL POETRY BOOK for the purpose of using it as a subscription premium in connection with our own new successful paper, the UNIVERSAL MAGAZINE.

THE UNIVERSAL MAGAZINE

is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, patterns, fashions and poetry—a splendid publication. One thing about the UNIVERSAL MAGAZINE is, that it is not loaded down with advertisements. Notwithstanding it is a cheap magazine, the subscription price being 25 cents a year, it is supported by subscriptions alone.

A TEN-CENT PROPOSITION.

Anyone who will send 10 cents to pay for four-months' trial subscription to the UNIVERSAL MAGAZINE can select one copy of the UNIVERSAL POETRY BOOK as a free premium, and we will send it by mail, prepaid, safe delivery in good order guaranteed. Below will be found two subscription blanks for two subscribers.

Here is a Subscription Blank.

HALE PUBLISHING CO., 3550 Vista Ave., St.Louis, Mo.:

Gentlemen:---Herewith please find Ten Cents to pay for four-months' subscription to the Universal Magazine, for which please give me credit. You will please send me as a Souvenir Supplement, post free, safe delivery guaranteed, one copy of the Universal Book of Original and Selected Poetry.

Tomatoes.

There are intelligent people who in all seriousness refuse to allow a tomato to be grown in their gardens, owing to the belief that it breeds cancer. The notion is an absurd one, and the tomato is a wholesome relish, containing medicinal properties claimed to be efficient for indigestion and liver troubles. Its mildly acid flavor is refreshing in hot weather, and the multitude of combinations with other food, either in soups, salads or relishes of various sorts, renders it a great help to the housewife, especially when called upon to prepare a hurry-up meal, while its beautiful appearance adds much, in the fresh state, to the appearance of the table.

Some who will never touch a ripe tomato find the green ones delicious when sliced, rolled in flour or bread crumbs and fried, either with or without an egg dressing. Season with salt and pepper, and they in a measure supply the place of meat or are good in combination with it.

Another excellent way to use the green tomatoes is this: Pare and slice three or four well-grown green tomatoes and one small onion. Cook until soft in just enough water to prevent scorching. Just before ready to serve, add a slice or two of bread broken into small pieces; butter, pepper and salt to taste. We have known some who dated their liking for tomatoes from a trial of this way.

Plain sauce made from ripe tomatoes usually wears well with those fond of the vegetable. Remove the skins, slice and cook for a very few minutes in a little water, and then add salt, a little sugar and serve alone or with bread or macaroni added, and a little butter.

Many complain that they cannot can tomatoes and have them keep if ordinary glass cans are used. Personally, we have had little trouble in this way, but are always careful to use cans that are perfect and new rubbers. Perhaps it is only a notion, but we fancy that the vegetable keeps better when pared than if the skins are removed by scalding. Of course, this means more waste, but with us it means better results. And with a sharp knife one can pare the firm fruit quite close to the skin, while that which is not firm has no place with the canner. Use only fruit that is in good condition. If an apple has a decayed spot, it can be removed; but the way to remove the decayed spot from the tomato is to remove the tomato. It is almost impossible for a part to be infected and not injure the entire fruit.

Slice and cook in just water enough to prevent scorching. As the tomatoes heat through they will soon furnish an abundance of juice of their own. Cook until scalded through. In some instances this occurs while the vegetable is still largely in its original form, or it may go to pieces. Add a little salt if you prefer. Have ready Mason cans and fill them while the tomatoes are still boiling hot. Seal at once. Keep the tomatoes in a cool, dark and dry place. If light comes in, wrap each can in dark-colored paper.

If tin cans are used, two rules must be observed: The inside of each can must be closely examined, for if a bit of tin is missing it means poison; the contents of the can must be entirely removed as soon as the can is opened, for corrosion of the tin commences the moment the outside air enters. If the cans are of good material and well cared for they will last two, three or even more seasons. But there are some frauds on the market, and experience will soon detect the shams. Use the red stick sealing wax, which is more easily managed than the old rosin-beeswax way. If you have the cans with tightly-fitting covers, such as molasses and some other products come in, these may be rendered first-class for canning tomatoes by filling in the space between the can and cover with wax.

If a can is found to be a bit "off" in flavor, discard it. There is too much danger of poison to court any chance of harm. Console yourself with the thought that no sugar is wasted, only the fruit and time, and try again.—Bessie L. Putnam.

Among the Chicks.

Trying to raise a thousand chicks without an incubator is the aim of one young girl of my acquaintance. Of course, this is by no means an impossible feat. But it looks like quite an undertaking to those at all familiar with the machine work. It will require so many hen mothers to do the work, and they will require so much feed, all of which she is obliged to buy, that it is scarcely possible to avoid questioning the wisdom of the plan. However. it is all right to try. If she should fall two or three hundred short, she will still have enough to be able to invest a part of the profits in an incubator next year, and then raise her chicks earlier, in more even lots, and in the shortest possible space of time.

The orchard is a fine place in which to raise young chickens. The shade is agreeable to them in hot days, yet they can wander out into enough sunshine to keep them healthy and still be within easy range of the hen or brooder. Insect life is usually plentiful, and the orchard is the better for the thinning out of winged pests. There is grass in plenty. And the habit acquired of scratching and picking about is a benefit to the trees in more ways than one.

If your chicks are yarded on small range, cut out every dandelion top that comes upon the lawn and see how they will scramble to get the feast. This plan not only tends to grow healthy chicks, but it also solves a weed problem that is in many places quite a serious one.

If the chicks vary materially in size and age, keep the different flocks separate at feeding time. The cannibalistic nature is never so apparent on the farm as in the poultry yard. It sometimes seems as if the larger fowls take delight in trampling down the smaller ones if they cannot eat fast enough to monopolize the food.

Two different breeds of fowls are quite enough for any but the fancier to handle, and to us it seems that one breed is best. In any business, the more you can cut out details the better, and the single breed with a definite aim will most surely bring results.

Sweet milk is excellent for young chicks, and the clabbered milk is equally good for the larger fowls. But beware of foul dishes, for if not kept clean there is danger of their breeding disease among the flock.

The wheel hoe is a most useful tool in the poultry yard. Alternate between two plots of ground, sowing rye or oats for green feed, allowing them access to the one while the other is being renewed. Or by running through a small piece of the yard with the weed-cutting attachment you may slice off a thin layer of earth, giving the chicks nice mellow ground in which to scratch or dust.

As soon as they are able to eat it, wheat makes a fine evening meal for the little chicks as well as for the laying hens. But do not think that screenings at half price makes a cheaper food than the good grain. The outside hull may be a little smaller than that of the well-filled grain, but it is the meat that is lacking. You pay more for an inferior food because so small a proportion is of any value.

Renew the drinking water several times a day. Note how eagerly the flock gather around the fountain, preferring the water even to food. The chicks are just as thirsty as we in warm weather, and the cool drink aids greatly to their comfort. Keep the drinking fountain in the shade, if possible.

A good insect powder is one of the necessities of the poultry yard. If it does not make you want to sneeze, suspect that it is too ancient to be of use. Clean and air the brooders or coops two or three times a week. Sunshine and cleanliness will do much toward keeping them in health. Bran, sand, chaff or sawdust make a good litter for the floor, but be sure that it is dry. Dampness is always dangerous.—Bessie L. Putnam.

In the Pantry.

First, an ounce of prevention is worth a pound of cure, and one can usually rid the pantry of all kinds of insects if common cleanliness is used and a little time expended upon their extermination, and the waste, inconvenience and sickness caused by insect pests in the household exceeds by many times the expense and trouble of their elimination.

It is well to put all small groceries in tin boxes or empty glass jars, as their strength is preserved in addition to keeping out weevils, roaches, mice, etc., for no matter how careful a housekeeper may be in keeping her cupboards and pantry shelves clean, insects of some kind will occasionally make their appearance. The housekeeper can save time and strength by covering the pantry shelves with white or marbled enamel oil cloth neatly tacked in position, as one can take a damp cloth and wipe off the shelves every few days and keep them looking dainty with very little trouble.

Some are not aware of the danger there is in leaving meat, vegetables or fruit in tin cans or tinware over night. Tin cans should be emptied as soon as opened, for the poison generated from allowing them to stand has many times resulted in sickness or death.

Cockroaches, water bugs and so on only stay where they are well fed, and moisture and food must not be supplied if their elimination is hoped for. When they occur in numbers, the damage done by eating is scarcely so great as that done by the spoiling of whatever they come in contact with.

To get rid of ants, take some bits of coarse sponge, sprinkle sugar in the cavities and place them where the ants are most numerous, and when the sponges are full of ants they can be picked up, dropped into hot water and dried, then they can be refilled with sugar for use again. Another discouragement is to saturate small bits of linen with oil of tansy and lay them in the pantry and all places infested by ants.

There is nothing better to keep black ants out of the pantry than a mixture of equal parts of powdered borax and ground red pepper sprinkled where they run and around the edges of the covering of the shelves.

To keep roaches out of the pantry, wash the floor at least once a week with gasoline and water, about equal proportions, letting it run into every crack and crevice, and when perfectly dry sprinkle the boraxe mixture around freely. The odor of the gasoline soon passes off and freedom from insects is assured. Wash the pantry shelves with strong borax water and allow it to dry before using the dry powder, and while borax is harmless to human beings and also to domestic animals, it is dreaded by insects, and to have deadly poisons about one's house is to invite accidents.—M. H.

It is Sanitary, It is all Glass!

There are *four* good things about this fruit jar—the easy seal, the glass cap, the green tint and the big mouth. It takes most fruit *whole*.

It is *all glass*—that's another good thing. The "tin age" is past. No tin about this jar—no metal. Even the *cap* is glass—no twisting—nothing to taint the fruit. This season try

E-Z SEAL JARS

You can preserve all kinds of vegetables as well a fruit, and be sure they will "*keep*" in E-Z Seal Jars. Get our Free Book.

This jar is the housewife's *joy*—easy to fill, easy to close, easy to open and easy to clean. It is air-proof and light-proof—the jar that is *sanitary*.

Free Jar—Free Book

Cut out this coupon, take it to your grocer — he will give you one E-Z Seal Jar — FREE. Be sure and write for FREE Book of Recipes — it tells many things you should know. Get the jar from the *grocer*. Get the Book from *us*.

HAZEL-ATLAS GLASS COMPANY
Wheeling, W. Va.

1-Qt. E-Z Seal Jar CG FREE for the Coupon

Please note—in order to secure free jar this *coupon must* be presented to your dealer before Sept. 1st, 1912, with blank spaces properly filled out.

HAZEL-ATLAS GLASS CO.,
Wheeling, W. Va.

This is to certify, That I have this day received one "Atlas" E-Z Seal Jar Free of all cost and without any obligation on my part. This is the first coupon presented by any member of my family.

THE SMITH FAMILY DOWN THE ROAD.

A Trip to Town With the Neighbor Woman Brings Another Revelation.

It was on the trip to town with the neighbor woman, one bright September morning, that another inspiration came to Mrs. Smith. Mrs. Smith had shyly asked the neighbor woman whether she could ride to town with her and have her help in selecting a winter coat, to be bought with some of the extra money earned that summer helping with the strawberries.

"First let me take these two crates of eggs to the depot," said the neighbor woman as they neared the town. "I wish to get them off on the next train, so they will get to their destination to-morrow morning. I don't fancy the idea of having my eggs stand around in a hot depot over night if I can help it. Then after they are out of the way we can give all of our time to your shopping."

"What are you sending eggs away for? Can't you trade them?" asked Mrs. Smith.

"I could if I would, but I won't, if I can dispose of them at city prices and get cash for them. If I were to take these to the store I'd get at the rate of thirteen cents a dozen for them and have to take that out in trade, which often I do not care for. I will get eighteen cents a dozen for these. There are twelve dozen in each case, which makes a profit of $1.20 over the amount I would get at the store in trade. It comes to me in a check or a postal money order. In a couple of days I will probably get an order for $4.32. The consumer pays express on the eggs and pays the express for the return of the empty crate."

"Land!" gasped Mrs. Smith. "That's the one thing I can do, get hens to lay, but I've always traded off the eggs and taken whatever the storekeeper wanted to give me for them. And to think there's a way of getting good money for them. But who could I send mine to?"

"I can give you the name of a hotel that I was afraid I might have to disappoint, as I have had so many calls lately. I got my first customers by advertising in a city paper. You can do the same for seventy-five cents, and if your results are anything like mine and you are careful about supplying the best and freshest eggs, you can work up a good, permanent trade."

"If I could get the coat for ten dollars I could send in the advertisement right away, if you'd show me how to write it; but I've only got eleven dollars."

"Yes, and you'll have to order several crates in which to ship them. We'll get this started right away while we are in town, Mrs. Smith, and if you run short of money, I can help you out to the extent of a couple of dollars. I am sure if you follow out this plan you will soon begin to get money for your eggs. There's money for us women on the farm, but we have to do our share to get it out."

Mrs. Smith was so consumed with interest at the prospect of finding a money market for the eggs that she almost forgot about her coat; but after the neighbor woman had attended to the shipment of the two cases of eggs, and Mrs. Smith had ordered three new cases for herself, and with the neighbor woman's help had written and sent the advertisment, the ten dollars left in her usually empty purse reminded Mrs. Smith of the errand that had brought her to town. Before repairing to the coat department of the little village store, let us peep at that advertisement.

> "Eggs fresh from the farm to your table within three days of the receipt of your order, at market prices. Consumer pays express. Twelve or sixteen dozen in case. Address..."

Women readers will desire to stop in the store with Mrs. Smith long enough to see what her selection was, since it was the first outer garment she had bought since her marriage.

This was surely sufficient explanation for the sparkle in Mrs. Smith's eyes and the flush on her cheek, as she looked at one after the other of the garments shown her. Some persons might have thought it a poor assortment, but not so Mrs. Smith. She was bewildered by what seemed to her such grandeur. At last she appealed to the neighbor woman: "Do you think I ought to get black? Almost everything I've been wearing for the last ten years is a worn-out black, and I'd just love that gray, woolly-looking coat. I'd feel like a different woman in it, but I guess all the women of my age get black."

The neighbor woman examined the gray before she answered: "I think nothing could be more practical for a country woman than gray of this color. Black is not a sensible color for us when we have to ride through all sorts of dust and dirt. Besides, this gray exactly suits your style, and, best of all, it has not a lot of cheap braid or trimming on it. Every cent spent on it has gone into the goods. The buttons are a good bone instead of cloth-covered that will wear out the first season you use the coat. And because it is so perfectly plain you will grow to like this coat better as you wear it longer instead of tiring of it as you would of one of these overtrimmed garments."

Within a week Mrs. Smith had her first answer to her advertisement, and in time several others followed. The children took as much interest in the new enterprise as did their mother, and not even the slyest old hen who sought the most out-of-the-way place in which to make her nest succeeded in eluding those bright eyes. The smallest eggs were kept out for home use; the biggest, the freshest went into the cases for the city customers. One day a man wrote: "We are very thankful that we are not buying your eggs by weight, for I think most of them are twice the size of the eggs we have been paying the same price for at the grocery stores here and not strictly fresh at that!" Mrs. Smith was very proud of that letter, for it seemed to her that she had a definite place in the business of the farm, a place that had a money value. And better than anything else was the companionship that had sprung up between herself and the children. She had made them her partners and they received a small per cent. of the proceeds, according to the number of eggs the hens which she had given to them contributed. The mother was giving her children one of the best business educations in the world, though perhaps she did not at the time realize the value it would be to them in their future life.

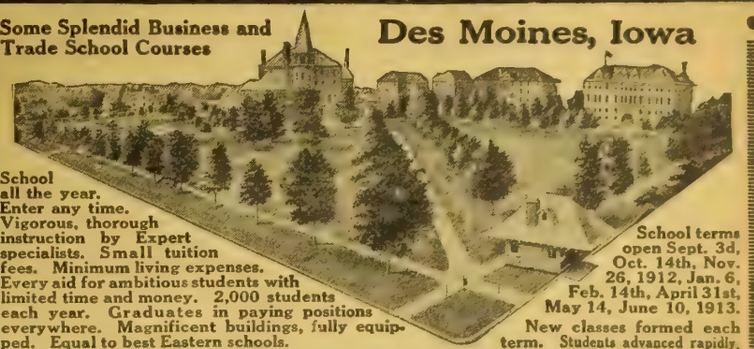
The egg money had brought one great happiness to the Smiths. It was necessary for Mrs. Smith in her new business to keep in touch with the markets, and so a telephone had been installed. Then the family, formerly so isolated, awoke to the fact that they were in touch with the whole world. It was then that Mrs. Smith admitted to her husband that she now found nothing dull about farm life. "If only the days were twice as long and I had twice as many hands to do all I want to do, I'd feel as though I was getting somewhere near done what I want to do," she remarked. "And you are happy now; or anyway you're not discontented?" asked her husband.

"No, I'm not discontented. I'm contented and I'm happy here; yes, I'm happy!"—Janet Thomas Van Osdel.

Highland Park College

Some Splendid Business and Trade School Courses

Des Moines, Iowa



School all the year. Enter any time. Vigorous, thorough instruction by Expert specialists. Small tuition fees. Minimum living expenses. Every aid for ambitious students with limited time and money. 2,000 students each year. Graduates in paying positions everywhere. Magnificent buildings, fully equipped. Equal to best Eastern schools.

School terms open Sept. 3d, Oct. 14th, Nov. 26, 1912, Jan. 6, Feb. 14th, April 31st, May 14, June 10, 1913. New classes formed each term. Students advanced rapidly.

COLLEGES AND SCHOOLS

Liberal Arts Standard, Classical and Scientific Courses. Also preparatory and Elementary Preparatory Courses, in which students of all degrees of advancement are admitted.

Normal Didactic, State Certificate, County Certificate, Primary Training—most complete training for teachers in the West. Graduates receive state certificates.

Engineering Civil, Electrical, Mechanical. Also one-year Telephone, Electrical, Steam, Machinist's and Automobile Machinist's courses. 12-weeks courses in Gas, Automobile and Traction Engineering. Shop work from beginning.

Pharmacy 1. Regular Ph. G., Ph. C., Pure Food and Iowa Courses. 2. Practitioner's Course and Extension Courses for Druggists. One of the largest, best equipped Colleges of Pharmacy in the United States.

Oratory A thoroughly equipped College of Oratory directed by most competent teachers

Music A Complete College of Music. Piano, Violin, Voice, Orchestra, Band, Chorus, Harmony, Mandolin, Guitar, and Supervisors Course in Public School Music. A fine faculty of teachers, each an artist in his line.

Commerce Business, Shorthand, Telegraphy, Penmanship, and Civil Service. "Not simply a course in bookkeeping in a Literary College, but a thoroughly equipped Business College with the finest business exchange department in the U. S." Graduates of combined Business and Shorthand, Shorthand and Telegraph courses guaranteed positions.

Home Study Over 8,000 Students Enrolled in the Correspondence School. Almost any subject you wish by correspondence.

Expenses Board, $1.75, $2.25 and $2.75 per week. Tuition in Preparatory College, Normal and Business Courses, $18.00 a quarter. Send for catalogue. State Course in which you are interested. Address

O. H. LONGWELL, Pres., Highland Park College, DES MOINES, IOWA

Corrected.

A wealthy American girl was attending a social function at a country house in England.

"You American girls have not such healthy complexions as we have," said an English Duchess to the girl. "I always wonder why our noblemen take a fancy to your white faces."

"It isn't our white faces that attracts them," responded the American; "it's our greenbacks."—Judge.

A Mortal Blow.

"What's the matter with your wife? She's all broken up lately."

"She got a terrible jar."

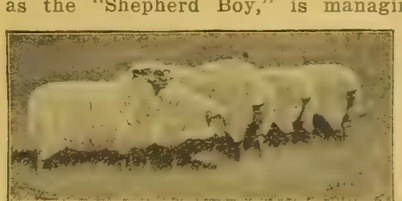
"What has happened?"

"Why, she was assisting at a rummage sale, took off her new hat, and somebody sold it for 35 cents."—Exchange.

The cost of high living is not caused by the price of wheat, which is selling in market considerably less than two cents a pound.

The Shepherds' Journal

IS a splendid monthly paper devoted to the world's sheep husbandry. It is published at Chicago, and W. J. Clarke, known as the "Shepherd Boy," is managing editor. THE NATIONAL FARMER AND STOCK GROWER is the best monthly farm paper in the United States. Useful on any farm, in any state. Good for grain farmers, horse, cattle, hog and sheep raisers, also dairymen and vegetable growers. These two are companion publications, and we are authorized to offer these two great and valuable papers for the price of one. Send us Fifty (50) Cents and we will send you THE SHEPHERDS' JOURNAL and



The National Farmer and Stock Grower

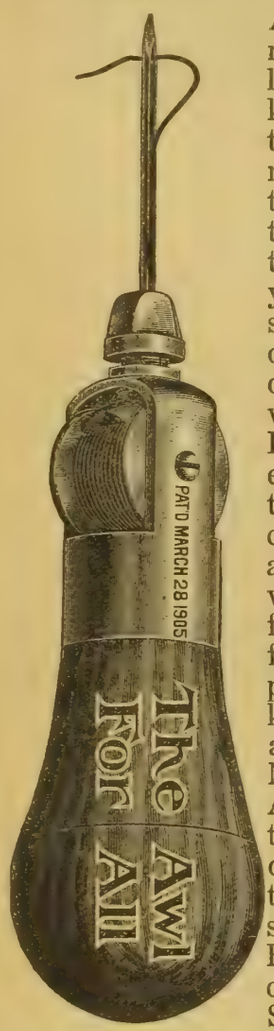
both papers, for one year. Address,

THE HALE PUBLISHING CO., 3550 Vista Ave., ST. LOUIS, MO.

MYERS FAMOUS LOCK STITCH SEWING AWL.

The Best Dollar's Worth Ever Offered by a Farm Paper Publisher.

A FARM on which there is not a sewing awl is in difficulties when work is most pressing. It is surprising how useful this little implement is. It is the MYERS FAMOUS LOCK STITCH SEWING AWL. It is the only sewing awl made with a groove running the full length of the needle and has what is known as a diamond point. In order to sew leather or any heavy, thick material without breaking or cutting the thread it requires an awl with the groove running the full length of the needle. With the Myers Awl you can sew old or new harness, saddles, carpets, canvas, tents, rugs, quilts, shoes, grain bags, and many other things. It is very simple; a woman can use it as well as a man. It is one of the most practical devices ever invented. They are put up with two needles—one is straight and one curved—with a small screwdriver and wrench combined; also a reel of waxed thread with each awl ready for use. The Myers Awl is nicely finished, the metal parts are nickel-plated, the needles and wrench are kept in the hollow handle, which has a screw top. We are using the Myers Famous Lock Stitch Sewing Awl as a subscription premium with the best monthly farm paper. Anyone who will send One Dollar cash to pay in advance for two-years' subscription to THE NATIONAL FARMER AND STOCK GROWER can select one of Myers' Lock Stitch Sewing Awls, which we will send by mail, postage paid, as a free premium. Address,



The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

A Compliment For the Bride.

I must relate a striking salutation that the bridal couple received from a Quaker client of mine, a shrewd dry goods merchant. Presented by an usher, he surveyed the bride, whom he had never seen before, and then with the utmost deliberation proceeded to say:

"William, I think the bride has shown more judgment in her choice than thee has."

Fortunately before I could turn to resent this strange salutation he continued as follows:

"Because it takes some penetration to discover the good qualities, but hers can be seen at a glance."—A Retrospect of Forty Years.

A Stickler For Etiquette.

The members of a certain colony of artists in New York tell, with great glee, of a comrade who, though he does pretty well in a financial way, is always "hard up."

One day a collector called upon this artist to try to get him to settle a bill for picture frames.

"I am exceedingly sorry," said the artist, "but I cannot settle this bill at present."

"Very well, sir. When shall I call again?" asked the collector.

"It seems to me," suggested the artist, suavely, "that it would hardly be etiquette for you to call again until I have returned the present call."—Harper's Magazine.

French Submarine Lost.

The submarine is a war vessel which can be operated below the surface of the water for the purpose of destroying larger vessels. It is one of the modern instruments of war, but it is a dangerous occupation for sailors engaged in it in times of peace, and many losses have been reported. On June 8th, 1912, Cherbourg, France, suffered a fourth disaster of this character when the Vendemiaire was crushed down by the battleship Saint Louis and disappeared in 150 feet of water. The submarine was undoubtedly ripped apart by the steel prow of the battleship and all hope was abandoned of saving the crew.

An official statement issued by the Minister of Marine fixed the number of men aboard as twenty-three, including the Commander, Lieutenant Prioul, and Ensign Audic. Although a Board of Inquiry was immediately appointed, it is said that no blame attaches to the Saint Louis, as the Vendemiaire came to the surface directly under the battleship's bow. The other submarines previously lost by France were the Lutin, the Farfodet and Pluviose.

The official report of the disaster made by Rear Admiral Marolles, commanding the squadron, says the warships were maneuvering in fair weather when the upper parts of the submarine suddenly emerged from the water dead ahead of the Saint Louis. There was no time to change the course, and after the shock bubbles rose to the surface for ten minutes, then bits of wooden wreckage and the submarine's bridge.

A buoy was anchored at the place where the accident occurred, and, after waiting an hour, the squadron steamed to Cherbourg, leaving behind a cruiser and a destroyer.

Later the strong current dragged off the buoy and it was not possible to locate the precise place of the collision, although oil on the water and the cruiser's reckonings fixed it approximately. In the opinion of Admiral Marolles salvage of the Vendemiaire will be impossible.

The battleship was steaming along quietly when the Vendemiaire appeared right under the bows of the warship. There was no time to avoid a collision, and the next moment the stem of the St. Louis struck the submarine with terrific force, driving the latter below the surface. The engines of the warship had been quickly reversed, but when she was brought to a stop the submarine had disappeared and only a threshing of waters showed where the under-the-surface fighter had gone down.

The Vendemiaire was commanded by Lieutenant Prioul, a young ensign, and a crew of twenty-two men. She was launched on July 7, 1910, and was the ninth vessel of the Pluviose type added to the French navy. She was 167 feet in length, with a beam of sixteen feet.

This latest loss to the French navy has caused great distress not only throughout the service, but among the public generally which has been made so frequently to mourn naval disasters. No other navy has been so unfortunate in the matter of submarines. The Pluviose was run down by a channel steamer and lost with her crew of twenty-seven men on May 26, 1910.

His Dream Came True.

"Have you ever had a dream that came true?"

"Yes. I had one only a few nights ago that came true. I dreamed that I was going to receive a telegram which I would be afraid to show my wife."

"And you got it? Was it from another woman?"

"Yes."

"Say, old man, I never spposed you would be guilty—"

"Wait! It was from my mother, who notified me that she was coming to visit us for two or three weeks."

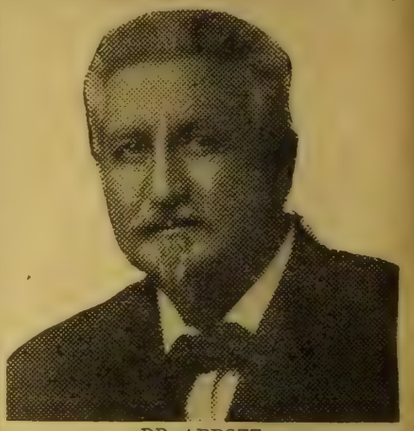
St. Louis feather market quotes 63 cents a pound for prime white live goose feathers; 44 cents for prime grey; 36 to 38 cents for old white; other lots, 15 to 30 cents.

My 10-Day Treatment Free

For Rheumatism, Bladder Diseases, Kidney Trouble, Catarrh and Other Uric Acid Ailments

SIMPLY FILL OUT THE COUPON

I will send anyone who suffers from a Uric Acid disease like rheumatism, kidney or blader trouble, catarrh and similar afflictions my ten day treatment absolutely free, with full directions for use, so that a good, thorough test can be made of my



DR. ABBOTT.

method of cure without cost. This 10-day free treatment is free in every sense of the word, and yet it is not a small sample, proof or test treatment. It is not sent you to be paid for later when cured, nor are you to take a part of it and pay for the rest. It is just as stated, my 10-day treatment free, and any sufferer can get it by simply writing me for it. All I want to know is that you have a disease for which this treatment is effective, and so that I can decide that please fill out the coupon ad send it to me. My address is Dr. G. B. Abbott, 1090 Austen Building, Chicago, Ill.

After 32 years of striving I believe I have a perfected treatment for these diseases, but the best way to prove it to the public is to send them a generous supply of it free. This I am doing by giving away Ten-day free treatments. The remedies contained in this free treatment are vouched for and it can be relied upon that there are no objectionable ingredients. Thousands of people have been helped and cured by this treatment, and pages of indorsements could be given, but as nothing after all is so convincing as personal experience, every sufferer from a Uric Acid disease is invited to write me for my ten day free treatment for himself or herself. I will send it to you with full directions promptly on receipt of the coupon properly filled out, or a personal letter giving some of your chief symptoms. All charges will be paid by me.

You will find that the various remedies comprising the treatment will tone and strengthen the kidneys, quiet aches, pains and swellings, enrich the blood and invigorate the system so that catarrh germs are destroyed, stop the too frequent desire to urinate and banish chronic rheumatism when other means fail. It has done this for many other people, and to see if it will do it for you you have only to send me your address and I will send you a full ten day treatment of my remedies entirely free, the only agreement being that you use them. All who write will also receive a free copy of my large new medical book, richly illustrated, describing these serious diseases in detail.

I ask you to send the coupon or a personal letter today.

MAY MANTON PATTERNS.

This is the best pattern service, and we re very much pleased to obtain it for our lends and patrons. Each pattern is new nd original. In this edition we present for onsideration very seasonable patterns abso- utely up-to-date, with directions for rdering.

PRACTICAL MODELS.

No. 7454.—Norfolk Coat. 34 to 40 bust. or the medium size will be required 3 ards of material 36 inches wide.

No. 7439.—Blouse or Shirt Waist. 34 to bust. With box-plait, stock collar and ng sleeves with rolled-over or straight uffs, or opened neck, hemmed edges and bow sleeves. For the medium size will be equired 2⅝ yards of material 36 inches ide.

No. 6632.—Sailor Suit, For Misses and mall Women. Fourteen, sixteen and ghteen years. With or without applied oke on blouse, with long or three-quarter eeves. For the sixteen-year size will be equired 1½ yards of material 27 inches ide, ⅝ yard 27 inches wide for shield. ¾ yards of wide, 4½ yards of narrow anding.

No. 7462.—Three-piece Skirt With Tunic ffect. 22 to 30 waist. With high or atural waist line. For the medium size ill be required 3¾ yards of material 36 nches wide, with ¾ yard 27 inches wide or the lower portion.

No. 7445.—Three-piece Skirt in Tunic tyle. 22 to 32 waist. With high or nat- ral waist line. For the medium size will e required 2⅝ yards of material 36 inches ide for the upper portion, ¾ yard 36 nches wide for the lower portion.

The price of each pattern is 10 cents.

MODELS FOR THE COUNTRY AND THE SEASIDE.

No. 7015.—Bathing Suit. 34 to 44 bust. With V-shaped neck and sailor collar or igh neck and round collar, with or with- ut bloomers. For the medium size will e required 6¼ yards of material 36 inches ide, with bloomers, 4¼ yards without bloomers, ¾ yard 27 inches wide for sailor collar and sleeve bands.

No. 7424.—Girl's Bathing Suit. Four to twelve years. With kimono sleeves, with or without separate skirt. For the six-year size will be required 3 yards of material 36 inches wide, with 1 yard for the trim- ming.

No. 7401.—Bathing Suit. 34 to 44 bust. With separate bloomers. For the medium size will be required 4 yards of material 36 inches wide for blouse and skirt, 2 yards 36 inches wide for bloomers, ¾ yard 27 inches wide for trimming.

No. 7422.—Sun Bonnet, Women's, Misses' and Children's. To make will be required 1 yard of material 27 inches wide, for any size.

No. 7449.—Child's Sun Bonnet. Six months or one year, two or four years. with crown that can be buttoned or sewed to the brim, with square or round corners. For the smaller size will be required ¾ yard of material 36 inches wide.

The price of each pattern is 10 cents.

DAINTY AFTERNOON MODELS.

No. 7453.—Coatee or Overblouse. 34 to 42 bust. For the medium size will be required 2¾ yards of material 36 inches wide, with 2½ yards of applique.

No. 7459.—Blouse or Shirt Waist, For Misses and Small Women. Fourteen, six- teen and eighteen years. For the medium size will be required 2½ yards of material 36 inches wide.

No. 7448.—Semi-Princess Gown. 34 to 44 bust. With four-gored skirt, with back gore that can be laid in box-plaits or gath- ered, with square or high neck, with or without cuffs. For the medium size will be required 5¼ yards of material 36 inches wide, with ½ yard 27 inches wide for collar and cuffs.

No. 7440.—A Three-piece Skirt in Envelope Style. 22 to 32 waist. With high or nat- ural waist line. For the medium size will be required 3¾ yards of material 36 inches wide.

No. 7452.—Five-gored Skirt. 22 to 34 waist. With high or natural waist line. For the medium size will be required 3¾ yards of material 36 inches wide, when there is figure or nap; 2¾ yards 44 inches wide, when there is neither figure nor nap; ¾ yard 27 inches inches wide for the panel.

The price of each pattern is 10 cents.

LADIES', MISSES' AND CHILDREN'S ATTIRE.

No. 7311.—Fancy Blouse For Misses and Small Women. Fourteen, sixteen and eighteen years. For the sixteen-year size will be required 1 yard of material 36 inches wide for blouse, 1 yard 36 inches wide for overwaist, ⅝ yard of all-over lace 18 inches wide, 2 yards of lace for frills.

No. 7432.—Overblouse or Coatee. 34 to 42 bust. With or without revers, with postillion that can be made shorter or in pointed or round outline. For the medium size will be required 1⅝ yards of material 36 inches wide, with ¾ yard 27 inches wide for trimming.

No. 7464.—Semi-Princess Dress For Misses and Small Women. Sixteen and eighteen years. With round or high neck, elbow or long sleeves. For the sixteen-year size will be required 4¼ yards of material 36 inches wide, with 1¼ yards of lace to finish as shown in front view, ½ yard 18 inches wide for yoke and collar.

BEAUTIFUL APRON PREMIUM.

To further introduce our splendid Universal Magazine we are offering a useful fancy apron as a premium. Hand-embroid- ered tea aprons are always in great demand among ladies and girls, and this is an article anyone would be proud to own. We offer this beautiful apron, stamped on fine white lawn, including piece for pocket and

strings; also a year's subscription to our popular Universal Magazine, filled with choice stories, departments for all the family, thirty-two pages, etc., all for only thirty cents. Send stamps or coin at once. Don't miss this great offer, because our supply will not last very long. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

The Crop on Shares.

Senator Vardaman, so the story goes, once rented a plot of several acres to one of his black neighbors. The land was to be planted in corn, and the Senator, then ex-Governor, was to receive one-fourth. The corn was duly harvested, but the Senator did not receive his fourth. Meeting the negro one day he said:

"Look here, Sam, have you har- vested your corn?"

"Yes, sah, boss, long 'go."

"Well, wasn't I to get a fourth?"

"Yas, sah, boss, dat's de truf, but dar warn't no fo'th. Dar was jes' three loads, and dey was mine."—Judge.

Honey quotations at St. Louis: Bright amber in barrels at 7 cents per pound and in cans at 7½ cents per pound; dark in barrels at 6 cents.

HOW TO GROW HAIR

A SIMPLE, SAFE AND RELIABLE WAY THAT PRODUCES SURPRISING RESULTS.

NEW DRUG CRYSTOLIS CAUSES BIG STIR AMONG HAIR SPECIALISTS.

$1,000 REWARD If They Fail.

Cut Out Free Coupon Below and Mail Today.

Those who have become prematurely gray or who are troubled with scalp or hair dis- eases, such as falling hair, dandruff, bald- ness, itching scalp, etc., know full well the humiliation that they cause. There is no need, however, of such condition. These troubles can be quickly overcome by Crys- tolis, the new drug recently discovered at the Creslo Laboratories.

Why Wear Puffs, Pompadours, Rats and Braids of Filthy Chinese Hair, When Crystolis Grows New Hair in 30 Days?

Since its discovery, a little over a year ago, Crystolis has been found to contain marvelous properties for producing a new growth of hair. In subjecting it to various tests in the worst cases of baldness, dandruff, itching scalp, etc., the results obtained by the experimenting chemists were considered almost miraculous.

In every case it was found that where there were any hair roots left it would pro- duce a new and luxuriant growth of hair in from four to six weeks' time.

Gray or faded hair was often restored to its natural color in from 10 to 14 days' time. In minor cases of scalp and hair dis- eases, such as dandruff, falling hair, itching scalp, etc., it was found that these unnat- ural conditions were corrected and often completely cured by two or three applica- tions.

The discovery of Crystolis will, without doubt, put an end to the troublesome scalp and hair diseases that are becoming so common with the American people. Women who have been forced into wearing false hair will greatly welcome this marvelous product, as, aside from its many other vir- tues, it adds a beautiful gloss and luster to the old hair. Besides, it contains no oil and has a tendency to make the hair light and fluffy.

The managers of the Creslo Laboratories have such strong faith in Crystolis, we have been authorized to make the following re- markable offer: They will forfeit $1,000 in gold if they fail to prove that Crystolis actually grows hair. They will forfeit $1,000 in gold if any one can prove they were not the first discoverers of Crystolis. They will forfeit $1,000 in gold if it can be proven that it contains any oil, dye or coloring matter of any kind. They will forfeit $1,000 in gold if every testimonial and sworn state- ment which they publish is not absolutely genuine.

Arrangements have been made with the Laboratories to furnish free information in regard to this new process to all readers of The National Farmer and Stock Grower. Merely cut out and send in the coupon below, and you will receive particulars of this marvelous new product by return mail.

Baldness, Dandruff, Itching Scalp, Etc.

FREE CRYSTOLIS COUPON.

Cut out this coupon today and mail to Creslo Laboratories, 786-G Street, Bing- hamton, N. Y., for free information regarding Crystolis, the new discovery for growing hair.

CYCLONE CELLARS OF CONCRETE

Afford Safety and Are Otherwise Useful.

While destructive cyclones cannot be prevented, nevertheless the excessive loss of human life can be. The means is simple, inexpensive and within the reach of everyone who can obtain sand and gravel or crushed rock. Perfect protection is afforded by an outdoor cellar of concrete with a curved roof built along the lines of the well-known "dug-out" or "cave." Such a cellar is also valuable as a storage place for fruit, vegetables, milk and butter.

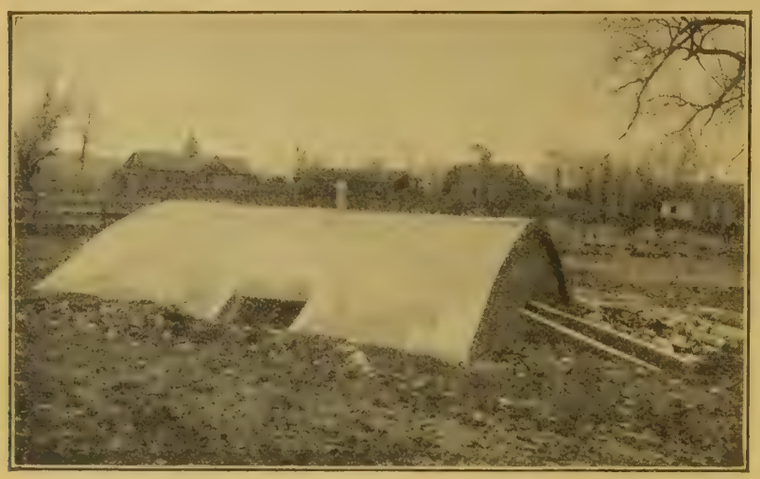

Fig. 1.

Building the Walls and Floor.

The most popular size for the average farm is a cellar 10 by 14 feet, inside measurements, with a self-supporting arched roof 5 feet above the floor at the sides and 7 feet 8 inches in the center. All of the sidewalls are 8 inches thick, therefore dig the hole 11 feet 4 inches by 15 feet 4 inches to the depth desired, usually 5 feet. At one end cut out the earth to a width of 4 feet 4 inches and slope it upward for seven concrete steps with a rise of 8 inches and a tread of 10 inches and for a thickness of 4 inches of concrete back of the steps proper. Arrange for an 18-inch landing at the bottom of the stair.

Make the sidewall forms of 1-inch siding on 2 by 4-inch uprights spaced 2 feet. As the concrete floor will be 4 inches thick, set up the forms on 4-inch concrete bricks. Above ground level use outside forms similar to the inside. To curve the end wall forms, lay them out with a 6-foot string in the same way as described below for arch rings. At the entrance end, to provide for a doorway, set between the forms a frame of 2 by 8-inch stuff 3 by 7 feet in the clear. Mix the concrete 1 part Portland cement to 4 parts bank-run gravel, or 1 part cement to 2 parts sand to 4 parts crushed rock. A sack of cement equals 1 cubic foot. With the forms in place, lay the 4-inch floor the same as a sidewalk, but without joints. Fill the wall forms in 8-inch layers with mushy wet concrete, and, 6 inches from the top of the sidewalls and 1 inch from the outside, place two ⅜-inch steel rods the full length of the cellar. In the concrete two inches above the door-frame, lay three four-foot lengths of ⅜-inch rods. Roughen the top of the walls so as to insure a good bond with the roof. Build the stairway with a 4-inch thickness of concrete behind the steps proper. Each step has a tread of 10 inches and a rise of 8 inches. The sidewalls of the cellar hatchway extend above the door opening of the cellar proper, so that outside sloping doors may be added. In the top of the hatchway walls, while the concrete is soft, bolts are set heads down for holding the wooden sill to which the strap hinges are later attached.

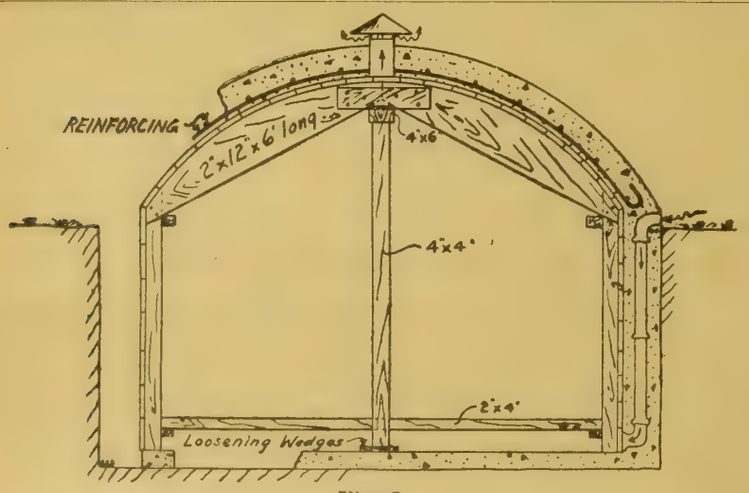

Fig. 2.

The Self-supporting Roof.

When the sidewalls are one week old, begin on the roof. To give the roof a rise of 2 feet 8 inches, arch rings are needed. For laying out the rings, choose a floor or a bit of level ground. To one end of a strong string fasten a pencil and tie the other end to a nail driven firmly in the floor with exactly 5 feet 11 inches of string between the pencil point and nail. Mark out half a circle. Across the circle lay a board exactly 10 feet long so that its ends just touch the mark. The part of the circle above the board represents the arched inside of the roof. Place boards for the arch rings over the mark on the floor and nail them together. Mark the curve upon them and cut them to the mark. Brace the arch well as shown in the drawing. Spacing the rings two feet apart, six will be needed. Fasten them securely in place to 2 by 6-inch liners spiked to the sidewall forms. Cover the rings tightly with 1-inch sheathing.

With the roof form ready, place the reinforcement upon it. Use ⅜-inch rods 14 feet long. Space them 6 inches apart crosswise and 12 inches the long way of the cellar. Wire the rods together where they cross. The roof must be 5 inches thick. Carefully work exactly 1 inch of concrete between the rods and the sheathing. Tamp the concrete until the liquid cement flushes to the top and then finish the surface smooth by means of a wooden float and steel trowel. Do not stop for anything until the roof is finished. In two or three weeks the concrete roof will be strong enough to support itself; then the forms may be removed.

Ventilation is necessary for most cellars. While building the wall make one or more air-shafts (similar to a chimney flue) of 3-inch tile, by imbedding them in the concrete wall, with an opening inside at floor level and another outside well above the ground line. By this arrangement fresh air is admitted. Place a tile chimney in the concrete roof and cover it with a galvanized iron hood for removing the foul air. If built late in the fall, protect the fresh concrete from freezing by covering it with clean straw or with old carpet so suspended as to leave a dead air-space between the concrete and the covering.

Below is given a list of the materials required. The prices are higher than in most localities. If good screened pit gravel is used, no sand will be needed.

Bill of Materials.*

Crushed rock, 13 cubic yards, at $1.10	$14.30
Sand, 6½ cubic yards, at $1.00	6.50
Portland cement, 22 barrels, at $2.50	55.00
Rods, 40 pieces, ⅜ inch by 14 feet, 206 pounds, at $0.02¼	4.65
Total	$80.45

* Consult local dealer for prices.

The cellar shown in the photograph is 18 by 18 feet by 8 feet deep. It is located on an apple farm. The owner finds it a profitable investment, as he has his own storage and keeps his apples until the market is no longer glutted with "wind-falls" and "seconds."

The Scale on the Farm.

The scale is just as important on the farm as in the grocery store. How would the grocer succeed who in selling sugar should put in a few scoopfuls and say: "I guess that's about right," or in selling nails should drop a few handfuls in the bag and say: "I guess that's about it?" The farmer who guesses at how much he is feeding his cows or hogs, who guesses at how much milk or gains he is getting is doing just the same kind of business as the merchant who should guess instead of weigh.

The cows and the pigs, etc., are the farmer's customers. They take his feed and roughage. Now the farmer needs to know what he gets in return in the way of pounds of milk, butter-fat, pork, etc. No successful business was ever built on guessing—farming is no exception.

This brings to mind a case. A boy who was learning how to test milk at school, tested his father's herd. He also weighed the milk from each cow morning and evening and kept a record of it. He also kept a record of the feed given the cows. After awhile the fourteen-year-old informed his pa that Brindle didn't give enough butter-fat to pay for her feed. Pa looked at him kind of funny. The idea of his boy telling him that! Yet he did not attempt to contradict the boy: He knew the boy had been weighing and figuring. The boy also informed him Spot was paying a splendid profit and Rosy was not paying for her feed, and so on. What was to be done? The boy's information was taken and acted on. At the end of the year the herd had been reduced from twenty-one to fourteen cows by selling the poorest and buying some more good ones. The fourteen gave more profit than the twenty-one. That was what a fourteen-year-old boy could do by weighing and keeping accounts. The time the boy spent in doing that weighing and figuring, only a few minutes a day, brought more profit than the day-after-day of work put in by his father. And these few minutes of work a day made it possible for that farmer to increase his returns year after year.

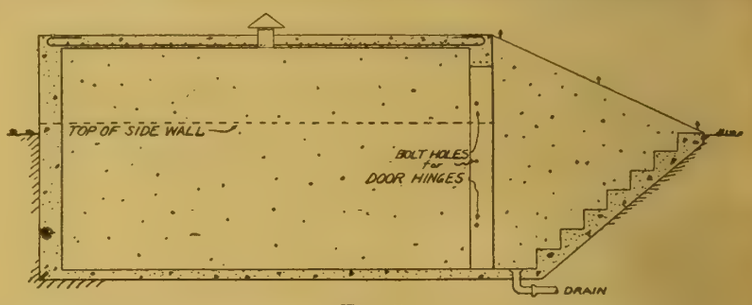

Fig. 3.

If one is feeding pigs, the only way to know what is going on is to weigh the pigs from time to time and to weigh the feed. The horses should be weighed that their condition may be the more accurately known. The load of grain or hay that goes to town should be weighed. But there is no need of enumerating further.

The scale is necessary on the farm—just as necessary as in the grocery store or the coal yard.—Prof. W. C. Palmer, North Dakota Agricultural College.

Our Subscription Department.

SELECTED POETRY.

BAY BILLY.

You may talk of horses of renown, what
Goldsmith Maid has done.
How Dexter cut the seconds down, and
Fellowcraft's great run—
Would you hear about a horse that once a
mighty battle won?

'Twas the last fight at Fredericksburg—
perhaps the day you reck—
Our boys—the Twenty-second Maine—held
Early's men in check,
Just where Wade Hampton boomed away,
the fight went neck and neck.

All day we held the weaker wing, and held
it with a will;
Five several stubborn times we charged the
battery on the hill,
And five times beaten back, re-formed and
kept our column still.

At last from out the center fight spurred up
a General's aid;
"That battery must silenced be!" he cried
as past he sped.
Our Colonel simply touched his cap, and
then with measured tread,

To lead the crouching line once more the
grand old fellow came,
No wounded man but raised his head and
strove to gasp his name,
And those who could not speak nor stir
"God blessed!" him just the same.

For he was all the world to us, that hero
gray and grim,
Right well he knew that fearful slope we'd
climb with none but him,
Though while his white head led the way
we'd charge hell's portals in.

This time we were not half-way up, when,
midst the storm of shell,
Our leader, with his sword upraised, be-
neath our colors fell,
And as we bore him back, the foe set up a
joyous yell.

Our hearts went with him—back we swept,
and when the bugle said:
"Up charge!" again no man was there but
hung his dogged head.
"We've no one left to lead us now," the
sullen soldiers said.

Just then before the laggard line the Colo-
nel's horse we spied,
"Bay Billy," with his trappings on, his
nostrils swelling wide,
As tho' still on his gallant back the master
sat astride.

Right royally he took the place that was of
old his wont,
And with a neigh that seemed to say
above the battle's brunt:
"How can the Twenty-second charge if I
am not in front?"

Like statues rooted there we stood and
gazed a little space,
Above that floating mane we missed the
old familiar face;
But we saw "Bay Billy's" eye of fire and
it gave us heart of grace.

No bugle call could rouse us all as that
brave sight had done;
Down all the battered line we felt a light-
ning impulse run.
Up! up! the hill we followed Bill and
captured every gun!

And when upon the conquered night died
out the battle's hum,
Vainly 'mid living and the dead we sought
our leader dumb;
It seemed as if a specter steed to win that
day had come.

And then once more with banners gay the
troops stood on parade,
Trimly upon the furrowed field stretched
out the long brigade,
And bravely amid the ranks were closed
the gaps the fight had made.

Not half the Twenty-second's men formed
that torn field upon,
For Corp'ral Dick, who yesternoon stood
six brave fellows on.
Now touched my elbows in the ranks, for
all between were gone.

Ah! who forgets that dreary hour, when,
as with misty eyes,
To call the old familiar names the solemn
Sergeant tries;
One feels the thumping of the heart as no
prompt voice replies.

And as, in falt'ring tones and slow the
last few names were said,
Across the field some missing horse toiled
up with weary tread,
It caught the Sergeant's eye, and quick
"Bay Billy's" name he read.

Yes, there the old bay hero stood, all safe
from battle's harms,
And ere an order could be heard or the
bugle's quick alarms,
Down all the front, from end to end, the
troops presented arms!

Not all the shoulder-straps on earth could
still our mighty cheer,
And ever from that famous day, when
rang our roll-call clear,
"Bay Billy's" name was read, and then the
whole line answered: "Here!"
—Poet Unknown.

WHEN PHYLLIS DRIVES.

When Phyllis drives her motor car,
And down the street we set the pace,
There's not a monarch, earl or king
With whom I would exchange my place.
I long to take her hand in mine,
And tell her of the love I feel;
But, no, her thoughts are far from me,
And both her hands are on the wheel.

Her talk is all of chains and gears,
Of sprockets, rims and springs;
Of non-skid tires and inner-tubes,
Of carburetors and such things,
And when I'd take her hand in mine,
And tell her of the love I feel,
She says: "You really must look out,
And keep your hands, please, off the
wheel."

It surely is a cruel fate
To love a girl who knows so much,
Who holds the wheel, likewise your heart,
Beneath her lightst finger-touch;
For when you'd take her hand in yours,
And tell her of the love you feel,
She says: "You really must take care,
And keep your hands, please, off the
wheel."

Some day I hope a tire will burst,
Blow out, or come right off the car,
And that beside the road we'll stop,
Out in the country—very far,
And then I'll take her hand in mine,
And tell her of the love I feel,
When we are sitting there quite still,
And both her hands are off the wheel.
—E. Marriner, in Harper's Magazine.

MIRTH UNENDING.

Oh, wherefore should a mortal sigh
And vow that life is full of care?
Each moment that goes swiftly by
Is sure to bring a laugh somewhere;
And the supply is ever new
And louder grows the note of cheer;
The clothes that Fashion brings to view
Are getting funnier every year.

These hats and shoes and all the rest
Of the attire that meets our gaze
We'll greet with wild, hilarious zest
As now we jest of other days.
The present price tag may exert
A certain influence severe;
But look ahead for laughs alert;
Our clothes get funnier every year.
—Washington Star.

AS TO YOU.

Did you give him a lift? He's a brother of
Man
And bearing about all the burden he can.
Did you give him a smile? He was down-
cast and blue.
And the smile would have helped him to
battle it through.
Did you give him your hand? He was the
slipping-down hill
And the world, so I fancied, was using him
ill.
Did you give him a word? Did you show
him the road.
Or did you just let him go on with his load?

Did you help him along? He's a sinner
like you.
But the grasp of your hand might have
carried him through.
Did you bid him good cheer? Just a word
and a smile
Were what he most needed that last weary
mile.
Do you know what he bore in that burden
of cares
That's in every man's load and that sym-
pathy shares?
Did you try to find out what he needed
from you,
Or did you just leave him to battle it
through?

Do you know what it means to be losing
the fight
When a lift just in time might set every-
thing right?
Do you know what it means—just the clasp
of a hand
When a man's borne about all a man ought
to stand?
Did you ask what it was—why the quiver-
ing lip
And the glistening tears down the pale
cheek that slip?
Where you brother of his when the time
came to be?
Did you offer to help him, or didn't you
see?

Don't you know it's the part of a brother
of Man
To find what the grief is and help when
you can?
Did you stop when he asked you to give
him a lift,
Or were you so busy you left him to shift?
Oh, I know what you mean—what you say
may be true—
But the test of your manhood is What Did
You Do?
Did you reach out a hand? Did you find
him the road,
Or did you just let him go by with his
load?
—J. W. Foley, in New York Times.

OLD CATTLE MAN SOLILOQUIZES.

He rode by us this mornin', and he looked
jest like a knight,
With his silver traps a-shinin' in the
streaks of rosy light;
His pack horse trailed behind him, with a
bed upon its back,
And he made a purty picture as he passed
our homestead shack;
And we knowed that summer 'd hit us—
knowed it past the slightest doubt—
'Cause the calves were bein' gathered, and
the roundup call was out.

The wagon top is shinin' in some distant
lonely draw;
The cook is yellin': "Grub pile!"—you can
hear the gang hurrah

Here's

1-J

Whenever you see an Arrow think of Coca-Cola.

As they leave the brandin' fire and gallop
for the feed,
While the snow-white foam is drippin'
from the mouth of every steed.
I'd like to throw in with 'em, but Father
Time, it seems,
Has put me in the discard—I can only live
in dreams.

I can only dream of stretches where the
cactus and the sage
Crown the rollin' hills of glory—neither
time nor creepin' age
Can dim the youthful pictures that come
up before my eyes,
When the first glad hint of June-time puts
a new blue in the skies,
And a top-hand, young and knightly, passes
by my cabin door
On his way to join his comrades where the
roundup's on once more.
—Denver Republican.

OLD MAIDS.

The silly rabble ridicule
And foolishly upraid
The sweetest creature in the world—
The much-abused Old Maid.

Most everybody jibes and jeers—
Has something hard to say,
As if these ladies elderly
Had done a crime some way.

What have they done—the dear old
things—
That men should hate them so?
Nothing, except they dare to live
And wave—without a beau!

When models ask that they should take
The toilsome place of wife,
And give their independence up
In slavery for life—

They have the common sense and pluck
To boldly answer No,
And that is the reason why
Old maids are hated so.

And still they are the primmest,
The nicest and the cutest,
And everything about them
Is the cutest and the sweetest.

Then honor to the dear Old Maids!
Though lonely be their lives;
Perhaps to God they're just as dear
As many wedded wives.

And, girls, unless your sweethearts be
Industrious, honest, staid,
I hope that each of you will be
The oldest sort of Maid.
—Champ Clark.

SHE'S CHANGED.

Though Dorothy's put up her hair
That late was hanging down her back,
She still is young and she is fair—
She not a single charm doth lack;
But now there's distance in her eye
And introspection in her smile,
I look at Dorothy and sigh
And then I muse a little while.

Here was a careless, happy child,
Who romped and laughed so frank and
free;
She ran, she climbed in pleasure wild—
She'd even come caressing me!
Her wind-blown curls then swept her
cheeks
Where tan—ah, that's the proper wear!
Would show in long vacation weeks,
Now Dorothy's put up her hair!

That is a sign to one and all
That Dorothy's a woman grown.
On her sweet youth I vainly call
And, sitting here, I now make moan.
I'm pushed aside—I'm old, forsooth!
My leaping heart's not old, I swear,
But now will come some conquering youth
Since Dorothy's put up her hair!
—Chicago News.

The Battle of Alamance.

At the Battle of Alamance, North Carolina, fought May 16, 1771, was shed the first blood of the great struggle which was to result in the establishment of American independence.

All honor to Lexington, where the "embattled farmers" fired the shots that were "heard around the world," but let it not be forgotten that other farmers, almost four years before the day of Lexington, opened the fight of which Lexington was only the continuation.

Says John Fiske, in his American Revolution: "The barbarous condition on the frontier, where these scenes occurred (the Battle of Alamance, etc.), and the fact that the militia of the lower counties voluntarily assisted the Governor in his campaign against the Regulators, deprived these events of much of the influence they might otherwise have had upon the country; so that it is not the Cape Fear but the Concord River that ordinarily occurs to us when we think of the first blood shed in the Revolutionary War."

The principles for which the North Carolina farmers fought at Alamance were identical with those for which Massachusetts farmers fought at Lexington. Of the Massachusetts patriots nineteen were killed and wounded, while of the Carolina patriots over two hundred lay killed or crippled upon the field, and six, later on, died upon the scaffold; yet, while all the world has heard of Lexington, not one person in a thousand knows anything to speak of about Alamance.

William Tryon, the Royal Governor of North Carolina, was so mean that they called him the "Wolf." In the name of his royal master, and for the furtherance of his own greedy instincts, Tryon oppressed the people of his province to the point where they were obliged to do one of two things—resist him or become slaves. They resolved to resist, and formed themselves into an organization known as "Regulators," a body of as pure patriots as ever shouldered a gun.

Having protested time and again against the unlawful taxation under which they groaned, the finally quit groaning, raised the cry of freedom and rose in arms against Tryon and King George.

To the number of two or three thousand the Regulators, only partly armed and without organization, met the forces of the Royal Governor at Alamance.

"Lay down your arms or I will fire!" shouted the British Commander. "Fire and be damned!" shouted back the leader of the Regulators. At once the battle opened, and, of course, the Regulators were defeated and dispersed. But Oly Tryon received the lesson he had so long needed, that while Americans could be shot down on the battlefield they could not be made tamely to submit to the high-handed oppression of King George and his creatures.

Monuments are good things; and why not build one of the finest design and most enduring material to mark the spot where the Regulators began the fight that was to end in the creation of the United States of America?—Rev. Thos. B. Gregory.

Heroic Measures.

Tom—"That Miss Biggies is the poorest conversationalist I ever met."

His Hostess—"Is that so?"

Tom—"Yes. The only thing she said to me the whole evening was 'No,' and I had to propose to her to get her to say that."—Boston Transcript.

LET US MAKE YOU FAT

50-CENT BOX FREE!

We Will Prove at Our Own Expense That It Is No Longer Necessary to Be Thin, Scrawny and Undeveloped

"Gee! Look at that pair of skinny scarecrows! Why don't they try Sargol?"

This is a generous offer to every thin man or woman reader of this paper. We positively guarantee to increase your weight to your own satisfaction or no pay. Think this over—think what it means. At our own risk, we offer to put 10, 15, yes, 30 pounds of good, solid "stay there" flesh on your bones to fill out hollows in cheeks, neck or bust, to get rid of that "peaked" look, to rejuvenate and revitalize your whole body until it tingles with vibrant energy; to do this without drastic diet "tonics," severe physical culture, "stunts," detention from business or any irksome requirements—if we fail it costs you nothing.

We particularly wish to hear from the excessively thin, those who know the humiliation and embarrassment which only skinny people have to suffer in silence. We want to send a free 50-cent package of our new discovery to the people who are called "slats" and "bean poles," to bony women, whose clothes never look "anyhow," no matter how expensively dressed, to the skinny men who fail to gain social or business recognition on account of their starved appearance. We care not whether you have been thin from birth, whether you have lost flesh through sickness, how many flesh builders you have experimented with. We take the risk and assume it cheerfully. If we can not put pounds and pounds of healthy flesh on your frame we don't want your money.

How can we do this? We will tell you. Science has discovered a remarkable concentrated treatment which increases cell growth, the very substance of which our bodies are made—a treatment that makes indigestion and other stomach troubles disappear as if by magic and makes an old dyspeptic or a sufferer from weak nerves or lack of vitality feel like a 2-year-old. This new treatment which has proved a boon to every thin person, is called **Sargol.** Don't forget the name **"S-A-R-G-O-L."** Nothing like it has ever been produced before. It is a revelation to women who have never been able to appear stylish in anything they wore because of their thinness. It is a godsend to every man who is under weight or is lacking in nerve force or energy.

What Sargol Has Done for Others

When we mail you the Free 50-cent package of Sargol, we will send you copies of letters received from grateful patrons, reporting actual gains in solid healthy permanent flesh, of from ten to over thirty pounds.

We give here a few interesting figures from reports which are being received daily:

REV. GEORGE W. DAVIS says:

"I have made a faithful trial of the Sargol treatment and must say it has brought to me new life and vigor. I have gained twenty pounds and now weigh 179 pounds, and what is better, I have gained the days of my boyhood. It has been the turning point of my life. My health is now fine. I don't have to take any medicine at all and never want to again."

MRS. A. I. RODENHEISER writes:

"I have gained immensely since I took Sargol, for I only weighed about 106 pounds when I began using it and now I weigh 130 pounds, so really this means 24 pounds. I feel stronger and am looking better than ever before, and now I carry rosy cheeks, which is something I could never say before.

"My old friends who have been used to seeing me with a thin, long face, say that I am looking better than they have ever seen me before, and father and mother are so well pleased to think I have got to look so well and weigh so heavy for me."

C. E. Croumer gained	**15**	**pounds in**	**30**	**days.**

Send to-day for our free 50-cent package and let us prove that

Sargol Should Do the Same for You

This treatment increases the red corpuscles in the blood, strengthens the nerves and puts the digestive tract into such shape that your food is assimilated and turned into good, solid, healthy flesh instead of passing through the system undigested and unassimilated. It is a thorough scientific principle, this Sargol, and builds up the thin, weak and debilitated without any nauseous dosing. In many conditions it is better than cod liver oil and certainly is much pleasanter to take.

Send for the 50-cent box to-day. Convince us by your prompt acceptance of this offer that you are writing in good faith and really desire to gain in weight. The 50-cent package which we will send you free will be an eye-opener to you. We send it that you may see the simple, harmless nature of our new discovery, how easy it is to take, how you gain flesh privately without knowledge of friends or family until you astonish them by the prompt and unmistakable results.

We could not publish this offer if we were not prepared to live up to it. It is only the astounding results of our new method of treatment that make such an offer and such a guarantee possible on our part. So cut out the coupon to-day and mail it at once to The Sargol Company, 786-U Herald Bldg., Binghamton, N. Y., and please inclose 10c. with your letter to help pay distribution expenses. Take our word, you'll never regret it.

Free Sargol Coupon

This certificate, with ten cents to help pay postage and distribution expenses, entitles the holder to one 50-cent package of Sargol, the Flesh Builder. The Sargol Co., 786-U Herald Bldg., Binghamton, N. Y.

Address to Patrons and Friends.

During the months of August and September many thousands of subscriptions to The National Farmer and Stock Grower expire, and during these months we make every effort to obtain renewals. This year we are able to offer a subscription premium which we are proud to send to our patrons and which they are all delighted to receive. We refer to the Book of Live Stock Champions, which is fully advertised in this issue on page 22. Every picture in the book is excellent. There are seven hundred and fifty pictures, with record, owner and interesting features and history. It is beautifully bound in blue silk cloth. We are receiving compliments upon the splendid work, and, what is still better, our friends who receive the book are in turn recommending it to their friends. We specially solicit renewal of subscriptions. If you are not inclined to take the Book of Live Stock Champions, "The American Government" is another book well worth owning. The Cement Workers' Handbook, advertised on page 12, is also one of our favorites. In any event, we will appreciate all our friends and patrons can do for us in the way of subscriptions, especially in the month of August.

Special Recommendation.

The deep-tilling machines advertised by the Gale Manufacturing Company represent a great advance in agricultural methods. A careful reading of the advt. on page 5 is well worth the time it will require.

and Stock GROWER

Our Industrial Policy.

The National Farmer and Stock Grower is in favor of the United States collecting a reasonable range of customs duties upon all foreign farm products and all foreign manufactured goods admitted into the United States from foreign countries, said duties to be applied to the support of the national government. By this policy fully one-half the money required for the support of the national government should be collected at the custom houses besides furnishing the farmer and manufacturer the very moderate amount of protection to which they are entitled. We are opposed to the admission of foreign farm products free of duty, because admission of such products duty free always leads to the advantage of the foreign merchant and speculator and causing increased burdens to be imposed upon our own people.

Taking the duty off hides has been entirely in the interest of foreign countries and to the detriment of our own people; admitting coffee duty free enabled the formation of a South American combination that has raised the price three for one, and every time goods are placed on the free list there is the same result. With moderate import duties received by the United States on various products as now collected the total is over three hundreds of millions of dollars a year, and if not collected that way will have to be collected by direct taxes upon our own productions. The admission of foreign goods free of duty results in higher prices to the American consumer and higher taxation also to make up the necessary revenues.

Every farmer in the United States is taxed by his county and by the state; he also pays a share of the taxes collected in various ways for the support of the federal government. We believe that in return for his support in tax money and in time of necessity for his personal services the American citizen is entitled to preference in his home market for his own productions from the laws of the government he supports. We believe that the advantages of our own markets belong to the citizens of the United States, and that all foreign farm productions should pay a duty at the front door as the goods are admitted. By collecting these customs duties the United States government receives part of the income that is necessary for the public service. In times of scarcity, caused by drouth or other unavoidable influences, the foreign farm productions can come in under light duties on a fair basis, and in times of abundance the country thrives better without them.

We believe the farmer as a producer outranks all other people; the manufacturer is next; but without the farmer's products the manufacturer would have to shut his doors. Legislation against the farming interest is the height of folly, and special discrimination against the farmer is a political crime. It will cause more poverty in the cities than most people imagine. The nonproducing, so-called consumers in cities will be the first to find it out and the greatest sufferers.

Farmers' Institute Workers.

The next annual meeting of the American Association of Farmers' Institute Workers will be held at Atlanta, Georgia, November 11 to 13, 1912. At the same place and beginning November 13 will be held the annual meeting of the Association of American Agricultural Colleges and Experiment Stations.

Notice is sent out thus early in order that Farmers' Institute Workers, in arranging their work, may have in mind the date of this meeting, and so arrange that it may be possible for all who are interested to attend.

The call is signed by John Hamilton, Farmers' Institute Specialist, from office of Experiment Stations, Department of Agriculture, Washington, D. C.

Exposition of Horticulture, 1913.

The Hon. Secretary of Agriculture has received through the Secretary of State official notification from the Imperial Embassy of Russia at Washington, D. C., that under the patronage of His Majesty, the Emperor of Russia, an International Exposition of Horticulture will be held at St. Petersburg during the spring of the year 1913. The Exposition will comprise the following sections:

1. Floriculture.
2. Decorative horticulture—(A), Greenhouse; (B), Outdoor.
3. Pomology.
4. Fresh fruits and those kept naturally during the winter.
5. Vegetables and market-garden plants.
6. Preservation and use of fruits and vegetables.
7. Grains.
8. Apiculture and agriculture.
9. House plants.
10. Scientific section.
11. School section.
12. Tools, instruments and apparatus.
13. Floral art.
14. Commercial section.

The organization of the Exposition is in charge of an Executive Committee under the direction of A. de Jaczewski, Vice-President of the Imperial Society of Horticulture of Russia, President; and M. K. Borowski, General Secretary of the Society, Secretary.

Requests for registration should be addressed to the Executive Committee, care of the Bureau of the Imperial Society of Horticulture of Russia, Quai de la Cour, 32, St. Petersburg, Russia, on or before February 1, 1913, by Russian exhibitors, and not later than January 1, 1913, by foreign exhibitors.

Provisional and foreign exhibitors who cannot themselves or by their representatives be present to receive their exhibits should send them prepaid to the Bureau of the Imperial Society of Horticulture. Exhibits not prepaid will not be accepted and the society will not assume any responsibility therefor. The committee will receive exhibits sent prepaid by railway or steamship and will put them in position at the expense of the exhibitor.

Corn Crop and Exports.

The largest exports of corn go out at the ports of New York and Baltimore. Our exports of corn are not large. In the year ending June, 1911, we exported 58,429,541 bushels out of a crop of 3,125,713,000 bushels harvested in the year 1910. We also exported 39,402,218 bushels of corn in 1912 out of a crop of 2,531,488,000 bushels in 1911. It will be seen from this that the export influence on the corn trade is a small item. The figures show that our own market is in control of the corn product. If corn was plentiful and cheaper, the exports naturally would be larger. Exports of corn meal are practically nominal.

The three greatest wheat-growing countries are the United States, Russia and India.

Wheat correctly fertilized. Good crops.

Stop this Loss

Unfertilized. Wheat abandoned, planted in corn.

FROM one-quarter to one-half of the wheat acreage has been abandoned in five states that produced about one-third of the winter wheat in the United States.

This means *a loss of about seven million dollars for seed alone* and several times this for preparing the ground and sowing. As usual, we can blame the weather—but can anything be done to prevent such losses?

A well-fed plant, like a well-fed animal, can better resist unfavorable surroundings. Look about you and see if wheat which was *well* and *correctly fertilized* did not come through the winter much better than that which was unfertilized.

POTASH

Good fertilization means enough fertilizer of the *right kind.* With a good rotation three hundred to four hundred pounds per acre is enough, provided a reasonably high grade formula such as 2-8-6 or 0-10-6 is used. The low grade 1-7-1, 2-8-2 or 0-10-2 formulas are out of date and out of balance, and the plant food in them costs too much per unit. Urge your dealer to carry high grade formulas, or if he is stocked up with low grade stuff get him to buy some potash salts with which to bring up the *potash content* to a *high grade.* One bag of muriate of potash added to a ton of fertilizer will do it.

If you prefer real bone or Bone Meal in place of acid phosphate try a mixture of 1700 pounds of either with three hundred pounds of muriate of potash. You will find that *Potash Pays.*

These high potash mixtures produce better wheat and clover, heavy grain and stiff straw.

We sell Potash salts in any quantity from two hundred pounds up. If your dealer will not get potash for you write us for prices and for our FREE booklet on Fall Fertilizers.

GERMAN KALI WORKS, Inc., 42 Broadway, NEW YORK.

CHICAGO NEW ORLEANS SAVANNAH

Agriculture a Beautiful Study.

There is no more beautiful study in the world than the study of agriculture. It has in it the beauty of color and the beauty of growing things. It is the study of many forms of life. There is no study in the world that has so much to do with the myriad forms of life as has agriculture.

He who studies the flowers finds a world of beauty, and that beauty exerts an influence on his own soul. But the study of flowers is also the study of productiveness and the study of how to provide for our needs. Thus beauty is linked with use.

If we study the value and use of flowers we are led to the study of the bee and of other fertilizing insects. These have a beauty of their own—the beauty of orderly arrangement and of exquisite use.

Also we must study the insects that prey on the flowers and on the foliage and wood that make the flowers possible, and these insects have in themselves the beauty of wonderful arrangement.

When the peach tree is in bloom and the wild crab is covering the landscape with its blossoms, we find a form of beauty that charms us but which has its purpose. One purpose is to kindle delight and ecstasy in the heart of man. So it is that the painters delight to paint the fruit trees in blossom and the wheat fields when they are yellowing in the autumn haze.

Beauty is one of the most powerful things in the world, but few can fathom its power. Under right conditions it can make our farm boys and girls fall in love with agriculture. If they do not, it is because the other conditions of farm life are not right.

One can little appreciate the beauty of agriculture if a living is not being made or if the members of the family must work fifteen hours a day to make that living. Here is where the great problem lies. Only under proper living conditions can we avail ourselves of the beauties that are found in agriculture.

All of our farm animals are so beautiful that they are often the subjects sought by painters. Many a farmer does not appreciate those beauties because of the hard life he is living. Yet by co-operation it is possible to so lighten the toil on the farm that all may be able to obtain the advantages of the beauty that is found in agricultural study.

Green things growing have a beauty of such exquisite force that when spring comes even the city man longs for a hoe and a garden.

We must foster the study of agriculture and show forth its side of beauty as well as its useful phases. There is something more about it than the accumulating of dollars and cents.

Art long ago embraced agriculture, and in some of our finest homes in the great cities we find expensive pictures of wheat fields with yellowing grain, of horses drawing the plow, of flocks of sheep grazing on the hillside, of herds of cows with deep udders coming home at evening time, and of innumerable phases of farm life.

What art has recognized and what science has proclaimed should be more fully recognized by the farmers themselves.

Argentina's Beef Supply.

The increasing demands from foreign countries for Argentina beef bid fair to leave that country without cattle sufficient to supply needs there. The President of the nation has instructed the Minister of Agriculture to investigate the matter and make such recommendations as the situation may warrant. Various societies interested in the cattle industry have also taken the matter under advisement, so serious has the situation shown itself. Reports received from many of the investigators substantiate the statement that the annual slaughter of cattle by packing companies far exceeds the increase in the herds for the same period. Legislation looking to the limiting of the number of cattle slaughtered to the number represented by the yearly increase is proposed as the sole solution.—Live Stock Report.

Missouri Lambs on the Market.

Prof. D. H. Doane, head of the Farm Management, Department of the University of Missouri at Columbia, was at the St. Louis National Stock Yards recently with two loads of lambs, fed and marketed by private parties under his direct supervision. One lot consisted of sixty-three head raised and fed by T. E. Atkins, of McBane, Mo. These lambs came from ewes bought in the West last September at a cost of $3.55 per head. The ewes were served by a native pure-bred Hampshire ram and the lambs began to come from February on. They were given only 15 cents' worth of grain to the head, consisting of oats, bran and corn. The rest of their feed consisted merely of pasturage. The lambs were sold by Clay, Robinson & Co. at $7.85 per 100 pounds, topping the early market there by 10 cents per 100 pounds. They averaged 69 pounds and returned Mr. Atkins $5.20 per head. The ewes sheared 8½ pounds of wool each, which sold at 20½ cents per pound. Mr. Atkins realized a gross profit of $3.40 on his original investment per ewe, a gain of 95 per cent.

In addition to the profit through the sale of wool and lambs, amounting to 95 per cent., he still has his ewes on hand.

The other lot of lambs whose handling was supervised by Mr. Doane were fed by F. H. Russell, of Columbia, Mo. There were ninety head in this shipment, and they were sold by Clay, Robinson & Co. at $7.85 per 100 pounds, averaging 70 pounds. They returned $5.01 per head.

These lambs were also raised from ewes bought in the West last fall at the same figure as Mr. Atkins'. The ewes sheared 8½ pounds of wool this past spring, which brought 19 cents per pound. The lambs had been fed no grain whatever, but the last three weeks they had access to a patch of rape, on which they flourished and gained rapidly. Mr. Russell figures that to date his ewes have returned him a net profit of $2.42 per head, and he still has his ewes to earn him more money.

The entire lot of lambs had been castrated and docked. They presented a nice, uniform appearance. Examples like these show what farmers can accomplish in handling sheep in a commercial way and through conducting the business along scientific, practical lines. Mr. Doane has achieved notable success so far in the line of work he is conducting. He is now putting men in separate counties throughout Missouri so as to further increase the usefulness of the department.

The University of Missouri also had a lot of experimentally-fed lambs on the aforesaid market the same day, in charge of Howard Hackedorn, who presides over the Sheep Department at the University. All lambs in the shipment were raised from Western ewes. It is significant that lambs sired by pure-bred native rams brought $7.50 per 100 pounds, while lambs sired by ordinary range rams sold at only $5.00 per 100 pounds. This speaks volumes for the efficacy of the native pure-bred ram.

The American Breeders' Association will meet at Columbia, S. C., January 24th, 25th and 27th, 1913, in connection with the Fifth National Corn Exposition. The Corn Exposition has assigned a booth to the American Breeders' Association for its exhibits and headquarters during the Exposition. In this booth will be exhibits and literature relating to the subjects of plant breeding, animal breeding and eugenics. The President of the American Breeders' Association is Hon. James Wilson, Secretary of Agriculture. The Secretary is Prof. W. M. Hays, the Assistant Secretary of Agriculture. Prof. Hays is taking a great deal of interest in the preparation of the programme.

There will be a round-up by the Mississippi Live Stock and Dairy Associations at the Agricultural College, Miss., during the first week in September, from the 2d to 6th, inclusive. A very interesting programme is arranged by Dr. E. M. Ranck, Secretary, whose address is Agricultural College, Miss.

The exhibition by the National Implement and Vehicle Manufacturers was remarkably successful last year, and Peoria, Ill., has been selected as permanent headquarters. This year the show will be held on 136 acres bought for the express purpose of holding this Exposition. This year the show will be open from September 27th and continue to October 5th, inclusive. The National Implement and Vehicle Show will interest every farmer and it will pay him to travel miles to see it. There is ample show ground for every sort of demonstration.

BINDER Attachment with Corn Harvester cuts and throws in piles on harvester or windrows. Man and horse cuts and shocks equal with a Corn Binder. Sold in every state. Price, $20.00. W. H. BUXTON, of Johnstown, Ohio, writes: "The Harvester has proven all you claim for it; the Harvester saved me over $25 in labor last year's corn cutting. I cut [illegible] and make 1 bushels corn [illegible]." Testimonials and catalog free, [illegible] of harvester. Address,
NEW PROCESS MFG. CO., SALINA, KANSAS.

The Wheat Market Situation.

The wheat market fell down with a crash. The decline is easily shown by cash wheat selling at St. Louis at $1.11 to $1.12 on the last day of June and at $1.01 to $1.03 on the last day of July. On the last day of July, cash wheat was worth $1.01 to $1.03 per bushel at St. Louis, $1.00 to $1.03 at Chicago, and 98 to 99 cents at Kansas City.

The July option for wheat closed out at 92½ cents, against 87½ cents a year ago, $1.05½ two years ago, and $1.06 three years ago.

The first shipment of new Missouri wheat, four cars, arrived in St. Louis Thursday, July 11, and was sold on the Merchants' Exchange. They graded No. 2 red. One car weighed 61½ pounds per bushel and sold for $1.10½. The second weighed 60½ pounds and brought $1.10. The third weighed 59 pounds and went at $1.10. The lowest-price bid was $1.08 for the fourth car, which weighed 59 pounds per bushel.

On July 12th the first sacked wheat of the new crop arrived at St. Louis. It came from New Madrid, Mo., graded as No. 3, and brought $1.02 a bushel.

On July 29th the St. Louis market received 626,542 bushels of wheat, the largest arrivals in the history of St. Louis. The largest previous record was that of Saturday, August 9, 1902, when 587,835 bushels were received. The receipts on July 29th break the record by 38,707 bushels. By rail 511 cars were received and by river 6,152 sacks, each containing 2½ bushels. Of the arrivals by rail 406 cars were consigned to St. Louis merchants and 105 were billed through. Last year on the same day the receipts were 148,033 bushels, and in 1910, on the same day, the receipts were 269,614 bushels.

Coming back to the market prices, the September option is the next to arrive at maturity. On March 30th the September option was quoted at 95⅞ cents, was advanced to $1.08¾ by April 30th, was quoted at $1.06 by May 31st, at $1.06⅛ by June 29th, and 93½ cents on July 31st. The explanation of a reduction of 13 cents in one month can only be explained by expectation of a large world's crop or anticipation of bad business conditions, or both. The December option was quoted at $1.06¾ on June 30th, and at 95⅜ cents on July 31st, a clean decline of 11⅜ cents.

We have thus given the drift of the wheat trade, not as it ought to be, but as it was and is.

On the last day of July the C. H. Albers Commission Company received one of the largest cars of wheat that ever came into the St. Louis market. It contained 2,180 bushels. A car of 1,800 bushels is considered a heavy load. The car weighed 131,600 pounds, and was soft winter wheat from Missouri.

Hammond's Handy.... Atlas of the World.

Is the most recent and authoritative, and, therefore, the most reliable Atlas of its size published.

IT contains a separate Railroad Map of each state and territory; maps of each of our insular possessions, and of every other portion of the globe, printed in colors from new plates. In the maps of our states and territories, and of the provinces of Canada, Railroads are named, and stations are shown, in a very complete manner. These, and all other details, are brought down to as recent date as in any of the more expensive Atlases.

Alphabetically arranged lists of cities give the latest population statistics.

The maps in this work are not only new and reliable, but they are legible. Every name is lettered in clean-cut type; no indistinct hand lettering is used. Every map is beautifully printed in colors, on high-finish paper made expressly for this book.

Many, if not most, low-priced Atlases are made up of old plates, all but worthless in this era of rapid changes.

Our plates are new, up-to-date and superior in every respect. Contains 96 pages; 6x8 inches; bound in durable, silk-finished cloth.

We are using HAMMOND'S HANDY ATLAS OF THE WORLD as a subscription premium with the best monthly farm paper in the United States.

The National Farmer and Stock Grower

is a nice, clean, ably-edited general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, to dairymen, to vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, to horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. The best live stock illustrations appear in THE NATIONAL FARMER AND STOCK GROWER. There are thirty-two pages, four columns to the page. It is published monthly.

Send us One Dollar ($1.00) and we will send you one copy of HAMMOND'S HANDY ATLAS OF THE WORLD and we will also send you THE NATIONAL FARMER AND STOCK GROWER regularly for two years. Address,

THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

Oats Market Situation.

The farmer who sells oats at present quotations ought to be worse off than the editor of The National Farmer and Stock Grower, who becomes poor in June, poorer in July and dead broke in August. A farmer who is not dead broke can be excused for selling oats, but no other can, because it is only a way to break the market, that would recover if let alone.

If the oats market does recover, it will be because farmers keep the oats off the market. If we had authority to prevent farmers from selling oats at less than 50 cents a bushel we would never allow a bushel of oats to be sold at less than the price stated.

On June 30th cash oats were sold at 50 to 53½ cents a bushel at St. Louis, and on July 31st the range was 35½ to 38 cents, a decline of 15 cents in the price of a bushel that only weighs 32 pounds. There has been no great run of oats and no great reason for the decline, but markets are not run on reason, and there is little use hunting for the cause. Holding back oats is not like holding cotton; the farmer can feed the oats to stock, but he cannot feed the cotton.

At Chicago, on July 31st, cash oats sold at a great difference in prices. No. 2 white, old crop, 54 to 55 cents; No. 2 white, new crop, 46 cents; standard, old crop, 51 to 53 cents; new crop (greater shrinkage), 39 to 43 cents; No. 3 white, old crop, 47 to 53 cents; new crop, 39½ cents; No. 4 white, 47 cents.

In regard to future deliveries, the September option at Chicago was quoted at 40⅛ cents on June 30th and 33 cents on July 31st. The December option, quoted at 41 cents on June 30th, had declined to 34¼ cents on July 31st. The May option for 1913 was quoted at 36¾ cents.

We desire to say that the price of oats cannot stand still, and farmers ought to have patience and bide their time for a better market.

The Magic in Deep-Tilled Farms!

Here are some facts about deep tilling and the money-profit to farmers who do it. Also the facts about the SPALDING DEEP-TILLING MACHINE, which TILLS, PULVERIZES and MIXES the soil, all in one operation, leaving a perfect, deep, garden-like seedbed over the entire farm. Every farm that produces its maximum profits must, finally, come to this careful, easy way of deep tilling.

Ordinary Seedbed

Spalding Machines at Work

Spalding Seedbed

Note the illustration above. It shows the rear view of the Spalding Deep-Tilling Machine. The seedbed to its right, with the high stand of corn, is the seedbed the Spalding makes. The one to the left is the kind of seedbed that most farmers are apt to make now. **Note the difference in crops.** We have hundreds of letters from Spalding users giving actual figures to bear out what this picture tells—not only corn figures—all kinds of crops. These farmers have plowed one field the old way and another, alongside, with the Spalding Machine, just to make an actual comparison. The results they obtained are surprising. Every up-to-date farmer should know what they are. **The Spalding Machine on a thousand farms is causing some almost miraculous increases. Learn what it can do for you. Among the thousands of Spalding owners there are farmers who own just such farms as yours. Their experiences with the Spalding are exactly the same as yours will be.** Write for the name of an owner near you who will show you his Spalding in operation. Get his experiences first hand.

Why Users Laugh at Drought

Hundreds of users in drought sections say: "If we'd had that machine last year we'd have had a crop now." That's because the deep seedbed stores the winter rains, like a sponge, while the rains on the shallow-plowed land run off. It's because this pulverized, well-mixed soil liberates the utmost of the needed plant food for the long, healthy roots which can grow **to their full** in deep seedbeds.

Using a Spalding is like spading the whole farm, just as you spade your garden, taking even less time to do it than plowing and harrowing takes now.

The machine's operation is simple. But the results in the yields are like magic. One disk cuts a furrow four inches deep. Another disk follows, cutting the same furrow from eight to twelve inches deeper, the soil being mixed and pulverized all in the one operation.

No other machine or plow does anything like it. You ought to know all about it and about the profits to farmers who deep-till every year with the Spalding.

Read over the letters from users. Then write for our book on deep tilling called "The Bulletin"—also the Spalding Catalog. Cut out this ad as a memo to send for them.

Spalding Dept. H-8, Gale Manufacturing Co., Albion, Michigan

Cleveland, O., February 9, 1911.

Gentlemen: About three years ago I bought for Good Hold Farm, in Mentor, two of these plows. Last fall I bought the third. That is perhaps the best opinion that I could give in regard to this plow. If it had not been satisfactory, of course I would not have bought the third plow. As a cultivator it is correct in principle. It will cut up the hardest kind of soil. It lifts the soil up in the same manner that it is lifted up by a spade—lets the air come through it and drops it back again in a loose condition. It does not create soil, but it will cultivate it as deep as it is ever practicable.

My experience is that by under-draining and the use of the Spalding plow and disks, which work on the same principle as the plow, and by proper selection of seeds and fertilization of the soil, we have increased the products of the land on Good Hold Farm threefold. Yours truly,

L. E. HOLDEN.

Live Oak, Fla., August 18, 1911.

Gentlemen: I am in receipt of yours of the 14th, and replying thereto will say I would like to have the machine shipped as early as you can do so. In my opinion your double disk plow is the finest instrument for breaking land and turning under heavy vegetation that has yet been made. I note a wonderful difference in corn grown on land this year, broken with your tilling machine, as compared to land broken with the ordinary two-horse plow. I believe it will make at least ten bushels of corn per acre more. Please let the shipment come forward at once. Yours truly,

W. J. HILLMAN.

Monmouth, Ill., April 27, 1912.

Gale Manufacturing Company,
Albion, Mich.

Dear Sir: In reference to your inquiry as to my experience with the Spalding Deep Tilling Machine, I wish to say that we bought the machine in 1910. In the fall of that year I plowed a field of about seventy acres, forty acres with a gang plow to the ordinary depth and thirty acres with the Spalding Deep Tilling Machine to an average depth of fifteen inches, cutting a furrow of about twelve inches in width. At this width and depth I considered it of very light draft, considering the amount of ground we were turning and the fact that we were only using four ordinary-sized horses.

In the spring of 1911 this field was put in corn, all was tended the same, cultivated the same number of times, and no difference made as regards cultivation, except that the ground plowed with the Tiller was much easier to get into condition for seeding, due to the manner in which the machine pulverizes the soil.

The yield of corn per acre was as follows:
Ground plowed with Gang Plow, ordinary depth, 24 bushels.
Ground plowed with Spalding Machine, 15 inches, 61 bushels.

I will admit that the above results sound unreasonable, and have had a hard time realizing that it was so, but wish to say that the above results were not gained through guesswork, but by actual weight.

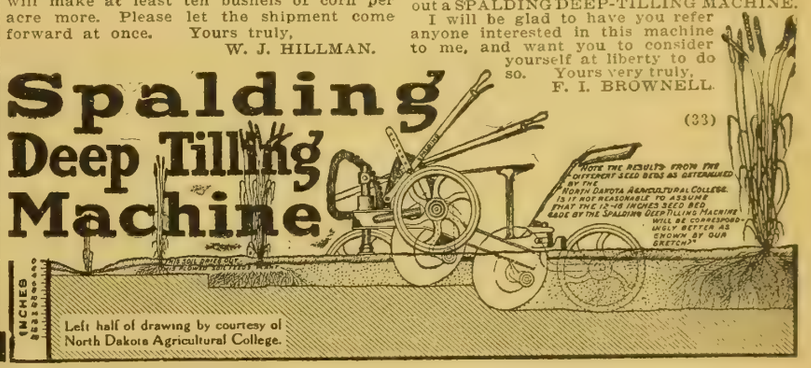
When the machine was first brought to my attention I hesitated about buying on account of the price, thinking it too high, but the above experience proves to me that it is without doubt the cheapest implement on the farm, and especially so, because the first cost is the only cost, as there have been no repairs.

With the experience, together with the results I have obtained, it is impossible for me to understand how any farmer can be without a SPALDING DEEP-TILLING MACHINE.

I will be glad to have you refer anyone interested in this machine to me, and want you to consider yourself at liberty to do so. Yours very truly,

F. I. BROWNELL.

(33)



The Corn Market Situation.

Cash corn, No. 2 grade, was worth 72½ to 73 cents a bushel at Omaha, 77 cents at Kansas City, 74½ cents at Chicago, and 75½ to 76½ cents at St. Louis. This was on July 31st, and from June 30th the price had declined about three cents a bushel.

Our intention in writing about the grain market is to enable our friends and patrons to be able to keep the records before them by keeping a file of the paper. If a farmer knows what corn is selling for in market, the next information he needs is the rate per hundred pounds to market, and then he should learn the grade of his corn. With No. 2 grade selling at 75½ to 76½ cents, No. 3 was selling at 74½ cents; No. 4 at 73 to 74½ cents, and no-grade corn was selling at 72 cents a bushel. Of course, market information is most necessary when the farmer is selling his own corn, but it is well for him to keep the run of the market at least once a month, even if he never sells a bushel of corn on the market.

Turning to the market for future delivery, generally called the speculative market, we find that July corn, quoted at 75¼ cents on June 30th at Chicago, was closed out on July 31st at 71¾ cents, a decline of 3½ cents in one month.

The September option, next in order, was quoted at 73¼ cents on June 30th and declined to 66¾ cents by the close on July 31st, and the December option, quoted at 63⅜ cents on June 30th, was reduced to 57¼ cents by July 31st. Closing quotations for 1912 corn options follow:

	May.	July.	Sept.	Dec.
Jan. 31	67⅞	67⅝	....	....
Feb. 29	69⅜	69½	....	....
March 30	74⅞	74¾	73⅞	....
April 30	80¼	78¾	76¾	....
May 31	80	75	72¾	62⅞
June 30		75¼	73¼	63⅜
July 31		71¾	66¾	57¼

It will be seen from these figures that considerable changes take place between the end of one month and the end of another.

In our June edition we anticipated the decline and said that the trade expected a large crop and naturally reduced prices, but the last word has not yet been said as to what corn will sell for after the actual crop is ascertained.

Cash Grain at St. Louis.

The following were official quotations for cash grain at St. Louis, July 31st, 1912:

No. 2 red wheat, $1.01 to $1.03; No. 3 red, 98c. to $1.01½; No. 4 red, 92 to 98c.; No. 2 hard, 93½ to 96c.

No. 2 corn, 75½ to 76½c.; No. 3 corn, 74½c., nominal; No. 4 corn, 73 to 74¼c.; no grade, 72c.; No. 2 yellow, 76 to 76½c.; No. 3 yellow, 76c.; No. 4 yellow, 74½c., nominal; No. 2 white, 82c., nominal; No. 3 white, 78 to 79c.; No. 4 white, 74c.

No. 2 oats, 35½ to 38c.; No. 3 oats, 34 to 37½c.; No. 4 oats, 34c.; No. 2 white, 41½ to 42c.; standard, 40c.; No. 3 white, 38½ to 40c.; No. 4 white, 37c., nominal; No. 2 rye, 77c.

Kansas City Live Stock.

The receipts of cattle at Kansas City on August 1st, 1912, were 5,000 head, including 1,800 Southerns; market steady; Southerns weak; dressed-beef and export steers, $8.20 to $9.75; fair to good, $6.00 to $8.15; Western steers, $5.30 to $8.90; stockers and feeders, $4.50 to $7.40; Southern stockers and feeders, $4.50 to $7.40; Southern steers, $4.90 to $6.50; Southern cows, $3.50 to $5.50; native cows, $3.20 to $6.75; native heifers, $5.00 to $8.50; bulls, $4.00 to $4.90; calves, $5.00 to $8.75. Hogs—Receipts, 3,500 head; market 5 to 10 cents higher; bulk of sales, $7.95 to $8.15; heavy, $7.80 to $7.90; packers and butchers, $7.95 to $8.15; lights, $7.95 to $8.15; pigs, $5.75 to $7.00. Sheep—Receipts, 3,500 head; market 10 to 15 cents lower; lambs, $6.00 to $7.40; yearlings, $4.25 to $4.75; wethers, $4.00 to $4.50; ewes, $3.50 to $4.00; stockers and feeders, $2.50 to $4.60—all quotations are at the price stated per 100 pounds.

Melons to the Front.

A solid train of fifty-five cars of watermelons left Chickasha, Okla., for market, August 2d. Each car contained over 1,000 melons. None weighed less than thirty pounds and many weighed sixty pounds each. The farmers in the melon-growing district agreed to load forty cars of melons a day for ten days. Chickasha is in Grady county, where the live stock valuation alone amounts to $3,040,483,000.

A dairyman was arrested near St. Louis recently for pouring milk into unwashed bottles.

CORN HARVESTER

All steel, will last a lifetime. Only weighs 175 lbs. Either 1 or 2 men. One horse cuts 2 rows. Sold direct at wholesale prices. Every machine warranted. We also make the Jayhawk Stacker and Sweep Rakes. Prices very low. Write to-day for free circular—it will pay you.
F. Wyatt Mfg. Co., 140 N. 5th St., Salina, Kan.

Start Your Library.

Every man and boy should own a library. It is easy to obtain a nice lot of books. A splendid book to begin with is "The American Government," by Frederick J. Haskin, which is a valuable book for any American between the age of nine and ninety years.

No other book explains so clearly what our government consists of. The articles upon the Presidency, the Senate, the House of Representatives are alone sufficient to place the book on the top shelf of the home libraries and in the 386 pages there are thirty distinct articles, each one of them complete with information concerning a government department.

"The American Government" clears the mind of many doubts and answers many questions. A Congressman serving his first term needs such a book before he goes to Washington, and Mr. Haskin has produced a book of which 175,000 copies were sold the first year.

We will recommend other books, but "The American Government" is a first-class book for No. 1 in a farm library. We have adopted "The American Government," handsome cloth-bound edition, as a subscription premium in connection with The National Farmer and Stock Grower. Anyone who will send One Dollar for two-years' subscription to The National Farmer and Stock Grower can select a copy of "The American Government" as a subscription premium, and we will send it postpaid, safe delivery and satisfaction guaranteed.

Government Competition in Business.

A groceryman who pays taxes for the support of the government would not like the idea of having the government use the tax money in order to start a grocery store upon the opposite corner.

A creamery company that is started with personal funds for the purpose of doing a legitimate business does not like the idea of having to compete in the purchase of butter-fat on the one hand and the sale of butter on the other, the competitor being a public institution, capitalized and conducted with money derived from taxes.

The farmer who is keeping a stallion for public service as a part of his means of support does not like the idea of being competed out of his stud fees by a stallion bought with tax money and offered for service in unfair competition by state institutions.

The publisher of a newspaper who is employing people at current wages, who buys his own stock on which to print his paper and who has to pay for everything done for him; who must buy and sell on the open market; he does not like to find that tax money in various ways is used for the purpose of conducting business in opposition to his own.

The seed breeder, grower and improver, who is engaged in a business enterprise which is beneficial to the farming community does not like to have his business demoralized by a free distribution of seeds paid for by the government out of tax funds which were not collected for any such purpose.

We are of the opinion that it is absolutely wrong for the government to engage in any form of business in competition with the citizen except in the matter of munitions of war for the defense of the country. The postoffice is the only government monopoly established by law, and the only excuse for it is the equality of service for an equal amount of postage, regardless of cost or distance, which is required of the postoffice department.

We are in perfect sympathy with all people whose interests suffer through unfair competition on the part of city, county, state or federal government, and there is only one way for parties at interest to do in such matters, and that is, do as the labor union officials do under such circumstances, which is to assert that they will not stand for it and demand that it be stopped.

Articles on the Automobile.

With their usual vigor and unusual knack for doing things R. M. Owen & Company have just issued the summer number of the **Reo Echo.** It is a beautiful 7x10 brochure of forty-eight pages, filled with timely articles on motoring and bright half tones illuminating the scenic grandeurs within the four corners of America. Among the articles contributed by writers of national reputation are "The Growth of the Motor Car," "The Automobile as a Solution to the Farm Problem," "The Ideal Motor Truck and Its Place in the Commercial World To-day," all of which bristle with interest throughout and must needs prove invaluable to the farmer and business man who are seeking the latest and most reliable information on pleasure and commercial motor vehicles. Wit, humor, science and patriotism also come in for their just share in the rare exhibit. A limited number of these handsome brochures are being mailed free by R. M. Owen & Company, 1759 Broadway, New York, to readers of The National Farmer and Stock Grower if the request be mailed promptly. Don't fail to send for it and mention this paper.

OATS AND SOY BEANS.

A Mississippi Experience at the Delta Station.

In November of 1910 the Station planted eleven acres of fairly well surface-drained loam land in oats, using two and a half bushels of seed per acre. A good stand was secured and they went through the winter in fine shape, ripening the last of May, just in time to escape the effects of a six-weeks' drouth. The weather was ideal for harvesting and the yield was a most satisfactory one. Being in need of the oats for feeding purposes and not having a thrashing machine at that time, we failed to get a record of the yield on the whole eleven acres, but we measured off one acre of what we considered to be a fair average of the field and saved the grain until we purchased a thrashing machine in August. From the acre we thrashed ninety bushels of very fine, heavy oats.

As soon as the oats were off these eleven acres, we broke the land shallow and on June 29th planted soy beans in rows thirty inches apart, using one and a half pecks of seed per acre. The beans were given two cultivations, going once to a middle with a "Planet Junior" cultivator each time. All but one acre of the beans were cut for hay when the pods began to turn yellow and yielded an average of 5,200 pounds of cured hay per acre. One acre was left until the beans ripened to get the record of bean yield per acre. After losing a good per cent. of the beans from shattering, we thrashed 22½ bushels from the acre.

When planting soy beans to be thrashed for seed, it is well to plant where the land is fenced, or where hogs can run on the land for a few days after the bean crop is removed, to pick up the shattered beans, otherwise considerable loss will be sustained.

As a crop for following a grain crop in this section, there are few things that will equal the soy bean. As a hay crop it is fine. When cut at the proper stage and when properly cured, the hay is equal in feeding value to that of alfalfa, and when planted on good land under good conditions will yield an average of two tons per acre. As a bean crop it is also fine. So long as there is a demand for soy-bean seed at $1.50 and up per bushel, it is an excellent crop to grow for seed. As a grazing crop for hogs, there is none better. The green foliage is as rich in protein as red clover and the bean has a higher protein content than oil meal. In fact, we know of no plant having a more useful range of possibilities than does the soy bean.

The Station recommends that crops of fall oats followed by soy beans be given more consideration when planting crop systems for the Delta cotton plantations. Since the boll weevil is a reality with us, it is possible for us to harvest our cotton crops in time to follow with fall oats, which would have been impossible heretofore. Oats do better following cotton than following corn and peas, as they are not so apt to lodge.

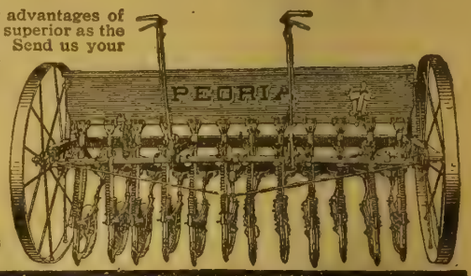
The Only Drill That Sows Grain in Any Kind of Soil—at a Proper, Even Depth

Think what it would mean to you to have *every* seed count and to have *every* stalk come up *evenly* and at the *same time*. You can easily accomplish this—with The New Peoria Drill equipped with our famous Disc Shoe Furrow Opener.

It combines every advantage of the single disc for cutting trash and penetrating hard ground, with every advantage of the shoe for forming a furrow and depositing the seed. The Disc Shoe Furrow Opener is the *only* one that sows every seed at an *exact, even depth*, in a *packed furrow*. No seed touches the disc and no dirt falls back into the furrow until *after* the seed is deposited. No practical, progressive farmer can fail to see the many money-making and money-saving advantages of this wonderful Disc Shoe Furrow Opener—found *only* on

The New Peoria Drill

There are also many other advantages of this drill, each one just as superior as the Disc Shoe Furrow Opener. Send us your name and address on a postal now for catalogue and all details of construction. Let us prove to you that it will pay you to discard even a new drill in order to buy and use the New Peoria. Will you spend a penny for a postal *now* to get all the facts? Address,



Peoria Drill & Seeder Co.

2430 North Perry St., Peoria, Illinois

The 1911 crop of wheat was 543,063,000 bushels, and out of the crop the exports were 28,667,757 bushels of wheat and 10,982,047 barrels of flour.

There is no famine in these figures. Farmers who could supply all home demands for wheat and realize but 87.4 cents for a sixty-pound bushel of wheat, leaving approximately 10 per cent. of the crop for export, are as near up to date as they have need to be in their own interest, and, so far as wheat is concerned, there is no cost that represents high prices.

Curious to Learn.

In Georgia they tell of a prisoner who had been convicted a dozen times of stealing, who, when placed at the bar for his latest offense, displayed a singular curiosity.

"Your Honor," said he, "I should like to have my case postponed for a week. My lawyer is sick."

"But," said the magistrate, "you were caught with your hand in this gentleman's pocket. What can your counsel say in your defense?"

"Exactly so, Your Honor; that is what I am curious to know."—The Green Bag.

The Exports of Wheat.

Although we are rapidly approaching the time when the grain crops will have to be materially increased to satisfactorily feed our own population, we have not yet reached that point. During the past three years the Department of Agriculture estimated the farm value of wheat at 98.6 cents in 1909, 88.3 cents in 1910, and 87.4 cents in 1911. These are very modest figures from the standpoint of the farmer. Wheat was exported in considerable quantities over and above the amount required to feed the people.

The 1909 crop of wheat was 673,653,000 bushels, and out of the crop the exports amounted to 44,-353,994 bushels and 8,992,420 barrels of flour.

The 1910 crop of wheat was 561,-051,000 bushels, and out of the crop the exports amounted to 23,441,354 bushels of wheat and 10,095,988 barrels of flour.

SUBSCRIPTION PREMIUM — A POCKET COMPASS.

This is a true 1¾-inch Pocket Compass purchased from a reliable house. It is a fancy, nickel-plated, open-face, watch-shape Compass, with a silvered dial, and it weighs less than one ounce. Every farmer or ranchman should have one in his pocket. Send us One Dollar and we will send you The National Farmer and Stock Grower for one year, and we will also send you this Pocket Compass by mail postpaid. Address, THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

THE MARKET FOR ALFALFA.

Being an Extract From an Address Before the National Hay Dealers' Association at Kansas City.

So far back as any of us can remember, timothy and clover were regarded as the staple hays, and without rivals. But for young animals, especially the one thing desired above all others is protein; the element that makes bone and muscle and blood rather than fat, and the Wisconsin Experiment Station, one of the most dependable, says an acre of alfalfa will yield three times as much protein as an acre of clover, nine times as much as an acre of timothy, and twelve times as much as an acre of brome grass.

Silage is rated high as a winter feed on account of its succulence, but experienced feeders who know alfalfa hay insist that cut at the right stage of maturity, properly cured and stored, it falls little short of serving all the purposes of good silage.

Largely a stranger to Kansas City fifteen years ago, alfalfa is to-day the most important hay handled in this greatest of all hay markets, and is shipped from here to every state, and every city of consequence east of the Missouri river. One of your dealers relates that in 1892 or 1893 a carload was shipped to him, but nobody knew what it was and nobody wanted it. Finally, he was able to unload the car by distributing its contents in small wagon-loads to jobbers who were not to pay for the stuff unless they could sell it.

This hay had its first official recognition on the Kansas City market in 1908, with quotations of $6.00 to $6.50 per ton, or about the same as those on prairie hay, but with little demand. Only now and then was a load received, and not infrequently it was absent from the market for days at a time. In the middle of December, 1898, its high price was $7.50 per ton, or more by 25 cents than choice timothy, and more by 50 cents than either choice clover or clover mixed. The public, rapidly learning its high feeding value, was willing to pay more, and it was not long available at $7.50. In December, 1900, "choice" reached the $10 mark, and since has sold above that, all the way to $26 or more, as was done the past spring.

Less than ten years ago no grades for it had been adopted at Kansas City. "Alfalfa" was alfalfa and there was little definite distinction between qualities, although in earlier days there had been a range of about $3.00 per ton between the high and low prices. The business in it soon developed to such proportions, however, that it became necessary to establish a uniform method of grading, and toward the close of 1903 the hay was classified and sold as "Choice," "No. 1," "No. 2," and "No. 3," and in February, 1912, the grade of "Fancy" was added.

Rye in Wisconsin.

The pedigree rye crop on the University farm at the College of Agriculture of the University of Wisconsin, just harvested, promises the largest yield ever obtained on the Station's large fields. The Agronomy Department estimates that it will yield between thirty and thirty-five bushels per acre. It stood about five feet high, did not lodge, and the heads were well filled with heavy, plump grain.

Wisconsin is now the leading rye state in the Union, having produced over 6,035,000 bushels in 1911, against 5,840,000 bushels in Michigan, 4,448,000 bushels in Minnesota, and 4,304,000 bushels in Pennsylvania. The increase in Wisconsin is largely due to the breeding up of rye by careful selection of the best grain for planting. This year's crop on the big fields of the University farm is about double the average for the state last year, and those who are growing the pedigree rye usually obtain five to ten bushels per acre more than the average for the state.

Why Do Plants and Trees Perish?

It has been estimated many times that not over one-half of the plants, vines and trees sent out by nurserymen to farm and village homes each season ever live to come into full bearing. I doubt if this statement is accurate, but many trees do perish in the hands of the planter. The main causes of the loss of these plants, vines and trees are as follows:

The branches are not cut back at planting or soon after, as they should be, leaving simply short stubs of branches four to six inches long. This pruning is necessary for vines and shrubs, especially roses.

The ends of the roots are not cut off with a sharp knife so as to induce fresh root growth.

The trees are planted too deep or not deep enough.

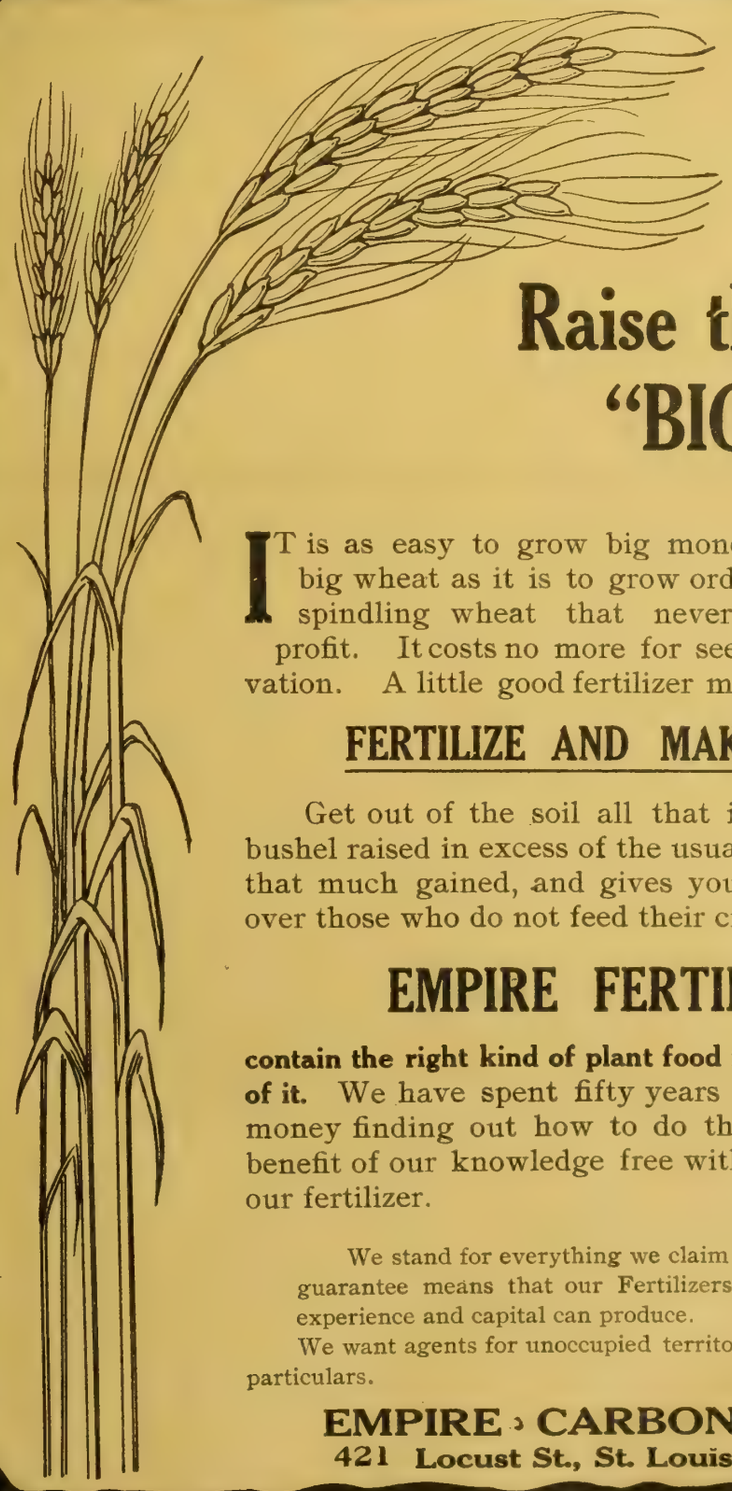
The soil is not compacted firmly over the roots. After the firm packing of the soil over the roots, the last shovelful of earth should be left loose on the surface as a mulch and a forkful of strawy manure should be thrown around the tree, plant or shrub.

Often the tree or vine after being planted is forgotten, whereas it should be visited frequently and given cultivation and should be watched for injurious insects.

Sometimes farmers will turn the cattle into a field planted with vines, shrubs or trees. Cattle are sure to destroy the trees.

Many times the plants or shrubs are left exposed to the sun in a wagon for many hours while planting is going on.

Properly planted and cared for, not one vine, shrub or tree in a hundred should perish.—Green's Fruit Grower.



Raise the "BIG" Wheat

IT is as easy to grow big money-making crops of big wheat as it is to grow ordinary crops of small spindling wheat that never pay anybody any profit. It costs no more for seed, planting or cultivation. A little good fertilizer makes the difference.

FERTILIZE AND MAKE MONEY

Get out of the soil all that it can bear. Every bushel raised in excess of the usual production means that much gained, and gives you a great advantage over those who do not feed their crops.

EMPIRE FERTILIZERS

contain the right kind of plant food for wheat, and plenty of it. We have spent fifty years and a great deal of money finding out how to do this, and you get the benefit of our knowledge free with every purchase of our fertilizer.

We stand for everything we claim for our Fertilizers. Our guarantee means that our Fertilizers are the best that skill, experience and capital can produce.

We want agents for unoccupied territory. Write us at once for particulars.

Improvement in Ranch Cattle.

On July 31st it was reported that the Capital Syndicate of Texas, known as the X. I. T. Ranch, had sold a herd of Aberdeen-Angus cattle, 27,000 strong, to J.M.Shelton, of Shamrock, Texas, and to D. C. and S. L. Trigg, of Panhandle, Texas. The price was stated at $1,100,000, carrying with it a lease on 600,000 acres of pasture land.

The transaction so far stated is interesting of itself on account of its magnitude, and one would naturally ask where so many Aberdeen-Angus cattle came from? The answer to that question is, that they were graded up from some very ordinary Texas cattle which furnished the very beginning of the Capital Syndicate herd. Messrs. Taylor, Babcock & Farwell acquired three million acres of land for constructing the Texas Capitol Building. That was about twenty-seven years ago, and to stock the ranch there were not enough good and suitable cattle for sale in Texas. Herds were bought all over the state and finally the ranch was stocked with cattle that were neither uniform or well bred. The improvement began from that time and in the herd to-day every animal looks equal to the pure-bred bulls that commenced the improvement. Messrs. Shelton and Trigg are veteran ranchmen of Texas, were on the ground before the Capitol Syndicate was started and they knew the cattle they bought equally well with the cattle they themselves have raised and owned.

Automobile Road Contest.

In the first automobile road contest ever held for farmers and ranchmen exclusively, fourteen of the twenty-six starters finished with perfect scores and divided the cash prizes. The tour was held under the auspices of the Farm and Ranch, a rural publication, at Dallas, Texas. W. H. Camp, of San Gabriel, who drove a Reo, was awarded the Holland trophy by lot, as fourteen starters finished with perfect scores. The Reo Car winning this contest is advertised on page 15.

Beef Cattle at $10.10.

Since this edition went to press on August 5th, at the Chicago market a load of Missouri-raised beef steers, fed to perfection by A. W. Bragg, of Tuscola, Ill., was sold at $10.10 per 100 pounds and averaged 1,500 pounds; another and lighter load sold at $10.05 per 100 pounds. These prices break all records for beef steers sold on the open market. On the same day many good steers sold at $9.50 to $9.80, with the medium to good largely at $8.50 to $9.25; not many cattle were common enough to sell below $7.50; receipts were 23,000 head.

August 22d is the date set for the meeting of the American Apple Growers' Congress at the Planters' Hotel, St. Louis, Mo.

U. S. CROP REPORT, 1912.

Satisfying Statement in Regard to Possible Yield of Crops.

Probably the Most Valuable Report That is Issued For General Information by the United States Department of Agriculture in July.

Bumper crops of spring wheat, corn, oats, potatoes, flax and tobacco are promised. While winter wheat falls far below the last two years, the spring wheat crop is estimated at 271,000,000 bushels, or 81,000,000 bushels more than last year. The total indicated winter and spring wheat is 629,000,000 bushels, as compared with 621,000,000 bushels in 1911 and 635,000,000 bushels in 1910.

The following table shows the indicated yield of 1912, compared with the figures for 1911:

Crops.	1912.	1911.
Winter wheat.	Bushels. 358,000,000	Bushels. 430,656,000
Spring wheat.	271,000,000	190,682,000
Corn.	2,811,000,000	2,681,258,000
Oats.	1,139,000,000	922,298,000
Potatoes.	352,000,000	292,737,000
Flax.	28,000,000	19,370,000
Rice.	25,000,000	22,934,000
	Pounds.	Pounds.
Tobacco.	1,009,000,000	905,109,000

Corn now promises a harvest of 2,811,000,000 bushels, or 280,000,000 bushels more than last year, and oats will be the largest crop ever raised — 1,139,000,000 bushels — if there are no setbacks. Last year the oats crop was 922,000,000 bushels.

Barley conditions suggest a crop of 194,000,000 bushels, and rye 37,000,000 bushels, both excellent yields. The outlook for hay is much better than a year ago. The conditions of the crop on July 1 was 85.2, against 64.9 on July 1, 1911. The flax crop of the Northwest will be about 27,000,000 bushels, or 8,000,000 bushels more than a year ago.

Climatic conditions the last month were favorable on the whole,although some sections suffered from drouth, the condition of spring wheat in the Northwest dropping from 95.8 on June 1 to 89.3. The decline was due to hot weather and lack of rain, but late in the month there was general precipitation, resulting in an almost complete recovery in crop conditions.

Cool weather during June, with an abundance of rain, did wonders in improving the winter-wheat outlook, while retarding somewhat the seasonable growth of corn and delaying the ripening of oats. In the section east of the Mississippi the wheat outlook is decidedly poor, but prospects are for big crops of corn and oats.

Government Report in Detail.

The government report gives the indicated yield per acre and the total production of the country's principal crops, as follows:

Winter Wheat.—Condition, 73.3 per cent. of a normal, compared with 76.8 per cent. on July 1 last year and 80.2 per cent., the average normal condition for the past ten years on July 1. Indicated yield per acre, 13.9 bushels, compared with 14.8 last year and 15.5 the average for the past five years. Estimated total production, 358,000,000 bushels, compared with 430,656,000 last year, 434,142,000 in 1910, and 418,000,000 in 1909, as returned by the Census Bureau.

Spring wheat.—Condition, 89.3 per cent. of a normal, compared with 73.8 per cent. on July 1 last year, and 85.6 per cent., the average normal condition for the past ten years on July 1. Indicated yield per acre, 14.1 bushels, compared with 9.4 last year, and 13.4, the average for the past five years. Estimated total production, 271,000,000 bushels, compared with 190,682,000 last year, 200,979,000 in 1910 and 265,000,000 in 1909, as returned by the Census Bureau.

Wheat on farms.—The amount of wheat remaining on farms, July 1, is estimated at about 23,876,000 bushels, as compared with 34,071,000 on July 1 last year and 35,929,000 bushels on July 1, 1910.

Corn.—The area planted to corn this year is estimated at 108,110,000 acres, compared with 105,825,000 last year and 104,035,000 in 1910. Condition, 81.5 per cent. of a normal, compared with 80.1 per cent. on July 1 last year and 84.6 per cent., the ten-year average condition on July 1. Indicated yield per acre, 26 bushels, compared with 23.9 last year and 27.1 the average for the past five years. Estimated total production, 2,811,000,000 bushels, compared with 2,681,258,000 last year and 2,886,260,000 in 1910.

Oats.—Condition, 89.2 per cent. of a normal, compared with 68.8 per cent. on July 1 last year, and 84.8 per cent., the average normal condition on July 1 for the past ten years. Indicated yield per acre, 30.1 bushels, compared with 24.4 last year and 28.4, the average for the past five years. Estimated total production, 1,139,000,000 bushels, compared with 922,298,000 bushels last year and 1,186,341,000 bushels in 1910.

Barley Below the Average.

Barley.—Condition, 88.3 per cent. of a normal, compared with 72.1 per cent. last year, and 86 per cent., the average normal condition for the past ten years on July 1. Indicated yield per acre, 16 bushels, compared with 21 last year and 24.8, the average for the past five years. Estimated total production not given.

Rye.—Condition, 88.2 per cent. of a normal, compared with 85 per cent. of a normal on July 1 last year, and 89.9 per cent., the average normal condition on July 1 for the past ten years on July 1. Indicated yield per acre, 16 bushels, compared with 15.6 last year, and 16.3, the average for the past five years.

White potatoes.—The area planted to white potatoes this year is estimated at about 3,869,000 acres, compared with 3,619,000 last year, and 3,720,000 in 1910. Condition, 88.9 per cent. of a normal, compared with 76 per cent. on July 1 last year, and 89.3 per cent., the average normal condition on July 1 for the past ten years. Indicated yield per acre, 95.5 bushels, compared with 80.9 last year, and 96.8, the average for the past five years. Estimated total production,352,000,000 bushels, compared with 292,737,000 bushels last year and 349,032,000 bushels in 1910.

Tobacco.—The area planted to tobacco this year is estimated at about 1,194,200 acres, compared with 1,013,000 acres last year, and 1,366,000 acres in 1910. Condition, 87.7 per cent. of a normal, compared with 72.6 per cent. on July 1 last year, and 84.6 per cent., the average normal condition on July 1 for the past ten years. Indicated yield per acre, 884.9 pounds, compared with 893.7 pounds last year and 828.0 pounds, the average for the past five years. Estimated total production, 1,009,000,000 pounds, compared with 905,109,000 pounds last year, and 1,103,415,000 pounds in 1910.

Flax.—The area planted to flax this year is estimated to be about 2,992,000 acres, compared with 2,757,000 acres last year, and 2,467,000 acres in 1910. Condition, 88.9 per cent. of a normal, compared with 80.9 per cent. on July 1 last year, and 87 per cent., the average for the last nine years on July 1. Indicated yield per acre, 9.4 bushels, compared with 8.7 bushels, the average for the past five years. Estimated production, 28,000,000 bushels, compared with 19,370,000 bushels last year, and 12,718,000 bushels in 1910.

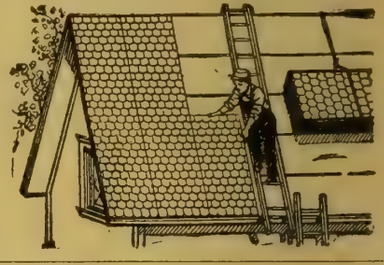
Rice Yield About Normal.

Rice.—The area sown to rice this year is estimated at about 710,100 acres, compared with 696,000 acres last year, and 723,000 acres in 1910. Condition, 86.3 per cent. of a normal, compared with 87.7 per cent. on July 1 last year, and 88.1 per cent., the average normal condition for the past ten years. Indicated yield per acre, 31.7 bushels, compared with 32.9 bushels last year, and 32.4 bushels, the average for the past five years. Estimated total production, 25,000,000 bushels, compared with 22,934,000 bushels last year, and 24,510,000 bushels in 1910.

Hay.—Condition, 85.2 per cent. of a normal, compared with 64.9 per cent. on July 1 last year, and 81.4 per cent., the average condition for the past four years on July 1. Indicated yield per acre, 1.4 tons, compared wtih 1.10 tons last year, and 1.41 tons, the average for the past five years.

Steel Shingles For Farmers.

In almost every instance the farmers who have purchased Edwards Steel Shingles have applied the roofing to their farm buildings themselves, a hammer and nails being all they required to complete the work. The steel sheets were sent to them, freight prepaid, in sizes twenty-four inches wide by from five to twelve feet long, and ready for use upon delivery. In every case the cluster shingles have proved themselves fire-proof, lightning-proof and weather-proof.



A valuable book containing interesting statistics on roofing has just been issued by the company. While the edition lasts it will be sent free to those who write for it. Just send your address to the Edwards Manufacturing Company, Lock street, Cincinnati, Ohio, and ask for the roofing booklet. It will be mailed free and you will find it to be interesting.

WEBER IMPLEMENT AND AUTO CO.,
1900 Locust Street, St. Louis, Mo.

ROPP'S COMMERCIAL CALCULATOR is an institution that was prepared for farmers' use. The edition we offer is the latest. It is a standard book. There are millions in use. They are in use because they are especially valuable By the regular use of ROPP'S COMMERCIAL CALCULATOR many hard problems become easy. It will prevent mistakes, relieve the mind, save labor, time and money and do your figuring in the twinkling of an eye. As handy as a watch, always ready and reliable. THE NATIONAL FARMER AND STOCK GROWER is a nice, clean, general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, to vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, to horse and mule raisers and dealers. There are thirty-two pages, four columns to the page. Issued monthly.

The Grain Dealer Surprised.

OUR PROPOSITION:—Anyone who will send 50 cents for one-year's subscription to THE NATIONAL FARMER AND STOCK GROWER can select one copy of ROPP'S COMMERCIAL CALCULATOR as a free premium, sent by mail, postage paid. Address,
THE HALE PUBLISHING CO., 3550 Vista Ave, St. Louis, Mo.

Government Bulb Farm.

Comparatively few know of the interesting experiments that are being carried on at the bulb garden near the town of Bellingham, Washington, under the direction of the Secretary of Agriculture.

For years the United States has been sending to Holland and European countries many thousands of dollars annually for hyacinth, tulip, narcissus and crocus bulbs. The purchase of these bulbs had constantly increased until the past year, when over a million dollars' worth were imported.

In 1908 the Secretary of Agriculture decided to establish on the Pacific Coast a garden for the culture and propagation of Holland bulbs, and a point on the Puget Sound, near the town of Bellingham, was selected as having a suitable soil and climate for this work. A tract of ten acres was leased through the Bellingham Board of Trade and the necessary buildings erected and turned over to the Department of Agriculture for the purpose of demonstrating whether or not the Holland bulbs could be grown sucessfully at that point.

The Department commenced work at once and the same year planted over 170,000 bulbs. From that time the work has gone on increasing until the present year, when over 869,000 bulbs were planted. The increase in the number of bulbs raised has been very gratifying, each bulb yielding the maximum number of young ones, which have proven equal, if not superior, to the results obtained in Holland.

It is believed that bulbs can be grown on the Pacific Coast, and of a quality that will compare favorably with and in many ways surpass the imported article, the cost of production and marketing being now the chief obstacles.

An effort is being made to overcome the differences between the high price of labor in America and the cheap labor of Europe by inventing appliances to lessen the hand labor required in bulb production, and the substitution of horse power for many of the operations performed entirely by hand in Europe has reduced the cost of production considerably. In this way it is hoped that growers in the United States will be able to compete successfully with the European bulb growers.

A serious drawback to the production of Holland bulbs on the coast is the heavy expense of freight shipments across the continent; but when shipment can be made by water, as will be the case after the completion of the Panama Canal, it should be possible to deliver such bulbs at the port of New York almost as cheaply as they can be brought from Europe. Furthermore, the demand for such bulbs for planting on the Pacific Coast is rapidly increasing.

These experiments are solely for the purpose of showing prospective bulb growers what can be done in growing these bulbs in the United States. The gardens are always open to the public, and when the bulbs are in bloom thousands avail themselves of the opportunity to visit the gardens and enjoy the flowers. At that time it is a veritable little Holland. Thousands upon thousands of hyacinths, tulips and narcissus in all colors and nearly all in flower at once can be seen.

Careful records are being kept and much valuable information is being collected in connection with the bulb experiments which will, eventually, be at the disposal of anyone who may wish to take up bulb growing.

Last year a very interesting experiment was made on the trial grounds of the Department of Agriculture at Washington, where a test was made of the bulbs that had been grown at Bellingham in comparison with those grown in Holland. Fifty bulbs of the same varieties of tulips were planted side by side and given the same treatment. Those from Bellingham opened their flowers from seven to ten days earlier than the Holland-grown bulbs, were of better quality in size of flower and in color and were remarkable for the almost total absence of disease, while the imported bulbs showed a larger number of diseased plants and many of them failed to produce a flower.

As the demand for such flower roots is increasing rapidly and bids fair to double in value within a few years, it offers a promising field for the investment of American capital and the establismment of a new and profitable industry on the Pacific Coast which will keep home the large amount of money now being sent abroad annually for bulbs.

FOR FERTILIZATION.

The Common Sense of the Subject—A Few Pertinent Paragraphs.

Every pound of butter, live stock, grain, vegetables or milk that is sold off of the farm, removes just that much plant food from the soil.

When you sell more plant food from the soil than you put back in, there is but one result—a run-down farm.

That is just what finally happens to every farmer who does not use complete fertilizers; the length of time it takes him to reach the point depending entirely upon how rich the original soil was.

It is just like a bank account. If you take out more than you put in, you finally have nothing left.

Using up all of your manure, rotating crops, turning under clover, etc., are all good, but after doing all those things, you are still way short of what you took out.

All of the cotton, meat, grain and their products that are exported, take away just that much plant food, that never gets back into our soil.

Everything that we wear comes from the ground, never to be returned. Is it any wonder that the ground grows poorer and poorer where fertilizers are not used?

The three elements of plant food that are lacking are: Nitrogen, phosphoric acid and potash.

Nitrogen is the scarcest of all. Every bit of bone and offal from slaughter houses, meat markets, restaurants, etc., is now carefully saved, the grease extracted and the residue prepared to put back into the soil.

What is more natural or practical than to take this residue which left the farm in the shape of live stock and put it back in the ground properly mixed wth potash and available phosphoric acid in the proportion that a hundred years of experience has taught best?

Bone is the ideal source of supply of phosphoric acid, but unfortunately the supply is limited.

Large deposits of phosphate rock are found in this country, however, which will last for many years to come. This rock in its raw state, either alone or mixed with manure, is no more fit for plant food than is sole leather for human food. When properly treated, it is readily available as a plant food.

There is an unlimited supply of potash to be mined in Germany.

Fertilizers are no experiment. Georgia uses over 1,000,000 tons per annum; North Carolina, 631,000; Pennsylvania, 290,000; Ohio, 146,000; Indiana, 151,000; and the tonnage increases from 20 to 40 per cent. every year.

This enormous business has been built up on the merits of the goods alone, and in the face of prejudice and obstructionists.

If Illinois, Wisconsin, Minnesota and the Dakotas are to hold their position in the agricultural world, they must use enormous quantities of complete fertilizers.

The Eastern States are fast going ahead of the West in yields of farm products, and the so-called worn-out farms are fast becoming wealth producers by the use of fertilizers.

There is no theory about this. It's just hard facts, that have been demonstrated, and your own good common sense will tell you that it's right.—From a booklet entitled "The Soil Builders," issued by Darling & Co., Chicago, Ill.

FARM AND RANCH LANDS.

FARM AND RANCH LANDS can be advertised effectively in The National Farmer and Stock Grower in small space at a reasonable price. The best land advertising in a general farm paper is classified and arranged by states. The National Farmer and Stock Grower will obtain for an advertiser more substantial inquiries in a ten-line advertisement than any other farm paper will give for five times the space or money. Send in your advertisement and let us quote you a price. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

ALABAMA.—2,240 acres fertile farm land. Thirty-three tenant houses. 900 acres fenced. Fine land for alfalfa, corn, cotton or cane. One-fourth mile from station. Buy from owner and save commissions. **D. Vaughan,** Catherine, Ala.

ARKANSAS.—Near Arkansas City; 1,000 acres, with 350 of it in cultivation. Will be sold with live stock and work stock and crop started. The plantation is on the Mississippi river, at good landing; has on farm new gin, twenty tenant houses; two miles west of county seat, where there is a fine high school. All cultivated land is protected from overflow; also 300 acres rich land not under cultivation. The soil is rich sandy loam; makes plenty of hay and corn; good water; fine pasture for stock; has hay sheds, corn cribs, tool houses, commissary building and nice pecan grove. Price, $16,000; half cash; balance in payments at 6 per cent. interest, if desired. **J. S. Ross & Son,** Arkansas City, Ark.

FLORIDA.—A real bargain in good land. One of the best sections of land just west of Jacksonville. I need some money quick and will sell this fine section for $30.00 per acre. Adjoining sections sold for $60.00 per acre. **Miss N. Ryan,** 2627 Clifton Ave., St. Louis, Mo.

MINNESOTA.—Farms for sale. Send for my list of CHOICE FARMS for sale, the best in the United States, considering location, terms, etc. Ask for my FREE BOOKLET, telling about the country, crops, markets, etc. **Geo. W. Elder,** McGinn Block, Thief River Falls, Minnesota.

MISSISSIPPI.—800 acres of land, in one body, for sale, located 1½ miles from the I. C. Railroad, south of Corinth. Good soil; no rocks; plenty of timber. Price, $10.00 per acre. Fine place for settlement. Every ten acres would make a good truck and poultry farm. Address, **Owner,** care National Farmer and Stock Grower, St. Louis, Mo.

TEXAS.—We have for sale 5,502 acres in the famous Pecos Valley, near Pecos City, Texas. Shallow water belt; inexhaustible supply of water. This land lies in three tracts, but close together; three sets of houses, barns, wells, windmills, tanks, gardens, fruit trees, etc. All fenced and cross fenced. Schools, telephone, auto road. Dark chocolate loam. As fine land as the sun shines on for alfalfa, fruits, grapes and general crops. Ideal for dividing into small farms. Will sell in a body or in sections of 640 acres cheap for one-half cash, balance easy terms. Don't delay, if interested, as this land must be sold at once and is a real bargain. For full particulars address **Robt. H. Rinehart & Co., Box 98. El Paso, Texas.**

FARMS WANTED.—We have direct buyers. Don't pay commissions. Write describing property, naming lowest price. We help buyers locate desirable property FREE. **American Investment Association. 55 Palace Bldg., Minneapolis, Minn.**

CASH FOR YOUR FARM OR BUSINESS. I bring buyers and sellers together. If you want to buy, sell or trade any kind of property anywhere, write me. Established 1881. **FRANK P. CLEVELAND. 7910 Adams Express Building, Chicago.**

Splendid Prospects OF Bumper Grain Crops IN Western Canada

160 ACRE FARMS IN WESTERN CANADA FREE

Latest reports from the fields of Manitoba, Saskatchewan and Alberta are to the effect that Wheat, Oats, Barley and Flax give promise of an abundant yield. Rains have been sufficient and all grains have advanced rapidly. There are now

16 Million Acres Under Crop

Railroads are built and building in all settled portions. The opportune time for getting some of this generous producing land is now. Excursions on all lines of Canadian Railways to inspect the lands. Apply for Settler's Certificate to the undersigned Canadian Government Agent:

DAISY FLY KILLER placed anywhere, attracts and kills all flies. Neat, clean, ornamental, convenient, cheap. **Lasts all season.** Made of metal, can't spill or tip over; will not soil or injure anything. Guaranteed effective. **Sold by dealers, or 6 sent prepaid for $1. HAROLD SOMERS, 150 DeKalb Ave., Brooklyn, N. Y.**

PROFITABLE DAIRYING.

A very elegant, illustrated, cloth-bound book of 200 pages is called **Profitable Dairying.** It is all good, satisfactory reading matter relating to the successful management of the dairy business under all circumstances, including the management of the cows and construction of the barn. We have discovered this book lately and we find that there is a better demand for it than for all other dairy books combined. For one dollar we will send

The National Farmer and Stock Grower for two years and we will send the book, **Profitable Dairying,** as a premium. Address,
HALE PUBLISHING CO.,
3550 Vista avenue, - St. Louis, Mo.

The Creamery Motor Truck.

The use of the auto truck in creamery work is shown by record of work done by a five-ton capacity worm-driven motor truck owned by the Towar's Wayne County Creamery of Detroit, Mich. The item was published originally in the Elgin Dairy Report:

"The routes taken by this truck every day and the loads carried do not vary materially, and because of this condition it is possible to show just what the truck does, how many wagons it has replaced and the daily mileage which is kept down, owing to the numerous stops made. Two shifts of men are employed to operate the truck, owing to the long hours the vehicle is in service.

"The truck leaves the garage at 3 a. m., and does not return until 12 midnight, making twenty-one hours' service daily through the week and twelve hours on Sunday. It leaves the Towar factory every morning with a load of wholesale bottled milk and cream, which it distributes to the grocery stores and factory dining rooms on the east side of Detroit. It takes from 3 a. m. to 1 p. m. to peddle this load and make collections, etc. The truck, of course, brings back empty bottles and crates which weigh about three tons. It formerly took three teams and one single wagon to do this work.

"On the truck's return to the plant at 1 o'clock it makes two trips to the railroad station for milk, loaded with five tons each trip. The second driver takes the truck at this time, 2 o'clock. The truck now makes a trip to the north end branch, a distance of four miles, with a full load of bottled goods to be delivered the following day by wagons stationed at this branch. On the return trip it has a full load of empty bottles weighing four tons. The truck then makes another trip to this branch with the same load. Upon its return at about 6 o'clock the crew has its lunch. Two trips to the railroad depots for supplies follow lunch, then one trip to the east side branch, a round-trip of ten miles. Upon its return from the east side there is usually another trip to the railroad station.

"The afternoon and evening loads are all five-ton loads with an overload of one-half ton occasionally. Mr. Towar estimates that it would take five large teams to handle this afternoon and evening work, while now it is done with two men on the motor truck. The morning load consists of the following:

Case Milk.

	Cases.	Pounds.
648 quarts milk.....	54	3,186
1,800 pints milk.....	90	4,950
100 half pints cream..	5	205
40 pints cream.....	2	110
60 quarts buttermilk.	5	295

Bulk Milk.

5 cans milk..10 gals. each..		550
6 cans milk.. 5 gals. each..		324
5 cans milk.. 3 gals. each..		145
10 cans milk.. 2 gals. each..		100
5 cans cream. 2 gals. each..		100
Total load.....		10,075

"Ninety-five ten-gallon cans of milk is a load for a depot hauling, a total of 10,450 pounds. The daily mileage of this truck is between fifty and sixty miles."

Illinois Butter Test.

At the June scoring test for Illinois creamery buttermakers there were thirty-six tubs presented for scoring and twenty-five of them were from creameries receiving cream separated by farm cream separators only.

The average score on the butter exhibited was 91.2. The highest score, received by F. J. Weddige, of Big Rock, Kane county, was 94½; the lowest score 86.5.

The highest moisture content was 15.39 per cent.; the lowest, 11.21 per cent.; and the average, 13.41 per cent. The highest salt content was 4.6 per cent.; the lowest, 1.21 per cent.; the average, 2.37 per cent.

The showing is considered very creditable. Two-thirds of the creameries represented were located in Northern and Middle Illinois.

More Silos Needed.

All over that part of the country where dairy cows are kept and fed more silos are needed. The silo is now no innovation. It has been in use so long in the United States and Canada that there is only one side to the question of profitableness.

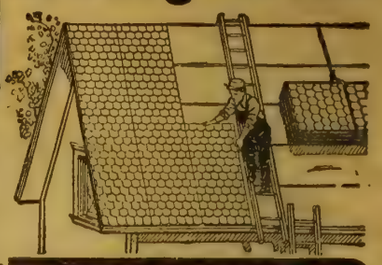
Every Experiment Station in the North has its silo, if it has a herd of dairy cows. The Station managers long ago ceased to debate the question of whether or not they should build silos The only question now is, what kind of a silo to build.

The silo makes it possible to feed the cows on succulent feed the year around. In milk production this is a matter of supreme importance. A good supply of succulent feed keeps up the milk supply to its greatest possible limit.

Every man that has handled dairy cows knows how seriously a summer drouth affects the milk supply. Dry pastures and dry hay cannot give a large flow of milk, even when there is a liberal feeding of mill feeds, and mill feeds are now too expensive to be used in large quantities.

Even when mill feeds are liberally used, they do not offset the effect of dry pastures and dry hay, because the stomach of the cow is not adapted to taking large quantities of concentrated foods, such as ground grain of any kind. Also there is a waste in feeding such food, as much of it goes through the digestive tract of the cow in an undigested state.

Roof That Building With STEEL Shingles!



Don't even **think** of putting costly **wood-shingles** or commonplace **composition roofing** on your buildings till you've investigated the famous Edwards "Reo" Steel Shingles, now used on 100,000 houses and barns. "Reo" Steel Shingles are not only easier to put on but they **last 5 times as long as any other roof.** YET THEY DON'T COST A PENNY MORE! "Reo" Steel shingles require **no painting; won't rot, won't rust, won't leak, won't burn.** Guaranteed against lightning by our $10,000 Guarantee Bond.

Edwards "REO" STEEL Shingles

are ready to nail right onto sheathing or old roof. Your hands and a hammer only tools needed. They come in large sheets 24 inches wide, 5 feet to 12 feet long. Genuine Open-Hearth Steel, made absolutely rust-proof by world-famous Edwards "Tightcote" Process (explained in catalog). Our patent Interlocking Device covers nails and makes perfect joint, unaffected by heat or cold. "Reo" Steel Shingles make the finest looking, most durable roof in the world, **bar none**—a roof that NEVER NEEDS REPAIRS. **Sold** at lowest prices, **direct** from factory, all freight prepaid. Don't buy roofing material till you know more about these "Reo" Steel Shingles. Write for new, big, free Catalog 857, and Lowest Prices. Send dimensions of building and let us quote you price delivered to your railroad station.

THE EDWARDS MFG. CO., 807-857 **Lock St., CINCINNATI, OHIO**
(80) Largest Makers of Sheet Steel Building Material in the World

But silage made out of corn stalks is just the right kind of food and is taken into stomachs particularly prepared to digest it So it is that we cannot judge a food by its chemical analysis, but rather by the amount of food that is digested. That being so, the argument is all on the side of silage.

In the great corn belt the easiest plant to grow is corn, and an acre of land properly farmed will yield several tons of corn silage when reduced to a state of feed. A little ground will thus produce a larger amount of digestible food in the form of silage than in any other way.

Every summer the cities experience a shortage in the milk supply. This shortage would not exist if silos were common everywhere. The prejudice against silage-made milk should not be allowed to hold a place as affecting the situation. Silage milk is as good milk as can be made. Some of the finest dairies in the country use silage as a feed in the production of milk that sells at twelve cents per quart and above.

All of the Experiment Stations have made tests that show the fine quality of milk produced from silage. Not that the feed affects the richness of the milk, but it gives a high quality of milk because it contains all the nutrients required for the production of good milk, when the silage is balanced with some feed rich in protein.

There is nothing that will affect more advantageously the feeding of our dairy cows than an increase in the number of silos.

A Very Successful Prescription.

The combination of remedies used in the manufacture of Bodi-Tone is proving a wonderfully successful prescription for old, chronic ailments. The makers of Bodi-Tone publish this prescription broadcast, so all may read and judge it for themselves. Bodi-Tone contains Iron Phosphate, Gentian, Lithia, Chinese Rhubarb, Peruvian Bark, Nux Vomica, Oregon Grape Root, Cascara, Capsicum, Sarsaparilla and Golden Seal. Read the trial offer on the last page. No one need pay a penny for Bodi-Tone until they have tried it.

Combination For a Dollar.

In getting ready for the fall subscription campaign we have made a splendid arrangement whereby four first-class monthly publications can be obtained one year for a dollar. It is a co-operative clubbing arrangement, which includes The National Farmer and Stock Grower, the American Swineherd, the Shepherds' Jorunal and the American Poultry Journal. These are first-class publications, and for one dollar the farmer will receive four good papers forty-eight times a year. We hope to sell this grand combination many thousand times during the year.

Paper Bottles For Milk.

The glass milk bottle is not an unmixed blessing for several well-known reasons and experiments are being made to find a satisfactory commercial substitute that will be found containing the milk and cream in proper condition several hours after being delivered at the back door of the family mansion, apartments or flats.

The Ontario Agricultural College at Guelph, Ont., has done something towards that investigation and the following is the report thereon:

"The ordinary glass bottle commonly used for delivering milk in towns and cities has many good features, but has some objectionable ones, among which may be mentioned: They are easily broken, easily lost, are a heavy load to carry, and if not properly washed and sterilized may be the means of spreading contagious disease. A substitute for glass, as a milk container, has recently been placed on the market in the form of a 'mono-service' paper bottle, sterilized and coated on the inside with paraffine wax.

During the season of 1911 a number of tests were made in the Dairy Department of the College, comparing these single service paper bottles with a glass bottle for holding milk. The main points observed were with reference to the effect upon flavor, acidity and general good qualities of the milk at the end of twenty-four and forty-eight hours. The milk was first pasteurized at a temperature of 165 to 170 degrees Fahrenheit, then cooled to about 58 degrees, when the milk was placed in the various packages and allowed to stand in a room where the temperature averaged 56 degrees Fahrenhiet.

There was little difference in the milk of the various containers as to temperature or acidity, but some of the paper packages imparted a package flavor to the milk after standing in them for about twenty-four hours. One or two of the mono-service bottles gave good results and compared quite favorably with the milk in glass bottles. If these packages can be put on the market at a reasonable price, we see no reason why they may not displace the ordinary glass bottle as a container for retail milk and cream. So far as we know, this package is not made in Canada at present.

The advantages of the mono-service milk bottle over the glass bottle are: It is lighter, as a quart-size paper bottle weighs a little over one ounce, whereas the quart glass bottle weighs one pound, or is sixteen times heavier; there is no danger of spreading contagious disease, as the bottles are used once and destroyed; there is no loss to the milk dealer by customers failing to return the bottles, which loss is a heavy item of expense in the milk business, and if it can be reduced ought to result in cheaper milk to the customer.

So far as we can see, the single service milk bottle ought to prove a great help in solving some of the many perplexing problems of the town and city milk trade. The matter is of sufficient importance to warrant a thorough investigation of the possibilities of replacing the present glass bottle with something more nearly an ideal package. We have tried to interest both Canadian and American manufacturers in placing these bottles on the Canadian market at a reasonable price, and feel confident that this will soon be accomplished."

The Book of Live Stock Champions.

We specially request all our readers to study the advertisement of the Book of Live Stock Champions which appears on page 22. This is our own favorite publication. It contains a magnificent array of illustrations such as was never before brought together. There are 352 pages in all, 750 different illustrations, and there is a complete index. The book contains one to five champions to the page, and the record of each is given with name and address of owner in nearly every instance. This book would sell in limited numbers at $5.00 a copy, but our purpose is to place one on every stock farm in the United States, therefore we issue the Book of Live Stock Champions at practically a nominal price of $1.00 a copy to our own subscribers. Read the advertisement; it is well worth reading, and the book is certainly a credit to any farming establishment in the United States.

Effective Fertilizer For Corn and Oats

Empire Carbon Works, 421 Locust street, St. Louis, Mo.:—Gentlemen: I used one ton of Empire Brands bought of E. Falkner, part of it with oats. I feel assured that the oat crop where I used fertilizer was doubled. After gathering the oats, the land was sown in cowpeas, which produced a double crop. Part was used on corn, and the corn crop was increased in fully as satisfactory proportion as the cowpeas. I expect to want double the amount next season that I used this year, and feel assured that my experience will aid you in selling several tons next season. W. F. BEDFORD, West Point, Tenn. (See page 7.)

DAIRY AND CREAMERY.

According to reports, Indianapolis consumes four gallons of ice cream per inhabitant, which puts that city at the top of the ice-cream consuming centers. Increased consumption, however, has not decreased the price. In 1880 the price was $1.00 per gallon, In 1912 the price is 60 cents.

A creamery has been established by Swift & Co. at their South St. Paul packing plant. Milk will be gathered from the farms of the vicinity and arrangements are being made for shipping from near-by towns. The special milk train service maintained on the Chicago Great Western Road will be utilized.

A concoction sold as butter and discovered at Clinton and Bolivar, Mo., by State Inspectors, was made up of beef fat, cotton-seed oil, a small amount of butter, some cream churned together and then colored. The mixture contained 38 per cent. of moisture. A warrant has been issued for the manipulator.

Oats Crop and Exports.

We have often said that farmers control the oats market, for the reason that they use the bulk of the crop on the farms, and should use it all, unless they can obtain at least 50 cents a bushel for oats in market.

Our crop of oats in the year 1909 was 1,007,129,000 bushels. The exports from the crop consisted of 1,634,292 bushels of oats and 15,422,799 pounds of oatmeal.

Our crop of oats for 1910 was 1,186,341,000 bushels of oats, and the exports out of the crop were 1,982,121 bushels of oats and 32,342,706 pounds of oatmeal.

Our crop of oats in the year 1911 was 922,208,000 bushels, and the export from the crop consisted of 2,133,777 bushels of oats and 8,948,823 pounds of oatmeal.

In trading, every little helps, therefore these exports cut a figure in the transactions on the Board of Trade. Although the transactions are comparatively small, there is sufficient of them to help to steady a declining market.

Fall Fertilizers.

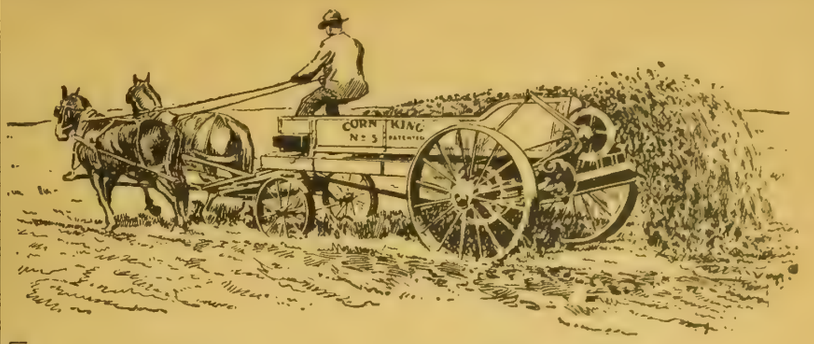
Attention is invited to the advertisement of the German Kali Works on page 2. Potash is now within reach of the farmer in almost any quantity to be applied direct to the land or to mix with fertilizers that do not contain sufficient for self-mixing, etc. Any farmer who will write to the German Kali Works for a copy of a booklet entitled "Fall Fertilizers" will receive something that is worth reading and studying. Address the nearest office mentioned in the advertisement and say you saw it in The National Farmer and Stock Grower.

Our Subscription Department.

Our readers are invited to send in their subscriptions to all publications they desire to receive on their farms during the year. We can help the transaction financially by our co-operative clubbing arrangements. See pages 23 and 24.

What Alfalfa Has Done.

"In Kansas and Nebraska, the states having given it the largest recognition, alfalfa-growing has been the handmaiden of prosperity and is the dependable promoter of progress. From obscurity this legume has steadily risen here to the foremost place among forage plants, and has already quadrupled our output of tame hay."—From speech of Hon. F. D. Coburn, at the National Hay Dealers' Convention.



What Is Soil Fertility? How Does It Interest You?

WHAT is soil fertility? Why is its lack considered so serious a matter? Why is it that authorities on better farming agree in considering it one of the most important questions requiring solution by farmers today?

The answer is found in the small average yield of farms in this country as compared with those of other countries where correct fertilizing is practiced, and in the rapidly decreasing quantity of available new land. There are two things that every farmer can do, both of which will make his farm more productive. One is to practice a proper rotation of crops; the other to buy and use an

I H C Manure Spreader Kemp 20th Century, Corn King, Cloverleaf

Every farm can be benefited by the use of an I H C manure spreader. It will distribute the manure in an even coat, light or heavy, as may be required. Manure spread in this manner does the most good to the soil at about half the expense and much less than half the work of hand spreading.

An I H C manure spreader is a scientific machine, built to accomplish a definite purpose in the most economical manner. It is constructed according to a well-thought-out plan, which insures the best work in the field with the least strain on machine or horses. To take one example of the thoroughness in detail, all I H C spreaders are so constructed that a reach is unnecessary. This construction allows the spreader to be managed handily in small feed lots, backed up to barn doors opening into narrow yards, or turned completely in its own length. Yet the absence of a reach in no way interferes with the strength or field efficiency of the machines.

See the I H C local dealer or write for catalogues and information.

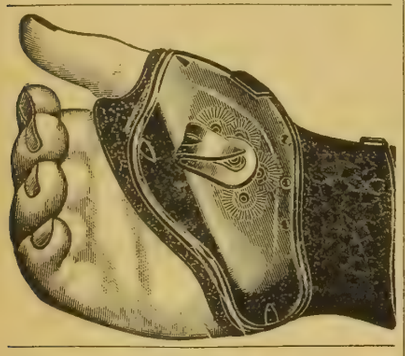
Favorite Corn Husker.

Clark's Corn King with its new self-shedding hook. The spear point enters the husks easily. The slant bend turns the husks for shredding, and the rounded, curved and beveled edges throw out the husks and prevent clogging. As this is the most approved husker on the market, we have selected it as a seasonable subscription premium. The hook sets at any angle; two positions for a thumb hook and five positions as a palm hook. Opening and closing the small end of the plate makes the adjustment perfect for any width of hand and prevents chafing. The strap passes through the leather tongue and the first ring and over the hand to the opposite ring and



back through the first ring. Be sure and have the strap enter the ring from the outer side. It brings the pulling strap underneath, forms the sinch draw and gives you the full benefit of the sinch-lock, which is the same as a half-hitch. The strap then passes to the last ring and then to the buckle; the half-hitch forms one fastening and the buckle holds the end of the strap. We will send The National Farmer and Stock Grower for one year and Clark's Corn King Husker for 50 cents. The Husker is a free premium. Address, HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

St. Louis Fruit Market.

The prices quoted here represent the sales of country shipments upon the wholesale market of St. Louis, usually in car lots, and the prices paid during the first days of August.

Apples are beginning to arrive by boat. Hand-picked Welthy at $2.00 to $2.75; Benoni at $1.50 to $2.25; Strawberry at $2.25 to $3.00; Maidenblush at $2.25 to $2.75; Wolf River at $2.00 to $3.00; and other varieties in proportion; No. 2 inferior fruit at $1.50 to $1.75; home-grown boxed fruit selling at from 20 to 75c., as in quality. Sales: Twelve barrels Strawberry Welthy and green at $2.10; ten barrels Welthy at $2.50; forty-five barrels do. at $2.25 to $2.75; sixteen Wolf River at $3.00, and six No. 2 do. at $1.75; fourteen Welthy at $2.25; six do. at $2.35; thirty-five do at $2.56.

Crab apples quotable at $2.50 per barrel, and 25 to 30c. per half-bushel basket for choice.

Peaches.—Offerings continue large (although Texas receipts are falling off) and there has been a good deal of overripe and damaged stock sold at low prices—partly rejected cars for account of railroads on basis of 50 to 60c. for bushel baskets, and 25 to 30c. for flat crates. Reported sales: Three cars Arkansas bushel baskets Elbertas (bad order) for charges; one car Texas bushel baskets do. at 50c., delivered; one car Texas part Climax baskets at 33c., and part bushel baskets at 80c., delivered; one car Texas bushel baskets at $1.00, delivered; one car do. at $1.05 on track; one car extra fancy do. at $1.20, delivered; two cars Cummer crates Arkansas Elbertas at 75c., delivered; one car bushel baskets do. at 75 to 85c., delivered; one car do. (overripe) at 60 to 90c., delivered.

Pears.—Alabama Keifer and sand pears dull at 25 to 30c. per hamper; home-grown and near-by half-bushel baskets sugar pears quotable at 30 to 35c.

Plums.—Home-grown and near-by Wild-goose slow sale at 25 to 30c. per half-bushel basket; Damsons in larger receipts and dull at 40 to 50c. per half-bushel baskets—and some selling by weight at 2c. per pound; Yellow Egg quotable at 35c. per half-bushel basket.

Watermelons.—Large-sized choice Watsons in fair demand, but market dull and prices low on dinks. Quote car lots on track at from $85 to $155, according to size and loading of cars, and in wagon-loads delivered at 40 to 65c. per 100 pounds. Sales on track: One car Kolb Gem (27,000) pounds) at $85, East Side track; one car 25-pound Texas Alabama sweet at $125; one car 25-pound do. at $135; one car do. (heavily loaded) at $145; one car 24-pound do. at $130; one car 30-pound Texas Watson (slightly sunburnt) at $155; one car 23-pound Arkansas Watson (26,000 pounds) at $140.

Cantaloupes. — Market dragging. Arkansas standard crates sold at $2.00, delivered; car Arkansas unwrapped—Standards at $1.00; pony crates at 60c., to flat crates at 50c., delivered; part car Arkansas standards at $1.00 to $1.10, delivered; Missouri baskets at 20c., delivered, and Southern Illinois (Poag) baskets at 25 to 35c. Express receipts: Arkansas standard crates range from 50c. to $1.00—soft and damaged not worth charges.

Grapes. — Home-grown Moore's Early plentiful and slow at 30 to 35c. per 20-pound basket. Consigned lots in 4-basket crates do. at 30 to 35c.

Cherries.—Slow. Quote Michigan 16-quart cases at $1.50 to $1.75.

Blackberries.—Receipts lighter and quality poor. Quote home-grown at 75c. to $1.00 per 3-gallon tray.

Currants. — Slow. Quote Eastern 32-quart cases at $1.75 to $2.00.

THE CEMENT WORKERS' HANDBOOK.

THIS book is designed to teach anybody how to work with cement. How to mix mortar of all kinds for all concrete purposes. How to make building blocks. How to build walls, floors, ceilings, walks, posts, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers.

The National Farmer and Stock Grower

IS a nice, clean, general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, to vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, to horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. The best live stock illustrations appear in THE NATIONAL FARMER AND STOCK GROWER. There are thirty-two pages, four columns to the page. It is published monthly.

Anyone who sends in One Dollar to pay in advance a three-year subscription to The National Farmer and Stock Grower can select the CEMENT WORKERS' HANDBOOK as a free premium, or one-year's subscription and the book for Sixty Cents.

ADDRESS,

The National Farmer and Stock Grower,
3550 Vista Ave., ST. LOUIS, MO.

Green Feed Given to Cows Will Insure Larger Profits.

Now that the summer is well advanced, the cows should be fed green stuff from the fields so that they will not dry off and become strippers, unless they have been bred to freshen in the fall. Many cows calved this spring, and to permit these animals to become strippers means to lose a real profit.

Hot weather and flies worry the cows a great deal, but they do not cut down the milk supply like dry, scanty pasture. To live comfortably and yield a fair mess of milk, the cow living on pasture must eat about 100 pounds of grass a day. Does the average person ever stop and think about the amount of work which the animal must do to find and eat 100 pounds of grass? It must be remembered that a cow's mouth is not as wide as a lawn mower, and that many, many bites must be taken in one day to secure enough food, even when on good pasture. If anyone doubts this analysis of the problem, let him go out into the pasture some day and cut 100 pounds of grass with a pair of shears.

As a matter of fact, the cow, when she has satisfied her own hunger, will oftentimes lie down in the pasture and forget all about the grass which she should have eaten to make her keeping profitable. To obtain a profit the cow must eat much more feed than is needed for her own personal needs. She will not produce liberal quantities of milk unless she is fed liberally. She will eat a liberal amount of feed only when she can get it by expending a minimum amount of energy.

In a test made by the writer which lasted three years and concerned a herd of sixty dairy cows, it was conclusively shown that cows on short pasture, even though well fed at the barn, become dry sooner than the cows which ate a similar amount of feed, but which were not compelled to run about while they were securing it. The cows which were fed put the energy into the milk pail, which the others exercised in running about.

The summer silo is the best means of bridging over this dry spell. If the farmer with cows does not have a summer silo, however, he should feed green feed to them. Corn, or peas and oats, make an admirable green feed.—R. M. Washburn, Dairy Division of Minnesota College of Agriculture.

Fattening Poultry.

The method used by most of the large establishments engaged in fattening poultry in this country is to feed the chickens in crates from troughs, according to information collected by the United States Department of Agriculture. From six to ten birds are placed in each division of the battery or feeding coop, depending on the size of the birds and the ideas of the feeder. Two or three chickens do better in a division together than when only one bird is placed in each compartment, and the cost of equipment and labor per bird varies inversely with the number of birds in each division. Another method which is used to a considerable extent on a small scale in this country is pen fattening. This method is adapted for use on the farm where the farmer does not care to go to the trouble of crate fattening, or where the price received for well-fed birds does not warrant the extra labor and feed cost of the crate method.

Most "milk-fed" chickens are fed for fourteen days, but results indicate that a more profitable gain can be secured in a shorter feeding period, provided the same price per pound can be obtained for the finished product. Practically all of the special feeding in this country involves the use of milk, thus producing "milk-fed" chickens. Milk, while the least expensive, seems to be the most essential constituent of the ration, and when a feeder cannot get milk in some form he generally does not attempt to fatten poultry commercially. Fresh buttermilk, condensed buttermilk and skim milk are preferred in this relative order. The feed is mixed to the consistency of thick cream, or so that it will drip from the tip of a wooden spoon. Rations of 50 per cent. corn meal, 40 per cent. low-grade wheat flour and 10 per cent. fine shorts; or of 58 per cent. corn meal, 36 per cent. oat flour and 6 per cent. tallow, by weight, give very good results, producing gains which cost from 6.45 cents to 7.74 cents per pound. Low-grade wheat flour is a more economical feed than oat flour at the present prices of grain.

The results of extensive fattening tests conducted in the Middle West, showing the methods of feeding and the costs of gains, are given in Bulletin 140 of the Bureau of Animal Industry, United States Department of Agriculture.

Vegetable Market at St. Louis.

At the opening of the month of August vegetables were being sold to wholesale dealers at St. Louis as follows:

Potatoes.—Early Ohio sales loose from farmers' wagons ranging from 55 to 60c. per bushel. Lot of twenty-five sacks sold on levee at 60c.

Onions. — Home-grown red sold loose at 55c. per bushel by weight. North Missouri Red Globe in sacks quotable at 57c., and choice yellow and pale red at 45 to 50c. per bushel; heated and damaged less.

Beets.—Quote home-grown at 25c. per bushel box loose.

Butter beans.—Quote home-grown at $1.25 to $1.50 per 3-gallon tray loose.

Cabbage.—Sale: One car bulk Northern at $9.00 per ton, delivered: home-grown sells at 45c. per 100 pounds by weight and at 15 to 20c. per box, and quotable on orders at $1.10 per crate.

Carrots.—Home-grown at 25 to 35c. per dozen bunches.

Celery.—Michigan (Kalamazoo) at 10 to 20c. per dozen, and square and flat boxes (two to two and one-half dozen) at 40 to 60c. per box for choice—heated less.

Cucumbers.—Home-grown selling loose from 15 to 30c. per bushel; Dill pickles and salt pickles, 60 to 75c., and small vinegar pickles at $1.00 to $1.25 per bushel loose.

Egg plant.—Home-grown at 50 to 65c. per bushel loose; New Orleans hampers at 50 to 60c.

Green corn.—Home-grown at from 3 to 8c. per dozen; top for Evergreen.

Gumbo.—Home-grown selling at 35 to 40c. per peck basket; consigned lots not wanted.

Lettuce.—Quote express receipts: New York hampers at $1.00 to $1.25 (heated less); Chicago cases at 65 to 75c., and Buffalo cases at $1.00; home-grown sold at 15 to 25c. per bushel box loose.

Peppers.—Home-grown steady at 50 to 75c. per bushel box loose; consignments not wanted.

Squash.—Home-grown dull at 10c. per bushel loose.

String beans.—Home-grown sell at from 40c. for poor to 60 to 75c. for choice round green per bushel loose.

Sweet potatoes.—Alabama Jerseys dull and nominal at $1.50 per hamper, delivered—not moving, in fact; home-grown (new) Bermuda in fair supply and quiet, selling at 75 to 85c. per half-bushel basket loose.

Tomatoes.—Choice ripe in pretty good demand, but half-ripe very dull and lower, shipping demand having abated. Sales from farmers' wagons at 30 to 35c. per bushel loose for choice ripe and 20c. for half-ripe.

Turnips.—Home-grown at 25c. per bushel box loose.

A Positive Cure for Worms.

A horse that is infested with worms can never do well. Worms cause a derangement of the whole system. The symptoms are a ravenous appetite, rough hair, rubbing of the tail, nervousness, irregular bowels, gauntness, etc.

FRAZIER'S DISTEMPER CURE

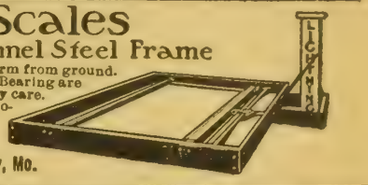
Removes worms in three to six days. One bottle a guaranteed CURE. If not satisfactory, your druggist will refund your money. Booklet free. $1 bottle holds three 50c. bottles.

BINKLEY MEDICAL CO., Dept. H, Nappanee, Ind.

Lightning Pitless Scales

New Pattern. Solid Channel Steel Frame

Channels are seven inches which is the height of platform from ground. Levers are octagon in shape giving greater strength. Bearing are Toolsteel. This scale will last a life time with ordinary care. Equipped with compound Beam Free. Furnished absolutely complete except platform planks. Guaranteed accurate and tested to more than its capacity. Write for our prices and description before buying.



KANSAS CITY HAY PRESS CO., 425 Mill St., Kansas City, Mo.

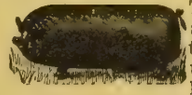
Co-operative Clubbing Arrangement.

Four Great Papers . . For One Year . . . . . For Only One Dollar.

FOUR STERLING, UP-TO-DATE SPECIAL FARM PAPERS.

THE NATIONAL FARMER AND STOCK GROWER—issued monthly—a magnificent guide and counsellor in all branches of farming, grain growing, fruit growing, dairying, stock raising and feeding, markets, etc.



THE AMERICAN SWINEHERD—issued monthly—a leader in its class. The hog paper, the pig paper, the brood-sow paper and strictly first-class in teaching how to top the market by producing top hogs.

THE SHEPHERDS' JOURNAL is devoted to sheep husbandry on the farm and on the range. It is equally valuable for the breeder as for the herdsman. It is issued monthly, printed on elegant paper, splendidly illustrated and edited by practical men.

THE AMERICAN POULTRY JOURNAL—the oldest, best and most elegant poultry journal issued in the United States. Great on breeding points, and splendid articles on raising, feeding and shipping poultry. THE AMERICAN POULTRY JOURNAL is distinctly practical in all articles. The writers are thoroughly expert in their particular branches of Poultry Husbandry and retain the peculiar quality of being good instructors. You gain something every time you read THE AMERICAN POULTRY JOURNAL.

The four papers above mentioned ought to be on every farm and ranch. Taken singly they cost $2.00 a year. By our co-operative clubbing arrangement we are enabled to offer all four papers one year for One Dollar. Address us at once without fail.

THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

Hominy Feed For Fattening Hogs.

The high price of corn in recent years has caused many farmers in the vicinity of hominy mills to resort to the use of hominy feed for fattening hogs.

The Purdue University Experiment Station, being requested to do so, took up the subject of pig feeding with hominy chop and investigated it, and we are cutting out the details and reaching the result.

What the Feed is.

Hominy feed or chop consists of the bran coating, germ and part of the starch portions of the corn kernel secured as a by-product in the manufacture of hominy. The average of forty-four analyses made by the State Chemist's Department of this Station in 1910-11 showed the following analysis: Water, 9.0 per cent.; protein, 10.4 per cent.; fat, 8.2 per cent.; nitrogen free extract, 66.1 per cent.; fibre, 3.3 per cent.; and ash, 2.5 per cent. The price of the feed varied from $20.50 to $30 per ton. The average of eighty-six analyses in Henry's "Feeds and Feeding" shows the following composition for corn: Water, 10.6 per cent.; protein, 10.3 per cent.; fat, 5.0 per cent.; nitrogen free extract, 70.4 per cent.; fibre, 2.2 per cent.; and ash, 1.5 per cent.

The Composition of Corn.

It will be noted that the compositions of hominy feed and corn are practically the same. For this reason the former must be considered as a substitute for rather than as a supplement to corn. It should not be used like shorts, tankage, milk, etc., as a supplement to corn, but rather used to take the place of corn in the ration. It therefore requires for best results that it be supplemented with such feeds as shorts, tankage, milk, etc. It should be used only when the price and convenience of securing it make it a cheaper source of starch and fat than corn.

Seven Experiments.

They were pig experiments. Four lots of hominy-fed pigs received twenty parts hominy feed to one part tankage, and each 100 pounds of gain cost $4.81. The corn-meal lots received twenty parts corn meal and one part tankage and cost $4.31 for each 100 pounds of gain.

In three experiments the pigs were fed hominy feed two parts and one part shorts. The cost for 100 pounds of gain was $6.31. Three other lots were fed two parts corn meal and one part shorts and cost $6.05 per 100 pounds of gain.

The Summary.

The cost of producing 100 pounds of gain was the same with hominy feed at $20 per ton and corn at 45 cents per bushel. With hominy feed at $26 per ton, corn would have to be worth approximately 60 cents per bushel before it would be economical to replace it with hominy feed. With hominy feed at $30 per ton corn is worth, on a comparative basis, more than 65 cents per bushel. Any of our patrons who are sufficiently interested to go deeper into the subject may obtain a copy of Bulletin No. 158 by addressing the Director Agricultural Experiment Station, Purdue University, Lafayette, Ind.

ALFALFA MANAGEMENT.

From a Nebraska Standpoint, Where They Know How to Raise It.

The Nebraska Experiment Station has just issued Bulletin No. 130, entitled "Alfalfa Management." This gives a summary of the methods used by the most successful farmers in various parts of the state in securing a stand and in handling a crop of alfalfa. The discussion relates to the eastern as well as to the western sections.

It has been the purpose in writing this bulletin to put the material in such a form that the farmer can readily find a discussion of the phase in which he is particularly interested. The first division treats of the kind of soil best adapted to the growth of the plant, with suggestions for treating soil which does not give satisfactory results. This is followed by a discussion of the seed bed. The method of its preparation and the importance of manure receive a prominent place.

The farmers are advised to purchase their seed from the North or from the dry lands of the Northwest, rather than from the South. It is also recommended that no seed be used which has not been tested for purity and for germination by the government seed laboratory located at Lincoln. This test will be made free.

A discussion of the amount of seed per acre and of the various methods of seeding will help the man who is in doubt in reference to this point. Broadcasting is compared with drilling, both with a disk drill and a press drill. Warnings are given to farmers who use either method, and suggestions for greater success.

There is a comparison made of spring seeding, early summer seeding, late summer seeding, and fall seeding, from which conclusions are drawn. The late summer seeding is recommended for sections of the state where there is plenty of moisture to give the plants a good start at that season of the year.

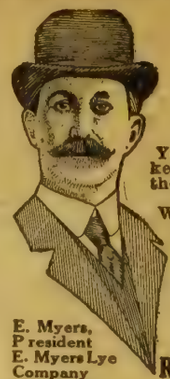
The important subject of disking the alfalfa is discussed quite thoroughly. The conclusions are based upon reports which have been received from a large number of farmers who have practiced disking their fields to increase the yield. The results do not seem to warrant the practice unless the field is to be plowed up in a year or two after it is disked.

Directions are given for thickening the stand on fields where there are not a sufficient number of plants. It is stated that this can be successfully done in many instances. Recommendations are made to alfalfa seed growers, and the bulletin closes with a brief description of methods of caring for the hay and of pasturing the alfalfa field.

This bulletin may be had free of cost upon application to the Nebraska Agricultural Experiment Station, Lincoln, E. A. Burnett, Director.

Coburn's Herd Boar.

"Whenever possible, the breeder ought to inspect personally the animal he selects as a herd boar; but when unable to do this and he has no competent representative, he should endeavor to make the best selection possible by mail by detailing his needs and the deficiencies of his sows. Ordering by mail should be considered a last resort, to be done only when the purchaser cannot buy near home, or for other good reasons is unable to give personal attention to the selection. When that is the case the purchase should be made from a breeder known to be reputable and the needs of the buyer and the price he figures on paying should be definitely stated in the letter as the attitude of one who expects the best possible for his outlay. All men who have had much to do with the selling of pure-bred boars are familiar with the buyer who insists that 'you must get him down as low as you can; he must be cheap, as I have written to a number of other breeders.' A man of this stamp is likely to want a boar of almost impossible make-up for a very small sum. He is less likely to do well in his purchase than the man who will frankly state the type of boar he needs and the amount of money he can afford or intends to invest. The chances are, too, that the latter procedure will bring much the better treatment." — From Coburn's "Swine in America."



E. Myers, President E. Myers Lye Company

I Will Prove To You That Merry War Powdered Lye Will Cure Sick Hogs

You, and every other Hog Raiser, know that if hogs can only be kept on their feet and on their feed and free from worms and cholera, there'll be no cause to worry about your hog profits.

When I, personally, say to you, Mr. Hog Raiser, that MERRY WAR POWDERED LYE will do this and more, that it is the greatest Hog Remedy, Conditioner and Fattener, the world has ever known—I want you to take my word for it until you have had time to prove it for yourself—I know exactly whereof I speak because 20 years with MERRY WAR POWDERED LYE and a close study of Hog Conditions has made me competent to advise you.

Hundreds of Hog Raisers have written telling how glad they are that I told them that MERRY WAR POWDERED LYE would kill worms, hog cholera and put pigs in prime condition quickly for highest market prices.

Read What Adam Schultz, a McLouth, Kansas Hog Raiser, Writes

This is but one out of the big daily mail and it's mighty interesting reading for up-to-date Hog Raisers.

"Before I began feeding MERRY WAR POWDERED LYE my hogs did not eat as they should. Some of them would not eat at all, but after I had fed MERRY WAR POWDERED LYE about 8 or 10 days, I could see a marked improvement in my drove and they now look slick and thrifty. I consider MERRY WAR POWDERED LYE the best remedy I have ever used—and the cheapest. I have spent a good deal of money at times but I never got the results from any of the so-called Hog Cholera and Worm Cure Remedies as I have from MERRY WAR POWDERED LYE." And that's the general testimony of Hog Raisers—and I just want to say to you that the very best way you can insure big, fat pork profits is to

Feed Merry War Powdered Lye Daily

—and feed it just as regularly as you do their daily ration—you will find it a profit-earning investment—it not only prevents hog losses from Cholera, Worms, etc., but turns your golden grain into more golden dollars quicker than anything you know and costs so little, 10c a can.

Heed My Warning

It's mighty important that you don't make any mistake—because some makers of ordinary commercial lye try to persuade dealers and hog raisers that their product is just as good as Merry War Powdered Lye as a hog remedy. Don't you be led astray by such talk—no other lye maker knows the secret process that makes Merry War Powdered Lye safe to use in hog feed—they don't know the combination in Merry War Powdered Lye that does the work.

Follow these Directions

Mix one tablespoonful Merry War Powdered Lye with slop for 10 hogs or a half can with barrel of swill. Stir well and feed EVERYDAY, night and morning; If your hogs are on dry feed ration, mix half can Merry War Powdered Lye to each barrel drinking water.

At All Leading Dealers

Most dealers handle Merry War Powdered Lye. If yours can't supply you, write us, stating your dealers' names, and we will see that you are supplied, and will also send you, free, a valuable booklet on, "HOW TO GET THE BIGGEST PROFITS FROM HOG RAISING." Merry War Powdered Lye comes in 10c cans; full case of 4 dozen for $4.80, at Grocers', Druggists', Feed Dealers' there are no substitutes.

Kettle Powdered Lye For Soap Making

If you want the best lye, exclusively for Soap-Making, scouring cleaning, disinfecting, etc., use my famous Kettle Powdered Lye—it makes the best soap you ever used —But Don't Feed It To Your Hogs. Feed Only Merry War Powdered Lye To Your Hogs.

E. MYERS LYE COMPANY, Dept. 22 ST. LOUIS, MO.

Barley Production and Exports.

During the twelve months ending June 30, 1912, a total of 1,458,378 bushels of barley were exported, against 9,233,956 bushels exported in the year previous. Most of the barley exported is from San Francisco. The United States' crop of barley in 1910 was 173,832,100 bushels, and in 1911 the crop was 160,240,000 bushels. In the year 1911 the California crop was 40,600,000 bushels; Minnesota, 28,025,000 bushels; Wisconsin, 20,910,000 bushels; North Dakota, 20,475,000 bushels; and Iowa, 10,950,000 bushels. Idaho, Washington and Oregon combined produced 16,420,000 bushels, and it required twenty five states to produce the remaining 22,860,000 bushels of the crop. The average crop of barley in the United States was twenty-one bushels per acre. The average farm value of barley in 1911 was a fraction under 87 cents a bushel.

St. Louis Apple Statistics.

During the year 1911 St. Louis received 411,808 barrels of apples. Of the total, 189,245 barrels arrived by rail and 222,563 barrels arrived by river. St. Louis also received 104,995 boxes of apples in the year 1911 and only 2,062 boxes of them arrived by river. The largest month's receipts were 164,410 barrels and 39,195 boxes in the month of October. St. Louis apple receipts were 248,555 barrels and 135.685 boxes in the year 1910, and 317,664 barrels and 70,532 boxes in 1909. As far back as 1906 St. Louis received 509,066 barrels and 42,831 boxes of apples. A feature of the St. Louis trade in the year 1911 was the fact that 104,995 boxes were received and 227,905 boxes were shipped out, which indicates repacking some of the apples at St. Louis. Of the 411,808 barrels received, 203,740 barrels were shipped out, leaving 208,068 barrels for home consumption and reshipment in boxes.

At the annual Agricultural Exposition in Bohemia the firm of Knotek & Co., of Jicin, Bohemia,, exhibited an auto reaper and binder, the machine being driven by an automobile having the power located in a similar position.

What Disastrous Winters Teach.

Last winter was, in parts of the Middle West, the most disastrous winter in thirty-five years. A nurseryman said to the writer: "Three-fourths of our perennial plants are killed."

Every once in a while a winter of this kind comes along and blasts the hopes of the fruit raiser and the hopes of the grower of ornamental plants.

The chief lesson should be to discard the varieties of plants that perish in such winters. It is a waste of time to grow plants that will do well for a number of years but die with the blast of such a winter as the last.

In some parts the winter was destructive on the peach trees, even the seedlings perishing. One man who had a number of peach trees that bore heavily last year lost them all except one, and that tree escaped entirely, with not a root or a twig injured in the least, so far as one can tell. Such a tree should be one to propagate from. The scions from it could be grafted on seedlings grown from its own pits. All of these trees were equally exposed to the rigors of the winter, and the one that escaped all injury must have extra hardiness. All of these peach trees were seedlings. The lesson should be to use that tree for propagation.

To the surprise of the writer, some of the Americana plums were killed, varieties, too, that originated far north of where the writer lives. As these Americanas are developed from our native wild plums, there seems no good reason why they should not have been able to stand the cold.

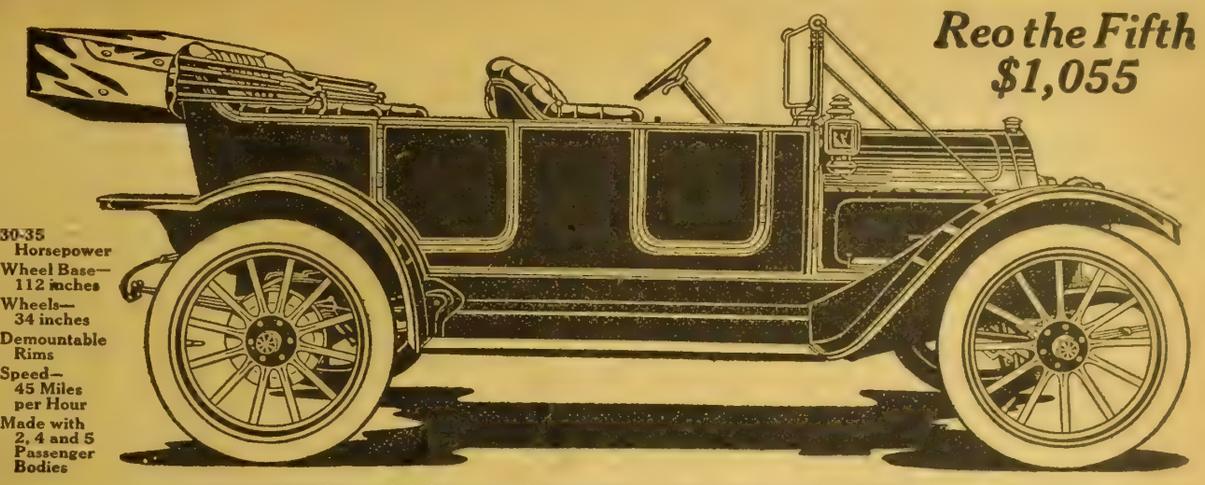
Some of the writer's fruit trees, pear and apple, had been protected by a layer of coal ashes six inches thick. The trees are very vigorous this summer and perhaps would have done well anyway. But there is a strong suspicion that the layer of coal ashes was an added protection against the unusual cold.

A man asked the writer why it is that his plum trees that seemed to be root-frozen leaved out in the spring and then died. The writer explained that a tree does not leave out from the material in its roots but from the material stored in the parts above the ground. This man said he could not understand how it was, if the roots were frozen, the sap could come up in the spring enough to start the leaves. He was told that this idea of the going down of the sap into the roots in winter is an old fallacy. The sap does not leave the wood in which it lies, except in response to the laws of evaporation and sap circulation. Sap remains in the exposed wood all winter, and that is why we get "sun-scald" in some trees exposed to a bright sun on winter days. The temporary warming up of the sap and its subsequent freezing causes the rupture of the cells of the bark.

If we take to heart the lesson of the past winter we will cease to grow a good many of the plants we have been trying to grow of late years. This will be in the end a good, for we have still a good many varieties of plants that came through the winter all right.

Effect of County Roads.

Bulletin No. 15, issued by the State Board of Agriculture, Columbia, Mo., is by Curtis Hill, Engineer, and W. C. Davison, Deputy. It is finely illustrated, showing bad roads and good roads, with appropriate articles for the encouragement of road improvement. One special article entitled "Wagon Roads a Transportation System," is specially interesting. The reason we do not go deeper in this subject in this edition is because we desire each of our readers to write and obtain a copy of the bulletin, which is a pamphlet of sixty pages.



Top and windshield not included in price. We equip this car with mohair top, side curtains and slip cover, windshield, gas tank and speedometer—all for $100 extra. Self-starter, if wanted, $20 extra.

The Center Control

By R. E. Olds, Designer

Nearly every builder of high grade cars is designing a center control.

In another year, cars with side levers which block a front door will be so out-of-date as to hardly be salable.

Bear this in mind in selecting a car. The side lever car is now a back number, as every maker knows.

Left Side Drive

In some cars the side levers are merely moved to the center. That idea won't do. Men want to get rid of the reaching. They want the front of the car to be clear.

In Reo the Fifth there is only one lever, and that is placed close to the seat. All the gear shifting is done by moving this lever only three inches in each of four directions.

There are no brake levers, for both the brakes are operated by foot pedals.

This arrangement permits of the left side drive, as in electric cars. The driver sits close to the cars which he passes. He is on the up side of the road. In making any turn which crosses a road he is sitting where he can look back.

That is the greatest reason for the center control—to permit of the left side drive. Every car is coming to it as fast as models can be changed. The side levers and the right side drive are going out at once.

This Year's Sensation

Reo the Fifth, with the center control, has been this year's sensation. Our spring output was five times oversold.

In all the 25 years I have spent in this industry, I have never seen such a popular car.

It is this amazing demand which has driven makers to the immediate adoption of center control.

But That Isn't All

There are other reasons beside center control for this car's immense popularity.

It is the final result of my 25 years spent in car building. In every detail it marks the best I know.

The cars are built under my supervision. And I insist on absolute perfection.

The steel is twice analyzed, before and after treating.

The gears are tested in a crushing machine of 50 tons' capacity.

Parts are ground over and over to get utter exactness. The parts in each car pass a thousand inspections.

Engines are put through five severe tests—48 hours in all.

Finished cars are tested over and over.

There are in this car 15 roller bearings. Ball bearings are nowhere used, save in the clutch and fan.

The bodies are finished in 17 coats. The seats are luxurious. The tonneau is roomy.

With a lifetime's reputation at stake on this car, men know I am mighty careful.

Then the Price of $1,055

And the underprice has been another sensation. We fixed the initial price at $1,055, which is $200 below any car in its class.

The price of this car must soon be advanced, because of advancing materials. It is much too low. But the price remains at $1,055 while our present materials last.

Reo the Fifth is sold by dealers in a thousand towns. Write for our catalog, showing all styles of bodies, and we will tell you where to see it. Address

[Please mention National Farmer and Stock Grower.]

Unfair Minister.

"Why did you and that young minister quarrel?" asked the friend.

"He was nice enough in many ways, but he was so horribly jealous and unfair," said the fair damsel to whom the young divine had been paying serious attention.

"Jealous, perhaps — and naturally," smiles the friend. "But unfair?"

"Yes. Every time I would make an engagement for a moonlight walk or an afternoon stroll with some other man he would pray for rain."—Chicago Post.

Cattle in Argentina.

According to the report of United States Vice-Consul General at Buenos Ayres, an official estimate places the number of cattle in Argentina at the end of 1910 at 28,827,900, an increase of 1,000,000 over the estimated number in 1909.

On page 6 there is an interesting article entitled "Start Your Library."

THE SEWING AWL.

A Most Useful Premium For Subscribers to The National Farmer and Stock Grower.

It is surprising how useful this little implement is. It is the Myers Famous Lock Stitch Sewing Awl. It is the only sewing awl made with a groove running the full length of the needle and has what is known as a diamond point. In order to sew leather or any heavy, thick material without breaking or cutting the thread it requires an awl with the groove running the full length of the needle. You might just as well have no groove in the needle as to have it only part of the way. With the Myers Awl you can sew old or new harness, saddles, carpets, canvas, tents, rugs, quilts, shoes, grain bags, and many other things. You can use any kind of thread in the Myers Awl and it makes a lock stitch same as a sewing machine. It is very simple; a woman can use it as well as a man. It is one of the most practical devices ever invented. They are put up with two needles—one is straight and one curved—with a small screwdriver and wrench combined; also a reel of waxed thread with each awl ready for use. Every teamster and farmer should own a Myers Lock Stitch Sewing Awl, as there is use for one in almost every household. The Myers Awl is nicely finished, the metal parts are nickel-plated, the needles and wrench are kept in the hollow handle, which has a screw top.

Anyone who will send one dollar cash to pay in advance for two-years' subscription to The National Farmer and Stock Grower can select one of Myers' Lock Stitch Sewing Awls, which we will send by mail, postage paid, as a free premium. Address, HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

The St. Louis Mule Trade.

In the Holland, Nugent & Maxwell Bros.' circular, dated National Stock Yards, Ill., July 31st, 1912, they stated: "There was more demand for mules this week than there has been. There were a number of buyers from the South for cotton mules and sugar mules. The supply of mules on the market is very small. The dealers have very few in their stables at present and it looks as if we could sell some big mules, good miners and sugar mules and cotton mules with quality to good advantage. This does not mean extravagant prices, but for a little more than buyers on the market will pay until they are obliged to."

Western Range Horses.

At the St. Louis National Stock Yards, on Thursday, July 25th, the third sale of Western range horses by Campbell & Reid and Western Sale Stables Company for the season of 1912 was held with great success and about 1,600 head were sold at auction to the highest bidder and about 200 head were sold on private terms. The offerings were not specially good, and the market was active, especially from Southern sources. The regularity and reliability of these sales and the large number offered at each sale afford buyers an opportunity to come in and look over the market. A load of mares may sell at $40 and another load at $85, and it requires a horseman looking on to thoroughly note the differences in quality, age, condition, appearance, etc. The sales in August will be on the 8th and 22d, and the first sale in September on the 5th. All who wish to be kept posted in regard to these sales should come in and report to J. J. Searcy, Sale Manager, National Stock Yards, Ill.

The Hog Market and Prices.

The closing day of each month is a good day to keep a record of prices of farm products. Those who keep a file of The National Farmer and Stock Grower are able to turn back year after year and find the record. On July 31st, 1912, at St. Louis, with good hogs on sale, the highest price paid was $8.40 per 100 pounds for fine butcher hogs, weighing 205 and 207 pounds. Heavier hogs of the better class, 225 to 310 pounds, sold at $8.10 to $8.35, and some coarser grades at $7.50 to $8.00. Light hogs sold at all prices, from $8.00 to $8.40 a load, averaging 185 pounds, reaching the top of the market. Packers purchased the mixed hogs largely at $8.00 to $8.25 per 100 pounds. Best pigs and lights went at $7.75 to $8.15; fair to medium offerings at $7.00 to $7.75; and the common ones at $5.75 to $6.75 per 100 pounds. Rough heavy hogs were thrown out and sold at $7.50 to $7.75 per 100 pounds as a rule.

Record-price cattle.

On July 31st, at the St. Louis National Stock Yards, sixteen head of 1,539-pound beef steers were sold at the record price of $9.75 per 100 pounds. The cattle were sent into market by Dobbins Bros., extensive shippers from Saline county, Missouri. How these cattle were brought to market excellence is thus described by Mr. Dobbins: "These cattle were native Missouri stock and were raised in Howard county. They were Angus, Shorthorns and Herefords mixed. We put them on feed last October and gradually increased their ration until by January 1 they were on full feed. We gave them ground corn, cotton-seed meal and alfalfa meal with molasses. They gained nicely and the price they brought here on the market to-day testifies as to their condition. This is the highest price we have ever received for beef cattle, though we have been feeding many years. It is needless to say that we are greatly pleased with the result of our shipment."

St. Louis Hay Sales.

The following represent a few of the hay sales early in August upon the St. Louis market. Sales on the St. Louis side of the river were: New timothy—Two cars No. 2 at $12; two cars do. at $13; two cars do. at $13.50; on car scant No. 1 at $14; one car No. 1 at $15; on car do. at $15.50; one car do. at $16. Old timothy—Part car at $17; part car at $18; one car scant No. 1 at $22.50; one good car do. at $24. Prairie—Arkansas—One car at $8.50. Western—Part car hot at $8.00; three cars and part car No. 2 at $9.00; one car do. at $9.50; eleven cars No. 1 at $10; two cars do. at $10.50; two cars do. at $14; one car good do. at $11.50, delivered; one car choice Kansas at $12.50. Alfalfa—Part car at $14; one car choice at $16.50. On the East Side: New timothy—One car No. 3 at $10; two cars do. at $11; one car No. 2 at $12, delivered to St. Louis; one car do. at $13; one car No. 1 at $14; one car do. at $14.50; one car do. at $15, delivered to St. Louis; one car do. at $15 do.; one car do. at $16; one car good do. at $16.50, delivered to St. Louis; old—Two cars clover-mixed at $20. Timothy—One car scant No. 1 at $22.50. Last sale of wheat straw, $7.50 per ton.

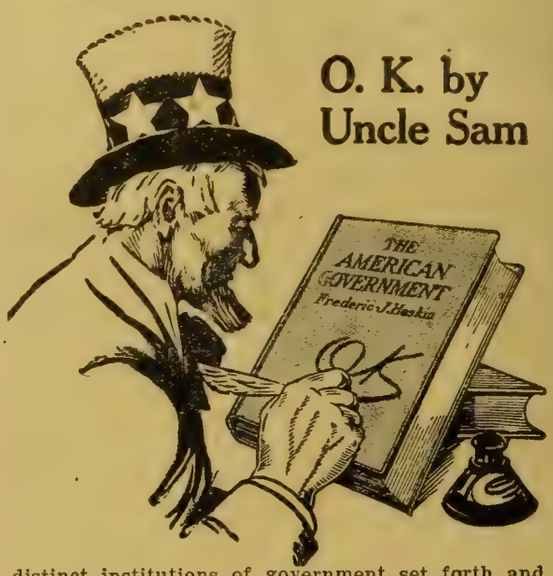
Misrepresented Beef Prices.

The daily press of the United States is making people believe that beef cattle in the market are generally selling on the hoof at nearly ten cents a pound. They do not mention the cows at $3.25 to $6.50, or the hundreds and thousands of steers at $5.00 to $7.50 per 100 pounds. Undoubtedly cattle are high compared with former prices, but the ordinary newspaper sensational items are usually 50 per cent. misrepresentation, and go a long way towards making satisfied people discontented.

THE AMERICAN GOVERNMENT

BY FREDERICK J. HASKIN.

A Book That Shows Uncle Sam At Work.



APPROACH his book with a desire for information about any feature of your government and you lay it down feeling as if you had read a thrilling tale. Read it with the idea of being entertained and you shortly find yourself in possession of a mass of information, the thought of which would have staggered you, had you been compelled to dig it out for yourself. There are thirty distinct institutions of government set forth and explained. You are a partner in the firm of Uncle Sam & Co. It is this partnership with Uncle Sam which you hold by virtue of your American citizenship. Frederick J. Haskin explains the government of which you are a partner.

Mr. Haskin doesn't merely tell you that it costs a billion dollars a year to keep Uncle Sam & Co. going, but he traces clearly how it is obtained and how it comes back to you.

The list of your benefits as a stockholder in Uncle Sam & Co. would fill this newspaper if printed in full. Get yourself posted by owning a copy of this book. There are 386 pages, 5x8 inches, specially illustrated.

We have adopted the book "THE AMERICAN GOVERNMENT" as a premium for the best monthly farm paper in the United States.

The National Farmer and Stock Grower

IS a nice, clean, general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, to vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, to horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. The best live stock illustrations apear in THE NATIONAL FARMER AND STOCK GROWER. There are thirty-two pages, four columns to the page. It is published monthly.

OUR SUBSCRIPTION PROPOSITION.

Send us One Dollar ($1.00) and we will send you one copy of "THE AMERICAN GOVERNMENT," and we will also send you THE NATIONAL FARMER AND STOCK GROWER regularly for two years. Address,

THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

HORSE AND MULE SALESMEN.

Holland, Nugent & Maxwell Brothers.

NATIONAL STOCK YARDS,
EAST ST. LOUIS, ILLINOIS.

Horse Auctions Every Monday and Tuesday.

Sale of Texas-fed Cattle.

On July 29th, at the St. Louis National Stock Yards, S. M. Cowan, of Archer City, Texas, marketed a five-car string of 1,263-pound Texas cake-fed steers at $7.90 per 100 pounds. This is the highest price ever paid in the month of July for a string of Texas steers of the size. The July record for all markets is $8.00, but only one-car shipments reached this price, and $7.90 for a five-car string is a record even greater than the top-notch price.

Mules in New York City.

A pair of gray mules, standing sixteen hands high and weighing upward of 3,000 pounds, attracted a lot of attention among visitors to the Bull's Head district last week. They were the toppers of a select shipment from Missouri to the Fiss, Doerr & Carroll Horse Company, and it was the consensus of opinion among experts that they were from high-grade Percheron mares. Mr. Carroll says that such a pair of mules is worth about as much as the best pair of draught horses in the market, and can do more work than any draughters of their weight and inches. The record price for mules in Twenty-fourth street is $1,000 a pair, this price having been paid last winter for an extra large, well-matched pair now at work on the Westchester estate of Alfred H. Smith, General Manager of the New York Central Railroad Company, and one of the Directors of Durland's Riding Academy.—New York Herald, July 21st, 1912.

Visiting the East.

Mr. T. H. Holland, of the firm of Holland, Nugent & Maxwell Bros., horse and mule commission salesmen at the St. Louis National Stock Yards, is taking a short holiday for the purpose of recreation and incidentally to enlarge the business connections of the firm if it is possible to do so. He started for the East and will pay a visit to most of the great horse-selling establishments at Washington, Baltimore, Philadelphia, Newark, New York and Boston.

Mr. T. H. Holland has been a leading operator in the Western markets for twenty years. Three years ago he concluded the market that could attract and assemble the largest number of horses and mules was St. Louis, and the market capable of suiting the largest number of buyers with horse supplies was also St. Louis. Having reached the conclusion that St. Louis was the center in which horses could be assembled, sold and distributed at the least cost in money to come out of the price of the horse, he decided St. Louis would have to be his market.

At a horse and mule center like St. Louis, where capable, energetic, enterprising, reliable men are the rule, they are proud to recognize Tim H. Holland as one of the foremost of their number and highly representative of the great market where he presides over the horse auction on Monday and Tuesday of each week.

Early-matured Beef.

How light cattle can weigh and yet be acceptable to the butchers for slaughtering purposes is placed in evidence by a bunch of very choice yearling steers that were sold by Clay, Robinson & Co. on July 16th for $8.80 per 100 pounds, the highest price ever paid upon the Denver market for general beef-cattle consignments. They were taken right from the cows, as calves, last December, and put on alfalfa and corn. When weaned they averaged 473 pounds, and when sold averaged 873 pounds. On May 7th they were turned on grass and had grass and corn until shipped. They were sold on July 16th. Mr. M. M. Maxwell, of Boulder, Colo., was at the market with the shipment. It was as good an example of baby beef as one can see on the market.

Oklahoma Steers at St. Louis.

As indicating the market for Oklahoma cattle at St. Louis on July 31st, Naylor & Edwards Bros., regular shippers from Oklahoma, marketed a string of forty cars of cake-fed cattle at top prices. The shipment included 210 steers which averaged 1,108 pounds, and sold for $7.50 per 100 pounds. This price is close to the record for Oklahoma beeves and a record for a string of this size.

Texas Grass-cattle Record.

From Pearsall, Frio county, Texas, on the 31st of July, 1912, Meyer Halff and Chas. Schreiner had sold on the St. Louis market twelve carloads of grass steers. The consignment included 207 head 1,075-pound cattle at $6.50 per 100 pounds; a small string of coarse cattle at $5.35 per 100 pounds, and two cars, forty-six head, 1,118-pound top-notch grass steers at $7.25 per 100 pounds, said figure being the record price for grass Texas cattle.

St. Louis Sheep Trade.

On the last day of July, at the St. Louis National Stock Yards, 11,000 sheep were on sale.

The best lambs offered went at $7.00 to $7.15 per 100 pounds, but there were plenty of good lambs that sold at $6.50 to $6.90 per 100 pounds, and medium grades at $6.00 to $6.50 per 100 pounds, while fair offerings that were not fat went at $5.50 to $6.00 per 100 pounds, and the culls at $3.00 to $4.75 per 100 pounds. Buyers sorted the lambs pretty deep, so that there were a good many culls on sale.

The best ewes brought $4.25 to $4.50 per 100 pounds, while the mutton sheep sold largely at $4.10 per 100 pounds, with a few at $4.00 per 100 pounds, but the top was $4.25 per 100 pounds, while the day before most of them went at $4.25 per 100 pounds. Stockers were a little slow also and the best went at $2.50 to $3.25; fair, $2.00 to $2.50; old cull, thin sheep, $1.00 to $1.85; and the bucks, $3.00—all quotations being at the price stated per 100 pounds.

WESTERN RANGE HORSE SALES.

Horse raisers are advised that sales of the very best Range Horses in the country are being conducted twice each month by

Campbell & Reid and Western Sale Stables Co.,
NATIONAL STOCK YARDS, ILL.,

As usual, during the season of 1912. The Fifth and Sixth Sales will be held

Thursday, August 22d, and Thursday, September 5th,

And every two weeks thereafter until the close of the season. We will be glad to hear from Ranchmen having Horses for sale. The demand is very good this season, especially for well-bred Mares and Geldings in good condition, and every class is in demand, from yearlings up.

Please address
J. J. SEARCY, Sale Manager,
NATIONAL STOCK YARDS, ILL.

EGG-LAYING CONTEST.

The Second in Missouri—To Start Next November, When First Contest is Over.

(Letter from the Manager.)

So much interest has been manifested in the first egg-laying contest, and so many things are being discovered as a result, that a second one will begin November 15th for another year's test. Missourians are given the first opportunity to enter their birds and what pens are left will be filled by outsiders.

Practically everyone who now has a pen entered has expressed a desire to have a pen entered for the second year if their birds are desirable. The second year will differ from the first in the fact that each contestant must send ten females instead of five, as this year. All must be pullets or yearling hens. All must be standard-bred poultry of good quality and score not less than 90 points. We will not have two pens of Black Orpingtons and eighteen pens of S. C. White Leghorns, as this year. Each variety will have the same representation; that is, if there are five pens of Barred Plymouth Rocks this year there must be five pens of S. C. Reds also, and the same is true of all other varieties entered. This gives all varieties a more equal chance and is fairer for all and a better test from every standpoint.

It seems that the best breeders of this country, fanciers, farmers and other breeders of poultry should avail themselves of this contest. No one need feel any uneasiness about poor results or a bad showing, or feel any delicacy about having their flocks tested, for the breeder's name will not appear on the pen, be published or made known unless he requests it. The pens will all be known by number and states, unless the breeder desires his name on the pen. It is worth hundreds of dollars to any breeder to know how his pen compares with others of the same variety and with different breeds when housed, fed and cared for under the same conditions, and it will be worth thousands of dollars to the winning pens in this contest if their good qualities are proven and properly advertised.

The best breeders in Missouri should not hesitate to enter a pen in this contest. It is up to them to see that their variety is properly represented. The leading hen in this contest at the present time is bred from winners in two good shows. It is up to our best breeders and our best-advertisel strains to demonstrate their good laying qualities as well as their fancy and show points. We believe they can do it. The day has come or is close at hand when people are not going to buy a Leghorn, a Plymouth Rock, a Red, or an Orpington, simply because it is a Leghorn, a Plymouth Rock, a Wyandotte, a Red or an Orpington, but they desire to know their powers of productiveness as well, and rightly so. I believe that the best breeders of this country can demonstrate the fact that their flocks can do both win and lay, and the best show bird in America is not too good to have a place in the next Missouri National Egg-laying Contest at Mountain Grove, Mo.

Several hundred dollars in cash and special prizes will be offered. We are getting dozens of requests from other states and foreign countries to enter pens in this next contest, but if we can fill it up with farmers' and poultrymen's poultry from Missouri we much prefer to do it, but we must know at once what we can depend upon; so if you are thinking of making an entry, you had better write to-day for further information. Only a limited number of pens of each variety will be accepted. The first who apply will be the first accepted. The entry fee is $5.00 for Missouri pens and $10.00 for out-of-the-state pens. Last year several entered pens, houses and yards were reserved for them, and at the last minute, when too late to get other birds, they notified us that they had changed their minds and would not send. We are at great expense for the contest, offer large prizes and charge a small entry fee to know that you are acting in good faith.

Write to T. E. Quisenberry, Mountain Grove, Mo., for full particulars concerning this egg-laying contest.

The Problem of Marketing Poultry.

The question of marketing poultry is something larger than the question of fitting poultry for market. The consumers of poultry products pay a very high price for them, but only a small fraction of this price gets into the pocket of the farmer that produced the poultry.

In the sale of poultry on the great markets there are all kinds of combinations. Some of the commission firms have wheels within wheels. Some members of the firm will form a sub-company, which buys the best products and resells them at a higher price.

Some men in the sub-companies have a large acquaintance and have mutual friends that play into their hands. Poultry that comes in is bought readily at a low market figure and is resold at a figure several times above the current quotations.

The writer one day saw one of these men making up a pen of Brown Leghorns. He went to one crate and got out a couple of Brown Leghorn hens, paying for them about nine cents a pound. The hens came to about forty cents each. He repeated this at some other commission stalls and soon had a breeding pen of four females and a male. Then he put them in a nice new crate and set up a sign over them, which read: "Pen of Brown Leghorns, Pure Bred, $10.00." The pen consisted of four females and a male with no known breeding but all looking like pure-breds.

The man bought them at forty cents each and wanted $2.00 apiece for them. Of course, the farmers that had sent in the birds got about forty cents each for them. From this had to be deducted the commission. Is it any wonder that some of our farmers do not find it profitable to raise poultry?

Any farmer that ships his fowls to unknown firms may or may not get what the birds bring, less commission. He has to take the word of the commission man for it. Commission men are no more honest than other men, and the fact that there is no way of finding out what prices they get naturally makes them bold in any scheme they undertake. It is therefore very easy for a commission man to sell a lot of poultry for a little above the market price and return just the market price. Resorting poultry to get larger prices is quite common, and no doubt the commission man justifies himself in putting an extra profit into his own pocket by saying to himself that if he had not re-sorted the fowls he would have had to sell at the market price.

By co-operation among farmers the selling of fowls can be put on a better basis, and in no other way. We are very slow in forming such associations, which exist all over several European countries. In Denmark egg-selling and poultry-selling associations have been doing a great business for twenty years or more. They are now part of the agricultural machinery of the nation.

Such an association is able to have its own means of disposing of its products. Then all the price obtained goes into the pockets of the farmers and an army of leeches does not fatten in the dark on the profits that should but do not reach the pocket of the man that produced the materials sold.

The Hen No. 717.

In issuing the report of the eighth month of the egg-laying contest at Mountain Grove, Mo., Mr. T. E. Quisenberry, the Director, gave a list of the ten highest individual records thus far, the individual eight-months' records ranging from 161 to 179 eggs per hen.

Mr. Quisenberry said: "The White Plymouth Rock hen No. 717, while she is two years old, has laid more eggs than any pullet entered in the contest, though, as a rule, pullets have done best. This hen has perhaps laid more eggs without missing a day than any hen on record to date. She laid 82 eggs in 82 consecutive days, or laid an egg every day for nearly three months. After laying the 82 eggs, she missed one day, a proof that it is possible to have both utility qualities and fancy or standard-bred points combined in the same flock and in the same hen. This hen is bred from a male and female which were both winners in good shows. This hen herself shows her good breeding. It is all tommy-rot to say that scrubs and cross-breeds can outlay standard-bred poultry. We are in hopes the farmers and poultry breeders of this country will endeavor to combine both these qualities in the same flock as we find it in this hen."

It appears, however, that it requires team work to make a pen record. In the list of the first fifteen pens with records of 605 to 708 eggs for the eight months the White Plymouth Rock pen does not appear, although the other four pens were in the contest. Let us hope, for the sake of Hen No. 717, that her companions will make a showing during the next four months.

Oldest Egg of All.

Not so long ago a party of explorers, members of the Archaeological Society of Mayence, found, during their excavations in the ancient Moguntiacum, a hen's egg which was estimated to have been buried for something like nineteen centuries. Moguntiacum was built by Drusus, the son of the Roman Emperor, Augustus, in the year 14 B. C., says Harper's Weekly. Upon the side of the ancient Roman castrum or encampment near the city the excavations in question brought to light many interesting relics, including some water cisterns of Roman make. It was in one of these, which was located twenty feet below the ground, that a damaged Roman clay pot was found containing the shell of a broken egg and also a whole egg that had been kept from being smashed by a shred of the damaged pot which covered it. The ancient egg was turned over to the municipal museum.—Salt Lake City Republican.

Poultry House Construction.

There isn't even a nail missing in the description of the three poultry houses given in a bulletin, No. 132, "Farm Poultry Houses," just issued by the Iowa Agricultural Experiment Station at Ames.

Every detail and every step of construction is made clear by photographs showing the exterior and interior alike, and by builder's drawings showing the method of construction throughout, and by bills of materials that include every item needed.

Three types of houses are described, two movable and one stationary. The "A"-shaped movable house may be built at a cost of $39.00. The "Iowa Colony House," used first at the Iowa poultry farm at the Station, costs about $58.00. The stationary house is larger than either and may be built for about $173.00 or $180.00, depending on whether lumber and concrete or hollow tile and concrete are used.

The Iowa Agricultural Experiment Station will send these bulletins on request.

Sent on Trial.

If you are sick, you can get a full-size one-dollar box of Bodi-Tone on twenty-five days' trial. If it benefits you, you pay $1.00 for same. If it does not help, pay nothing for it. This is the way Bodi-Tone is being offered to the sick in the large announcement on the last page of this paper and the way thousands have already been cured by it.

The Leading Pen.

The International Egg-laying Contest held at Storrs, Conn., has now passed the performance of thirty-eight weeks. There are 100 pens in the contest and the leader is a pen of five White Leghorns owned by F. G. Yost, of Sayre, Pa., with a record of 818 eggs.

BACK TO LIFE.

A Strange Way to Get Rid of An Objectionable Wife.

If the reader can conceive what his emotions would be upon meeting face to face in a crowded street a man whose funeral he had attended seven years before, he will then be able to realize how I felt when I came suddenly upon Milton Ross in a far Western city.

I stopped abruptly, rooted to the pavement, as it were, with the shock.

"Why, Milton," I cried, holding forth my hand.

There was not a sign of recognition in his face; indeed, there was that very faint curl of the lip, hardly a sneer, which is often seen when a person is saluted by mistake. But it is impossible that I could make any mistake about this man. Years before I had met him almost daily in our Eastern home, and frequently transacted business with him—knew him, as the saying goes, as well as though he had been my brother. And what if I had attended his funeral, seven years before? Here he stood in his own person, the same as when I last saw him in life, bearing not a trace of age or change.

"Your surely know me, Milton," I said. "I am John Tanner."

This time there was a very decided sneer, and it was in his speech.

"I don't doubt your acquaintance is a very desirable one, Mr. Tanner, to those who are honored with it, but I have the misfortune not to be one of that number. Please stand aside, sir."

I obeyed in dumb amazement and he walked on. Every word and motion gave me increased assurance that there was no mistake. Not only was his voice that of Milton Ross, but the manner and substance of his speech had that half-sarcastic dash for which he had been noted. I watched him as he strode off through the crowd, and there was his peculiar gait that I could have sworn to anywhere, a weakness in the right hip causing the step of that foot to be shorter than the step of the left.

My business in this town was finished and I was on my way to the railroad station when this meeting occurred. My resolution was at once taken to wait for another train. Nature had given me an investigating disposition; I was not the person to see dead men walking about without calling them to an account for the eccentricity of the proceeding. So I followed my quondam friend down the street, keeping him easily in sight. Once I stopped a gentleman who had the air of being a resident of the place, begged his pardon, and, indicating the object of my pursuit, asked him if he could tell me that man's name. He could, certainly—that was Stanley Robbins, the merchant.

"Live here?"

"Oh, yes."

"How long?"

My informant reflected an instant and said the time was rather more than six years.

I continued the pursuit. It led me into a large dry goods establishment, over the handsome front of which was displayed in great gilt letters the name of Robbins. Walking straight back to the office, I found the proprietor alone. His fair forehead contracted into a frown as he saw me, and then did a thing which seemed to me very significant. He closed the office door.

"Sir, you are laboring under a very curious delusion," he said.

"Sir, I am not! You were long a resident of S—, in the state of—. You were buried there many years ago. How you got out of your grave and got so much life into you, I don't know, and I have the curiosity to find out. How was it?"

The man certainly had amazing self-possession. I had adopted a tone and manner of good assurance, hoping to throw him off his guard; but he overmatched me. His face wore an easy smile, a combination of amusement and irritation, while he replied promptly to my accusation.

"My dear sir, please remember that I am a business man, and have not the time for any sensational nonsense. You look like a person in possession of his senses, and I am willing to believe that it is your zeal that has led you into annoying me about an accidental resemblance. If you have no other business here, I must wish you good morning."

How provoking he was, to be sure! But I was not to be thrown off the scent by any such device. I put my card down on the desk before him.

"Mr. Ross," I said, "there is my name; it is well enough known to you without the card. I shall leave this town by the five o'clock train; in the meantime shall be at the G— House. You'd better call there and explain the resurrection to me!"

He flipped away the card and took down the ledger. My hand was on the door knob when he swung his stool around and faced me.

"You don't—that is—you won't think it necessary to telegraph or write to S— before I see you again?"

Confession spoke in his words.

"Milton," I said, "this masquerading has gone far enough with us. You see I can't be deceived. Speak out like a man and explain yourself."

I saw a rapid change in his face as he opened the door himself and called out:

"Mr. Perkins, I shall be particularly engaged for an hour. I must not be disturbed."

He led the way to his private office, locked the door and asked me to sit down. Then he stood before me and said, in a defiant voice, which was plainly assumed:

"You are right, Mr. Tanner—I am Milton Ross. What then?"

"Nothing in particular, only it strikes me that perhaps you have missed your vocation. You seem to be doing a prosperous dry goods business here; but from the manner in which you've faced me down for the last half hour I should say you would make a capital actor."

His cool bravado vanished in an instant; the strain had been too great, and his break-down was complete. He dropped helplessly in a chair and looked pitifully at me.

"For the last half hour, John," he said, "I've been suffering the torments of the damned. You are the first person from S— or anywhere else who has come across me since I disappeared. I have been schooling myself for years to play the part that I have been trying to play on you, and you have seen my failure. John, you used to be my friend; now, what will you do? Have me arrested? Give me up to the law?"

"Mr. Ross, this masquerading out of the grave, where you properly belong, is a mere matter of curiosity to me. I'm not aware that you've committed any crime—unless it is punishable for a dead man to pretend to be alive."

"For heaven's sake, John, do not jest with me now! What will my Mrs. Ross say if you betray me?"

I looked at him curiously.

"I should judge you hadn't heard lately from S—"

"I have never heard from there; I did not dare to name the place or make an inquiry."

"Then you will be interested to know that she died three years ago."

The man jumped to his feet and paced the room like a crazy person, and actually shed tears of joy at the announcement.

"May she be happier in Heaven than she ever was with me on earth!" he said, when his excitement had calmed somewhat. "Three years ago, do you say? It is not two years since I met here the only woman that I ever loved. The love and disappointment of twenty years ago came back too powerfully to be resigned. Rash as it was, wrong as I believed it, I married her. And now you tell me I had a perfect right to do so."

"So it appears. But you haven't told me yet how you came to life."

"I'll do it. First, though, how did things, my affairs, go on at S—, after—after—"

"You mean after your death? Very probably indeed. Your funeral was a particularly fine one, very well attended and your old pastor preached an excellent discourse. I think that on my return I'll have to look up some of the newspaper obituaries and send them to you; they would be interesting reading. As for your business affairs, you probably don't need to have me tell you that they were found in excellent shape. Your estate was valued at $30,000, if I remember rightly; with but little debt. To tell the truth, your wife didn't seem to take your loss very much to heart; and"—

"I see," said Ross, with a broad smile. "She found consolation elsewhere."

"She married in barely a year after your funeral."

"Well, all right; but curiosity leads me to ask who the happy man was."

"You couldn't guess."

"Of course not."

"It was Squire Braden."

"What! That insignificant little wiffet! Well, what won't a woman do?"

The tension and stress under which Milton Ross had suffered were now gone, and he was able to join in the laugh that his last remark provoked. Then he proceeded to give me a brief account of the cause and manner of his disappearance from S—. With the disguise that is here given to the names of persons and places, the whole episode is committed to print as illustrating a phase of our social life, which, if unpleasant to contemplate, is none the less an existing fact.

Milton Ross, as we knew him in S—, was a prosperous and popular man of business, and fortunate in all the relations of life.

Years of wedlock had brought him no children, but it was never suspected that the pair did not enjoy an average share of marital felicity. The secret truth, decorously veiled from the world in the skillful American fashion, was, that these two, whom God was supposed to have joined together, bore the yoke of matrimony as an insupportable burden.

A strange combination of circumstances presented to the husband the opportunity of releasing himself from his hateful bonds at the price of the sacrifice of property, name and life-long associations. He promptly seized it. Being in New York on a brief business visit, he had occasion to be absent from his hotel over night. The paper of the next morning brought to him in Brooklyn an account of the destruction of this house by fire. Several guests had lost their lives; one of the bodies recognized had not been positively identified, and probably could not be, from its condition; but it was thought to be that of a Mr. Ross, of S—. For twenty-four hours thereafter that individual secluded himself and awaited events. The press of the next morning stated that the body had been sent to S—, as unquestionably that of its unfortunate citizen. Confident that he had left no clew in or about the metropolis by which the truth could be known, Ross accepted the fate assigned him and became practically dead and buried to his real life.

Neither my interest in this drama of real life, nor its own unities would have been satisfied without my introduction to the present Mrs. Robbins, and I did not hesitate to accept Milton's invitation to dine with him. He took me to a beauiful home and introduced me to a charming woman. I am pointing no morals nor drawing any lesson, yet truth compels me to say that there was positive wedded happiness, if the thing ever existed. But I wonder what the lady thought when I inadvertently called her husband Mr. Ross?

For a Late Crop.

Rev. John D. Craft was conducting a series of meetings in a rural neighborhood of Southwest Virginia. One night he was trying to bring the necessity of early embracing a religious hope to bear upon his congregation. Said he: "We'll just illustrate: You begin in February or March to prepare your ground for planting your spring crop. You plant in April to be on time. Suppose you neglect this work. May will be late, but perhaps will answer. Let the work go undone till June; then what will you do? 'Too late, too late!' will be the cry."

"Just now it is in buckwheat," called out an old farmer from a rear seat.

The preacher sat down.—Mack's National Monthly.

At the Agricultural Exhibition in Bohemia the International Harvester Company exhibited and sold a forty-horse-power gasoline traction plow, which attracted much favorable attention.

Our Subscription Department.

A Keyless Padlock Premium.

Keyless locks are very useful and valuable. When you get used to them you will use no other. The keyless locks are rust-proof, light and strong, being made of aluminum. In opening the lock you use a combination, turning the knob to the right and left as indicated by instructions. It requires a trial or two to learn the combination, and then, night or day, the lock cannot be picked, but you are able to open it easily and do it with your eyes shut. You can hear the clicks and you can feel them. These locks cannot be excelled for security, convenience and durability. We have prevailed upon the manufacturer of keyless locks to allow us to use a special aluminum padlock No. 8 as a subscription premium. It is a good, substantial lock fit for any purpose. Anyone who will send in one dollar to pay for two-years' subscription to The National Farmer and Stock Grower can select the aluminum keyless padlock No. 8 as a premium. We will send it postage paid, safe delivery guaranteed. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Rain-making With Dynamite.

A controversy over rain-making between Mr. C. W. Post, of Battle Creek, Mich., on the one hand and Willis Moore, Chief of the United States Weather Bureau, on the other, will probably be settled some time in the future for the benefit of farmers in general. Mr. Post claims that bombarding the heavens with dynamite on the night of July 22d did produce almost half an inch of rain at Battle Creek, Mich., and Mr. Moore states that just as much rain would have fallen had the bombardment not taken place. The rain-makers require sixty degrees of humidity in the air before they confidently start the battle for rain. We believe the original rain-makers used gunpowder to produce the concussion, but now they use dynamite. It may be in the future that getting rain hereafter in periods of drouth will simply be a matter of cost of dynamite when the amount of humidity in the air indicates a fair possibility of success. In the meantime, the usual dry-farming methods should be persevered in.

THE NEW ST. LOUIS FAIR

To be Open the Week of September 23d to 28th, 1912.

Every effort is being made by the management of the New St. Louis Fair to revive the old St. Louis Fair in all its glory. The programme includes pageants, aviation meets, stock show, horse show, poultry show, sportsmen's show, harness meet, horse racing, auto racing, motorcycle racing and novelty racing.

Business men of St. Louis are actively engaged in lending encouragement to the enterprise and have undertaken to sell 100,000 tickets for "Big Thursday," September 26th, at 50 cents each. The President of the organiation is C. F. Blanke; Vice-President, Geo. W. Maxwell; Secretary, Thos. W. Garland; Treasurer, Julius Kessler. The General Manager is Joseph A. Murphy, and the office of the company is at 1023 Chestnut street, St. Louis. The Fair Grounds are admirably located on the St. Charles Rock Road, just outside the city limits, and reached by good roads for vehicles, automobiles and several lines of street cars. The farmers and stockmen who have kindly feelings for the old St. Louis Fair should remember to come in and assist the new enterprise. It does not conflict with the Missouri State Fair at Sedalia, which is a week later, September 28th to October 4th, or the Illinois State Fair, which is two weeks later, commencing October 4th and ending October 12th.

BLOODED STOCK NOTES.

Secretary J. M. Wade, of the American Shropshire Registry Association at Lafayette, Ind., urges the organization of State Associations of Breeders of Shropshire Sheep to be rounded out at the State Fairs. How it can be done and the reasons therefor are set forth in a circular available to those who write the Secretary for a copy.

Mr. Howard Chandler, of Chariton, Iowa, specialist in importing and raising pure-bred Shropshire sheep, has a card in the breeders' columns. We have a dozen testimonials in our hands of satisfied customers who have purchased Shropshire bucks of Mr. Chandler and who are very much pleased with their purchases.

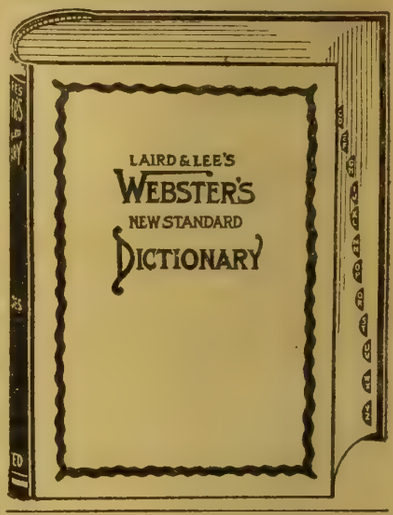
Volume 60 of the American Poland-China Record is to hand. The book contains records of boars from 174,951, to 175,985, and sows from 418,204 to 429,798, a total of 16,632 magnificent Poland-Chinas, the record giving name and number, sex, breeder, owner, sire, dam and ancestry in each instance. The book is generally subscribed for by members, and non-members who are interested in obtaining a copy can address Mr. W. M. McFadden, Secretary, Union Stock Yards, Chicago, Ill.

Working Time For Farmers.

It is generally stated, and upon good authority, that during the month of July general farmers throughout the Central West and Southwest have worked as they never worked before. The watchword was "Make hay while the sun shines."

WEBSTER'S DICTIONARY.

This is Laird & Lee's Webster's New Standard Dictionary of the English Language, a wonderful book, 756 pages in all, 840 illustrations, substantially bound, gilt title, red edges, patent thumb index. Special edition for office and general use on farms, estates, ranches, etc.; massive but handy; contains ten encyclopedic features, supplements of new words, dictionaries of biography, geography, musical terms, Biblical, classical, historical and mythological names, foreign phrases, English word-building, rules in orthography, current abbreviations, metric system with conversion tables; weighs twenty-eight ounces.



Our offer to you: Send us one dollar and we will send you The National Farmer and Stock Grower for two years and we will also send you, postage paid, safe delivery guaranteed, one copy of this great Webster's Dictionary. We also agree to refund money and pay return postage to anyone who is not satisfied with the bargain. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

DR. M. NEY SMITH, 302 N. 12th St., St. Louis, Mo.

GOAT RAISING.

Profitableness of the Industry and Hope For the Future.

This article emanates from the Bureau of Commerce and Labor. It appears that money has been sent out of the country, amounting to $25,000,000 a year, to purchase goat skins for use in this country; at the same time the price of goat skins has never been any inducement in raising common goats. Even as this is written, goat skins are quoted at St. Louis at 20 to 35 cents each and kid at 5 to 15 cents. That refers to skins from common goats.

The Department of Commerce and Labor arrives at the conclusion that much of the waste lands in the United States could be utilized for raising goats. The arguments are based upon the report of the United States Consul at Vera Cruz, Mexico. In the report he says:

"Goats are raised in every state of the Republic of Mexico. The industry is largely confined to the central table lands * * * * though the animals thrive everywhere and can be raised at a good profit over a wider range of territory than that on which cattle may be successfully raised. * * * * The dry plains of Nuevo Leon, with scant growth of brush, are able to support large flocks of goats, though these same plains will not produce corn, cane or grass, unless water is supplied for irrigation. * * * * The extent of territory which could be given to the raising of goats, without in any way interfering with agriculture, is very large. Vera Cruz has tens of thousands of acres of land so steep and rugged that it cannot be farmed profitably, but these rugged mountain sides furnish ideal feeding grounds for goats. * * * * The value of the goat depends upon three things: Meat, tallow and the skin. * * * * The matter of fresh meat in farming districts of the hot country is greatly simplified by the breeding of goats. In small, isolated communities it is risky to slaughter an ox or cow, as the flesh is liable to spoil before it is consumed. The small carcass of a goat makes it entirely practicable to kill frequently without risk or loss. In the state of Tobasco the inhabitants are never at a loss for fresh meat on plantations where goats are raised and where formerly meat was almost unknown. * * * * The flesh alone would make it a profitable industry, for the carcass of each animal will bring from $1.00 to $1.50. Fats of all kinds are high-priced in all parts of the country. * * * * At two years a fat goat will yield six to ten pounds of clear tallow, which will be worth from 75 cents to $1.50. * * * * The most valuable part of the goat is the skin, worth $1.25 to $1.50, and the constant trend of prices is upward." (These figures of values are presumably in Mexican currency, in which the dollar is equivalent to about one-half dollar in United States currency.)

The Consul adds that the increase in the number of goats is very rapid, since they begin breeding at from six to eight months of age, and breed twice a year, bringing forth two and not infrequently three kids at each breeding season. A single shepherd it is said will look after at least 1,000 goats. He adds: "A careful investment of $1,000 well looked after can certainly be counted upon to double itself inside of two and one-half years and to give at least a 50 per cent. profit per annum from the end of the second year. The report closes by presenting the result of a three-years' experiment in goat raising on a farm in the state of Guerrero, Mexico, as follows:

"In 1904 the manager of the farm received 66,000 goats, including large and small, at a valuation of $1.50 each, equal to $99,000. From the produce of these he sold, during nine months of 1904 and the years 1905 and 1906, 50,000 head at $5.00 each, equal to $250,000, and had, at the close of 1906, 88,000 head on the farm, being 22,000 more than he started with. The result was, counting the value of the 22,000 increase at $1.50 each with the foregoing sales, the investment of $99,000 produced in less than three years $283,000, besides the original stock of 66,000 goats was intact." (Figures in Mexican currency.)

The above facts as to the possibilities in the increase of the meat supply of the United States, while retaining at home the hundreds of millions of dollars now sent abroad for the purchase of goat skins, and producing this supply of valuable material on lands now practically unutilized, are cited as the cause of the numerous inquiries upon this subject now reaching the Department of Commerce and Labor. The number of goats now produced in the United States is small compared with that of many other countries. The latest figures in the Bureau of Statistics show the number in the United States in 1910 at about 3,000,000; in Mexico, 4,250,000; Turkey in Asia, 9,000,000; British South Africa, 12,000,000; and British India, 34,000,000. The importation of goat skins into the United States was in 1911, stated in values, from India, nearly $7,000,000 worth; from China, a little over $3,000,000 worth; from Mexico, over $2,000,000 worth; from Brazil, $1,666,000 worth; from Argentina, $1,000,000 worth; and from England, $1,000,000 worth. For the current fiscal year, ending with the present month, the total value of this article imported will approximate $24,000,000, the number of animals represented by these importations being about 45,000,000.

The number of goats in the United States, according to the census of 1910, increased about 50 per cent. in the last decade, a very large proportion of the 3,000,000 enumerated by the census of 1910 being in the Southwestern States. Texas has 1,135,244 goats; New Mexico, 412,050; Arizona, 246,617; California, 138,413; and Oregon, 185,411.

Successful Hog Shipping.

John Murty, of Alvo, Neb., was at South Omaha with a car of mixed stock. For eighteen years he has been going regularly to that market, having shipped for a number of years from Verona before going to Alvo. During all that time he has made a study of the question of how to load his stock, especially hogs, so as to suffer the least loss. He has succeeded well in this. For a number of years back he says that he has averaged barely one dead hog for every fifteen cars shipped.

His method of loading is very simple. In the first place, he loads his hogs never to exceed 500 to 800 pounds over the minimum. If he has more than that weight of hogs on hand he leaves the surplus home. Then he is very careful to clean out out all the manure on the theory that the manure, which develops great heat when water is thrown on it, stifles a good many hogs in the summer time. After the car is thoroughly cleaned he beds it down with sand, if it is to be had; if not, with earth. In cold weather he uses straw for bedding, being very careful not to have it over four inches in depth, because if deeper hogs will fall over it and others will pile up on them. In the summer time he wets down his hogs before loading and again after they are loaded. In the winter, during stormy weather, he nails boards over the two lower cracks in the car on the north side, to protect them from the wind and storm and thus keep them from piling up on the south side of the car and smothering.—The Live Stock Report.

Chicago Live Stock.

On August 1st, 1912, at Chicago, the receipts of cattle were about 4,000 head, mostly common and medium steers and butcher stuff; good fat cattle were gobbled up quickly at strong rates; both corn-fed and distillery-fed steers sold at $9.85 per 100 pounds, both being a record price by a big margin; common and medium light-weight short-fed steers sold at $7.00 to $8.50; all cows and heifers sold steady to strong; fat cows went mostly at $6.50 to $8.00, and fat heifers at $7.00 to $8.25; bulls were higher at $4.60 to $6.50, including bolognas at $4.70 to $5.10; veal calves were 25 cents higher, selling at $9.50 to $10.25; heavy calves, $6.00 to $8.50; stockers and feeders were about steady at $4.60 to $6.80. Hog receipts, 18,000 head; demand was strong and prices about 5 cents better than the day before for the good grades; top was $8.35 for the light, with the bulk of shipping kind at $8.00 to $8.30, and packing at $7.50 to $7.75; about 4,000 carried over. Sheep receipts were 20,000 head; lambs sold steady to strong, and heavy sheep a little lower; most of the ewes sold at $3.50 to $4.40; wethers, $4.00 to $4.60; fat lambs, $7.00 to $7.75; common and medium lambs, $5.50 to $7.00—all quotations being at the price stated per 100 pounds.

Co-operation and Competition.

Co-operation is a good word, but when it comes to action in business competition is a good word also.

I want the privilege of sending a 60-day supply of Sal-Vet (my famous worm-destroyer and conditioner) to every man who owns sheep, hogs, cattle, horses or mules. I want you to see for yourself how it rids all farm stock of the deadly stomach and free intestinal worms—how it will stop your losses from worms and solve your stock-raising problems—how it will make your stock thrive better—keep healthy and free from disease. In making this offer I don't ask one penny from you, now or at any other time, unless Sal-Vet does all I claim.

SAL-VET

Worms rob you of your stock-profits—keep your animals thin and out of condition—steal their food—sap their strength and vitality and make them easy victims of disease. I'll rid your stock of these pests. I'll prove it before you pay.

READ THESE LETTERS

A short time after beginning to use Sal-Vet on a lot of thin sows in bad condition it completely cleaned the worms from these animals and at once they commenced to eat better, and to thrive accordingly. There were cases of cholera close by and we consider that Sal-Vet was our salvation. (Signed) D. E. C. LONG & SONS. Auburn, Nebraska.

I have just shipped a carload of hogs that went within a nickel of topping the market. These hogs were on Sal-Vet. Most of my neighbors lost their entire herds from disease. W. J. BUTLER. Ottawa, Ill.

Send No Money—Just the Coupon

Tell me how many head of stock you have. I'll ship enough Sal-Vet to last 60 days. You simply pay the freight charge when it arrives, and when the 60 days are up report results. If it does not prove satisfactory I'll cancel the charge—you won't owe me a cent. Fill out and mail coupon today. (80)

PRICES: 40 lbs., $2.25; 100 lbs., $5.00; 200 lbs., $9.00; 300 lbs., $13.00; 500 lbs., $21.12. No shipment made for less than 40 lbs. Never sold in bulk; only in Trade-Marked Sal-Vet packages.

Hot-weather Hints.

These are at best trying days, and it is the duty of everyone to look well after their own comfort as well as that of those around them, for this may mean health. Imprudent diet, overexertion, undue exposure to the hot sun, very easily prove serious. It is much easier to guard against than to combat with trouble.

Too many make the mistake of baking and roasting and broiling, believing that the harvest hands must have good food or they cannot work. This is all true in a certain sense. Yet they do not need and cannot assimilate the heat-producing foods required in winter. Meat should be used sparingly. In many homes it is required, but it should not be used in quantity. And let there be variety in the way of serving. One day a beef soup bone with some good vegetables added to the soup will be relished. Another it may be ham or steak, and a third a small piece of pork served with baked beans will suffice.

Fruits and vegetables are nature's foods at this season and are really the most satisfying. They may be served in a variety of ways, the simpler the better. Those using a cream separator are sure of the most delicious of dressings—cream. And with this at hand there is no excuse for tiring one's self out making pie and cake. Plain cookies or bread with berries and cream is a dessert good enough for a king.

Many have discarded hot drinks and find the cold ones an improvement. There is danger in drinking ice water, especially when overheated. But if the pail of water is placed on ice it will soon become quite cool and as satisfying as though the ice had been added to the water. A bit of lemon juice with no sugar gives a cooling drink which quenches thirst better than water alone or than the usual lemonade. Some find a little sugar, ginger and vinegar added to water a good preventive against the illness so often resulting from overdrinking. Fruit juice is another pleasing addition to water.

Keep the house cool by opening doors and windows at night and keeping the blinds or shades closed during the heated portion of the day. Use cold water for cleaning the kitchen and note the difference in temperature. If a sick room becomes intolerable and there is no fear of trouble from the attendant dampness, wring a sheet out of very cold water and hang it in front of the window. The evaporation caused by the wind playing among its folds brings with it a perceptible lowering of the temperature.

Live out of doors as much as possible. There are many household duties which can be done on the back porch or in the shade of the apple tree. And when the work is over, instead of going to a warm chamber for a nap, go out under the trees. Even though you have a less comfortable bed than that of your own room, the abundance of pure air will make amends for it and more, and after a few trials you will gladly seek outdoors, for there is more of rest where you can take in full breaths.

Try frequently the plan of cold suppers in the orchard or by the brook. This may not sound right, but others have tried it and found it to work out nicely. Of course, it takes previous preparation. The sandwiches may be filled with meat, eggs, cottage cheese or lettuce, or there may be plain bread and butter with pickles or cheese, onions or radishes as a relish. Milk or buttermilk and fresh fruit, salads and the plain product of the farm will prove quite sufficient in variety. The children will be almost as happy as though it had been a real picnic, and there will surely be some pleasant surroundings to make you glad that you came.

Try not to worry over the little annoyances and inconveniences of every-day life. Now, if ever, you need to drop them out. If they must be climbed over, at least draw up your skirts and determine not to let any remembrances of them cling to impede future progress. Keep cool mentally, if you would be cool physically.—Bessie L. Putnam.

The Webster's Dictionary, advertised in The National Farmer and Stock Grower, is certainly one of the best books we have ever sent out.

The 1912 session of the Farmers' National Congress will be held in New Orleans, La., convening November 7th.

THE BOOK OF LIVE STOCK CHAMPIONS.

Edition of 1912.

Now Ready For Delivery.

True to Life Pictures Reproduced From Photographs Taken in the Principal Show Rings of the American Continent by the Greatest Animal Artists.

ONE THOUSAND CHAMPIONS,

Winners in Annual Live Stock Contests at State and National Fairs and Expositions.

THIS is a new edition of the most valuable book ever published in the interest of high-class stock raising. The pictures in The Book of Live Stock Champions are of famous animals. There are sweepstakes and championship winners at State, National and International Fairs and Expositions. These include individual awards in breeders' competitions, also herds with prize-ring honors; the beef cattle include grand champion steers and car-loads; the dairy cattle include record makers and large producers of milk and butter; the horses include thoroughbred, trotting, coach, draft, hunters, ponies, jack stock, etc. Hogs, sheep and goats are represented by the best in every breed. The book is elegantly bound in blue cloth, 352 pages, with nearly 750 separate and distinct illustrations, one, two, five or more champions to the page.

There is not a second-class animal or inferior picture in the book. Every animal is a record-maker, record-breaker, famous sire, mother of champions, or winner in the prize ring.

Issued as a Souvenir Supplement.

The Book of Live Stock Champions is published as a Souvenir Supplement to The National Farmer and Stock Grower, issued monthly at St. Louis, Mo., a splendid, clean, general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. There are thirty-two pages, four columns to the page.

Special Inducements

To Paid-in-Advance Subscribers--To Old Friends and Patrons.

We offer the first ten thousand copies of this edition at One Dollar per copy, including a two-year subscription to The National Farmer and Stock Grower. The first ten thousand copies are handsomely printed on coated paper and elegantly bound in blue cloth, with gilt title.

This is An Extraordinary Offer.

Here is a Subscription Blank.

HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen:—Herewith please find One Dollar to pay for two-years' subscription to The National Farmer and Stock Grower, for which please give me credit. You will please send me as a Souvenir Supplement, post free, safe delivery guaranteed, one copy of The Book of Live Stock Champions, cloth-bound edition of 1912.

Destroying the Grasshoppers.

Reply to Jacob Mahiason, Walnut Grove, Minn.: "Please send me by mail directions for killing grasshoppers."

Before attempting to give a remedy for the grasshopper plague, a few words in regard to its early stages of grwoth will not be out of place. In order for the grasshopper to multiply to any extent, the soil in which the eggs are laid must be undisturbed and there must be an abundance of food available. The most favorable condition for grasshopper development seems to be found in the alfalfa sections of the West. Where it is possible, one of the best preventive measures is to cultivate the ground. The soil need not be disturbed below the first two inches of the surface, for the most of the eggs are deposited very shallow. We fully realize that in many cases this cannot be done so as to completely destroy the grasshopper, but where it is possible to plow and cultivate in the fall, the number can be greatly decreased.

There are two ways of destroying the adult or grown hopper. One is by the use of the hopper dozer. Various forms are in use, but one that has given very good satisfaction can be built of sheet iron, ten or twelve feet long, and about twenty-six inches wide, with a board across the back, against which the grasshoppers will fly and then fall into the bottom of the hopper dozer. The bottom of the hopper dozer should be made water tight, so that a quantity of water may be poured into it, also a small quantity of kerosene. The hopper dozer should be mounted on low skids or small wheels and drawn by one or more horses. The grasshoppers will be collected in the hopper dozer and killed by coming in contact with the kerosene. This whole structure is rather inexpensive and has proved a very good method of destroying the grasshopper.

The Bureau of Entomology of the United States Department of Agriculture has recommended a poisoned bait, which is known as the "criddle mixture," and has given very good results in some sections. The mixture is made as follows:

One-half barrel fresh horse droppings, in which is mixed one pound each of salt and Paris green. If the droppings are not fresh, the salt is dissolved in water and mixed with the manure and poison.

Then this mixture is scattered freely about where the grasshoppers are abundant. Dr. Fletcher, Entomologist for the Dominion of Canada, cites an instance where the poison mixture was scattered around a portion of the field, with the result that this portion stayed green, while the grasshoppers seriously injured other parts of the same field. The criddle mixture has been preferred to other brands of poison because its effect on other forms of animal life is not so serious.—International Harvester Company Service Bureau.

Missouri Fruit Bulletin.

Bulletin No. 102, issued by the Agricultural Experiment Station at Columbia, Mo., is entitled "Combating Orchard and Garden Enemies." It gives directions for spraying all kinds of fruits and vegetables. Very valuable to fruit and vegetable growers. The bulletin can be obtained by writing to the Station for a copy.

THIS GENEROUS TREATMENT AND 36 PAGE ILLUSTRATED BOOK FREE

Dr. F. W. Jiroch, of Chicago, who is regarded by many as perhaps the best specialist of modern times in his chosen field, makes you this liberal offer.

INDICATE YOUR SYMPTOMS HERE for FREE DIAGNOSIS

Wabash Ave., Chicago Ill.

FILL OUT this Application and Send it TO-DAY

If You Are Sick Let Me Help You

Just mark with a cross X in the coupon below any of the different symptoms you have and send it to me, and I will send you the **Treatment Free** so you may make a personal test of just what my special medicine will do.

This Treatment Will Be Delivered By MAIL, POSTAGE PAID, Right to Your Own Door Without One Cent of Expense to You

This offer is made to any person who sincerely wants to be cured of Kidney and Bladder Ailments, Rheumatism, Stomach, Liver and Bowel Disorders, Heart Trouble, Nervous Weakness, Catarrh and all other diseases arising from impure blood, Uric Acid conditions, Etc.

SEND NO MONEY Simply put a cross X mark before the symptoms that you have, cut out the coupon, sign your name in full and complete address, and I will do the rest.

The Object of This Advertisement

is to reach the sick, weak and suffering; those who have failed with other treatments, those who have given up in despair, those in remote places who are not supplied with modern, up-to-date and successful methods of curing diseases.

I Want to Prove to Those People at My Own Expense That I Have the Real Remedies

I have perhaps the most successful method yet devised for the permanent cure of diseases of which I have made a specialty. I do not ask you to accept my word for this. I am a Specialist and I do not have one remedy that cures everything; no patent medicines; no "dope." My special treatments are made up, of my own private prescriptions perfected after years of successful practice. My great success is due to knowing what remedies cure and treating my patients honestly. I count my cures by the hundred where a doctor in ordinary practice counts but one.

To Prove My Claims I'll Send a Treatment Free to Test

I want you to try at my expense, not yours. All I want to know is what you want to be cured of. I have made it convenient for you to tell me this by simply putting a cross X mark before the symptoms you have on the attached coupon or write me a letter in your own words about anything of a private nature (man or woman) that you want me to know. I realize that I must help you and get your good will if I expect you to recommend me to others. And you must believe that my remedies are genuine, and that I do cure, otherwise I could not afford this expense of advertising.

The Vast Majority of Patients I Treat Are Those who Have Failed With Other Treatments

You may feel discouraged on account of past failures; patent medicines may have proven worthless; your home doctor may have exhausted himself—even pronounced your case incurable—but this does not prove that I cannot help you and that I may cure you. The worst cases come to me. My treatment may be a surprise to you. Set aside your doubts; try once more. Try at my expense. You have nothing to lose.

Accept My Liberal Offer!

It Places You Under No Obligation Whatever To Me

I repeat—you are under no obligation to accept this free offer. No contracts; no express charges. I will pay the postage myself and deliver the treatment right to your own door without one cent of expense to you. Do not delay; do not argue. Just say to yourself "If Dr. Jiroch has so much confidence in his ability and his treatment to go to all this expense I am going to let him try." Put a cross X mark before the symptoms you have; sign your name and address to the attached coupon, cut it out and mail it to me to-day. It will obligate you to nothing. Just let me try to help you. Address,

Dr. F. W. Jiroch, Dept. 1272, **533-535 So. Wabash Ave., Chicago, Ill.**

Shows and Expositions.

Under the auspices of the Missouri State Immigration Society an Exposition will be held at the St. Louis Coliseum during the week of October 14th. Exhibits are expected to be in place from every county in the state. All who are interested should address Missouri National Land Congress, Coliseum Bldg., St. Louis, Mo.

Remember the date of the National Dairy Show to be held at Chicago, October 24th to November 2d. Mr. W. E. Skinner is General Manager, and his office is in the Unity Building, Chicago, Ill.

CAPTAIN OBSTINATE.

A Story of Napoleon's Grand Army.

One fine evening in the month of July, an old soldier of the "grand army," who had left one of his arms on the field of battle, was seated at the door of his pretty cottage.

He was surrounded by a group of young villagers, who were clamorously reminding him of his promise to tell them some of his military adventures.

After a moment of pretended resistance to their wishes, the old man took his pipe from his mouth, passed the back of his remaining hand across his lips, and thus commenced his tale:

"In my time, my friends, the French would have disdained to fight against Frenchmen in the streets, as they do in these days. No, no, when we fought it was for the honor of France and against her foreign enemies.

"But my story commences on the 6th of November, 1812, a short time after the battle of Wiazma. We beat a retreat, not before the Russians, for they were at a respectful distance from our camp, but before the sharp and bitter cold of their detestable country, a cold more terrible to us than the Russians, Austrians and Bavarians all put together.

"During the preceding days our officers had told us that we were approaching Smolensko, where we should get food, fire, brandy and shoes; but in the meantime we were perishing in the glaciers and continually harassed by the Cossacks.

"We had marched for six hours without stopping for breath, for we knew that repose was certain death. An icy wind blew the drifting snow in our faces, and from time to time we stumbled over the frozen corpse of a comrade. We neither spoke nor sang, even complaints were no longer heard, and that was a bad sign.

"I marched by the side of my captain; short, strongly built, rough and severe, but brave and true as the blade of his sword; we called him 'Captain Obstinate,' for when once he said a thing, it was fixed; he never changed his opinions. He had been wounded at Wiazma, and his usually crimson face was then ghastly pale, while a ragged white handkerchief, all stained with blood, was bound round his head, and added to the pallor of his countenance.

"All at once I saw him stagger on his legs, like a drunken man, then fall like a block to the ground.

"'Morbleu! captain,' said I, bending over him, 'you cannot remain here.'"

"'You see that I can, since I do it,' replied he, showing his legs.

"'Captain,' said I, 'you must not give way;'" lifting him in my arms, I tried to put him on his feet. He leaned on me, fell again, dragging me with him.

"'John,' he said, 'all is over. Leave me here, and rejoin your company as quickly as possible. One word before you go; at Voreppé, near Grenoble, lives a good woman, eighty-two years of age, my—my mother. Go and see her, embrace her for me, and tell her that—that—tell her what you will, but give her this purse and my cross. It is all I have! Now go.'"

"'Is that all, captain?'"

"'That is all. God bless you! Make haste. Adieu!' My friends, I do not know how it was, but I felt two tears roll down my cheeks.

"'No, captain,' I cried, 'I will not leave you; either you come with me, or I will remain with you.'"

"'I forbid you to remain.'"

"'You may put me under arrest, then, if you like, but at present you must let me do as I please.'"

"'You are an insolent fellow.'"

"'Very good, captain, but you must come with me.'"

"He bit his lips with rage."

"I lifted him and carried him on my shoulders like a sack. You can easily imagine that with such a burden I could not keep pace with my comrades.

"I still walked on, when presently appeared a troop of Cossacks galloping toward me, with furious gesticulations and wild cries.

"The captain was by this time completely insensible, and I resolved, whatever it might cost me, not to abandon him. I laid down on the ground and covered him with snow; then I crept beneath a heap of dead bodies, leaving, however, my eyes at liberty.

"Presently the Cossacks came up, and began to strike with their lances right and left, while their horses trampled us under their feet. One of these heavy beasts set his foot upon my right arm, and crushed it.

"My friends, I did not speak, I did not stir; I put my right hand into my mouth to stifle the cry of torture which nearly escaped me, and in a few minutes the Cossacks had dispersed.

"When the last of them had disappeared I quitted my refuge and proceeded to disinter the captain. To my joy, he gave some signs of life; I contrived to carry him with my one arm toward a rock which offered a sort of shelter, and then I laid myself by his side, wrapping my cloak round us both. The night had closed in and the snow continued to fall.

"The rear-guard had long since disappeared, and the only sound that broke the stillness of the night was the whistle of a bullet or the howling of the wolves feasting on the corpses that lay stretched around.

"God knows what thoughts passed through my soul during that dreadful night, which, I felt sure, would be my last upon earth. But I remembered the prayer which my mother had taught me long before, when I was a child at her knee, and, bending low, I repeated it with fervor.

"My children, that did me good, and remember always that a sincere and fervent prayer is sure to comfort you. I felt astonishingly calmed when I returned to my place by the captain. But the time passed, and I had fallen into a state of half stupor, when I saw a group of French officers approach. Before I had time to speak to them, their chief, a little man, dressed in a furred pelisse, stepped forward toward me and said:

"'What are you doing here? Why are you away from your regiment?'"

"'For two reasons,' said I, pointing first to the captain, and then to my bleeding arm.

"'The man says true, Sire,' said one of those who followed him; 'I saw him marching in the rear of his regiment and carrying this officer on his back.'"

"The Emperor—for, my friends, it was he—gave me one of those glances that only he or the eagle of the alps could give, and said: 'It is well. You have done very well.' Then, opening his pelisse, he took the cross which decorated his green coat and gave it to me. At that instant I was no longer hungry, no longer cold; I felt no more pain from my arm than if that awkward beast had never touched it.

"'Davoust,' added the Emperor, addressing the officer who had spoken to him, 'see this man and his captain placed in one of the baggage-wagons. Adieu!' And making me a motion of his hand, he went away."

Here the veteran ceased and resumed his pipe.

"But tell us what became of 'Captain Obstinate,'" cried many voices.

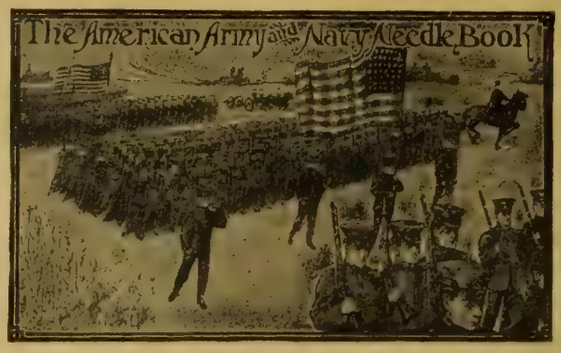
"The captain recovered, and is now a General on the retired list. But the best of the joke was, that as soon as he got well, he put me under arrest for fifteen days, as a punishment for my infraction of discipline.

"This circumstance came to the ears of Napoleon, and after laughing heartily, he not only caused me to be set free, but promoted me to the rank of Sergeant. As to the decoration, my children, here is the ribbon at my buttonhole, but the cross I wear next my heart."

And, opening his vest, he showed his eager audience the precious relic, suspended from his neck in a little satin bag.—Harper's Magazine, 1854.

The Army and Navy Needle Book.

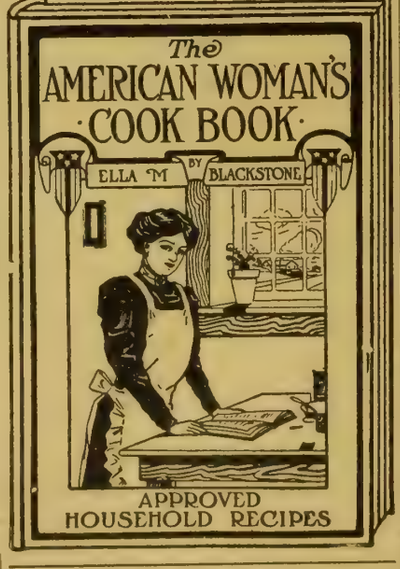
A TEN-CENT PROPOSITION WORTH TEN TIMES AS MUCH. The Army and Navy Needle Book contains five packages of Peerless Steel Needles, warranted; sizes, 2 to 9, 5 to 10, 6 to 7. There is no needle in the market better. There is also an assortment of fifteen other cloth-stuck needles, such as darners, mending needles, stitching needles, crewel needles, glove needles, straw-working needles, worsted needles, etc. The book as a whole cannot be beat. We have adopted the Army and Navy Needle Book as a subscription premium with the **Universal Magazine**, our own publication. It is a thirty-two-page, three-column illustrated monthly magazine. It contains interesting reading, stories, poetry, history, and useful information, fashions, patterns, etc. It is a magazine that recommends itself. Send us 10 cents in silver and we will send you the **Universal Magazine** on a trial subscription for three months, and we will send you one Army and Navy Needle Book. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo. TO CLUB RAISERS:**—Anyone who will get up a club of four subscriptions to the **Universal Magazine** in accordance with this advertisement will be credited with an extra three-months' subscription to the **Universal Magazine** and an extra package of needles will be sent for getting up the club. Don't wait. Remember, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**



THE BEST COOK BOOK.

The American Woman's Cook Book.

This is a splendidly-bound book that weighs nearly two pounds. There are three hundred and eighty-four pages of approved household recipes, including many excellent dishes never before presented in a Cook Book.



The American Woman's Cook Book is by Ella M. Blackstone, who is famous for clearing the road for the student of domestic science by giving the reasons for everything. It is so easy to learn from her when everything having a bearing on the subject is explained so clearly.

The book includes chapters devoted to foods for each month; time required to digest different articles of food; menus for all occasions; table etiquette; kitchen don'ts; kitchen equipment, and useful hints and recipes for the home in general; specially-drawn articles upon various subjects, such as soups, fish, poultry, beef, veal, mutton, pork, salads, vegetables, and all classes of dishes, besides beverages, candies, pickles and preserves, ice cream and ices; also ruled pages for new recipes to be preserved.

The thorough alphabetical index is a wonderful help to all subjects. A good book is known by its index, which in this case is eighteen pages, three columns to the page.

The publisher's price for single copies of the American Woman's Cook Book is $1.50 per copy and 15 cents postage, but we have contracted for such a large number we have obtained the benefit of a reduced rate. Therefore we will send one copy of the American Woman's Cook Book, postage paid, for One Dollar and include one-year's subscription to The National Farmer and Stock Grower. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

The corn cure advertised by Otto Ude is well advertised in St. Louis. It was originated forty years ago and is reliable. See page 21.

Have You a Chronic Illness?

If you have, you will surely be interested in the Bodi-Tone trial offer, which is printed on the last page of this paper. Bodi-Tone, which is now three years old, has made a great record in such cases. The manufacturers believe in it, for they will send you a box to try, no matter how old, hard or obstinate your case may be. If it does not help you, you need not pay for it.

Rider Agents Wanted

in each town to ride and exhibit sample 1913 bicycle. *Write for special offer.*
Finest Guaranteed 1913 Models **$10 to $27**
with Coaster Brakes and Puncture-Proof tires.
1911 & 1912 Models all of best makes.... **$7 to $12**
100 Second-Hand Wheels All makes and models, good as new..... **$3 to $8**

The Ounce of Prevention.

To keep the hair from falling out, rub a little salt water into the scalp every night before retiring. Take a little on the tips of the fingers and rub well into the scalp. Rub the finger tips in a rotary motion toward the crown of the head and use very little of the salt water.

Crow's feet and wrinkles perhaps disfigure a face quicker than anything else, and to prevent wrinkles, always use rain water for washing the face, and when washing and drying the face, rub up and back, never down, as the lines of the face naturally tend downward, and rubbing downward will accentuate all wrinkles. The habit of chewing gum is productive of wrinkles, as the incessant action of the jaws throws the mouth out of shape and must, sooner or later, bring out the wrinkles on the face. A famous physician says that the plumpest cheek will soon wrinkle under the force of this ugly gum-chewing habit and then it spoils the shape of the mouth and the eyes grow smaller.

Before going out in the sun or wind, dip a bit of old linen into cold cream and smear it over your face. Take another soft cloth and wipe all that cream away, then powder gently with corn starch and you have about the best preventive for tan or sunburn. A thin veil over this hides the "make-up," and, on returning, a bath of warm, soft water leaves an unharmed complexion.

It is an excellent practice to wash the face and hands at night just before going to bed; then the face is cleaned of floating dust and particles that might cause blackheads and pimples.

To prevent the hands from becoming rough and ugly, wear old, soft gloves when sweeping, dusting or doing any work that will roughen the skin; and to keep the hands soft, wash in warm water with good soap and then with a little corn meal, and when dry rub again with the corn meal.

To prevent a child's mouth from becoming sore, wash out the mouth daily with a weak boric solution, using a soft piece of linen, and to prevent chafing or any irritation of the skin, bathe with a stronger boric solution and allow it to dry on the skin; and one of the best and cheapest powders that can be made for young children is equal parts of boric powder and pulverized starch.

The best way to check perspiration and destroy the odor is to wash and dry the parts affected, then apply the boric solution with a piece of soft linen and allow it to dry on and then use the boric and starch powder with a little sachet powder added.

To prevent discoloration in bruises, apply a cloth wrung out of water as hot as can be borne comfortably, then dry with a soft cloth and rub well with butter and keep the part greased with the butter until all soreness is gone.—M. A. T.

The Cherokee Rose.

How many people in Columbus know that the white roses growing in the beds on the west side of the State House are the fragrant Cherokee roses of the Indians? Down in Alabama, which was first settled by Indians, the Cherokee roses grow wild everywhere. They seem to come up like weeds and send out their delicate fragrance on the warm air.

If one passes through the State House grounds when the sun is on the roses, he will observe the delicious odor. It is not like the fragrance of any other rose; it is distinctive, and delicate, and full of a haunting sweetness. The roses are a clear, pure white, like a pearl, with no trace of cream tint in them. They are full and round, like the old hundred-leaved rose of which the poet sang in "Lallah Rookh," and yet there is a beauty in them not found in th roses in the famous Vale of Cashmere.

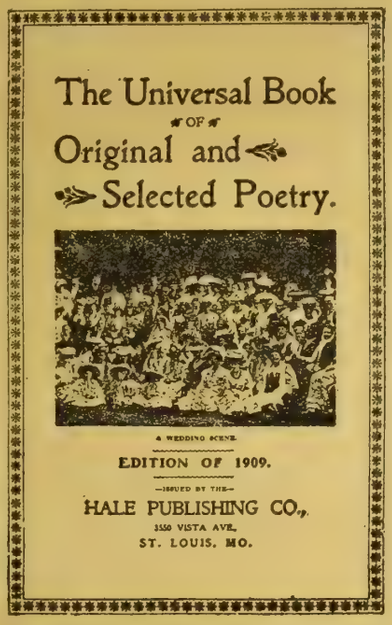
These roses are called the Cherokee in the South, the name being given them by the Cherokee tribe of Indians, which once inhabited that section of the country, but—"What is in a name? A rose by another name would smell as sweet."—Columbus Evening Dispatch.

Live Stock Marketing.

Compared with a year ago, cattle receipts at five principal markets have decreased 571,000 head, hogs have increased 350,000 head, and sheep increased 368,000 head. There is no shortage in the total.

Breeders' cards are on page 20.

The Universal Magazine



and the Universal Poetry Book.

TWO EXCELLENT PUBLICATIONS.

The Universal Poetry Book

CONSISTS of One Hundred Pages, containing three hundred and ninety beautiful, interesting, pathetic, descriptive, humorous and delightful poems. These poems have been selected from the very best of the ancient and modern authors and the occasional pieces which have attracted favorable attention. It is a book to be kept by the bedside to compose one to sleep, a book to carry in the satchel or to read on the train and street car. It is a book for all people at all times. We issued the UNIVERSAL POETRY BOOK for the purpose of using it as a subscription premium in connection with our own new successful paper, the UNIVERSAL MAGAZINE.

THE UNIVERSAL MAGAZINE

is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, patterns, fashions and poetry—a splendid publication. One thing about the UNIVERSAL MAGAZINE is, that it is not loaded down with advertisements. Notwithstanding it is a cheap magazine, the subscription price being 25 cents a year, it is supported by subscriptions alone.

A TEN-CENT PROPOSITION.

Anyone who will send 10 cents to pay for four-months' trial subscription to the UNIVERSAL MAGAZINE can select one copy of the UNIVERSAL POETRY BOOK as a free premium, and we will send it by mail, prepaid, safe delivery in good order guaranteed. Below will be found two subscription blanks for two subscribers.

Here is a Subscription Blank.

HALE PUBLISHING CO., 3550 Vista Ave., St.Louis,Mo.:

Gentlemen:---Herewith please find Ten Cents to pay for four-months' subscription to the Universal Magazine, for which please give me credit. You will please send me as a Souvenir Supplement, post free, safe delivery guaranteed, one copy of the Universal Book of Original and Selected Poetry.

Fruit Canning.

The bulk of this work comes during the hottest and busiest days in farm life, yet with proper utensils and a little care in advance it may be rushed through and still give good results. Most of the fruit may be prepared on the shaded porch, and then the cooking process hurried along rapidly when it is once commenced. If apples or pears are being pared, drop them into cold water as fast as done; this will prevent them from turning dark.

Never use overripe fruit to can. There is too much danger of its not keeping and thus giving more loss than gain. This is especially true of tomatoes. If there is a single soft spot on a tomato, reject it for canning. The trouble seems to permeate through the entire flesh. Berries, as well as all the firmer fruits, should be washed before being placed in the syrup. You will be surprised at the amount of dust and other impurities which a brief bath in cold water will dislodge.

Examine the cans well to see that there are no imperfections. A piece chipped from the top of a can may lead to spoiled fruit. If the cover bulges up or is depressed, beware. It should be level at the top. Rub each cover, inside and out, with some good cleaning powder, or even with wood ashes. This will not only improve its appearance but if there is a tiny hole in it the scouring process will render it free from corroded material and readily discovered. The rim should be free from dents. If any have been made in opening it previously, rub the rim down smooth with some hard surface. An old silver-handled knife or fork will answer, and in future strive to open the can by inverting the cover in a dish of hot water to loosen rather than by the prying process.

Be sure that the rubbers are good. New ones should always be used for tomatoes. If it is necessary to use the same ones more than once, save them for the plums and other more easily-kept fruit. Sometimes by putting two rubbers together they can be made to do as well for ordinary fruit as new ones. Dealers usually keep two grades in stock. We have found that the five-cent ones serve one season quite as well as those costing twice as much, and the latter are apt to crack and be useless after a single season. Absolute cleanliness is of course an essential both to can and cover.

Most fruit keeps nicely by allowing a teacupful of sugar to a quart of canned fruit, adding a little water and making it into a syrup before the fruit is added. Cook thoroughly, to be sure that all air is driven out. Pears should have a semi-transparent look and be soft enough to be easily cut with a spoon. As peaches are so easily converted into a mush, cook only enough to fill a single can at a time. But for most of the fruits much time is saved by using a large kettle and having several cans ready to fill at once.

Quince preserves are better combined with once or twice their bulk of sweet apple than when canned alone. They should be cut into thinner pieces than the apple and cooked longer, as they are more inclined to be tough. Save the parings, cook them separately and strain the water into the fruit, for much of the exquisite flavor is next to the skin. Elderberries and rhubarb combine nicely, the latter giving the acid taste which the former lacks. Strawberries and pineapple make a combination fit for the gods.

Test each can by inverting before putting them away. But do not leave it in this position long. Even though tightly sealed, the prolonged strain may prove too great and a leak result, when it would have kept perfectly. A few minutes will prove if there is a defect. Keep the cans in a cool, dry place. If it is light, wrap each can in dark paper; or the felt cases in which they originally come make ideal protectors. In handling, avoid taking them by the top, as it may loosen the sealing.—Bessie L. Putnam.

Among the Bees.

The buckwheat and autumn pasturage will give the bees plenty to do if they are given a chance. But if you let them manage the thing themselves they may get the comb crooked and make quite a medley of things. It is strange how some still cling to the notion that unless one is a professional apiarist it does not pay to use the sections and starter. The old plan of chunk honey, with brood cells and bee bread intermingled, has no place with the modern bee raiser, even if he is only a farmer, with a few stands of bees as a side issue. The sections cost less than a penny apiece and may be used several times, if kept in the home. Enough starter for thirty-two pounds of honey in these pound boxes may be purchased for a nickel at retail, and by sending direct to a bee-keepers' supply house still better terms may be made.

The superior quality of the pure white honey which is stored in the section boxes is assurance of ready sale at a good price. It is in convenient form to handle, and there is no waste, as is sure to come with the mussy "chunk" honey. The starter, which is really an imitation of comb, is given not so much to save the time of the bees in making this amount of comb—though it really does this—as to induce them to build the comb in straight pieces. If it is not inserted, they are liable to make two or three thin layers of comb instead of the one thick one in the box.

As shown above, the cost is small. The trouble of putting them in is more than compensated for by the ease with which the honey may be removed when finished. The starter comes in strips four inches wide and about sixteen inches long. Cut each into four squares, and each of these into four triangular pieces by two diagonal lines. If the knife is first dipped into cold water the severing will be neater. Nail a small block just large enough to slip into the section and half as thick as the section is thick upon a small piece of board. Slip the section over it, bringing one of the grooved sides tight against the block. On the block lay a piece of starter with longest side next to the section. Dip a brush into melted wax and touch along this line. Let stand five minutes and the starter will be glued firmly in the top, just where a neatly-constructed comb should be commenced.

When removing honey or giving new sections, take care not to pinch the bees. If it is absolutely necessary, use the smoker. But the fact that the bees must go to work and fan and fan after this to secure proper ventilation renders it advisable to use it as little as possible. Yet when the bees persist in clustering just where you want to put in a section or super, this is the only help.

Funny, isn't it? But when bees are disturbed, the first thing they do—if they do not sting—is to uncap honey. This looks as if they were like the good housewife when fire threatened, packing up ready to move out. If you happen to store your honey in a room with an open window, they may surprise you by finding it and carrying it away. But be careful not to leave any about the hive for them to clean up, as it may call robber bees.

Honey should be stored in a dry place, not so cool as to make the wax brittle, nor yet so warm as to melt it. The cellar is an abomination for keeping honey, which gathers moisture and soon becomes thin and watery. If ants trouble, they may sometimes be kept away by means of a chalk line drawn around the box. Tansy leaves scattered around will again repel the intruders. And if these fail, try scattering borax around the edges of the box. Honey which is well capped will keep a long time if properly cared for, and even after it becomes "candied" it is still a most delicious and wholesome sweet. Children like it as well as candy, and it is much better for them. If farmers only realized the sweets that are being wasted every year on their own farms because they do not keep bees, the little insects would soon become as much a farm asset as chickens or pigs!—Bessie L. Putnam.

Tribute to the Onion.

Kill the onion and you leave a gap in the universe. Kill anything else and there is a substitute. The potato is akin to the cereals; cabbage, turnips and cauliflower are of the same family; beans are elongated peas; the lemon is a pessimistic orange; beef reincarnated grass; watermelons just the survivor of a very fit cucumber, and so on. But the onion is sui generis alone, unique, triumphant. It is a special creation, to tempt the palate of a weary world. It proves the futility of man's wisdom. He might have guessed at everything else under the sun, but he would have never guessed an onion. Science may deduce a new star before it becomes visible, or radium before its discovery, but this succulent, fragrant, starry vegetable would have gone uninvented forever had not its own insinuating, yet not bashful, qualities forced themselves into tear-brimmed eyes and liquescent, anticipatory lips. With what a mixture of gratitude and awe should we view the spectacle of nature turning her energies to the transmuting of mere clay into a vegetable with an artistic temperament.—Richmond Times-Dispatch.

He Was Stale.

"Slip me a brace of cackles," ordered the chesty-looking young man as he perched on the first stool in the lunch room.

"A what?" asked the waitress as she placed a glass of water before him.

"Adam and Eve flat on their backs! A pair of sunny siders!" said the young man in an exasperating tone.

"You got me, kid," returned the waitress. "Watcha want?"

"Eggs up," said the young man. "E-g-g-s, the kind that come before the hen or after, I never knew which."

"Why didn't you say so in the first place?" asked the waitress. "You'd 'a' had 'em by this time."

"Well, of all things!" said the young man.

"I knew what he was driving at all the time," began the waitress as the young man departed. "But he's one of them fellows that thinks they can get by with anything. He don't know that they're using plain English now in restaurants."—Kansas City Times.

The Lion of St. Mark's.

"And did you stay long in Venice?"

"Only two days, but I saw everything worth seein', don't-y-know."

"Really! Then you'd see the Lion of St. Mark's, I suppose?"

"Rather; saw the brute fed, in fact!"—Punch.

Can you always eat all that you "can"?

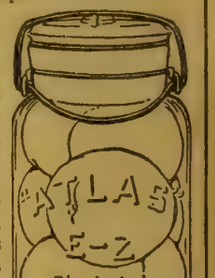
After the work of "canning" do you find much of your fruit is spoiled? Then, why persist in using old-style, narrow-necked, tin-topped, screw-capped jars? That was the old way of "canning." The new way, the easier, safer, *better* way is called "jarring," preserving in the all-glass

E-Z SEAL JAR

Try putting up beets, beans, corn and tomatoes for winter use. It is *fun* when you use the E-Z Seal Jar. It has the sanitary all-glass cap—no metal at *all*. No twisting and turning—the cap clamps with a spring seal. It closes and opens with a *touch* of the finger. And—your fruit *keeps!*

Free Jar—Free Book

Cut out this coupon, take it to your grocer—he will give you one E-Z Seal Jar—FREE. Be sure and write us for FREE Book of Recipes—it tells many things you should know. Get the Jar from the *grocer*. Get the Book from *us*.



HAZEL-ATLAS GLASS COMPANY
Wheeling, W. Va.

1-Qt. E-Z Seal Jar CG FREE for the Coupon

Please note—in order to secure free jar this *coupon must* be presented to your dealer before Sept. 1st, 1912, with blank spaces properly filled out.

HAZEL-ATLAS GLASS CO.,
Wheeling, W. Va.

This is to certify, That I have this day received one "Atlas" E-Z Seal Jar Free of all cost and without any obligation on my part. This is the first coupon presented by any member of my family.

THE SMITH FAMILY DOWN THE ROAD.

The County Fair Brings Some Surprises.

There was an unusual stir of excitement about the Smith farm one bright September morning. Every member of the family, except Baby Helen, was up at sunrise; such a bustle and stir was in the very air that old Shep decided he must help out by barking and getting in everybody's way. The milking and chores must be done, the breakfast disposed of and a big picnic lunch packed; then everyone must dress in his best. For it was the opening day of Fair week and the whole Smith family were planning to drive in the double wagon to the grounds and there spend the day. This was not the first Fair they had attended, but never before had they been in such good trim for a pleasure trip. The two little girls had fresh checked gingham dresses made after a neat pattern which the neighbor woman had suggested; the little boys donned new knickerbockers and freshly-laundered blouses; Mrs. Smith had made for the occasion a neat blue lawn, very becoming to her rosy cheeks; and Mr. Smith was wearing for the first time the only new suit he had had since his wedding day. Besides, each one had spending money jingling in pocket or purse, and each new jingle sent visions of rubber balloons, red lemonade, popcorn balls and fresh cream candy pulled over a big hook (to say nothing of rides on the merry-go-round) dancing merrily through the brains of the little Smiths.

Heretofore the family had elected to visit the Fair on Thursday, which is generally conceded to be the best day for the mere onlooker. But this year Mr. Smith and John expressed a strong desire to go the first day. Mrs. Smith and Myrtle seconded this so heartily as to look almost suspicious. The two smallest children didn't care particularly what day of the week they went, but, of course, the sooner the better. If Mrs. Smith and Myrtle had been less interested whispering together, they might have noticed that Mr. Smith and John had many a sly word with one and another.

Arrived at the Fair Grounds, the family immediately separated. Mrs. Smith and the two girls went straight to the big central building. At one end of this were arranged the exhibits pertaining to household arts; poultry, pigeons and cats occupied the opposite end; while the center of the building was given over to prize garden produce.

Mr. Smith and John, after putting up the horses, made a bee-line for the stock exhibit. There they beheld a sight which did Mr. Smith more good than a trip around the world; as for Johnny—he turned four somersaults in rapid succession. Never before had he been able to go beyond three, and even in this glorious moment he took care to count his turns and noted with rapture that at last he had realized his ambition in that respect. The cause of all this excitement was a young Jersey heifer eyeing them with friendly eyes as though glad to welcome her friends in her new quarters. Around the neck the little heifer wore a blue ribbon.

"Johnny, I'd always come 'round here every Fair time and I'd look at all the prize stock and I'd think how proud the owners must be, but I never thought once that I could take a hand at it, too. Just think of it, Johnny, your pa raised that little heifer there that's wearing the prize blue ribbon round her neck and he used to think he was good for nothing more than a fifth-rate farmer." In this strain Mr. Smith went on and Johnny rejoiced with his proud parent. Mr. Smith would probably have stood in front of the heifer all day had not Johnny at last said wistfully: "Honest, Pa, ain't you ever going to see enough of Daisy? I counted an awful lot on that punkin of mine, and now you don't even want to leave your prize long enough to see if I got anything I just bet that's got a blue ribbon, too."

"Bless me, Johnny, I clean forgot about everything else, I was so glad about Daisy. Yes, let's go right over and look at the punkins. And then we'll find Ma and Myrtle and tell them the news. Won't Ma stare, though? She never knew it was in me to do anything first-class."

But another half hour elapsed before they got to the "punkins." Entering the building at the poultry end, Mr. Smith caught sight of his wife with a handkerchief pressed to her eyes. Myrtle seemed to be trying to comfort her. What could be the trouble? His wife was not a crying woman. He reached her side in a couple of long strides. "Martha, what ails you? You be n't sick?"

"Oh, John, it's that White Wyandotte of mine!" gasped Ma. "She's been and took first prize. I wanted it so. I never had any kind of honors ever, you know, and I'm so glad about it I don't know what to do. It's funny I'd cry when I'm so glad, but I couldn't ever tell anybody what it meant to me when I saw my beautiful hen strutting around in there with the blue ribbon on. It was the neighbor woman got me into the notion of showing her, and even at the last I would have backed out, but she wouldn't let me."

"Why, it was the neighbor woman started me—but I forgot. You don't know the news. The Jersey heifer's won first prize!" With the announcement Mr.Smith began to caper about like a young colt, while Johnny solemnly turned another somersault in honor of the occasion. He stopped at one, however, as the floor was of concrete. Then he grabbed his father's coat and whispered: "Punkins, Pa!"

"Bless you, Johnny, we'll skip around there and see what's doing. Come, Ma, let's all go over to the punkins and see who won there. The boys all worked awfully hard over it."

But poor John was doomed to a slight disappointment, for the prize pumpkin bore an unfamiliar name, while his own name was placarded upon a card through which ran a red ribbon. John gulped hard, but he took his partial defeat like a little man and generously remarked: "That Brand boy won fair all right. I never did see such a punkin as that, and I thought mine was a mighty fine one." And John never knew that in that moment of self-mastery and generous concession to the merits of his neighbor's work he had won something infinitely more precious and more lasting than the blue ribbon.

Before the day was over the Smiths came to a faint realization of what their prize-winning exhibits had done toward raising them in the estimation of the neighboring farmers. For years these had looked upon the owners of the Smith farm as shiftless people; and not without reason. Some had noticed a change for the better during the past year, but nothing could have done more toward finally dissipating this reputation for shiftlessness than the act of the several members in placing worthy exhibits among the best farm products of the county. Mr. Smith talked with some of the most influential men of the county, men whom he had always felt looked down upon him. Now they approached him as an equal, asking questions as to Daisy's breeding, feeding, etc. Mrs. Smith was equally at ease with the poultry raisers who flocked to the exhibit, while John and Frank Brand, the successful pumpkin competitor, struck up a happy acquaintance.

Even that happy day came to an end, but the whole week was a time of celebration for the Smiths, and some of them were at the Fair every day. For the first time they realized that this annual exhibit of stock and farm products might be a real help to them in their own farm work. Mr. Smith and John spent many half hours discussing farm methods with fellow-farmers. Mrs. Smith jotted down in a note book pointers which other poultry raisers gave her, and Myrtle learned of a way to can strawberries without cooking them.

"Well," said Mr. Smith, on the day they took their exhibits home, "I wouldn't have missed this week for anything anybody could offer me. And here's a paper I subscribed for. Johnny and me took a fancy to it; it tells all about stock raising and lots of other things a farmer ought to know, and besides its got some pages for the women folks. I found out that all the best farmers take farm papers, and so I thought we'd have to take one, too."

"Why, John, I did the same thing, but the paper I took is mostly about poultry and gardening, with a few good cooking recipes and such things. But I guess we can stand the two of them all right, for there'll be four of us to read them. I never saw children so interested in anything as John and Myrtle are getting in the new way we are running the farm."—Janet Thomas Van Osdel.

Mechanical, Electrical and Civil Engineering

The wonderful expansion in all fields of activity has created a great demand for Mechanical, Electrical and Civil Engineers. You can save a full year's time at

Highland Park College

Vigorous and thorough instruction by expert specialists. Get your B. S. degree and be working a year before graduates of other colleges. Three years of 48 weeks each. Splendid opportunity for practical work, better than at almost any other technical college. Our graduates are filling good positions in all parts of the country.

Special One-Year Courses

Electrical Engineering—Designed especially to prepare young men for responsible positions, such as superintendency of the smaller electric power and lighting stations, power plants, etc. Diploma awarded.
Steam Engineering—Qualifies young men to take charge of steam power or heating plants and to run stationary engines. Thorough instruction in engine and boiler room work.
Machinists' Course—For those who want to become machinists in the shortest time. Plenty of shop work, not much text-book study. Special attention to accuracy and speed.
Automobile Machinists' Course—Arranged especially for those who want to secure a position in an automobile factory or to manage a garage. Students overhaul, repair, assemble and run cars. Very little text-book study.

Special Courses in Gas, Automobile and Traction Engineering

Each course may be finished in three months. Students work right in machine shops, traction engine house and auto garage; repair and drive engines and automobiles. Gas Engine Course may be taken with either the Traction Engine or Auto Course without extra tuition.
In all the Engineering Courses actual shop work is done by the students. Every aid is given to ambitious students with limited time and money. The tuition fees are small and living expenses low. The work done here is equal to that of the best Eastern colleges. For catalogue address

O. H. LONGWELL, President, Highland Park College, Des Moines, Iowa.

Regain Your Health.

You ought not to wait another day before trying Bodi-Tone, which many of your neighbors have used to the great and lasting improvement of their health. You ought to test it, because you can get it on trial and need not pay a penny unless it greatly benefits you. Read the liberal Bodi-Tone trial offer on the last page of this paper and send for a box.

Live Stock in the East Indies.

Live stock in British India amount to 103,428,118 cattle, 16,952,364 buffalo, 23,235,176 sheep, 30,603,562 goats, 1,553,289 horses, 113,643 mules and 446,700 camels.

The Universal Magazine Bracelet.

This is all the rage. And Adjustable Bracelet. The most elegant design and perfectly finished. It is not solid gold, but it is washed and plated and will stand the acid test. Its match cannot be purchased in country jewelry stores for any price. Universal Magazine Bracelet.

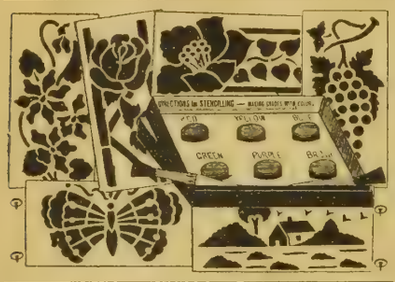
SPLENDID SUBSCRIPTION PREMIUM.

Beautify Your Home With This Popular Stencil Outfit.

Stenciling has long been a popular form of home decoration, and is today used more extensively than ever. Ladies are particularly apt at this work, and anyone can produce beautiful effects. From every standpoint stenciling is a very fascinating art of extreme usefulness. You can make the most artistic pillow tops, curtains, portieres, centers, etc., in colors for yourself or for sale, without having any knowledge of painting, by using this up-to-date outfit. In fact, stenciling is so simple with this outfit that a child ten years old can do it.

This outfit is just the thing for beginners. It consists of six cut stencils on special oil board, six cups of water colors (something new,



that will not spread, but dries instantly), two bristle brushes, four thumb tacks, also full and explicit directions for mixing colors and using stencils.

We have adopted the Popular Stencil Outfit as a subscription premium in connection with our monthly publication entitled The Universal Magazine. This is a nice, thirty-two-page, three-column magazine, issued monthly. It contains illustrated reading matter of interest to all the family. There are nice stories, historical sketches, selected poetry, a splendid line of patterns and a number of original household articles. The subscription price is 25 cents a year.

Our Subscription Proposition.

Send us fifty cents by postoffice money order and we will send you the Universal Magazine for two years and you can select the Popular Stencil Outfit as a free premium. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

UNIVERSAL EMBROIDERY SET.

A Subscription Premium in Connection With the Universal Magazine.

The most beautiful of all trays and doilies are those which display a

great deal of eyelet work; there is nothing more attractive on the dining room table than white linens embroidered in open work through which the polished wood may show.

The pretty Universal Embroidery Set illustrated shows a dainty pattern that should be carried wholly in eyelets, both ovals and rounds. This set was made especially for us and consists of one large tray, size 8x17 inches; six doilies to match, size 5½x5½ inches, all stamped on fine white imported linen.

Send us thirty cents and we will send you this dainty set for a short time only, absolutely safe delivery guaranteed, and the Universal Magazine for one year. The extra five cents is to pay postage thereon. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

A Coupon Worth a Fruit Jar.

Our lady friends are invited to understand the advertisement of the Hazel-Atlas Glass Company, of Wheeling, W. Va., on page 26. They manufacture the E-Z Fruit Jar and wish to introduce them into families where fruits and vegetables are canned. These jars are kept for sale by grocers, and if you can find the grocer handling their jars he will furnish you with a free sample that when canning time comes around you will buy their jars because you like them. It will do no harm to write the Hazel-Atlas Glass Company, Wheeling, W. Va., and ask for a free book on fruit jars.

MAY MANTON EMBROIDERY.

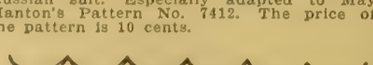
These paper patterns require only a hot iron to insure a perfect transfer on cloth. The way to do it is to lay the material to be stamped on a padded ironing board or table, place the pattern over it with the printed side down and press over the entire surface of the paper with a hot iron, when a perfect outline will result. Please order by embroidery number.

Cushion Cover Embroidery.

No. 668.—Design for a cushion cover of supreme elegance and refined appearance. The price of the pattern is 10 cents.

Russian Suit Embroidery.

No. 667.—Design for embroidering a boy's Russian suit. Especially adapted to May Manton's Pattern No. 7412. The price of the pattern is 10 cents.



Scalloped Edge.

No. 666.—Design for a scalloped edge. The scallops are three inches wide and one and one-eighth inches in depth. Four yards and four corners are given. The price of the pattern is 10 cents.

A Stylish Collection.

No. 670.—Design for initial frames, suitable for handkerchief corners or any object requiring a small initial. Two transfers of each design are given. The price of the pattern is 10 cents.

Pin Cushion Cover.

No. 671.—Design for embroidering a removable cover for a pin cushion five inches wide by fifteen inches long. Two sides are given, the under side with edge and slits for ribbon only. The price of the pattern is 10 cents.

Embroidery Edging.

No. 669.—Design for an embroidered edge three-quarters of an inch in width. Four yards are given. The price of the pattern is 10 cents.

Please send all orders for these embroidery patterns by number to the **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Dainty Colors.

She who would wear dainty-colored dresses must see that they are carefully laundered or they are soon faded and their beauty gone, and nearly all colors should set before washing.

A strong alum water is good for most tans, browns and blues, but the goods should not remain in the water; and purified oxgall is good for setting the different shades of pink, lilac and purple, and all nice colored garments should be washed, rinsed and dried as quickly as possible and the garments should be turned wrong side out and dried in the shade. No soap should ever be rubbed over dainty colors, but a nice suds should be made as for flannels, and the garment cleaned by pressing and squeezing between the hands.

An excellent way to clean delicate colored fabrics is to wash them through thin starch water without using soap, and the starch must be as smooth as can be without a lump in it. Rub through a second starch water and then rinse in blue water with a handful of salt, but no starch. The starch water cleans the goods perfectly, and there is plenty of starch left in the goods after rinsing to stiffen it sufficiently, and very dainty lawns can be kept in perfect condition with such treatment.

When the garment is perfectly dry, sprinkle with hot water, fold with as few creases as possible and roll up tightly, that it may be the same dampness all over when it is ironed, and iron on the wrong side.

No nice-colored goods should be subjected to sunshine while wet nor left in the wind after drying. When you have washed your pretty dresses your work is only half done. Be most careful about the way you hang them upon the line to dry, and when you are ironing one part of a dress, keep the other part pinned up in a cloth, and sometimes a pretty percale or muslin will fade with the most careful washing, and they can be colored some pretty color with the Diamond dye for cotton, and the work is easily done.

A faded muslin was colored a pretty shade of lavender and a faded percale was colored a dark shade of blue, and they looked almost as nice as new dresses, and a white lace waist was colored the same shade of blue with the same dye and then made over into a nice and serviceable waist, to be worn with a dark blue woolen dress skirt.

After washing any colored garment of a solid color, put a little dye of the same color in the rinse water each time they are washed, and they may be kept bright and new looking as long as they last.

Great care should be taken to keep the irons clean and smooth when ironing summer dresses, and they may be kept clean by rubbing them over coarse salt and then with a piece of beeswax tied up in a cloth and then over a piece of brown paper.—Aline.

BEAUTIFUL APRON PREMIUM.

To further introduce our splendid Universal Magazine we are offering a useful fancy apron as a premium. Hand-embroidered tea aprons are always in great demand among ladies and girls, and this is an article anyone would be proud to own. We offer this beautiful apron, stamped on fine

white lawn, including piece for pocket and strings; also a year's subscription to our popular Universal Magazine, filled with choice stories, departments for all the family, thirty-two pages, etc., all for only thirty cents. Send stamps or coin at once. Don't miss this great offer, because our supply will not last very long. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Degrees of Fever.

The normal temperature of the body is 98.6 degrees Fahrenheit. When it is more or less raised above this there is said to be fever. Degrees of fever have been recognized as follows:

Temperature under 101 degrees Fahrenheit is slight fever.

Temperature under 103 degrees Fahrenheit is moderate fever.

Temperature under 105 degrees Fahrenheit is high fever.

Temperature at 106 degrees Fahrenheit is called hyperpyrexia.

Almost Enough.

A woman came into a photographer's studio in San Francisco the other day and said to the proprietor:

"Do you take children's photos?"

"Yes, certainly, madam."

"How much do you charge?"

"Five dollars a dozen."

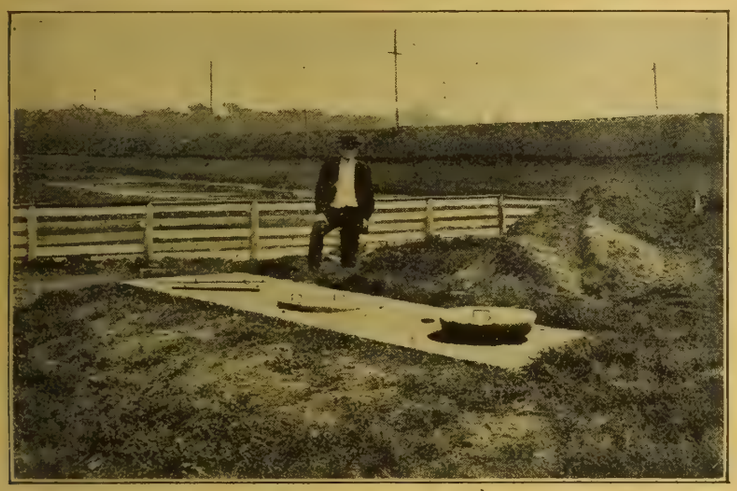
"Well," said the woman sorrowfully, "I shall have to see you again. I've only got eleven."—Denver Daily News.

Don't forget the four-paper combination on page 13.

SEWAGE DISPOSAL FOR COUNTRY HOMES.

Septic Tank Makes Modern Conveniences Possible.

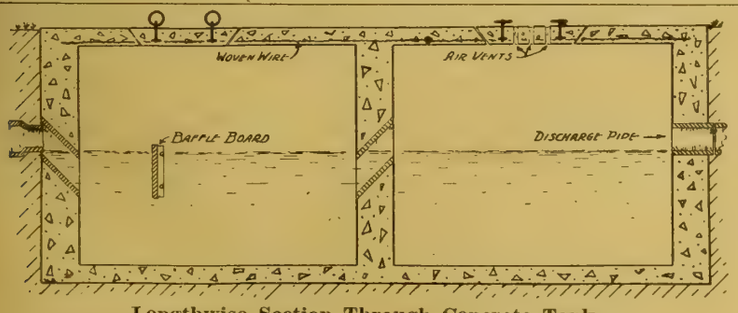
The general use in country homes of the modern conveniences of the bath and toilet has made necessary some effective and inexpensive means of disposing of the sewage. Otherwise the drinking water will be polluted and the health of the family endangered. Entire satisfaction is obtained by the use of the septic tank, which is nothing but a long water-tight cistern through which the sewage passes very slowly and evenly. Located underground, it is warm and dark—ideal conditions for the development of bacteria, little germs which eat up the sewage and render it harmless in much the same manner as another kind causes cider to ferment. The purified sewage, then merely clear water, may be discharged into an ordinary farm drain tile.



Concrete Septic Tank For Country Home.

Size of Tank Required.

Although the odor from a small septic tank is practically unnoticeable, yet it is best to locate it at least a hundred and fifty feet from the house. Choose a spot where it can be sunk to ground level and will be out of danger of flood waters. The tank should be large enough to hold the entire sewage for one day. For a family of eight to ten, plan a concrete tank of two compartments, each four by four by five feet long. Since the top and bottom are each four inches thick and the division and sidewalls eight inches, dig the pit four feet eight inches deep, five feet four inches wide and twelve feet long.



Lengthwise Section Through Concrete Tank.

Making the Forms and Pouring the Concrete.

If the ground stands firm, only inside forms will be needed. Make two, each four by four by five feet long. Old one-inch lumber will do for the siding. The compartment into which the sewage first enters is called the "charge tank." In each end of the wooden form for this tank cut openings for a five-inch tile with the lower edge of the hole sixteen inches above the bottom of the form. Through each of the sidewalls of this same form, eighteen inches from the inlet end and one and one-half and two feet above bottom, bore one-inch holes and insert in them greased wooden pegs extending four inches into the future sidewalls. Likewise, in the other form for the discharge tank, cut openings for a five-inch tile, this time with the lower edge of the hole two feet above the bottom.

Mix the concrete one part Portland cement to two parts sand to four parts crushed rock, or one part cement to four parts pit gravel. Place the four inches of concrete in the bottom and trowel to an even surface. Immediately set the forms in place so as to leave room for eight-inch division and sidewalls. Fill the forms with mushy wet concrete. At the proper heights insert the five-inch drain tile through the holes in the forms. Be careful that the outside end of the inlet tile to the charge tank is two feet and its other end sixteen inches above the tank bottom. The pipe leading from the charge tank is also set at the same sharp slope. The outlet tile from the discharge tank is two feet above bottom and with both ends level. By this arrangement of pipes, the sewage is kept in the tank to the depth of two feet and the ends of the tile in the charge tank are trapped or air-sealed, which aids the activity of a certain kind of bacteria. Likewise, other bacteria are developed in the discharge tank by means of the free circulation of air through the discharge drain tile and holes in the manhole cover.

Reinforced Top and Manhole Covers.

After the sidewalls are three days old, floor over the top of the forms and prepare to lay the four-inch concrete top. As molds for the manhole covers, have the tinner make two round bottomless dishpans, eighteen inches in diamter at the bottom and twenty-four inches at the top. Grease these tin molds and set one on the wooden floor over each compartment. Bore six one-inch holes in the floor inside the one manhole mold over the discharge tank and insert in them greased pegs projecting upward six inches.

Place one inch of concrete over the entire floor and at once lay on it, crosswise the tank, strips of heavy woven-wire fencing five feet two inches long, or three-eighths-inch rods running in both directions and spaced one foot. Likewise reinforce the manhole covers. Immediately place the remaining three inches of concrete and do not stop until the tank top and manhole covers are finished. Provide two lifting-rings for each cover by setting in them halves of old bridle-bits, or hitching-post rings, fitted with knobs of wire or with nuts and large washers. If a square wooden manhole mold is used, the concrete cover cannot be cast at once. In such case, carefully remove the wooden manhole form five hours after the top has been finished. Three days later mold the cover the same as for the tin form with this important exception—place heavy paper or cardboard around the edges of the opening to prevent the fresh concrete of the cover from setting to the old concrete.

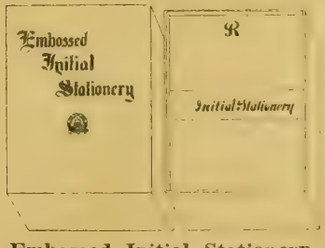
When the top of the tank is ten days old, lift off the manhole covers, saw openings in the wooden top and remove the forms. In the holes made in the sidewall by the greased wooden pegs, insert one-half-inch bolts and set them with mortar. To these bolts fasten the one by twelve-inch wooden baffle-board with extends across the tank and breaks up the current of the inflowing sewage. To carry the sewage from the house to the tank, use four-inch sewer pipe laid with tight mortar joints. Connect the discharge end of the tank with a string of drain tile.

The materials required for the tank described above are 5½ cubic yards of crushed rock, 2¾ cubic yards of sand and 9 barrels of Portland cement. If good pit gravel is used, no additional sand will be required.

When the septic tank is two weeks old it may be put to use. It will need cleaning at intervals of two to three years. By its use the health of the family will be protected and life in the country home will be made much more comfortable.

Universal Magazine Initial Stationery.

One of the most refined and elegant subscription premiums ever offered. A box of superfine white, cloth-finish embossed initial stationery sent free, postpaid, and safe delivery guaranteed. This is a splendid subscription premium offer in connection with our interesting publication entitled the Universal Magazine. The Universal Magazine is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, fashions. patterns and poetry—a splendid publication for the money.



Embossed Initial Stationery.

Our Subscription Proposition.

To anyone who will send us a money order for 50 cents we will send the Universal Magazine for two years, and they can select their own letter as the initial for the stationery, and we will send the box as a subscription premium postpaid. Money returned if not satisfied. Address, HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

"In One Hour I Learned to Play the Piano at Home"

FREE

Without Lessons or Knowledge of Music You Can Play the Piano or Organ in One Hour.

This Wonderful New System Sent Free, If You Write at Once.

"Just Think, I Never Touched a Piano Before!"

Impossible you say? Then write at once for this wonderful New Method and prove by actual test without going to any expense.

A musical genius from Chicago has invented a wonderful system, whereby any one can learn to play the Piano or Organ in one hour. With this new method you don't have to know one note from another, yet in an hour of practice you can be playing the popular dance music and songs with all the fingers of both hands, and playing it well

The invention is so simple that even a child can now master music without costly instruction You can have this system free, merely by asking, if you write at once. Simply write, saying, "Send me the Easy Form Music Method as announced in The National Farmer and Stock Grower.

The system will then be sent to you Free, all charges prepaid and absolutely not one cent to pay.

This wonderful system is so plain and easy that the moment you see it and get this free method you will be astonished to find that what seemed a great task with years of study, has been mastered with just one single hour of practice You will be more than delighted. Write at once. It will not put you under any obligations to buy anything, or pay one cent We are sending a free trial to one person in each locality, merely to demonstrate this marvelous method. We prepay all charges. State number of white keys on your piano o Organ. Address: Easy Method Music Co., 2831 Clarkson Bldg., Chicago, Ill.

A Famous Grape Grower.

Mr. Geo. S. Josselyn, of Fredonia, N. Y., died at his home, June 17th, on his 70th birthday. Since 1878 he was interested in grape culture and established what afterwards became the largest and best known grape and small fruit nursery in the country. It was his grape nursery that furnished the two-year-old grapevines used by this publication as a subscription premium.

MAY MANTON PATTERNS.

This is the best pattern service, and we are very much pleased to obtain it for our friends and patrons. Each pattern is new and original. In this edition we present for consideration very seasonable patterns absolutely up-to-date, with directions for ordering.

DAINTY DRESSES.

No. 7467.—Girl's Dress. Eight to twelve years. With round or high neck, short or elbow sleeves. 3⅛ yards 36 inches wide, 2¾ yards 44 inches wide, for the ten-year size.

No. 7495.—Girl's Box-plaited Dress. Six to twelve years. With square or high neck, short or long sleeves. 3 yards 36 inches wide, 1¾ yards of banding, for the eight-year size.

Please address all pattern orders to **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

SELECTED POETRY.

ALL'S WELL.

The sun is busy bringing the havest time along;
The rattle of the "mower" is blended into song;
Where swallows dip and circle above the new-mown hay
The incense of the meadows is blown along the way;
The clouds are high and fleecy, there's promise everywhere,
And who would not be hopeful, with all the world so fair?

The fretful politicians are going to and fro,
Arousing foolish passions, predicting future woe;
With selfish hopes they hurry from place to place to plead
Or utter foolish warnings the foolish only heed;
Their mouths are full of hatred, their hearts are full of spite,
But who woud not be hopeful, with all the world so bright?

The willows bend serenely above the placid stream,
Within the peaceful shadows the herds lie down to dream;
The "mower" blithely rattles, and many a fairy fleet
Is tossed upon the billows that cross the fields of wheat;
The bees, lured by the clover, seek hidden sweetness there,
And who would not be hopeful, with all the world so fair?

Urged by their own ambitions the politicians roar
Concerning ills that threaten and woes that are in store;
For selfish ends they vainly attempt to terrorize;
With cheap conceit they tell us they only are the wise;
But summer's joys await us, the clouds are high and white,
And who would not be hopeful, with all the world so bright?

—S. E. Kiser.

THE RENEGADES.

The last of the longhorn steers were they—
The last of the herds, far-flung,
That were trailed from the Rio Grande way
In the days when the West was young;
They had cunningly dodged the round-up hands
When the range was combed in the spring,
But we drove them at last to a final stand—
God! the race was a noble thing.

They had fled through the stunted cedar trees
That dotted the mesa top,
But, with heaving sides and trembling knees,
We brought them at last to a stop;
But the fire was bright in each wild eye,
And they bellowed and pawed the dirt,
And they flung their spreading horns on high
As they ended that last, long spurt.

Then our grizzled foreman, Texas Bill,
Spoke up, in a voice most queer:
He said: "I know we've got to kill
The last durn renegade steer.
But I've seen the time when their like was strung
For miles on the Chisholm trail—
When you heard the songs the cowboys sung
To the herds when the moon was pale.

"I've seen the time when their spreading horns
Was thick as the scrub oak trees—
When they growed like the prickly cactus thorns
On a million steers like these;
So I'm goin' to hit the back trail here—
You cowboys can do the rest—
And I'll know, when I hear your shots ring clear,
It's the last of the old-time West!"
—Arthur Chapman, in Denver Republican.

A CATTLE RANGE AT NIGHT.

The prairie zephyrs have dropped to rest,
And the dust clouds settle down;
The sun dips low in the golden West,
O'er the mesa, bare and brown.
The tired riders come loping in,
As the hills grow dim and strange,
And the songs of the insect world begin—
'Tis night on a cattle range.

The stars gleam out in the calm, clear sky
Like twinkling orbs of light,
And over the range drifts the coyote's cry,
Through the star-lit summer night.
The night-hawk whirls in its ceaseless rush,
As the evening breeze is stirred,
And the cowboy's song breaks the lonely hush
As he circles the bedded herd.

The campfire throws but a fitful glare,
And the buttes, like specters, rise
Far over the deep arroyo there,
As sentinels of the skies,
While the silent forms in their blanket-beds,
Dream on, to the night wind's sigh,
As gently about their sleeping heads
The breeze drifts idly by.

The moon steals up o'er the dark butte's crest,
In silvery shafts, which gleam
And sparkle there on the brown earth's breast
Like gems in a fairy dream.
The night creeps on with its mystic charms,
To the song of the whippoorwill,
And drifts to Dreamland in Nature's arms,
And the range grows hushed and still.
—E. A. Brininstool.

THE DUDE RANCH.

We used to run a cow ranch,
In all that old term meant,
But all our ancient glories
In recent years have went;
We're takin' summer boarders,
And, puttin' it quite rude,
It's now the cowboy's province
To herd the festive dude.

We used to run an outfit,
The greatest in the West;
Our cowboys were the wonders—
Our roundups were the best;
The punchers are still with us,
But now they merely guide
The tenderfoot from Boston
Who's learning how to ride.

We used to brand our cattle
And ship 'em wide and far;
But now we import humans
From off the Pullman car;
The dudies have got us captured
And tied and branded, too;
And the cowboy 's readin' Ibsen
When his daily toil is through.
—Denver Republican.

HOPE.

The wretch condemned with life to part,
Still! still! on hope relies,
And every pang that rends the heart
Bids expectation rise.

Hope, like the glimmering taper's light,
Adorns and cheers the way;
And still, as darker grows the night,
Emits a brighter day.
—Goldsmith.

NOT SO ROMANTIC.

With a glance fair Claribel
Swept the room;
Might have done it just as well
With a broom.
—Exchange.

Whenever you see an Arrow think of Coca-Cola.

Satisfies

There never was a thirst that Coca-Cola couldn't satisfy.
It goes, straight as an arrow, to the dry spot.
And besides this,

Coca-Cola

satisfies to a T the call for something purely delicious and deliciously pure—*and* wholesome.

Delicious
Refreshing
Thirst-Quenching

3-J

Was a Just Debt.

A noted lawyer of Tennessee, who labored under the defects of having a high temper and of being deaf, walked into a court room presided over by a younger man, of whom the older practitioner had a small opinion.

Presently, in the hearing of a motion, there was a clash between the lawyer and the judge. The judge ordered the lawyer to sit down, and as the lawyer, being deaf, didn't hear him and went on talking, the judge fined him $10 for contempt.

The lawyer leaned toward the clerk and cupped his hand behind his ear.

"What did he say?" he inquired.

"He fined you $10," explained the clerk.

"For what?"

"For contempt of this court," said the clerk.

The lawyer shot a noisome look toward the bench and reached a hand into his pocket.

"I'll pay it," he said. "It's a just debt."—Saturday Evening Post.

His Sarcasm.

"You have a lovely complexion," began the lover.

"Thank you," answered his fiancee, suspiciously. "Why speak of it?"

"It's so smooth and white and—er—natural—"

"It is. But you don't talk straight. Don't you believe that my complexion is my own?"

"Why, certainly, my own!"

"Then why refer to it at all?"

"I—I just wondered why it was that every time I leave you at night and go to the club the fellows all say that I've been eating marshmallows."

That's the real reason the engagement was broken.—Cleveland Plain Dealer.

Why Doesn't Smith Tumble?

"Jones is getting $5,000 a year and has a promise of further promotion."

"Wonderful fellow, Jones. He takes to his daily routine like a duck does to water. It's a pleasure to work near him."

"On the other hand, isn't it funny about Smith?"

"Yes, I feel sorry for Smith. But five years he's never got above $1,000. If he pastes on a postage stamp he makes work out of it."—Exchange.

Chronics

Don't Spend A Penny

No matter what your ailment may be, we want you to try a box of Bodi-Tone entirely at our own risk. No matter how old you are, no matter how long you have been sick, no matter what you have used without success, we are willing to send you a dollar box of Bodi-Tone, for you to try, without a penny from you. We don't care what doctors have told you, we don't care whether you have any confidence or belief in Bodi-Tone, we are glad to have you and *every chronic sufferer* try it at our risk. Don't spend a penny until you have tested it, until you are sure it is a right medicine for you, until you have seen and felt its curative and restorative powers in your own body. We know Bodi-Tone, we know what it does, we know the gratitude of the sick when they find the right medicine. We trust entirely to the power of Bodi-Tone and to *your gratitude when you feel that power*. We know you will gladly pay for permanent benefit, the kind Bodi-Tone brings.

All you need do is send us the coupon which tells us you want to try Bodi-Tone, with your name and address, and we will hand a dollar box of Bodi-Tone to you, to try at our risk.

We want to put Bodi-Tone in the hands of every *chronic sufferer*, to prove how Bodi-Tone is different from ordinary medicines, and therefore address this offer to "*Chronics*," for they are the ones who need Bodi-Tone the most. They are the ones who have wasted money over and over again without benefit, and that is why we say plainly, "Don't spend a penny for Bodi-Tone until you are sure it is the right medicine for you." A trial of Bodi-Tone at our risk and expense is not a gamble or an experiment, *but a test of a medicine that has already cured thousands*, a test that has proven in thousands of cases that Bodi-Tone is a right medicine for chronic sufferers, for poor, thin-blooded, weak, debilitated, worn-out, Rheumatism-racked, Stomach-tortured, Kidney-tyrannized, Heart-frightened men and women. A test of Bodi-Tone at our risk is a test that leads to our pay and Bodi-Tone's popularity. That is why we take all the risk and why we say to you and every chronic sufferer--Try a box of Bodi-Tone, but don't pay a penny until you have proven its worth to you.

Bodi-Tone Does Just As Its Name Means

It cures disease by toning all the body, and we want to show you what it will do for *your* body. Bodi-Tone is a small, round tablet, that is taken three times every day. Each box contains seventy-five tablets, enough for twenty-five days' use, and we send you the full box on trial so you can try this great remedy and learn what it is, so you can learn how it works in the body, how it *cures stubborn diseases* by helping nature to tone every organ of the body. Tone is a little word, but it means a great deal, everything in health. When all the organs are doing their part, when each is acting in a perfectly natural way, when all the functions are healthy and performed with natural vigor, when the energy, strength and power of resistance to disease are all at a natural point, then the body is in proper tone. When disease has attacked any part, when lack of vitality is found and felt, the tone of the entire physical body should be raised to the highest possible point, to make all the body help to cure and restore. This is the power which underlies all of Bodi-Tone's great work for the sick, this is the power it offers you to help you get new health and strength, new vigor and new vitality.

Not a Patent Medicine

Bodi-Tone is not a patent medicine, for its ingredients are not a secret. It contains Iron Phosphate, Gentian, Lithia, Chinese Rhubarb, Peruvian Bark, Nux Vomica, Oregon Grape Root, Cascara, Capsicum, Sarsaparilla and Golden Seal. Such ingredients guarantee its merit.

When you use Bodi-Tone you know just what you are using, know it is pure and safe and know you are taking the right kind of medicine to provide real help for the body. It contains nothing that your own family doctor will not endorse and say is a good thing. It does not depend on killing pain with cocaine, opium, morphine or other dangerous drugs. It does not excite the body with alcohol, but it tones the body and cures its disorders with remedies nature intended to tone and cure the body when that power was given them. Thus, Iron gives life and energy to the Blood, Sarsaparilla drives out its impurities, Phosphate and Nux Vomica create new nerve energy and force, Lithia aids in the Kidneys and dissolves rheumatic deposits, Gentian does invaluable work for the Stomach and Digestive forces, Chinese Rhubarb and Oregon Grape Root promote vigorous Liver activity, Peruvian Bark raises the tone of the entire system, Golden Seal soothes the inflamed membrane and checks Catarrhal discharges, Cascara gives the Bowels new life in a natural way, and Capsicum makes all more valuable by bettering their quick absorption into the blood. Every one of these ingredients possesses characteristics most valuable in this common-sense plan of toning all the body. Each exerts a special action in some certain part, organ or function of the body that helps to bring the whole body *back to nature and to health*. Its method is right.

Natural Curatives To Make Natural Health

Each Bodi-Tone ingredient adds a needed element from nature to the body, for Bodi-Tone is altogether *a natural remedy*. Each has a certain work to do in the body and does it well, in a natural manner. They are used in Bodi-Tone because of this ability. We claim no credit for discovering these valuable ingredients, each of which has a well deserved place in established medical science. We claim only the credit for our successful Bodi-Tone formula, which is our own discovery, for the way in which we have *selected, proportioned and combined these great natural curatives*, and for the health-making work which Bodi-Tone has so well proven its ability to perform in the body. The curative forces which Bodi-Tone so ably uses are the forces which have always existed in nature for the restoration of the body's health. Many are regularly prescribed by good physicians in combination with such drugs as each doctor may favor, for there are wide differences of opinion among doctors of various schools. The *exact combination used in Bodi-Tone* is what gives it the far-reaching and thorough curative and restorative power that makes possible the remarkable cures experienced by Bodi-Tone users, cures which prove the difference between Bodi-Tone and common remedies, cures which have won the gratitude of thousands.

You Need Bodi-Tone To Set Your Body Right

If you are tired of continual doctoring and bad health, if you are wearied of feeling you cannot depend on your body to act right and do its full duty, *you need Bodi-Tone right now*, and this offer gives you a chance to try it without risking a penny. You need it to seek out your weak spots and make them stronger, to stop the leaks which have been draining your vitality, to make your organs capable of giving you the right measure of strength, vigor, energy and full-blooded comfort your body should have. If there is anything wrong in your body, if any organ is acting in a way which you realize and know is not right, send for Bodi-Tone on this trial offer and give it a chance to set you right. If you do not feel right, eat right, sleep right, weigh right, work right and think right, now and all the time, put Bodi-Tone in command of your body for twenty-five days. Let it marshal your bodily forces, let it line them up and work them into shape, until all are marching along straight, strong and harmoniously, in perfect time, tune and tone, for that is what Bodi-Tone is for and what it is doing for thousands. If the doctor's prescriptions and ordinary medicinal combinations have failed, let this scientific combination of special remedies show and prove what it can do for you. Its greatest triumphs have been among men and women who had chronic ailments, who had used patent medicines and had doctored with their local doctors and out-of-town specialists, all without lasting benefit. It is because of its great work in these cases that all chronic sufferers and persons with obstinate diseases are invited to try a dollar box of Bodi-Tone at our risk.

Why be a Slave To Bad Health?

Why remain in ill-health month after month, why allow your body to make you a slave to ills, humours, distress and discomforts, when it is so easy to procure a trial box of this home treatment which has restored thousands to vigorous health and glorious strength? Why delay another day, when a trial of this proven medicine is yours for the asking? Why keep on suffering, when by filling in your name and address on the trial coupon and mailing it to us, you can get a full twenty-five days treatment of this great remedy which people everywhere are praising and talking about. It just costs a two-cent stamp, and you don't need to pay a single penny for the medicine unless Bodi-Tone benefits you. You have all to win and nothing to lose, no matter what your ailment may be, by thus trying it.

Thousands of Cures

of Rheumatism, Stomach Trouble, Kidney, Liver and Bladder Ailments, Uric Acid Diseases, Female Troubles, Bowel, Blood and Skin Affections, Dropsy, Piles, Catarrh, Anaemia, Sleeplessness, LaGrippe, Pains, General Weakness and Nervous Break-down, have fully proven the power and great remedial value of Bodi-Tone in such disorders. Each one got a dollar box on trial, *as we offer to you in the coupon.*

Its history of success has proven beyond a shadow of doubt how the Bodi-Tone plan of *toning all the body* is a right plan that helps to *cure* these and other disorders, that it is *a real aid to nature*. Many who had for years been in poor health and had tried good doctors and most all of the prominent medicines, have found that *one single box of Bodi-Tone* did more good than *all* other treatments combined. It goes to the root in the body and cures because its work is rational and thorough, the only kind that makes cures permanent. Read the reports, showing how Bodi-Tone makes new health and strength, send the coupon for a box on trial at our risk and see if it will not prove the *right thing* for you.

Doctor Said Nothing Would Help

OSWEGO, OREGON.—I am seventy-three years old, and had Catarrh of the Stomach and Bladder, Rheumatism and Heart Trouble for many years. I had such sharp, shooting pains that I thought they would kill me. I doctored for years, having had three of the best doctors in California and Oregon, but they did me no real good. When I got Bodi-Tone I was down in bed. My doctor said it would make no difference what I took, for I could not get any better. Well, that was over a year ago, and I am still alive and can split and saw wood and do a pretty fair day's work. The doctors said I had a slow heart, and for years I could not sleep on my left side, but now I lie down any way I happen to get into the bed and sleep until daybreak. The doctors used to inject morphine into me to kill the pain, but since I have used Bodi-Tone I have no pain. My feet and limbs used to swell clear to my knees, and my hands also, and now all is gone, along with the Rheumatism which I had for forty years. My Kidneys, Liver and Stomach do not bother me, and I can eat a good meal. Bodi-Tone was a blessing to me in my old age. G. M. SIMMONS.

Saved Her Life and Made Her a Well Woman

ATLANTA, TEXAS.—I feel like telling everyone what Bodi-Tone has done for me. I was almost dead when I saw it advertised. I read what it was made of and thought it might be the right medicine for me. I had tried most everything in the way of medicine; nothing seemed to do me any good. I have paid hundreds of dollars trying to get well, but all in vain. I was sick all over. I had Kidney, Bladder and Heart Trouble, Cramps, Nervousness and Constipation. I was past walking when I commenced taking Bodi-Tone. Now I am well of all those diseases. I have no pain anywhere in my body. Bodi-Tone saved my life, and I thank the Lord that I got the right medicine in time, for I was very far gone. MRS. S. A. PHILLIPS.

Permanently Cured a Year Ago

NORTH EASTHAM, MASS.—It is now over a year since I took Bodi-Tone, and I have waited to see if my troubles would return, but as they have not I feel it my duty to the public to testify what the medicine has done for me. I had Palpitation of the Heart so bad that I could hardly walk, and could never lie on my left side. I had Indigestion so serious that the doctors thought I must die, but since taking Bodi-Tone I am a well man. I can eat anything I want at any time and nothing hurts me. I have had no trouble during the year with either my Heart or my Stomach and sleep well at night, lying on either side. I am seventy-seven years old, and can now do a very good day's work alongside men of forty, and Bodi-Tone made it all possible. WARREN K. SNOW.

Trial Coupon

Clipped from Nat'l Farmer and Stock Grower

Bodi-Tone Company, Hoyne & North Aves., Chicago.

I have read your offer of a dollar box of Bodi-Tone on 25 days' trial and ask you to send me a box by return mail, postpaid. I will give it a fair trial and will send you $1.00 promptly when I am sure it has benefited me. If it does not help me I will not pay one penny and will owe you nothing. Neither I nor any member of my family have ever used it.

Address to Patrons and Friends.

During the months of September and October many thousands of subscriptions to The National Farmer and Stock Grower expire, and during these months we make every effort to obtain renewals. This year we are able to offer a subscription premium which we are proud to send to our patrons and which they are all delighted to receive. We refer to the Book of Live Stock Champions, which is fully advertised in this issue on page 22. Every picture in the book is excellent. There are seven hundred and fifty pictures, with record, owner and interesting features and history. It is beautifully bound in blue silk cloth. We are receiving compliments upon the splendid work, and, what is still better, our friends who receive the book are in turn recommending it to their friends. We specially solicit renewal of subscriptions. If you are not inclined to take the Book of Live Stock Champions, "The American Government" is another book well worth owning, and is one of our favorites. In any event, we will appreciate all our friends and patrons can do for us in the way of subscriptions, especially in the month of September.

and Stock GROWER

The Farmer's House.

The farmer's house is a very great factor in the life of the farmer, and even more in the life of his family. The neglect of the farm house has doubtless more than once driven the children from the farm to seek more attractive homes in the cities.

Pride counts with young children, especially with those of spirit and ambition. To-day, more than ever before in the history of the world, the children have high ideals, for they have become accustomed to reading books. In these books they find the ideal homes and beautiful houses. If the farm house in which they live is unpainted and dropping to pieces, it will fall so far below their ideals that they will be very uncomfortable when their friends come to see them and will look forward to the time when they can go out from the old house forever.

This is a very undesirable frame of mind in which to have the children of the farm home. It deprives them of that inspiration they should have. It is far better to reverse things and make the farm house and the farm home so attractive that the children will be proud of them, whoever comes to see them.

The farmer can well afford to pay a little less attention to some other part of the farm and give the house the attention it should have. Make it a thing of beauty and a joy forever. On the farm such work as painting is generally done by the men that inhabit the house. Thus, putting on a new coat of paint is less expensive than it is in the cities, where labor has to be paid for at a high price.

A farm house should be thoroughly painted every two or three years to protect it from the weather and make it look fresh and bright. Every year certain parts should receive coats of paint—such parts as the porch floors, steps and window sills. These are more exposed to the rain, sun and wind than most other portions, and, if not frequently repainted, go to pieces rapidly.

The sides of the house that are most exposed to the sun will crack and begin to deteriorate more quickly than the other sides, and this should be kept watch of to prevent the woodwork getting into a condition where it will be difficult to cover up the deterioration.

The arrangement and equipment of the farm house are things that should be studied in the light of modern art and modern ideas of comfort. It is surprising how much a little money will do in improving conditions in the house. To-day there are farm houses as well equipped as are the houses of the well-to-do people in the cities.

Running water in the kitchen and the bath room, a sewer system, furnace heat, a telephone, and even electric lights, are possible in a great number of localities. These all cost money, but money must be expended in the country as well as in the cities if the people there are to have attractive homes.

Our Industrial Policy.

The National Farmer and Stock Grower is in favor of the United States collecting a reasonable range of customs duties upon all foreign farm products and all manufactured goods admitted into the United States from foreign countries, said duties to be applied to the support of the national government. By this policy fully one-half the money required for the support of the national government should be collected at the custom houses, besides furnishing the farmer and manufacturer the very moderate amount of protection to which they are entitled. We are opposed to the admission of foreign farm products free of duty, because admission of such products duty free always leads to the advantage of the foreign merchant and speculator and causing increased burdens to be imposed upon our own people.

Taking the duty off hides has been entirely in the interest of foreign countries and to the detriment of our own people; admitting coffee duty free enabled the formation of a South American combination that has raised the price three for one, and every time goods are placed on the free list there is the same result. With moderate import duties received by the United States on various products as now collected the total is over three hundreds of millions of dollars a year, and if not collected that way will have to be collected by direct taxes upon our own productions. The admission of foreign goods free of duty results in higher prices to the American consumer and higher taxation also to make up the necessary revenues.

Every farmer in the United States is taxed by his county and by the state; he also pays a share of the taxes collected in various ways for the support of the federal government. We believe that in return for his support in tax money and in time of necessity for his personal services the American citizen is entitled to preference in his home market for his own productions from the laws of the government he supports. We believe that the advantages of our own markets belong to the citizens of the United States, and that all foreign farm productions should pay a duty at the front door as the goods are admitted. In times of scarcity, caused by drouth or other unavoidable influences, the foreign farm productions can come in under light duties on a fair basis, and in times of abundance the country thrives better without them.

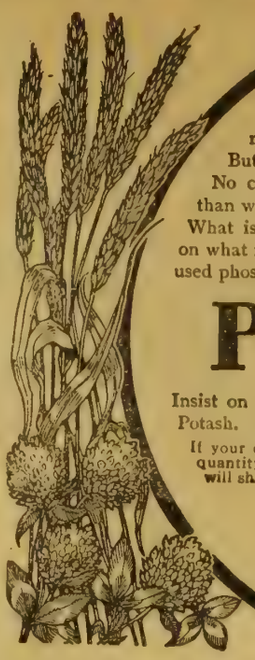
We believe the farmer as a producer outranks all other people; the manufacturer is next; but without the farmer's products the manufacturer would have to shut his doors. Legislation against the farming interest is the height of folly, and special discrimination against the farmer is a political crime. It will cause more poverty in the cities than most people imagine. The nonproducing, so-called consumers in cities will be the first to find it out and be the greatest sufferers.

The Book of Champions.

"Philip H. Hale, editor of The National Farmer and Stock Grower, in St. Louis, has just published a picture book of 'Live Stock Champions,' which is full of interest to horsemen. It contains 720 indexed portraits of noted animals, among which are scores of thoroughbreds, trotters, Hackneys and draught horses. Schreiber's photographs of Rysdick's Hambletonian, Ethan Allen, George Wilkes and other old-time trotters make the book of lasting value to votaries of harness racing."—New York Herald. See page 22.

Small Fruits in Massachusetts.

Cranberries are by all odds the most important of the small fruits grown in Massachusetts, with strawberries ranking next. The value of the cranberry crop in 1909 was $1,062,000, while the strawberry crop was valued at $495,000. The total acreage of small fruits in 1909 was 9,552, and in 1899 8,436, an increase of 14.5 per cent. The production in 1909 was 29,260,000 quarts, as compared with 25,882,000 quarts in 1899, and the value $1,677,000, as compared with $1,494,000. The quantity and value of products thus increased somewhat less, relatively, than the acreage.



Wheat and Clover

Many farmers stick to wheat raising mainly because clover follows it in the rotation. But why not get the best possible out of both crops? No crop returns better profit for the right fertilizer than wheat.

What is the right fertilizer? That depends on the soil and on what fertilizer you have used on it. The longer you have used phosphate the sooner it will pay you to balance it with

POTASH

Insist on your wheat fertilizer containing 6 to 8 per cent. of Potash. **Potash Pays** on both wheat and clover.

If your dealer does not carry Potash, write us for prices, naming quantity needed, and ask for our free book, "Fall Fertilizers." It will show you how to save money and increase profits.

SAVANNAH—Bank & Trust Bldg.

One Year With Another.

The Secretary of the Missouri State Board of Agriculture says: "Missouri farmers are just now interested in the erection of new corn cribs and silos rather than in boring emergency wells or buying windmills to meet water shortage. Where a year ago 25 per cent. of the live stock went to market at a sacrifice because of dry weather, farmers are to-day looking in vain for cattle to eat the surplus grass. Such stock as is going to market is at highly satisfactory prices and the close of the month sees hogs and cattle selling higher than for many months, choice Missouri beeves reaching the record mark of $9.75 per 100 pounds."

Condition of the Buckwheat Crop.

According to the report of the Department of Agriculture, dated August 9th, 1912, the condition of buckwheat was 88.4 per cent. of a normal, compared with 82.9 last year and 90.2, the average for the past ten years. The area planted to buckwheat this year is estimated at about 835,000 acres, compared with 833,000 last year, 860,000 in 1910, and 878,000 in 1909. Indicated yield per acre, 19.3 bushels, compared with 21.1 last year, and 19.5, the average for five years, 1906-10. On the area planted it is estimated the total production of buckwheat, interpreted from condition reports, will be 16,000,000 bushels, compared with 17,549,000 last year, 17,598,000 in 1910, and 14,849,000 in 1909.

Wonderful Deep Tilling!

Note How It Pays!

The marvelous Spalding Deep-Tilling Machine plows from 12 to 16 inches deep, **pulverizes** and **mixes** the soil, all in **one operation.** Makes a regular **garden**-seedbed over the **entire** farm, which holds moisture through **any** drought. **Results from a thousand farms show wonderful crop increases.** Figures and facts from farmers, farm papers, experiment stations, agricultural experts, etc., are ready to send you now. Send today for them.

We'll send you also our book entitled "1,001 Knights," full of nothing but letters from owners, many owners in drought sections, saying, "If we'd bought the machine last fall, we'd have had a crop now."

The Spalding Deep-Tilling Machine is the only thing of its kind in existence. If you farm only 20 acres it will pay for itself the first season. **Our free books disclose the magic in the soil of a deep-tilled farm. Cut out this ad as a memo to write for them.**

User E. H. Smith of Steele, N. Dak., writes—"I plowed some old land with the Spalding Machine that had been farmed for 30 years, and sowed it to flax as an experiment this spring, and it yielded 9 bushels clean flax; another piece (shallow plowed) that I sowed, being the fourth crop raised on it, yielded 7 bushels."

Hundreds of other instances from every State in the Union.

Thoroughness in Farm Enterprises.

Many good plans fail on account of lack of thoroughness. In farming operations one great element of loss comes as a result of lack of completeness in the doing of things.

The writer remembers one episode of his young days. in which a cranberry marsh did not materialize on account of the lack of thoroughness in the inception of the enterprise. The money and labor spent all went for nothing, because just a little more labor was not performed, which extra labor would not have cost an extra cent.

Enthusiasm has been roused by successes in cranberry growing reported from different parts of the country. A brook running through a swamp in the pasture suggested the creation of a cranberry swamp of considerable size, which ought to be profitable. By an expenditure of about $50 a dam was built across the stream and the low area flooded. This flooding was to be used to destroy the insects that attack the cranberries at certain times. The water was let out of the artificial lake and the putting in of the cranberry plants began.

The sod should have been taken off or the land should have been plowed and replowed long enough to kill all the heavy grass growing on it. But here was where the fatal mistake was made. The sod was merely turned over and time was not given the grass to die. Besides, the furrows did not lie close together, and the grass grew up between them. But the cranberry plants were put in at once and grew up with the grass. The whole experiment was concluded in a few weeks, for the grass grew up and choked out the plants of the experiment. Yet how easy it would have been to have done the work rightly and have scored a success!

By reason of lack of thoroughness we endure many things we do not need to endure. Take the matter of rats and mice about the farm premises. With the aid of cement, foundations of houses and of barns can be so constructed that it will be impossible for rodents to get into the buildings unless they come in at the doors, which need not be the case.

As in the cities, so on the farms, there is a great lack of thoroughness in too many things we do. Much of the advice given by the Experiment Stations is in the direction of thoroughness in farm work. The growers of big crops point out the thoroughness of all the steps taken in the producing of the crops. The soil was prepared thoroughly, the fertilizer was mixed with the soil thoroughly, after the crops had come above the ground they were cultivated thoroughly and the weeds were kept down thoroughly.

The writer visited a peach orchard in Michigan that in certain years has yielded as high as $35,000 worth of peaches. Everything in that orchard showed the most thorough care. Not a weed was to be found on hundreds of acres. The owner said to the writer: "I will give you $1.00 each for all the weeds you can find in this orchard." The writer noticed men driving back and forth on heavy weeders, so that a dust mulch was made continuous. Then the peaches were thoroughly thinned, no peach standing closer than a handbreadth to any other peach. It was the thoroughness of the methods that gave the golden results.

Things to Remember About Alfalfa Growing.

Alfalfa naturally belongs to a locality where the sun is hot, the sky cloudless, the soil friable or sandy, and the water table permanently located within twenty feet of the soil. Under such conditions it will make wonderful growth and will remain sometimes for centuries without replanting. It is reported that west of the Andes in South America are to be found fields of alfalfa that have been in continuous use for more than two hundred years.

We have brought alfalfa out of its natural homes to a land of cloudy skies, interrupted sunshine, to a land of uneven water table, and to a land of weeds. It will grow with us in almost any part of the country, but not with the same vigor that it will where the conditions are all favorable to it.

The seed bed for alfalfa in humid states must be prepared with great care and the weeds and weed seeds must be exterminated. Plowing the land and leaving it full of weeds and grass is not the way to prepare for alfalfa, as one of the great enemies of alfalfa is grass, especially some of the more persistent varieties of grass.

Many fields of newly-planted alfalfa are failures because the land is not properly prepared and properly treated. Sometimes the alfalfa seed is sown on land that will not grow red clover and other legumes. This generally means that the land has in it too much acid to make the development of the bacteria that helps the alfalfa to get nitrogen from the air.

Such land should be limed, either with fresh lime, slaked sufficiently to become a dry powder or by an application of ground lime-rock at the rate of about one ton to the acre. Often this neutralizing of the acid makes it possible to grow alfalfa where none could be grown before.

If the land is properly prepared by way of liming, if it needs it, it may still fail to produce a good growth of alfalfa on account of lack of bacteria in the soil suitable to work on the roots of the alfalfa plant. The next move will be to get some soil from an old alfalfa field and scatter it on the surface of the newly-planted field. The bacteria are so extremely numerous that a little soil will contain millions of the bacteria.

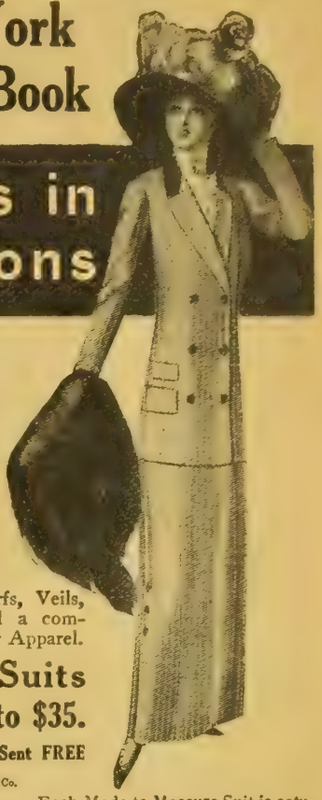
In the Middle West alfalfa is of very great importance, as it furnishes a fine balance for corn, which is grown extensively in a large part of this region. It is rich in protein, as corn is rich in carbohydrates. It means everything to our live stock interests, as the great problem in live stock raising is the production of a cheap feed.

Where alfalfa can be successfully grown it is of inestimable value for feeding of most kinds of live stock, especially beef cattle and dairy cows. Its great advantage over red clover is, that much more of it may be grown on an acre. As much of its nitrogen comes out of the air and not out of the soil, it is not so hard on the soil as are some plants that do not have root tubercles, which are produced by the nitrifying bacteria.

Nearly every farmer can afford to experiment in a small way with alfalfa, and on many farms it will pay to grow it in a large way.

FREE New York Style Book

Great Bargains in Newest Fashions



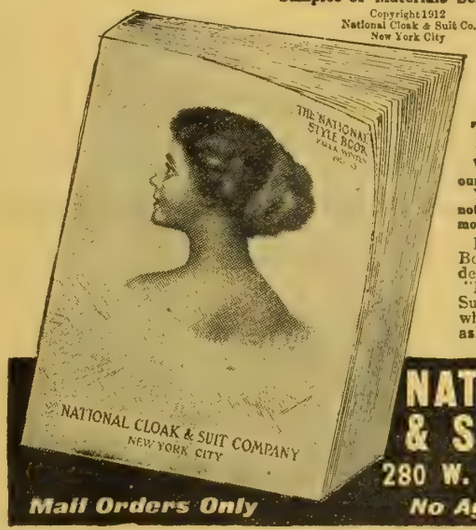
Most wonderful, most useful fashion book ever published—The "NATIONAL" Money-Saving Style Book—FREE to you at once! Every woman should take advantage of this and send for the book. It's full of newest New York styles—with endless bargains like these:

Waists, 69 cents to $6.98
Skirts, $2.98 to $9.98
Ladies' Coats, $6.75 to $29.75
Ladies' Dresses, $6.98 to $24.75
Furs, $1.95 to $18.57
Hats, $1.49 to $9.98.
Ladies' Ready-Made Suits, $9.98 to $17.98
Misses' Suits, $8.98 to $15.98
Raincoats, $4.98 to $11.98

Also a full line of Underwear, Hosiery, Scarfs, Veils, Gloves, Sweaters, Leather Goods, Jewelry and a complete line of Boys', Misses' and Children's Wearing Apparel.

"National" Tailored Suits Made to Measure $10.95 to $35.

Samples of Materials Sent FREE



Each Made-to-Measure Suit is actually cut and made to order. We guarantee each suit to be perfectly satisfactory in every way, or, if not, we will cheerfully refund your money.

The "National" Policy

We prepay postage and express charges on all our goods to any part of the United States.

You may return any "NATIONAL" garment not satisfactory to you and we will refund your money and pay express charges both ways.

In writing for your Money Saving Style Book, be sure to state whether you desire samples of materials used for "NATIONAL" Made-to-Measure Tailored Suits. Samples are sent gladly, but only when asked for—and they are well worth asking for.

Every Farm Has Climatic Zones, Says Expert.

"There are climatic zones on every farm that need to be studied and taken advantage of, just as slight peculiarities in plants and animals are studied and taken advantage of in breeding," says Eric R. Miller, United States Weather Forecaster, at the University of Wisconsin, in an article in the Journal of Geography.

"Different soils have the power to produce local differences in temperature," continues Mr. Miller. "This is largely due to the power to absorb heat and to the power to give out heat by radiation. A good absorber is a good radiator, and a poor absorber is a poor radiator. The temperature changes in the soil are very much modified by the state of the atmosphere above them. Clouds, dust and fog intercept both incoming and outgoing radiation so that the range of temperature of the soil cannot be so great. Clouds and fog act as a blanket, for they reflect back, and radiate back the heat sent out from the ground, and thus prevent the temperature from falling so low as it does on clear nights, when there is nothing to turn back or replenish the heat given out by the soil.

"The exposure of a slope to the sunshine is a factor of great importance, for the intensity of sunlight is greatest on a surface on which it falls vertically. Full advantage of this is taken in Europe, where the north banks of the valleys are terraced and planted in vineyards, which could not survive the colder climate of the level ground.

"The climate of this country is marked by greater variability than is that of Eurpoe, so that it is often important to nullify the effect of unseasonable warm spells in spring. To this end orchards are planted on north slopes, to retard blossoming in spring, because the climate there is colder than on level ground.

"A lake is of great importance in regulating the temperature of the land around, for it takes more heat to warm a given quantity of water to any stated number of degrees, than to warm the same quantity of any other substance to the same number of degrees. Similarly, the same quantity of heat will have less effect in heating water than any other substance, the same quantities being considered. It results from this that the shores of a lake experience less extremes of heat and cold than do places away from bodies of water The summers are not so hot, nor are the winters so cold."

Before starting up the hill with a load and when the top of the hill is reached, give the team a rest. Let them catch their breath. Undue forcing horses up a hill with a load frequently causes heart and lung disorders.

OATS MARKET SITUATION.

A Monthly Review of the Market, With Practical Explanation by the Editor.

The penalty of a large crop is usually low prices. The hand of every man is against the farmer, because everybody wishes to obtain the farmer's products as cheaply as possible. The seller tries to receive a good price for what he has to sell, whether he produced it or not, and on the other hand the buyer tries to get the product as cheap as possible.

"'Twas ever thus," and will be so for all time to come.

Let us look at the oats situation calmly and dispassionately. Let every man have due credit for being engaged in a legitimate occupation. We cannot all be farmers, and if we were, who would be our customers? City people are necessary, simply because there are certain forms of producers among them, and for those producers farmers are "ultimate consumers."

Just now the people in cities are buying oats cheaper than they ought to get them. The reason is that the crop of 1912 is estimated as being the largest on record, and the cool calculation on the part of the largest dealers in oats is that oats ought to be cheap and that the farmer cannot help himself. But there was never a greater mistake made. Under ordinary circumstances farmers use up 66 per cent. of the oats crop, and at present prices for cattle, hogs and sheep the entire oats crop, large as it is, can be used on farms at better prices and profit to the farmer than it can be sold for at the present prices and future prospects. Oats to pay back the cost of seeding, growing, harvesting, threshing, marketing and for the plant food taken from the soil, ought not to be sold for less than 50 cents a bushel on the farm.

Farmers must remember that expressed in bushels the oats crop always looks very much larger than it really is, and it almost requires two bushels of oats to equal in weight a bushel of wheat, and when oats are running light in weight it requires two bushels of oats to weigh equal to a bushel of corn. In feeding cavalry horses, many years ago, when the Quartermaster gave the order for supplies he said: "Order three bushels of oats to each bushel of corn and you will have all the corn you need and you will not have any oats left if you feed in proportion." If all farmers would feed that way the price of oats would take care of itself.

On August 31st, at St. Louis, oats shipped into market by the car-load were selling at 31 and 32 cents a bushel. Take off the cost of shipment, the commission for selling, the margin the dealer held out when buying small lots from farmers to make up the car-loads, and very likely the farmer at first hands did not receive over 25 cents a bushel, and at such a price every bushel is sold by the farmer at a loss of profit and a loss of fertility.

We cannot go into the circumstances of all the farmers who raise and sell oats. Some are tenants, some are conducting small farms, some are conducting rich farms, but they are all in the same boat when it comes to selling oats, and in each community they should get together and without any fuss or noise or notoriety simply agree amongst themselves that they have no oats for sale, or, if they must sell and cannot help but sell, to give the preference to stock feeders, who will keep the oats away from the grain markets, thereby letting a shortage appear instead of the expected surplus.

On August 31st, on the speculative market at Chicago, they quoted the September option at 31⅝ cents a bushel, showing a reduction of 1⅜ cents, compared with the close of the previous month. On August 31st the December quotation was 32¼ cents a bushel, showing a decline of 2 cents during the thirty days previous, and the May option of 1913, nine months in advance of actual delivery, was quoted at 34¾ cents. It can also be set down beyond the peradventure of a doubt that if farmers will feed the speculators on cheap oats and the speculators will empty the elevators by shipping oats at present prices, frightened by the very moderate crop of oats expressed largely in 32-pound bushels, there is no telling how low oats will sell before the end of the year.

This paper will appear on one hundred thousand farms in the farming territory where most of the surplus oats are raised. If one farmer will read this paper to another farmer who has surplus oats on hand, and it is passed on from farm to farm, and each farmer withdraws his oats from market and does it quietly, it will soon be observed that the market is advancing, and it will continue to advance, notwithstanding some few farmers of necessity, for actual need of money, may be forced to sell all or part of their oats before prices have advanced. The oats crop is the easiest for farmers to manage, so far as the market is concerned.

Young Men, Here's Your Chance.

The management of the Missouri State Fair has arranged to hold a Live Stock and a Corn Judging Contest during the State Fair at Sedalia, September 28 to October 4. The winner in each of these contests will receive a $50 cash scholarship, which will pay the expenses of one term at the Short Course in Agriculture, Columbia, Mo., which begins November 4, 1912. Besides this there will be $365 in cash divided into twenty-five premiums, ranging from $20 to $2.50, which will give every contestant a good chance to win one of the cash prizes if he does not succeed in getting the scholarship. For prize list and copy of the rules governing this contest write to Secretary John T. Stinson, Sedalia, Mo.

The 1912 Crop of Rye.

According to the report of the United States Department of Agriculture, the area planted to rye in 1912 was estimated at about 2,097,000 acres, compared with 2,127,000 acres last year, 2,185,000 acres in 1910, and 2,196,000 acres in 1909. It is preliminarily estimated the yield per acre is 16.9 bushels, compared with 15.6 bushels last year, and 16.3 bushels, the average for the five years, 1906-10. A preliminary estimate of the total yield places it at about 35,000,000 bushels, compared with 33,119,000 bushels last year, 34,897,000 bushels in 1910, and 29,520,000 bushels in 1909. The quality of rye is 94 per cent., compared with 91.5 per cent. last year, and 92.0 per cent., the ten-year average.

Special Recommendation.

The deep-tilling machines advertised by the Gale Manufacturing Company represent a great advance in agricultural methods. A careful reading of the advt. on page 2 is well worth the time it will require. When writing to the firm, ask for the free book H 9, Spalding Dept., and address Gale Mfg. Co., Albion, Mich.

FOR THE VEGETABLE GARDEN.

There is a very good book on the subject of Vegetable Gardening, written by Samuel B. Green. It is a manual that can be relied on. It is easy to grow vegetables and save them against the different diseases when at critical periods such a book can be readily referred to. There are 252 pages, nicely illustrated and practical throughout. We will send a copy of the book entitled Vegetable Gardening and The National Farmer and Stock Grower one year for 60 cents. Address, Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

Use KEROSENE Engine Free!

Amazing "DETROIT" Kerosene Engine shipped on 15 days' FREE Trial, proves kerosene cheapest, safest, most powerful fuel. If satisfied, pay lowest price ever given on reliable farm engine; if not, pay nothing. No waste, no evaporation, no explosion from coal oil.

Gasoline Going Up!

Gasoline is 9c to 15c higher than coal oil. Still going up. Two pints of coal oil do work of three pints gasoline.

Amazing "DETROIT"

—only engine running on coal oil successfully; uses alcohol, gasoline and benzine, too. Starts without cranking. Only three moving parts—no cams—no sprockets—no gears—no valves—the utmost in simplicity, power and strength. Cylinders can not carbonize. Mounted on skids. All sizes, 2 to 20 h. p., in stock ready to ship. Engine tested before crating. Comes all ready to run. Pumps, saws, threshes, churns, separates milk, grinds feed, shells corn, runs home electric lighting plant. Prices (stripped), $29.50 up. Sent any place on 15 days' Free Trial. Don't buy an engine till you investigate money-saving, power-saving "DETROIT." Thousands in use. Costs only postal to find out. If you are first in your neighborhood to write, you get Special Extra-Low Introductory price. Write! (138)

Detroit Engine Works, 383 Bellevue Ave., Detroit, Mich.

Canadian Cattle at Chicago.

On Monday, August 18th, at Chicago, Mr. A. E. Cross, of Grassy Lake, Alberta, Canada, marketed cattle. The lot consisted of 1,336-pound steers at $9.00 per 100 pounds, 1,333-pound steers at $8.85 per 100 pounds, 1,188-pound steers at $8.75 per 100 pounds, rough steers, 1,215 pounds, at $8.65 per 100 pounds, and a full train of 220 heifers, 1,100 pounds, at $7.50 per 100 pounds. These cattle were well sold by Clay, Robinson & Co., live stock commission agents, and after paying all shipping charges, import duty, yard and feed commissions, the Canadian cattle averaging 1,100 pounds sold at the record price of $8.75 per 100 pounds for 1,188 pounds, and net the shipper $93 per head. It cost only $10.55 per head to transport and market them.

Hammond's Handy Atlas of the World.

This great Atlas contains 107 pages, 6x8 inches, is printed in colors, and is bound in a durable red-cloth cover. It contains seventy full-page maps of every state and territory, with new railroads and towns. Every country in the world is shown by maps of the latest plates. We use this Atlas as a subscription premium. For fifty (50) cents paid in advance we will send one copy of **Hammond's Handy Atlas** post free by mail and credit one-year's subscription to The National Farmer and Stock Grower. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Start Your Library.

Every man and boy should own a library. It is easy to obtain a nice lot of books. A splendid book to begin with is "The American Government." by Frederick J. Haskin. which is a valuable book for any American between the age of nine and ninety years.

No other book explains so clearly what our government consists of. The articles upon the Presidency, the Senate, the House of Representatives are alone sufficient to place the book on the top shelf of the home libraries and in the 386 pages there are thirty distinct articles, each one of them complete with information concerning a government department.

"The American Government" clears the mind of many doubts and answers many questions. A Congressman serving his first term needs such a book before he goes to Washington, and Mr. Haskin has produced a book of which 175,000 copies were sold the first year.

MR. FREDERICK J. HASKIN, Author of the valuable Book entitled "The American Government."

We will recommend other books, but "The American Government" is a first-class book for No. 1 in a farm library. We have adopted "The American Government," handsome cloth-bound edition, as a subscription premium in connection with The National Farmer and Stock Grower. Anyone who will send One Dollar for two-years' subscription to The National Farmer and Stock Grower can select a copy of "The American Government" as a subscription premium, and we will send it postpaid, safe delivery and satisfaction guaranteed.

WHEAT MARKET SITUATION.

With Observations by the Editor Concerning the Market in General.

On July 31st, at St. Louis, we left cash wheat selling at $1.01 to $1.03 per bushel, and thirty days later, at the close of business August 31st, we find cash wheat at St. Louis selling at $1.00 to $1.05⅛ per bushel. Our readers will remember that the quotation for cash wheat represents shipments to the wholesale grain market, where the grain is sold for cash, just the same as hogs are shipped to the cash market and sold and the returns made to the shipper by the commission firm.

We now turn from the cash market to the market that represents contracts made from day to day for future delivery, and to understand the drift of that trade, or, as sometimes happens, not to understand it, we make a journey in our minds to Chicago. At Chicago, on May 31st, the May wheat option was closed out at $1.10½ per bushel; that is to say, all trades for the delivery of No. 2 wheat were settled at that price, no matter whether the personal settlements were by delivery of the actual goods or by the loser in the transaction paying the difference in money.

The May option represented transactions in old wheat, and the July option was closed out after considerable of the new wheat had been harvested and the total of the new crop had been discounted, therefore it is not at all surprising that the July option went out of business on July 31st very much lower at 92½ cents per bushel, which was a decline, one month with another, of 18 cents a bushel. This story of real life in the wheat pit has already been told and is mentioned now to remind our readers that once a month we endeavor to keep them posted in regard to the past, present and future of the grain business, and we do not hesitate to claim that the regular readers of The National Farmer and Stock Grower are the best posted farmers in the matter of grain prices, unless others should be so deeply interested as to receive telegrams or special market reports form day to day.

The September wheat option ripens like a peach on September 30th, which will be on a Monday, and after that date it will have passed into history. The first time we noticed the price at which the September option was quoted was March 30th, when the price which somebody had paid for No. 2 wheat to be delivered at latest September 30th was 95⅞ cents; the next quotation a month later, mentioned by us, was on April 30th, and the price had advanced to $1.08¾; on May 30th the quoted price was $1.06 per bushel, and on June 29th the price quoted was $1.06⅛ per bushel, and we may say here, by way of parenthesis, that unless an unlikely revolution sets in affecting September wheat and advancing the price, certain buyers of wheat are considerable losers from the transactions they entered into in the months of April, May and June, unless their transactions were covered by contracts for delivery to some one else at a profit.

And the next thing some one will say is that these transactions do not interest the farmer, and whoever says it will be mistaken. Every transaction interests the farmer, and, what is of still more importance, has an influence towards making the price the farmer who produces grain will ultimately receive for it. Every man who has bought grain at what appears to be a high price is interested in upholding the market until he has transferred his load to somebody else; then he may have lost interest in the market, so far as sustaining it is concerned, and by reason of having later sold some grain cheaper, which transaction he may not have unloaded, he may find it to his interest to depress the market instead of sustaining it. Board of Trade commission firms are interested in selling consignments as high as they can, and when buying for their customers they are interested in buying as low as they can, and they do not care a cent for any other interest than the interest they are representing that minute, whether it be their own speculations or the interests they are intrusted with for the time being. The Board of Trade commission man is supposed to be working for his commission, and he can work as a "bull" or work as a "bear," just according as he is employed for the time being. The attorney who is trying to secure a conviction is just as legitimately engaged for the prosecution as the attorney for the defense who is trying to secure an acquittal. So it is that the man who is acting the part of the "bull" in sustaining the market to-day may be equally legitimately engaged as a "bear" tomorrow in all attempts to depress the market. Every attempt to advance the market is in the interest of the farmer, and every attempt to depress the market is against the interest of the farmer, and each attempt is just as legitimate and as honorable as the other.

Now we will go back to where we left off and will continue remarks concerning the September option. On June 29th the September option was quoted at $1.04⅛ per bushel; on July 31st the quotation had declined to 93½ cents a bushel; and on August 31st the September quotation had declined to 92⅝ cents per bushel, and that is where for the present we are obliged to leave it. September trading will be a matter of history before we publish another paper.

Before leaving the wheat trade, it is as well to state that on August 31st the December wheat option closed at 93 cents a bushel, and on the same day the quotation for wheat for delivery May 31st, 1913, was 97¼ cents, and those figures indicate the consensus of opinion of bulls and bears on August 31st was, that wheat was as low as it was likely to be, so far as the general trade is concerned.

Table of Estimated Yield.

The following table shows the indicated yield of the various crops as compared with the figures for last year:

Crop.	1911.	1912.
Corn (bushels)....	2,531,488,000	2,811,000,000
Winter wheat (bushels).....	430,656,000	390,000,000
Spring wheat (bushels).....	190,682,000	290,000,000
Oats (bushels)....	922,293,000	1,207,000,000
Barley (bushels)..	160,240,000	202,000,000
Rye (bushels)....	33,119,000	35,000,000
Buckwheat (bushels).....	17,549,000	16,000,000
White potatoes (bushel).....	292,737,000	371,000,000
Tobacco (pounds).	905,109,000	980,000,000
Flax (bushels)....	19,370,000	28,000,000
Rice (bushels)....	22,934,000	23,000,000

The Farmer That is a Good Mixer.

To mix or not to mix is a problem well worth being considered by every farmer. In the city or on the farm, the good mixer is the man that is influential in the community. The man that keeps out of sight is generally the man that counts for little in either community. He may be overwhelmed with work, or think that he is too poor to mix with the rest of the community, but in either case he is taken by the community at less than his true value.

On the farms, perhaps more than elsewhere, men and women burdened with the work of life, tend to become recluses. Their round of work is never done and never will be if they work until there is nothing remaining undone. So, the only way out is for some of the apparently necessary work to be left undone, while the father and mother and children mix with the rest of the community.

The man on the farm should be a mixer in social events. He may think that he is not interested in the little social events, but others are, and he should be unselfish enough to get out of the ruts once in a while and do what interests others. Social life is of great moment to the women and children. Social mixing is medicine to them, and they will grow happy in being encouraged in social relationships.

The farmer should mix in the political life of his community. He owes a duty in this line to the public as well as in every other line. It is not enough that he appear on election day and deposit his vote. Real political work comes before election day at the various caucuses where principles are determined. The studious, intelligent farmer will find a joy in thus helping to lift up the political conditions existing within his influence.

He should be a mixer in the local church, whether he agrees with all its tenets or not. It is impossible to create a church that will hold principles agreeable to men at all stages of their development. But the church is now both a religious and social force. At the church, people meet together, and this meeting together is a great boon to all, an uplifting force of great value to any community.

In the life of the neighborhood the mixer is always a man to be desired. He is the one that is first thought of in every emergency, and, if honors are to be given, he is the man most likely to receive them.

The writer has in mind a man whom he has known for more than twenty years. He is a farmer and a good mixer, and his wife a good mixer. He was mixed up with nearly everything of an agricultural and social nature in his town and finally in his county. One day the farmers of his senatorial district were looking about for a man to represent them in the Senate of their state. They fixed on this man and supported him, regardless of party. He has now served for about sixteen years in that Senate and is an influence in his state. He was thus honored because he was a good mixer and men came to know him and his good qualities. The man that is not a good mixer is losing much himself and is depriving others of some of the good they would receive from his mixing with them.

Interest on Farm Loans.

Several years ago our readers will remember The National Farmer and Stock Grower made a pretty thorough overhauling of the rate of interest paid on farm loans.

We found that the subject did not appear to interest the farmers of such states as New York, Ohio or Pennsylvania, because they could borrow money on farm land security at as low rates as merchants and manufacturers. We found that in Illinois there was not so much money available, for the reason that if the mortgage was not paid when due, the holder of the mortgage would not be able to foreclose for a long time; in other words, the security was troublesome. But in Missouri no such difficulty was encountered, the law protected the creditor, and farmers could get money as cheap and on as good terms as anybody in any line of business. When we investigated Texas, Oklahoma, or rather the Indian Territory, as it was then called, it was entirely different. In the West, generally speaking, the rates were high and money was hard to get. In states like Texas, where farms of 200 acres in extent are exempt from debt, collection rates were high, except in cases where the debt represented a vendor's lien for purchase money, and the rate of interest was subject of agreement between buyer and seller. National banks do not directly loan money on farm lands, but were taking vendor's lien notes as security for short-time loans. Probably the highest rates of interest were paid in Texas and North Dakota.

The situation, as we understand it at the present time, is very much better, and where the security is good there is considerable more difficulty in raising the money to pay off the debt than there is to borrow money in the first place. There is considerable talk now about how it is done in Europe, where it takes a whole community to borrow a few dollars. In this country it requires no more machinery than we now have. We have postoffice savings banks, and in farming communities most of the deposits will be by farmers or farm laborers, and there ought not to be much difficulty to have it arranged for farmers to borrow money from the postoffice savings banks, or from the depositories which receive deposits of that money, and at reasonably low rates of interest. All money borrowed must be amply secured either by the title deeds of the property on which the loan is made, or sufficient personal security should be given in form of endorsement to make the loan secure. Not one cent of money should be collected from the people in the form of taxation to pay interest on money deposited in postal savings banks. The interest on postal bank deposits ought to be paid from the earnings of that money so deposited when it is loaned out again. There is no better way to secure for the people the beneficial purposes for which postoffice savings were instituted than to arrange to loan money to farmers, as we suggest, on good security at low rates of interest.

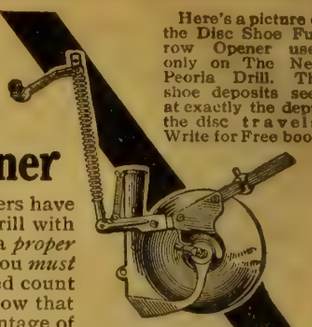
Not Back to the Plow.

Dean Woods, of the Minnesota Agricultural College, is credited with having stated that the Agricultural College is turning out graduates to positions beginning at $1,200 to $1,500 a year, and that every graduate so educated has the choice of several positions. Of course it is very nice that it should be so. There is quite a lot of work in various lines for Agricultural College graduates to do, and many positions in farming are open, especially where they can guarantee to bring into a paying condition the farm that ought to be classed as the "gentleman's plaything." The farm boy who attends the short course may go back to the farm from whence he came, but the actual graduate seldom does go back, but he obtains a city job, a professorship or the management of a larger farm. That is the tendency of the present time towards syndicate farming, the absent owner, the resident manager and farm laborers, rather than either farm owners or tenant farmers. No young man who has graduated at the Agricultural College can return in September and take up the plow where he left off. This is no kick on Agricultural Colleges. It is only a phase of the subject that some one who strives to look into the future ought to invite attention to. In all the arts and sciences the crop of professors is large and the crop of producers is small. Put us down as favoring the short course. For ten months in the year the best college and experiment station is the home farm.

Concerning Politics.

The tariff question is a political one, because it cannot be decided except by political action. It is truly an economic question and ought to be decided as such, independent of other questions that are more political and sentimental and less economic. But Congress does not legislate wisely, because there are influences brought to bear in their deliberations that have very little to do with the economic question. As Congress has now adjourned, it is not worth while to enter into the subject, for the reason that Congress will have no further opportunity to legislate until December, but it is well to say a word to the congressional candidate, because he may become, by election, a most important legislator and may even by a single vote decide whether foreign farm products shall be admitted or not admitted free of duty. It is not wise to concentrate your attention upon the Presidential nominees, because Presidents do not legislate, but it is good policy to follow the congressional candidates and find out how they stand and will stand and vote for them accordingly. We do not pretend to dictate what your views ought to be; but whatever your views are, vote for the man who holds those views, and make him announce his tariff views in advance whether he is or is not in favor of the same duties on farm products as on what the farmer has to buy. The farmer has been taught a lesson during the past year, and that lesson is in two parts. The first is, that it is well to have the Congressmen understand the farmers' principles; and the second is, that the farmer ought to understand his candidate's intention in voting upon matters distinctly relating to the agricultural interest. Congressional candidates are more easily influenced than Congressmen-elect.

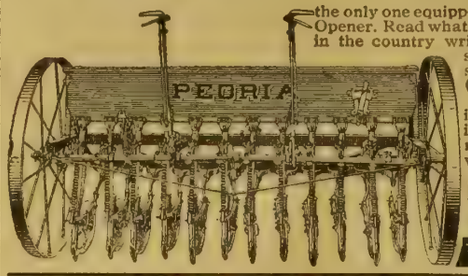
Why You Should Buy The Drill With This Disc Shoe Furrow Opener



Here's a picture of the Disc Shoe Furrow Opener used only on The New Peoria Drill. The shoe deposits seed at exactly the depth the disc travels. Write for Free book.

Hundreds of *other* practical, progressive farmers have made big, extra cash profits by using the *only* drill with a furrow opener that sows every seed *evenly* at a *proper depth*, in a *packed furrow*. How about you? You *must* know the many advantages of making *every* seed count and of having a *uniform stand*. You *must* know that *any* furrow opener which combines *every* advantage of the *single disc* and the *shoe* is as near to *perfection* as any practical farmer could expect. We want to tell you *all* the facts, figures and proof of the *money-making* and *money-saving* advantages of

The New Peoria Drill—



the only one equipped with our famous Disc Shoe Furrow Opener. Read what one of the biggest small-grain raisers in the country writes: "We have given the drill you shipped a good trial and I think I can safely say it's the best drill made." (Wyman Land Co., Halsted, Minn.) Let us send you our booklet showing opinions of others and telling why it will *pay you* to discard all other makes for this New Peoria, with its wonderful Disc Shoe Furrow Opener.

Peoria Drill & Seeder Co.
2430 North Perry St., Peoria, Illinois

Rubber Roofing

Warranted For Twenty-Five Years
FREIGHT PAID To Any Station East of Rocky Mountains, except Texas, Okla. Colo., N. D., S. D., Wyo., Mont., N. M., La., Ga. Ala., Miss. and Fla., on all orders of three rolls or more. Special Prices to these States on request.

ONE-PLY - - - - Weighs 35 lbs., 108 Square Feet, $1.10 per roll.
TWO-PLY - - - Weighs 43 lbs., 108 Square Feet, $1.30 per roll.
THREE-PLY - Weighs 55 lbs., 108 Square Feet, $1.50 per roll.

CENTURY MANUFACTURING COMPANY, Dept. 653, East St. Louis, Ills.

Plant Goes to Swift & Co.

It is now announced that the St. Louis Dressed Beef Company, one of the branch houses of the National Packing Company, has been transferred to Swift & Company. The Swift interests already have a packing plant at East St. Louis, and this transfer will give them the second one to operate with supplies obtained from the St. Louis live stock market.

The plant of the St. Louis Dressed Beef Company was started some twenty-two years ago by a number of St. Louis butchers and dealers, Henry and Gustav Bischoff, Louis Schaeffer, Matthew Courtney and others. It was very successful as an independent local packing house and finally engaged in the interstate trade. After the National Packing Company bought the business it continued to be an active competitor on the St. Louis market. Messrs, Swift, Armour and Morris, the principal owners of the National Packing Company, are voluntarily dividing up the assets of the National Packing Company in order to prevent future charges that said company is the illegal link or clearing house of the packers. Although in a general way the dissolution of the National Packing Company may be approved as tending to make each packer independent of the other, it is not by any means certain that competition in the live stock markets will be increased thereby. It is understood that the St. Louis property will continue for the present under the direction of the officers already in charge. Edward Tilden, of Chicago, is President; and Charles K. Urquart, Secretary and General Manager. The transfer is said to have been approved by officers of the United States Department of Justice.

A Farmers' Produce Association.

In another column will be found an article announcing the formation of The Mount Pleasant Produce Association of Allen, Miss., and we take pleasure in publishing the same, because it is a move in the right direction and it appears to be constructed with the correct view of matters as they now stand.

The gap between the producer and the consumer is a wide one, and in fact there are two gaps, one before the farm products reach market and one after the farm products are marketed at wholesale. It is the business of the farmer to close one gap by doing his own work properly and thoroughly, reaching the market with his produce in suitable packages and proper units, and if the farmer does his part as it should be done he will not be creating work for middle men to do on his side of the transaction.

After the farmer has sold his produce and obtained his money for that produce it is no longer any concern of his what becomes of it; that is the concern of the gentleman kicker, who, when potatoes are selling at wholesale at 60 cents a bushel, generally has to pay 60 cents a peck; that is the consumer's gap and it is not the farmer's problem.

On the one hand it is the duty of the farmer to see that his products are properly marketed, and when he in turn acts the part of the consumer and becomes a buyer of other people's products, it is important that his buying be done equally as well as his selling. This is best done by an association that shall have reasonable limits in locality and in the number of things to be done.

Many people jump into the association idea, thinking there is a whole lot of reforming to be done. Our idea of it is that reform, like charity, should begin at home. "Let the cobbler stick to his last," and let the farmer attend to his farm, and, associating himself with others, cooperate with them in preparing the products properly for market and making up the shipping units to suit the markets that are best able to buy those products, thereby being dependent for good service upon no man or set of men except themselves, their own employes and their own agents.

The Mount Pleasant Produce Association will find many doors open that appear to be closed; will find many a helping hand where they expect to find obstructions, providing they guarantee that their products are fully up to all representations and the association brand upon the association package is a guarantee of contents and quality.

There are many more of these associations in operation than the world has knowledge of. California products are 70 per cent. marketed under control of the producer, and where it is not done well it is usually because the associations in forming attempt to reform the other man instead of reforming themselves. The Mount Pleasant Produce Association appears to be starting off in the right direction, and these few remarks of the editor are full of good will for the members and for all similar associations now in existence or to be formed hereafter.

Address to Patrons and Friends.

During the months of September and October many thousands of subscriptions to The National Farmer and Stock Grower expire, and during these months we make every effort to obtain renewals. This year we are able to offer a subscription premium which we are proud to send to our patrons and which they are all delighted to receive. We refer to the Book of Live Stock Champions, which is fully advertised in this issue on page 22. Every picture in the book is excellent. There are seven hundred and fifty pictures, with record, owner and interesting features and history. It is beautifully bound in blue silk cloth. We are receiving compliments upon the splendid work, and, what is still better, our friends who receive the book are in turn recommending it to their friends. We specially solicit renewal of subscriptions. If you are not inclined to take the Book of Live Stock Champions, "The American Government" is another book well worth owning. The Cement Workers' Handbook, advertised on page 12, is also one of our favorites. In any event, we will appreciate all our friends and patrons can do for us in the way of subscriptions, especially in the month of September.

Grading Nursery Stock.

At the last annual meeting of the American Association of Nurserymen held at St. Louis, Mo., in June, 1911, a motion was passed appointing a committee to agree upon a uniform set of grades for fruit trees, to be adopted by the association. The motion went further and required the committee to have the same printed in the trade journals at least one month prior to the next annual meeting, and in compliance with that motion the committee presents the following grades:

All grades of trees shall be of fair shape, branched, well rooted. Caliper to govern and measurements taken two inches from the crown or bud, of the following grades:

Apple.—11-16 in. and up, 5 ft. and up; ⅝ to 11-16 in., 4 ft. and up; ½ to ⅝ in., 3½ ft. and up; ⅜ to ½ in., 3 to 4 ft., whips included.

Cherry.—¾ in. and up, 4½ ft. and up; ⅝ in to ¾ in., 4 ft. and up; ½ to ⅝ in., 3 ft. and up; ⅜ to ½ in., 2½ ft. and up.

Standard pear.—¾ in. and up, 5 ft. and up; ⅝ to ¾ in., 4 ft. and up; ½ to ⅝ in., 3½ ft. and up; ⅜ to ½ in., 3 ft. and up.

Dwarf pear.—¾ in. and up, 3 ft. and up; ⅝ to ¾ in., 3 ft. and up; ½ to ⅝ in., 2½ ft. and up; ⅜ to ½ in., 2 ft. and up.

Two-year plum.—¾ in. and up, 5 ft. and up; ⅝ to ¾ in., 4 ft. and up; ½ to ⅝ in., 3½ ft. and up; ⅜ to ½ in., 3 ft. and up.

One-year peach, plum and apricot.—11-16 in. and up, 5 ft. and up; 9-16 to 11-16 in., 4 ft. and up; 7-16 to 9-16, 3 ft. and up; 5-16 to 7-16, 2 ft. and up.

Some exceptions to the above may be made on such varieties as are known to the trade to be light growers, such as Yellow Transparent, Duchess apple, Seckel pear, English Morello cherry, etc., or from weather conditions affecting their growth, but such exceptions shall be noted in the printed price list issued by each grower or in their correspondence regarding all sales.

We would further say that the grades as named were adopted by the Western Association of Nurserymen at their meeting held in Kansas City in December, 1911.

It has been the aim of the committee to adhere to the grades generally used by the majority of the nurserymen of the association, and as most of these grades have been a standard for years, there should be no trouble in agreeing upon its adoption. The main object was to cut the number of grades to the minimum and to make enough distinction between each grade.

Respectfully submitted, E. P. Bernardin, E. S. Welch, W. T. Maloney, Committee.

Australian Beef For United States.

As evidencing the increasing attention which is being directed to Queensland as a cattle-raising country, a large Anglo-American firm has purchased a site on the Brisbane river and proposes to erect there, at a cost of $1,700,000, the most complete meat works in the world, capable of treating 600 cattle and 500 sheep daily. On the completion of the Panama Canal it is not improbable that chilled meat will be shipped to the United States.—The Weekly Sun, Toronto, Ontario, Canada.

During the census year the cheese production of the United States amounted to 320,000,000 pounds, valued at $44,500,000.

The National Farmer and Stock Grower.

(Title Registered in U. S. Patent Office.)

Published Monthly by
THE HALE PUBLISHING CO.
Philip H. Hale, Managing Editor.
Claude A. Cour, Advertising Manager.

Charles H. Hopkins, 150 Nassau street, New York City, Eastern Representative.
E. T. R. Murfey, 1123 Masonic Temple, Chicago, Ill., Western Representative.

Entered at Postoffice at St. Louis, Mo., as second-class mail matter in January, 1901.

Subscription Price in the United States, 50 cents a year, or three years for one dollar.
Office of Publication, 3550 Vista avenue, St. Louis, Mo. Bell Phone: Grand 400.

The parcels post that will go into effect on January 1st, 1913, will demonstrate more clearly than anything else has done that St. Louis is the center of distribution. The zone system will not satisfy everybody, but there will be no complaints from St. Louis, unless divisions are put up that are not zones. The zones around St. Louis, no matter how small or how extended, will be the richest zones, from an agricultural standpoint, in the United States.

The editor of The National Farmer and Stock Grower will be very much pleased to send out five thousand copies of the Book of Live Stock Champions in the month of September. The book is advertised on page 22, and not one word is exaggerated. We have received many compliments upon the value and elegance of this book, which is without doubt the best stock book ever published.

We advise our readers to make a study of the comprehensive index which appears on the first page. This index will direct you to one hundred and eighty-six articles or advertisements. It is so handy to find things by this index that when once accustomed to it, no other way of looking through the paper gives any such satisfaction.

Our patrons and friends will find a full-page advertisement of the 1913 model of the Overland Automobile. A catalogue is issued showing each car made, and the catalogue for our readers to ask for is L 69. Write to the Willys-Overland Co., Toledo, O., and ask for a copy. From a careful study of the catalogue you will understand more about the best makes of automobiles than was ever known before.

We have reason to congratulate Mr. T. E. Quisenberry, Director of the Egg-laying Contest at Mountain Grove, Mo., upon the manner in which he keeps up the interest in his work by pertinent and timely articles showing the progress of the contest and observations that instruct the reader. On page 18 our readers will find the nine-months' totals, and each month we hope to have something from Mr. Quisenberry until we have all the facts of the complete results.

Luther Burbank, of Pasadena, Calif., is at the head of the class in horticulture, having gone up to that position since he was at the head of the class in agriculture. Some of the little things he has done would be called great if done by somebody else, but with Burbank his great things are many; his little things look smaller than they really are by comparison. One of Luther Burbank's little things is his Crimson Winter Rhubarb, which has been taken up and improved by his neighbor, J. B. Wagner, until it is not only the best rhubarb, it is also a continuous yielder, and this rhubarb can be planted from a few roots and soon enlarge the plot until an acre of it will produce more profit than an ordinary fifty-acre farm. See page 19.

We are advertising a magnificent line of subscription premiums without going into the business of selling goods. If we had our way, there would be no premium except books, and those only that are on agricultural pursuits. One of our premiums will be found described on page 19. It is the sewing awl. We have sent out a great many of them to subscribers and they invariably give satisfaction.

Do your Christmas shopping early after reading page 25. The family is in need of some picture books for children, and the best books are advertised in connection with our Universal Magazine. We know it is a task to sit down and write a letter and to get a stamp and mail it, after securing a postoffice order for the money. But this is an exceptional case, and you ought to get busy, not for your sake or our sake, but for the sake of the children to whom these books will give much pleasure.

Our Valuable Publication.

We devote the columns of The National Farmer and Stock Grower to grain growing and stock raising in its various branches, because by so doing so we are enabled to appeal to the largest number of farmers with the same articles. The stock-raising industry is practically the same in Florida as it is in Iowa; if not, there is room for instruction in Florida. Dairying in New York and in New Mexico are on the same general lines of production, and articles when written for one state are acceptable in the other. With stock feeding, stock breeding, with poultry raising also, there is much in common in every state, therefore articles on live stock are practically without limit in their application. Not so with fruits: although there is a community of interest, there is a difference in crop seasons, that articles in the North are useless in the South, for the reason that Southern crops are marketed when Northern crops are growing. There are other crops that can be mentioned as grown in one section and not grown at all in another. All we intended to invite attention to in this article is, that The National Farmer and Stock Grower is useful to farmers, stock raisers, stock breeders, dairymen and poultry raisers in any state in the United States, and we invite subscriptions on that broad basis.

Vote Against Single Tax.

We have been requested to say a word against Single Tax and take pleasure in doing so. "Single tax" does not mean one tax any more than "free silver" meant that silver would be free. Single tax simply means a rearrangement of state taxes in an unpractical manner, and just as soon as single tax is voted, some other taxes will be imposed, and in the end there will be double tax and treble tax and a number of taxes, all imposed just as fast as the taxing power can impose them.

We have too many taxing powers, and all of them, except the people, are totally irresponsible. The Legislature that imposes a tax to-day is gone to-morrow. We have nothing before us except the statute books and cannot find any recourse for the greatest blunders, except through years of agitation, and in the meantime the evil done remains to plague us.

The so-called Single Tax is nothing more and nothing less than a scheme to double up the farmer's taxes. In cities it is improvements that constitute the earning power, and it would be very fine to do away with taxes on the great city buildings and pro-rate the taxes thus taken off on the farms of the country. And then after that is done, the federal government will step in and find some new form of taxation to replace the money collected in customs duties under the tariff laws. Farmers, one and all, should stand in line, and, if necessary, stand all night in line to vote against the misnamed proposition called "Single Tax."

Prosperity Through Sacrifice.

No one can form a fair idea of the sacrifices that have been made year after year in the cattle yards of the United States unless identified with the trade for a long time. We have reached an era of strong prices, but in order to do so it has almost required a famine to bring it about. Prices for beef cattle are now considered high by all who have to pay for them, whether it be the packer buying by the train, the butcher buying by the load, the small butcher buying only a few head, or the local butcher buying by the side, or the consumer buying by the pound. "Yes," said an old and retired cattle raiser, "I see that cattle are high, but my herd did not live to see it. A new generation is getting the money and the cattle owners who made the sacrifices have gone broke or passed away." The thought of the retired cattle man as expressed by him is largely true, yet there are many left who knew what it was to sell ripe and heavy native steer cattle at $3.80, $3.90 and $4.00 per 100 pounds that have barely been equaled in weight and quality by cattle recently selling at $10 to $10.25 per 100 pounds. Think of the hundreds of thousands of fat native cows that sold year after year at $3.50? How about the canners that pioneered the canning business on hundreds of thousands of Texas cows that cost $7.00 per head to ship from Texas to Chicago and netted the shippers $12 to $18 per head or less?

This article is not written in a spirit of complaint or to say that anything was wrong with olden days, because if we were poor we were then young, and riches will bring back youth, but to remind the men who are cashing the beeves that it is the good market and sometimes poor cattle that are bringing the good money. Fifty years ago there were Shorthorn steers weighing 2,500 pounds in market that sold for $4.50 per 100 pounds, and such cattle could not be turned out of a feed lot to-day and sold at a profit at $20 per 100 pounds. There were good cattle before 1912, and many of them were sold at a loss by breeder, feeder, shipper and butcher.

Yes, there were sacrifices being made in those days when the common saying was: "There are more babies born than calves;" but the calves reached maturity in three years and the babies reached maturity in twenty years. Yes, there were sacrifices made when Indians on Dakota reservations were fed on Texas steers at $2.80 per 100 pounds that had been gaunted down by drouth and a fifteen-hundred-mile drive from the original breeding ground. Dost thou not remember the sacrifices at Ogallalla of twelve-dollar steers that afterwards went into Chicago from Montana ranges to sell as fours and fives in market at around $3.50 per 100 pounds?

WEBER IMPLEMENT AND AUTO CO., 1900 Locust Street, St. Louis, Mo.

And yet all the time those sacrifices were being made the avenues of trade were building up to make it possible that when the right time came, when there were and are more mouths to feed than cattle to feed them with, the avenues of trade had been built up through sacrifice, and these good prices which the ranchmen and these stock farmers are now taking home with them constitute a matter of equalizing the prices of former days, the only regret being that not always does the man who lost the money in the period of low values get any of it back, now that prices are higher.

Raw Rock Not Available.

The fact that some encouraging results are obtained by using raw ground rock as an absorbent in stables is generally due to the fact that prior to the use of the rock the liquid portion of the manure had been allowed to go to waste or the manure had been improperly handled. The failure of stable manure to make available the insoluble phosphoric acid in raw rock is clearly shown by an experiment made at the Pennsylvania Experiment Station, and reported by Mr. Alva Agee in the National Stockman and Farmer for January 7, 1909. In this experiment a large quantity of stable manure was mixed with finely-ground phosphate rock and allowed to stand for many months under conditions that permitted no loss. Careful chemical analysis showed that the mixture did not contain any more available phosphoric acid at the end of the experiment than existed in the manure and in the raw rock separately at the beginning of the experiment.—Geo.D. Leavens, in National Stockman and Farmer.

Legislators Need Education.

It is reported that farm-implement mergers have just about fairly started. Apparently under the law it is perfectly legal for one outfit to buy several others. But if they consolidate without purchase the legal question remains unsettled. We ought to have laws that people can understand instead of laws that those who make them don't understand. If Congress would pass a law appropriating money to establish a school for legislators to attend before taking a seat in any Legislature, they could safely omit to appropriate money to educate farmers, who are, as a class, the best posted of any men in any business.

Every farmer should attend his State and County Fair and the Chicago International Live Stock Exposition.

Some of our so-called worn-out lands require the deep-tilling machines advertised on page 2.

It beats wheat!

Raising rice in Arkansas beats growing wheat anywhere. Hundreds of former wheat growers are in Arkansas now making two to three times as much money from rice as they did from wheat! This fact should make *any* wheat or corn farmer look into this.

[*Threshing Rice, Chas. Thompson's farm, Weiner, Ark.*]

Raising rice in Arkansas

is as easy as growing wheat anywhere—and think of the difference in net profit! Wheat brings you—at best—20 bu. per acre, for which you get around $1. And you raise it on land worth $100 and up per acre. Rice yields from 50 to 100 bu. per acre, brings from 75c to $1 per bu. and is raised on land that can be bought *now* as low as $20 per acre. Here's a typical experience:

65 bu. per acre, Honduras rice from 50 acres, sold at $1.07	$3,477.50
75 bu. per acre, Japan rice from 50 acres, sold at 75c	$2,812.50
Gross income	$6,290.00
Cost $25 per acre to raise	$2,500.00
Net profit	$3,790.00

A proposition that brings $37.00 per acre net is certainly worth finding out about. Bear in mind that these farmers never grew rice *in their life* before—and were successful from the first; for rice in Arkansas is planted on uplands, raised and threshed just like wheat; the only difference being the use of water.

This year there are over 75,000 acres planted to rice, and a bumper crop is sure. You ought to be in Arkansas while this crop is harvested. Low fares via Cotton Belt Route make the trip cost little. But first get our

Free Rice Book!

COTTON BELT ROUTE

Butter Scoring 97 Points Made With Help of College.

Butter scoring 97 points, made from farm skimmed cream, was sent to the monthly scoring exhibition of the College of Agriculture of the University of Wisconsin as the twenty-ninth exhibit of a man whose first exhibit, in 1909, made from whole milk, was 89.33. His average score on the three exhibits sent during that exhibition year was 92. Next year he sent ten exhibits averaging 92.79. The third year, his ten exhibits averaged 94.83, with 60 per cent. of the entries scoring 95 or higher. This last year the average on his nine exhibits was 94.07, a slight reduction due to the poor quality of farm skimmed cream.

The Normal Composition of American Creamery Butter.

The production of creamery butter has reached vast commercial proportions and different standards are in force in the various states for the regulation of its quality and chemical composition.

Reports of thousands of analyses for water and other constituents have appeared in various publications, but data showing the composition of normal American creamery butter and the conditions under which such butter is made are not plentiful.

The purpose of the Department's new bulletin (Bureau of Animal Industry No. 149), published after a comprehensive study of the subject, is to show in a variety of ways the results of the chemical analysis of American creamery butter collected during one year throughout the principal dairy districts of the United States, and to present at the same time a record of the conditions under which the butter is made.

The area covered in this investigation embraces the fourteen states of California, Iowa, Kansas, Maine, Michigan, Minnesota, Montana, New York, North Dakota, Oklahoma, Pennsylvania, South Dakota, Texas and Wisconsin, and of the samples which were taken from the 488 creameries 695 reached the laboratory in good condition for analysis. The methods of sampling and of analysis are described and the results given in a general table in the appendix, while thirty tables constructed from the original data show some of the comparisons that may be made.

The pamphlet can be secured by those interested in the subject by aplying to the Secretary of Agriculture, Washington, D. C.

THE CORN MARKET SITUATION.

The Editor's Monthly Review of the Market.

It is not the intention to say much more in this article than to refer to the changes which have taken place from month to month.

We all know that the Department of Agriculture has reported that there is a great corn crop and we might as well admit it to be no secret. All discoveries of this character are estimates, and good ones at that, although they sometimes fall down when the final count is made.

At Chicago, on May 31st of the present year, the May option was cleaned up at 80 cents a bushel. That was the limit then, and now banking on the larger crop in sight. The Board of Trade gives us a quotation of 54 cents as the price at which the May option of the present crop will go out on May 31st of next year.

We understand that half way through Congress is a bill to make it a penal offense to deal in grain futures. They have an idea in Congress that the commerce of the greatest country on earth can be conducted like a corner grocery in a big town, where supplies can be had from the big wholesale houses between morning and noon.

The editor of this paper asked a grain dealer what would be the effect of the bill. He said the first thing would be doubling up of selling commissions, because it would cut down the number of transactions, and the next would be the consolidation of different grain-dealing interests and the falling away of small concerns until the syndicates would absolutely control the trade, far beyond anything ever before thought or dreamed of. "How are you," said he, "on such a bill?" and the editor said distinctly and positively that he had never asked for it.

At the risk of saying something that may cause some of our readers to say we ought to know more about it, we will observe that it is not clear why the September corn option, which was quoted at 66¾ cents a bushel on July 31st, was at 72¼ cents on August 31st, the September quotation being advanced, whereas the December quotation at 57¼ cents on July 31st actually declined to 55¼ cents on August 31st. In other words, one quotation was going up and the other was coming down. The explanation offered us was that dry shelled corn of commercial grades will be scarce on September 31st and will be abundant on December 31st.

It is not then the grand total of the corn crop that has the greatest effect on the market, but the available supply of certain grades and qualities that actually means so much in determining commercial values.

RAW ROCK PHOSPHATE

Of No Value as Fertilizer, Yet Sold as Such.

Somewhere near a year ago The National Farmer and Stock Grower saw that an educator on the subject of soil fertility and fertilizers had listed raw rock phosphate as a fertilizer that contained slowly available phosphoric acid. At that time we had reason to believe that by solicitation we could obtain some advertising of raw rock phosphate, providing we were prepared to endorse the goods, and we wished to advertise the fertilizer and advocate the goods, if it was right and proper for us to do so.

What we had read about raw rock phosphate was not altogether in its favor, because the testimony was for and against, and a large majority against, and only one distinct and positive advocate, and he considered a competent authority upon soils and farm chemistry.

The editor makes no claim to superior knowledge in farming, although a farm editor and a farm manager years before Agricultural Colleges were furnishing the bulletins, and he was willing to listen and to learn. And he investigated wherever he thought he could find some evidence to prove that raw rock phosphate, ground or unground, would be a good purchase for anyone who was engaged in tilling the soil.

The conclusion we arrived at and the conclusion that we still hold to is that if a farmer pays a dollar a ton for the best form of rock phosphate for fertilizing purposes he pays too much.

If raw rock phosphate was available as a plant food it would be used by many complete fertilizer manufacturers in their own combinations. And yet it does not appear in any one of them. And if they are asked why not, they answer that they dare not, because in rock form it is not an available fertilizer, and in examinations by chemists it would be found out and denounced as a fraud; furthermore, such combinations would fail, owing to the uselessness of the raw rock phosphate, and customers would be lost year after year, because plants would not derive benefit from that ingredient. Again, all true fertilizers are guaranteed to the state, licensed and inspected, whereas raw rock phosphate is neither licensed nor inspected, and has no more standing as a fertilizer than a load of coal.

Thus it is that raw rock phosphate, although containing fertilizer material in an unavailable shape, is an outlaw when placed among fertilizers and is not rendered available on farms by any farm process that will not exhaust the means of the farmer by waiting and waiting without merchantable crops and without profits until some unusually good preparation of the seed bed, supplemented by available manures, assisted by deep tillage, creates such results in a good season that there is gain enough for all, not forgetting unavailable raw rock phosphate that, standing alone, is characterized by its chief advocate as being absolutely no good.

We do not hesitate to say to our readers that we would be highly delighted if we could be convinced that we are in error in this case, but just now we believe the sale of raw rock phosphate as at present sold as a fertilizer ought to be prohibited by law. The pure-food law, it seems, ought to be extended to plant foods.

FARM AND RANCH LANDS.

FARM AND RANCH LANDS can be advertised effectively in The National Farmer and Stock Grower in small space at a reasonable price. The best land advertising in a general farm paper is classified and arranged by states. The National Farmer and Stock Grower will obtain for an advertiser more substantial inquiries in a ten-line advertisement than any other farm paper will give for five times the space or money. Send in your advertisement and let us quote you a price. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

ALABAMA.—2,240 acres fertile farm land. Thirty-three tenant houses. 900 acres fenced. Fine land for alfalfa, cotton or cane. One-fourth mile from station. Buy from owner and save commissions. **D. Vaughan,** Catherine, Ala.

ARKANSAS.—FREE HOMESTEADS IN ARKANSAS under new three-year law. 500,000 acres good land vacant near railroads and markets. Our Homesteader's Guidebook tells just how to locate, acquire title, number of acres open in each county, and full text of new law. Price, 25c. **Farm Pub. Co.,** Little Rock, Ark.

ARKANSAS.—Near Arkansas City; 1,000 acres, with 350 of it in cultivation. Will be sold with live stock and work stock and crop started. The plantation is on the Mississippi river, at good landing; has on farm new gin, twenty tenant houses; two miles west of county seat, where there is a fine high school. All cultivated land is protected from overflow; also 300 acres rich land not under cultivation. The soil is rich sandy loam; makes plenty of hay and corn; good water; fine pasture for stock; has hay sheds, corn cribs, tool houses, commissary building and nice pecan grove. Price, $16,000; half cash; balance in payments at 6 per cent. interest, if desired. **J. S. Ross & Son,** Arkansas City, Ark.

FLORIDA LAND.—I will sell a part or all of one section of land just west of Jacksonville for less than one-half the price that adjoining land is now selling for. This is all good land. Extra good roadways and railroads in to Jacksonville. **Miss N. Ryan,** 2627 Clifton Ave., St. Louis, Mo.

KANSAS.—For Sale: Fine alfalfa and stock ranch; 2,240 acres; 600 acres sugar beet and alfalfa land; 80 acres in alfalfa and under irrigation; fair improvements. Price, $12.50 per acre, payable $2.50 cash, balance in ten payments at 6 per cent. Come out and see a bargain. **Roy S. Cone,** Garden City, Kansas.

MINNESOTA.—Farms for sale. Send for my list of CHOICE FARMS for sale, the best in the United States, considering location, terms, etc. Ask for my FREE BOOKLET, telling about the country, crops, markets, etc. **Geo. W. Elder,** McGinn Block, Thief River Falls, Minnesota.

MISSISSIPPI.—Farm for sale, two miles and a half from Starkville, and about the same distance from the Agricultural College. Starkville has about 2,500 inhabitants. Farm has 286 acres; good six-room dwelling; fine cistern; four tenant houses; plenty of woodland on place for all purposes; good fence all round the farm. There are two barns for cattle and hay, also horse barn. For fair price, terms and further particulars address **J. R. Cannon,** Starkville, Oktibbeha county, Miss.

FARMS WANTED.—We have direct buyers. Don't pay commissions. Wrte describing property, naming lowest price. We help buyers locate desirable property FREE. **American Investment Association, 55 Palace Bldg., Minneapolis, Minn.**

CASH FOR YOUR FARM OR BUSINESS. I bring buyers and sellers together. If you want to buy, sell or trade any kind of property anywhere, write me. Established 1881. **FRANK P. CLEVELAND, 7910 Adams Express Building, Chicago.**

PROFITABLE DAIRYING.

A very elegant, illustrated, cloth-bound book of 200 pages is called **Profitable Dairying.** It is all good, satisfactory reading matter relating to the successful management of the dairy business under all circumstances, including the management of the cows and construction of the barn. We have discovered this book lately and we find that there is a better demand for it than for all other dairy books combined. For one dollar we will send **The National Farmer and Stock Grower** for two years and we will send the book, **Profitable Dairying,** as a premium. Address,

HALE PUBLISHING CO.,
3550 Vista avenue, - St. Louis, Mo.

A Keyless Padlock Premium.

Keyless locks are very useful and valuable. When you get used to them you will use no other. The keyless locks are rust-proof, light and strong, being made of aluminum. In opening the lock you use a combination, turning the knob to the right and left as indicated by instructions. It requires a trial or two to learn the combination, and then, night or day, the lock cannot be picked, but you are able to open it easily and do it with your eyes shut. You can hear the clicks and you can feel them. These locks cannot be excelled for security, convenience and durability. We have prevailed upon the manufacturer of keyless locks to allow us to use a special aluminum padlock No. 8 as a subscription premium. It is a good, substantial lock fit for any purpose. Anyone who will send in one dollar to pay for two-years' subscription to The National Farmer and Stock Grower can select the aluminum keyless padlock No. 8 as a premium. We will send it postage paid, safe delivery guaranteed. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

DAIRY EXPERIENCE.

Building Up a Herd—Just Fifty Years of Careful Study and Management.

The following article is by Mr. L. A. Spies, who combines the double occupation of being one of the foremost milk producers in the state of Illinois and a high official of the Union Dairy Company of St. Louis, a company that is a large distributer of milk products. The address was delivered during Farmers' Week, 1911, at the Missouri Agricultural College.

"My experience in breeding live stock in Madison county, Illinois, covers a period of nearly fifty years. Like most boys on the farm, I fed the stock before and after school. I knew the ages and breeding of our stock better than father or my brother, and at fourteen years of age was given a free hand in selecting the breeding animals. We had been beefing the steers and cows we wished to dispose of except fresh cows, for which we had a good demand from St. Louis dairymen. We bred all our own cattle, which were milk Durhams. When I began farming for myself I bought heifer calves of father, and started a herd of my own. About the year 1882 we had a good supply of milk and commenced shipping to the Illinois Milk Company, afterwards the Union Dairy Company of St. Louis, but the Durham cows laid on too much fat. I put in a registered Holstein bull, but under high-pressure feeding I still had too much beef. I tried Jerseys, Guernseys and the best native cows; also three imported Holstein cows I bought at the old St. Louis Fair Grounds. They proved so satisfactory that I bought twelve more, four imported cows and their offspring, but, the most important, I bought the get of a great bull, imported by Smith & Powell of New York. He grew to be a very large animal, long and deep-bodied, four rudimentary teats an inch long; his heifers were great producers. It has been my experience that the bull is one-half the herd; that the stronger he is backed by his ancestors for good the greater will be his power to transmit those qualities. Never use a degenerate to head your herd, no difference if he has a fine pedigree—he may be a registered scrub. When selecting a bull to head your herd, go see his dam and sire, get a line on the quantity and quality of the dam's milk, unless she has an authentic record in the Advanced Register or a testing association. In starting a dairy herd, select the breed you like best and get a first-class registered bull of that breed, and get cows of the same breed. If you can't afford registered cows, get the best grades of the breed, but don't start with a grade bull, for he is one-half the herd, and you should make that one-half good and strong. I have a bull in mind that I bought in the year 1894 that had for his dam the grand cow Gerben Mechthilde, his sire Sir Henry Mechthilde of Maplewood. I used him on the herd for three years to the time of the dispersion sale in the fall of the year 1898, and wherever cows of that strain can be found in that section they bring good money on account of their production of large quantities of milk rich in butter-fat. I also advised two brothers in 1903, who came to me for advice, to buy a certain strain of Holstein in New York to head their herd, which they did. In 1908 I bought their herd and they are now among the top notchers at Calla Lily Farm. Seven years ago a farmer living in Bond county, Illinois, by the name of Wise, made an exceedingly good showing in the State Agricultural College year test with his herd of grade Holsteins, to the surprise of every one there. I traced the herd and found a patron of mine had sold Mr. Wise a registered bull, a son of the Gerben bull, breeding a large producing herd in the third generation from the start. In the capacity of buying milk by test at many creameries in Illinois from patrons whom I had advised in selecting their herds I find that the bull bred strong along certain lines transmitted this inherent virtue to the third and fourth generations, if mated properly. You must breed your herd to get a good one, unless you find some one who does not know what he has. If you buy your cows, you buy all the mistakes her breeder made with the cow. All dairymen should use the scale and Babcock test to find the amount of butter and milk each cow makes in one year. At Calla Lily Farm it showed me that I could not afford to buy, but must raise my herd, crowded as I was for room. The farmer holds his best cows high, that is, if he has any gumption. In these times a test association is one of the necessary things for a dairyman. Twenty-six farmers join to employ a competent man to test their respective herds; this gives him one day with each farmer to test the samples and instruct him and his family, or help in proper feeding and suggest improvements where most needed; it puts the farmer on the track of which cow is bringing a profit and which brings less or no profit at all. If you raise calves from your best cows, you know just what you are doing.

In Illinois land has nearly doubled in value in the past ten years. It requires intensive farming to buy and pay for a farm in twenty years, raise and educate a family and live as becomes a progressive man and family.

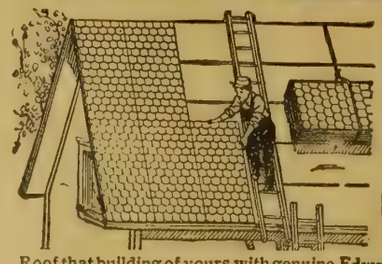
It is the age of smaller farms, better tilled and better managed, making three blades of grass grow where one grew before. Great wheat and corn fields give way to smaller fields, but more dairy stock—the most economical animal known to mankind. She will produce more food at a less cost in the shape of milk, butter, cheese, beef, veal and also build up his land. The high price of food the world over is causing the wise men to ponder, and well they may before it is too late. The land has been robbed; crops taken off and no food for the land given back.

On a visit to New York last summer I found tillable farms that were selling at $15 per acre—this, too, 125 miles from New York City. Forty miles south of Utica they are taking up dairying in earnest. I there saw more "black and white" cows to the mile than I ever saw before. The land robber, exclusive grain farmer, can pay $100 for good land, $150 for the best if near a good market, but only for a limited number of years—he is a curse to future generations—he robs the unborn of the chance to grow food by leaving the fields barren—he ruined and sold its fertility by the load.

The dairyman can farm land valued at $500 an acre, if fertile and near a good market, and he can build up the soil if he saves the fertilizer, as he should. This picture is not overdrawn, for in Holland land is valued at $700 to $1,000 per acre, and there intensive farming has reached its most perfect stage. They produce milk for the London market. They grow principally grass and make hay for their dairy cows.

"But we have something better. The great corn belt of the Mississippi Valley has in corn a plant the equal of which as a forage plant exists nowhere. Its yield in grain and fodder is unlimited; it will produce from ten to twenty tons of nourishing and succulent feed per acre. The

Edwards STEEL Shingles Last Longest Cost Least



Fireproof—Rotproof—Rustproof
Put 'Em On Yourself

Roof that building of yours with genuine **Edwards "Reo" Steel Shingles!** Can't **rust,** can't **rot,** can't **catch** fire, can't **leak. Guaranteed** against **lightning** by our $10,000 Guarantee Bond. **Never** need repairs or paint. Outlast **three** wood-shingle roofs and **five** composition roofs. Now selling at low factory prices—all freight paid. Put them on yourself. Don't hire carpenters or mechanics.

Edwards "REO" STEEL Shingles

are Open-Hearth Steel, **finest quality.** Made absolutely rustproof by our world-famous "Tightcote" Process (explained in catalog). Come in large sheets, 24 inches wide, 5 to 12 feet long. Nothing to do but nail the sheets on old roof or sheathing. Edwards Patented Interlocking Device covers all nails, makes permanent water-tight joints, unaffected by heat, cold or dampness.

You'll have the handsomest, most lasting roof in existence. 100,000 buildings now roofed with "Reo" Steel Shingles. Write for our big, free Catalog 957, and Factory Prices. Send dimensions of your building; let us quote price, delivered to your railroad station. You'll be amazed at how cheaply and easily you can roof your house or barn with "Reo" Steel Shingles.

best method of utilizing it is as ensilage and shredded corn fodder. It is the corner stone, the foundation, yes, the entire structure of animal husbandry in this section. We can feed a horse or cow for two and one-half cents per day with ensilage. We find it to be most profitable to cut when the grain is glazed. In this state it compares with dried fodder corn as a ripe apple compares with the dried fruit; the juice is distributed in just the right proportion and is easily digested in the animal's stomach.

"For thirty-six years we had been feeding corn with roasting ears while they lasted, and were anxious to prolong their season. Accordingly, twenty-six years ago we built the first silo in Madison county, Illinois, and we believe in Southern Illinois. Its capacity is 100 tons. We were so pleased with the results that in 1893 we built a second of 140 tons, having in the meantime increased our herd of dairy cows. Calla Lily Farm at St. Jacob, Ill., I am running as a model for the dairymen producing milk for the St. Louis market. We have eighty-eight fine Holstein cows producing certified milk, sold by the Union Dairy Company. This farm was an answer to the many questions that were continually being asked by our patrons how to feed, how to build silos, what kind of cows were best, what kind of barn did I recommend. There is the entire plant, which I built with my own money, and it is working nicely; some of the patrons are taking heed. There we emphasize the things that mean success. The pure-bred bull, records, silo, clover and alfalfa hay are all handled. It requires them to be successful."

HOLSTEIN-FRIESIAN RECORDS.

Seven-day Tests For Admission to Advanced Register—The Double Record of Another Dairy Queen.

The following is by Malcolm H. Gardner, Superintendent of Advanced Registry of Holstein-Friesian cattle, and consist of seven-day tests, unless otherwise mentioned:

"During the period from June 5th to August 10th, 1912, records for 232 cows were received and have been accepted for entry in the Holstein-Friesian Advanced Register; nine of which were begun not less than eight months after the freshening of the cows making them, and twenty-four of which were semi-official yearly or lactation records. The averages by ages or classes were as follows:

"Seven-day tests. — Seventy-two full-aged cows averaged: Age, 7 years, 3 months, 3 days; days from calving, 23; milk, 490.2 pounds; per cent. fat, 3.58; fat, 17.552 pounds. Nine senior four-year-olds averaged: Age, 4 years, 9 months, 9 days; days from calving, 24; milk, 496.7 pounds; per cent. fat, 3.36; fat, 16.699 pounds. Sixteen junior four-year-olds averaged: Age, 4 years, 3 months, 20 days; days from calving, 26; milk, 456.9 pounds; per cent. fat, 3.46; fat, 15.808 pounds. Thirteen senior three-year-olds averaged: Age, 3 years, 8 months, 19 days; days from calving, 22; milk, 421.9 pounds; per cent. fat, 3.43; fat, 14.484 pounds. Twenty-seven junior three-year-olds averaged: Age, 3 years, 3 months, 9 days; days from calving, 21; milk, 418.9 pounds; per cent. fat, 3.57; fat, 14.969 pounds. Eight senior two-year-olds averaged: Age, 2 years, 8 months, 15 days; days from calving, 21; milk, 357.4 pounds; per cent. fat, 3.36; fat, 12.011 pounds. Fifty-four junior two-year-olds averaged: Age, 2 years, 2 months, 15 days; days from calving, 21; milk, 330.4 pounds; per cent. fat, 3.52; fat, 11.636 pounds.

"This herd of 199 animals, of which nearly one-half were heifers with first or second calves, produced in seven consecutive days 84,567.8 pounds of milk, containing 2,983.781 pounds of butter-fat, thus showing an average of 3.53 per cent. fat. The average production for each animal was 425 pounds of milk, containing 14.994 pounds of butter-fat; equivalent to 60.7 pounds, or over 28.9 quarts of milk per day, and 17½ pounds of the best commercial butter per week. The averages are again very remarkable for the season and are only a hair's breadth less than those of the last issue of these reports, of which I said that they were the best yet for the time of year. With the best of our junior two-year-olds producing as much milk and fat as did our best full-aged cows a dozen years ago, who would venture to set a limit upon the dairy capacity of the Holstein cow?

Hardly is one Holstein-Friesian queen seated on the throne, with a production so large that it seems that she surely will be able to keep her crown for some time, than she is courteously requested to abdicate and resign throne and crown to a successor with a yet greater record. A few months ago I announced that Pontiac Lady Korndyke had won the crown in the seven and thirty-day divisions, with the great productions of 30.422 pounds fat from 601.4 pounds milk in seven days, and 125.541 pounds fat from 2,496.7 pounds milk in thirty days. Now she must stand aside to make room for Valdessa Scott, 2d, with the much greater productions of 33.5 pounds fat from 694.6 pounds milk in seven days, and 132.388 pounds fat from 2,933.9 pounds milk in thirty days. These yields are so large that it causes one to wonder how any cow can produce them; yet immense as they are, I have not the slightest doubt but that in due time some other and greater Holstein cow will surpass them.

"Valdessa Scott, 2d, is closely related in blood lines to the cows for many years prominently before the public, and the discovery of so wonderful a cow among the outsiders goes far to prove my claim that there are hundreds of great cows in the rank and file of the Holstein-Friesian legions. 'Where are these cows?' does some one ask. 'Perhaps in your own herd. Do you test? Do you give your cows a chance?' Every Holstein breeder, young or old, should know what he has in his own herd; but he should first make an effort to develop himself before he attempts to develop his cows. Only the broad-gauge feeder who feeds understandingly, mixing his feeds with brains, will be apt to make a success. Such a breeder realizes that the Holstein cow is a wonderful machine for converting feed into cash products, and also that she is at the same time a living organization whose wants must be studied and tastes consulted."

The Chicago International.

Again we have the opportunity and the pleasure to speak a word in favor of the Chicago Live Stock Show. The familiar annual "Preliminary Classification" has again come to hand and the date of the Show is November 30th for the opening and December 7th as the closing day. The State Fairs, beginning in August and lasting through September and October, are now making selections for exhibit at Chicago. That is the principal occupation of the State Fairs, so far as cattle, hogs and sheep and certain breeds of horses are concerned. And every time the judge looks at candidates for high honors he asks of the animal: "Are you of sufficient quality to be exhibited at the Chicago International?" and if the answer is favorable a ribbon is awarded which is a qualification for a Chicago exhibit. There are many State Fairs and Expositions and the Chicago International is the king of them all. The preliminary classification ought to be in the hands of all who may possibly become exhibitors, and may easily be obtained by requesting a copy of B. H. Heide, Secretary, Union Stock Yards, Chicago, Ill.

Is Your Purse Full?

YOUR farm is the purse from which you take the necessities and luxuries of life. What provision are you making to keep your purse full—to insure a constant supply of food, clothing, heat, light, protection, and worldly wealth?

No purse can stand a steady drain—no soil can produce constant yearly crops—without an adequate income. The purse must be supplied with money, the soil with plant food. It is easier, and far cheaper to maintain a fertile condition of the soil than it is to build it up after it is once exhausted. Be wise—begin now to use faithfully an

I H C Manure Spreader
Kemp 20th Century, Corn King or Cloverleaf

Use your I H C spreader to distribute stable manure and saturated bedding while it is still fresh. Spread in light coats so that the plant food elements of the manure may combine quickly and thoroughly with the soil and become available for the use of growing plants. Spread quick-decaying straw to increase the moisture holding capacity of the soil and make it easier to till.

If you would have the spreading well done, do it with an I H C manure spreader, built to accomplish a definite purpose in the proper manner, at the least expense, and with the least strain on horses. Make the quantity of manure usually spread by the fork do twice the amount of good by distributing it properly with an I H C spreader and leaving the ground better and more evenly fertilized and in greatly improved condition. The driving mechanism of the I H C spreader is strong and thoroughly protected. The aprons, both endless and return, run on large rollers. The feed is positive. The manure is spread evenly, light or heavy as may be necessary, the quantity spread never changing until the feed is changed.

See the I H C local dealer and have him show you the spreader best suited to your needs. Get catalogues and full information from him, or, write

[Please mention National Farmer and Stock Grower.]

About the Hopper Dozer.

Everyone is not interested at this time in the extermination of grasshoppers, but there is no telling where a copy of The National Farmer and Stock Grower may be found; therefore it is well to observe that the Agricultural Experiment Station at State College, New Mexico, has issued a circular entitled "Construction and Use of the Hopper Dozer," the aforesaid hopper dozer being the apparatus that can be made at home for the purpose of putting the grasshoppers to a sleep that knows no waking. The hopper dozer is made for field work, and can be hauled by hand or by horse power. Anyone who may be interested should write to the Director of the Agricultural Experiment Station, State College, New Mexico, and ask for a copy of Press Bulletin No. 189.

It Wasn't Soap.

A New Jersey farmer came to the city the other day, and, among other things, he visited a high-class restaurant. His appetite ran to cheese and, inquiring of the waiter what sort of cheese was listed, said he desired "something new." "Why don't you try a bit of Roquefort?" suggested the waiter. "What's that?" asked the farmer. "Hang it," he added, "bring me some. I like the name, anyway. He ate of it and liked it, so he thought he would take some home to his wife. Arriving late, he laid the small cheese wrapped in silver paper on the sideboard. He forgot to inquire about it till the next night and then he asked his wife how she liked it. "Oh, I s'pose it's mighty stylish up to the city, but I jes kinder couldn't use it. I couldn't get no foam out of it, and when I washed the children they smelled kinder funny, and I can't say that I like it."—Scraps.

Agriculture For Girls.

The Missouri Women Farmers' Club has started a movement to interest girls in the study of agriculture — not merely caring for flowers or managing a vegetable garden, but real agriculture, involving a knowledge of soils, crops, live stock, fruit, poultry and dairy products.

In order to start the movement the club offers a $25 cash scholarship in Short Course in Agriculture to the Missouri woman over eighteen years of age who will write the best essay of from 450 to 800 words on the subject "Why Women Should Study Agriculture." This should pay one-half the expense incurred in one term of the Two-year Winter Course in Agriculture.

Every young woman who would like to take advantage of this offer should write for a copy of the rules governing the contest to A. J. Meyer, Superintendent of Short Courses, Columbia, Mo.

Comparison of Conditions.

According to the United States Department of Agriculture, the condition of the various crops on August 1, compared with their average condition (not normal) on August 1 of recent years, follows:

Peaches, 123.7; apples, 122.1; spring wheat, 112.6; oats, 110.9; hay, 110.2; barley, 107.2; millet, 107.2; flax, 106.2; grapes, 106.1; tomatoes, 105.9; pears, 105.5; hops, 105.0; alfalfa, 104.9; timothy, 104.3; Lima beans, 104.3; hemp, 103.9; cantaloupes, 103.8; cabbage, 103.7; Kaffir corn, 103.5; onions, 103.5; potatoes, 103.5; broom corn, 102.2; watermelons, 101.8; clover for hay, 101.7; oranges, 101.5; tobacco, 101.2; raspberries, 100; pasture, 99.9; sorghum, 99.5; peanuts, 99.4; sweet potatoes, 98.6; beans (dry), 98.5; sugar beets, 98.3; rice, 98.2; buckwheat, 98.0; corn, 96.6; cotton, 94.9; lemons, 94.1; sugar cane, 93.2; blackberries, 90.5.

The Immense Hay Crop.

According to the report of the Department of Agriculture, dated August 9th, the hay crop beats all records, and is 73,000,000 tons, or 18,000,000 tons in excess of last year, and 4,000,000 tons more than the big yields of 1909 and 1910, which were based on census returns. Hay (all tame).—Condition, 91 per cent. of a normal, compared with 85.2 per cent. last month, 68.6 per cent. last year, and 82.6 per cent., the average for the past four years. Indicated yield per acre, 1.49 tons, compared with 1.14 tons last year, and 1.42 tons, the average yield for the five years, 1906-10. On the planted area it is estimated the total production, interpreted from condition reports, will be 73,000,000 tons, compared with 55,000,000 tons last year, and 69,000,000 tons in 1910.

Barley Crop of 1912.

In barley the year 1912 will establish a new record, the estimated yield of 202,000,000 bushels being 24,000,000 bushels greater than that of 1906, the previous best year. On August 9th the United States Department of Agriculture reported: Condition, 89.1 per cent. of a normal, compared with 88.3 per cent. last month, 66.2 per cent. last year, and 83.1 per cent., the average for the past ten years. Indicated yield per acre, 26.7 bushels, compared with 21.0 bushels last year, and 24.8 bushels, the average for the five years, 1906-10. On the planted area, 7,574,000 acres, it is estimated the total production of barley, interpreted from condition reports, will be 202,000,000 bushels, compared with 160,240,000 bushels last year, 173,832,000 bushels in 1910 and 173,321,000 bushels in 1909.

Cement Workers' Handbook.

This book is designed to teach anybody how to work with cement; how to mix mortars of all kinds for all concrete purposes; how to make building blocks; how to build walls, floors, ceilings, walks, joists, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers. The price of the book alone is fifty (50) cents.

For sixty (60) cents we will credit one-year's subscription to The National Farmer and Stock Grower and send a copy of the **Cement Workers' Handbook.** Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Hog Cholera Again Threatens.

Reports now being published show that already hog cholera is cutting down pig crops. This year any hog losses will be especially calamitous, as the shortage of beef and mutton will insure a good price for every pound of sound hog flesh that can be put on the market. One well-known Chicago packer gives it as his opinion that "1913 will be a year of high values for hog products."

In view of the existing conditions no farmer or hog raiser can afford to take any chances, and he should lose no time in adopting preventive measures against any possible outbreak of hog cholera in his herds. As is well known, it is the most deadly and most contagious of all swine diseases. When it once puts in its appearance in a neighborhood, every herd for miles around is in immediate danger, for hog cholera spreads with astonishing rapidity, leaving thousands of dead hogs in its wake.

The actual experience of many practical hog raisers has proved that the cheapest and by far the most effective way to make hogs cholera-proof is to feed them on a small quantity of Merry War Powdered Lye regularly twice daily with their rations. When so fed, hogs, if they are thin, scrawny, wormy and off their feed, show marked improvement at once. The Merry War Powdered Lye effectually destroys and expels the stomach and intestinal worms and parasites, which, unless destroyed, sap the blood and strength of the hogs and pave the way for cholera.

Merry War Powdered Lye quickly puts hogs on their feed, tones up their systems, makes them healthy, sleek and fat, and positively prevents hog cholera. When ready for market, a bunch of Merry War Powdered Lye fed hogs will be in prime condition and command top-notch prices.

The expense of the Merry War Powdered Lye treatment is very small, only about five cents a month per hog. It is manufactured by the E. Myers Lye Company, of St. Louis, Mo., and is for sale at all druggists, grocers and feed dealers at 10 cents a can. The most convenient way to buy it is by the case of four dozen cans for $4.80. The E. Myers Lye Company have recently issued a most valuable book on "How to Get the Biggest Profits From Hog Raising," a copy of which will be mailed free to anyone interested on request. Write to E. Myers Lye Company,

Reliable Seed House.

We take pleasure in recommending the A. W. Schisler Grain Company, of St. Louis, as a buyer of seeds direct from seed-growing farmers. The firm also sells direct to farmers all seeds they need. The way to get acquainted with this firm in the first place is to write for their Golden Arrow Seed Catalogue. Address, A. W. Schisler Grain Company, 708 North Fourth street, St. Louis, Mo.

The National Farmer and Stock Grower

is a nice, clean, ably-edited general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, to dairymen, to vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, to horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. The best live stock illustrations appear in The National Farmer and Stock Grower. There are thirty-two pages, four columns to the page. It is published monthly.

What To Send Us.

Send us a postoffice money order for sixty (60) cents, or 60 cents in clean, new one-cent stamps, and we will send you the good publication, The National Farmer and Stock Grower, for one full year, and we will mail you one NATIONAL FARMER FOLDING BILL BOOK, postpaid, safe delivery and satisfaction guaranteed. Address,

THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

Illinois State Fair.

Secretary J. K. Dickinson, of the Illinois State Fair, announces that definite contracts had been made for the last of the special attractions for the forthcoming State Fair, October 4-12. The most spectacular feature will be aviation. A fleet of airships have been engaged for each day, excepting Sunday. There will be a French monoplane, the Nieuport, which is said to resemble a hat, an American monoplane, manufactured by the inventor, Johnson, of Terre Haute, a Curtiss-type biplane, and the old-fashioned hot-air balloon, which will be operated by a woman.

Mule races and pony races have also been provided, and a Cuban woman will slide down an inclined plane in an automobile and turn three somersaults.

There will be a three-team turnout of very black ponies with gold-mounted harness attached to a white-enameled truck.

The airships will carry a mail bag with aerial mail out of the Fair Grounds every day.

The last day, Saturday, October 12, will be Automobile Day, and enough cash and trophies are offered to provide sensational driving. Disbrow, in a big Simplex, will be the great star, and the last event will be the climax of the Fair of 1912, when an automobile, a motorcycle, a biplane and both monoplanes, will race five miles around the race track.

Pastor Russell, the famous independent divine of Brooklyn and London Tabernacles, will deliver a lecture on Sunday on "The Life Beyond the Grave."

The Illinois State Fair this year offers nearly $90,000 in cash prizes, and nearly every department shows an increase in the prize money list.

The new $125,000 sheep and swine pavilion will be occupied in time for occupancy during the Fair, at least the contractors are under bond to finish it. The great Dome Building will have a brand new copper dome in place of the mass of glass it has carried ever since it was built at the Chicago World's Fair. The lower fourteen feet will remain glass, the balance being copper.

Open Letter About Eggs.

To farmers, buyers and shippers of eggs:

My Dear Sir:—It is a conservative estimate that more than $45,000,000 are lost in the egg-producing sections annually because of improper handling. This enormous loss is due to small eggs, cracked and broken eggs, dirty, stale, heated (hatched) and rotten eggs. Just think of the waste this sum means, from the time the mother hen loses from her business of egg laying in order to hatch and bring up the hens that lay these wasted eggs, to the money that the housewife pays for the bad egg that cannot be used. It is a loss to you, to the farmer, to every one in the egg business, and to the consumer. Will you assist us in our effort to save this loss and to improve the egg that finally gets to market?

To the buyer:—When farmers, peddlers, merchants, etc., come to you with eggs for sale, talk to them about the improvement of the market egg and enlist their co-operation in the elimination of this great loss. Here are some of the fundamental points to be considered by all egg men, whether producers, shippers or middlemen:

1. Encourage the production of large eggs. This can be accomplished by keeping pure-bred "general-purpose" breeds of fowls, hatching only the eggs that weigh at least two ounces apiece and from only the most vigorous stock. A higher price for large than for small eggs will help along the argument.

2. Infertile eggs do not hatch, do not form blood rings and seldom form black rots. If male birds are sold or penned up after June 1st the flock of hens will lay more eggs and they will be infertile and will keep better.

3. A year-round observation of New York egg receipts showed that over 12 per cent. were dirty-shelled and sold for a lower price on this account. You should buy these dirty eggs at a lower price, for you are paid less for them. If one nest is provided for each six hens, in a cool, dark place, kept clean and vermin free, dirty eggs will be reduced to a minimum.

4. More than 10 per cent. of the eggs received in New York during the year are "seconds," because they are stale. Tell your egg man that gathering eggs every afternoon, or twice daily in hot or murky weather, keeping them in a cool, clean, dry place until marketed, and marketing at least once a week and more frequently in the summer time, will reduce the number of stale eggs greatly. Of course, stale eggs are worth less money than fresh eggs, all along the line.

5. Can you convince your trade that eggs from stolen nests and from incubators are never fit for sale? If the farmer thinks they are good, reliable food, urge him to eat them at home. For, since the egg buyer can afford to pay more for large, clean, fresh, whole-shelled eggs, it is good business for the farmer to use small, dirty, cracked eggs at home.

6. Do you know how to candle eggs? If not, learn, and learn quickly! There is no other way by which you can determine the worth of what you are paying for. Having yourself learned how to grade eggs, show the merchants, peddlers and farmers in your neighborhood, by means of the candle, what kind of eggs they are bringing to you. Farmers are not scamps, nor egg buyers angels. Show the farmer the kinds of eggs you cannot pay for and he will find a way to eliminate the bad egg and to make the good egg even better.

7. When first-quality eggs come to your possession, what means do you take to keep them so until they go to market? To build up and keep a good reputation for your output you must grade carefully and uniformly; pack in good fillers, flats and cases; ship quickly and under good conditions. If you would be classed among up-to-date shippers you must have mechanical refrigeration, that the chilling of the egg may begin the minute you receive it. Candle eggs in a room where the temperature does not go above 55 degrees Fahrenheit. Ship chilled eggs in a good refrigerator car, in car lots. If you cannot chill the eggs before shipping, use a refrigerator car, well iced, and ship only the minimum load, that the eggs may receive the benefit of the ice before the market is reached.

Send this letter, or copies of it, to the egg people in your vicinity, if it will serve to strengthen your argument for better egg handling.—M. E. Pennington, Ph. D. Approved: James Wilson, Secretary of Agriculture.

Proven Teachers Wanted.

Every man knows how to run a hotel except those who are in the business; so it is in the minds of people that all farmers need instructors employed to teach them their business. The teachers ought first to prove their ability by their own books and their own profits.

Most For Money

$1 size bottle of FRAZIER'S DISTEMPER CURE holds 8 ounces (other so-called distemper cures hold 6 ounces). We authorize your druggist to refund the purchase price if "Frazier's" fails to give satisfaction in all cases of Distemper, Influenza, Coughs, Colds, Shipping Fever, Catarrhal Fever, and all nose and throat diseases. Two sizes, 50 cents and $1. Send for free horse booklet.

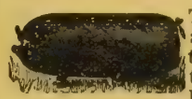
Subscription Proposition.

Co-operative Clubbing Arrangement.

Four Great Papers . . For One Year . . . . . For Only One Dollar.

FOUR STERLING, UP-TO-DATE SPECIAL FARM PAPERS.

THE NATIONAL FARMER AND STOCK GROWER—issued monthly—a magnificent guide and counsellor in all branches of farming, grain growing, fruit growing, dairying, stock raising and feeding, markets, etc.



THE AMERICAN SWINEHERD—issued monthly—a leader in its class. The hog paper, the pig paper, the brood-sow paper and strictly first-class in teaching how to top the market by producing top hogs.

THE SHEPHERDS' JOURNAL is devoted to sheep husbandry on the farm and on the range. It is equally valuable for the breeder as for the herdsman. It is issued monthly, printed on elegant paper, splendidly illustrated and edited by practical men.

THE AMERICAN POULTRY JOURNAL—the oldest, best and most elegant poultry journal issued in the United States. Great on breeding points, and splendid articles on raising, feeding and shipping poultry. THE AMERICAN POULTRY JOURNAL is distinctly practical in all articles. The writers are thoroughly expert in their particular branches of Poultry Husbandry and retain the peculiar quality of being good instructors. You gain something every time you read THE AMERICAN POULTRY JOURNAL.

The four papers above mentioned ought to be on every farm and ranch. Taken singly they cost $2.00 a year. By our co-operative clubbing arrangement we are enabled to offer all four papers one year for One Dollar. Address us at once without fail.

THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

A City Life Commission.

We did not take any stock in the Country Life Commission and did not care to read the conclusions until a long time after the whole performance was over. We then found ourselves just where we were before and just as wise. There is nothing the matter with country life that is not doubly the matter with city life. For every farm boy that cannot earn enough money to support himself there are ten city boys of the same age who are still more dependent upon their parents for food and clothing and money to spend. It is the same with grown-up people. The farmer of the poorest class is sadly outranked in this respect by the poor of the cities. In whole states like New York, Pennsylvania, Ohio, Indiana, Illinois, etc., the living conditions are so far superior on farms than in cities that the Commission should have been instructed to investigate city life and let country life work out its own salvation.

Boys coming to cities from farms would turn right back again if they came into the dark side of city life. They would go back anyway, only every son cannot inherit the old homestead; therefore some farm boys must be customers for the farm boys they leave behind, and many who do come remain in cities because they cannot again obtain the country positions they have given up.

There is urgent need of some city life investigation to ascertain how much of city money goes for necessaries and how much is expended for luxuries. There is an urgent need of light upon the dark city subjects. When farm earnings average $600 and $800 per farm and a city family will claim to be starving to death on a thousand dollars a year, there is room for investigation.

It would be interesting to know how many city housewives are buying bread at 10 cents a loaf, when they could buy flour and bake the same loaf for 2½ cents. It would be nice to discover how many families have a person to do the marketing and see what they get for the money, and how many families telephone their orders and are paying two prices instead of one out of clerks' and salesmen's salaries that are a good third higher than they used to be, and yet not large enough to stand the racket of carelessness in buying and ignorance in cooking.

For every good, economical housewife in cities there are ten in the country, and although many a farmer's wife has cause to complain of her hard lot, it will not require a Country Life Commission to find out that hereafter the farmer's wife will have more conveniences and less work.

We are not quarreling over city conditions or how city people live. There is certain liberty of action that all people are entitled to, and they are also entitled to obtain some experiences for themselves, for it is said some kind of people will learn no other way. But we have a quarrel with people who continually assume that the farmer is ignorant and the city people are wise. The reverse is the true situation. The next Commission appointed by the President should be appointed for the purpose of investigating city life, and a few first-class farmers should be members of the Commission. The first discovery would be that the American families are unthrifty and the foreign elements now coming in, Hungarians, Greeks, Russians, etc., are taking possession of the city occupations, and are the only people who provide food, lodging and raiment before they begin to expend money for luxuries.

Pleasant Hill Produce Association.

On July 27th the Pleasant Hill Produce Association of Allen, Miss., was launched. The purpose of this association, as stated in its Constitution, Article 1, Section 3, shall be to market the farm products of its members; to economic buying for same, and to disseminate needed information upon matters of interest to its members. Mr. F. E. Herring, of Martin, was made President; Dr. Colon Simmons, of McBride, First Vice-President; and P. S. Mangum, of Allen, Secretary and Representative.

The association expects to ship produce in car lots, and when it appears to be necessary to do some retailing. The association will place its representative in the field to superintend the sale of produce and to buy such articles and packages as may be of advantage to obtain in bulk and distribute same according to the requirements and orders of individual members.

The members of this association are farm owners and operators, living in Claiborne, Copish, Jefferson and surrounding counties, and is the seat of the famous "Mississippi cane syrup," made from the sugar cane as raised to perfection in those counties, and unsurpassed by anything of its name in the world. There is usually a surplus of Irish potatoes, beans, hay and grain to be shipped, and now that the boll weevil has invaded the country there will be a greater production of cattle, hogs and sheep. The lumber shipment from those counties is a considerable item.

By thus organizing buyers are enabled to find large quantities of fresh staple goods at reasonable prices. Buyers will do well to send daily quotations to such associations.

By communicating with Prof. P. S. Mangum at Allen, Miss., buyers can feel safe, as the Board of Directors, consisting of eighteen members, guarantees to make good any promised statement made by him as Acting Secretary and Representative.

We give the association our best wishes and will hail the day when more such organizations will be seen among the farmers.

The American National Live Stock Association.

As we understand it, the American National Live Stock Association, with headquarters at Denver, Colo., is the authorized representative of the live stock interests of the United States of America, and for that reason we publish the resolutions, so far as tariff matters are concerned, as adopted for the guidance and instruction of the members of that association. These resolutions are identically the same as those The National Farmer and Stock Grower has advocated ever since it was first issued, and is by us advocated for the reason that we believe in them:

The Preamble.

Whereas, This association recognizes that it has always been and must continue to be the settled policy of the government of the United States to raise a very large proportion of the funds necessary for its support from import duties, which will in a large measure affect the production, the consumption, the markets and prices of such imports and similar products of this country, the benefits and burdens of which should be fairly distributed as between the people, communities and industries of this country; and

Whereas, We believe that it has been plainly manifested by what has been said and done in Congress, and elsewhere, in connection with recent tariff legislation and attempted legislation, that it is the intention of many of our public men to open the door to the free importation of the products of the farm and ranch, including live stock, meats and other products of live stock, grains and feeds, and other food products in that part of the United States mainly engaged in such business, thereby shifting the burdens of the tariff system to the agricultural and stock-raising portions of the country, and depriving those industries of such benefits as would accrue were the tariff duties retained on those products. It appears to us that it is the avowed and deliberate intention to take the tariff off of the products of agriculture, including live stock and its products, for the purpose of reducing the price which the producer may receive, to the great injury of our business and for the supposed benefit of others; and

Whereas, Live stock and the products of live stock, including wool, hides, meat and meat food products, and all the products of the farm and ranch, should in justice receive the same measure of benefit or protection as is accorded to the products of other industries of the United States, including manufactures, without regard to whether it is called a protective tariff or a revenue tariff; and

Whereas, We believe it to be to the interest and to be the sentiment of the live-stock producing and agricultural interests of the United States that live stock and the products thereof, and all farm products, are entitled to and should receive an equal and equitable share in whatever benefit may or should flow from any system of import duties of the country; and

Whereas, We declare it to be unjust and discriminatory as against the live-stock producing and agricultural interests of this country, and therefore against the best interests of the United States as a whole, to place on the free list, and subject to the cheapest world-competition, live stock and its products, and the farm products of this country, while knowing that a tariff system will and must be maintained on manufactures and other commodities, the burden of which the farmers and stock raisers must bear, to the extent at least of their purchase of those articles of manufacture and commerce upon which there are import duties; now, therefore, be it

Resolved, By the American National Live Stock Association in convention assembled at Denver, Colorado, December 12 and 13, 1911:

The Resolutions.

1. That we demand the retention of sufficient duties on imports of live stock and its products, and all farm products of this country, as will be equal, fair and just to the industry which we represent, compared to the import duties on other products, whether those duties shall be levied for the avowed purpose of protection or for the avowed purpose of producing revenue to run the government.

2. We condemn us unjust, unfair and discriminatory the Payne-Aldrich Bill, in placing hides on the free list, and demand the restoration of same, and declare that we are unalterably opposed to the placing of live stock and live-stock products, and the products of the farm and ranch, on the free list.

3. We appeal to the live-stock producing interests and to the agricultural interests to unite in opposition to a discriminatory and unjust system of levying import duties whereby our interests shall be sacrificed for the benefit of others.

4. We declare it to be the just right of the live-stock and agricultural interests of this country to enjoy equally whatever preferences any system of import duties gives to the industries of this country, incidental or otherwise, in the home markets of the United States, in preference to the products of foreign countries, and we appeal to the fairness and good sense of the people of the United States to maintain the fundamental principle of our government —equal rights to all and special privileges to none.

H. A. JASTRO, President.

T. W. TOMLINSON, Secretary.

E. Myers, President, E. Myers Lye Co.

There Is A Specially Prepared Lye That Prevents Hog Cholera

It didn't "just happen" that *Merry War POWDERED Lye* has *proved* itself, by the *actual experience* of thousands of farmers to be the *safest preventive of hog cholera, destroyer of worms* and the best hog *conditioner and fattener* the world has ever known. Far from it—that is exactly what I meant it *should* do—what I have been earnestly striving to make it do during the past 20 years. Therefore I know what I am talking about when I say that *Merry War POWDERED Lye* is just what I claim it to be—*a POWDERED lye, specially prepared, that will prevent hog cholera, destroy worms, condition and fatten hogs!*

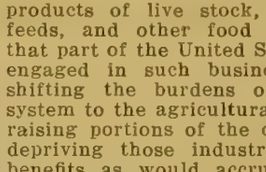
Don't be persuaded to try an ordinary, old fashioned lye as a *possible* preventive of hog cholera. At best it would be a doubtful, and perhaps a *dangerous* experiment. The use of *Merry War POWDERED Lye* is *not* an experiment. *Experience* has *proved* my claims for it. Plain directions for feeding to hogs are printed on the label. These directions are *not* guess work. They give, as the right quantity, one-half can to a barrel of swill or drinking water and *Merry War POWDERED Lye* should be used in that proportion *daily* to obtain the desired results.

That's mighty cheap hog insurance—*only 5c a month*—to *protect* a hog from *cholera*, and *worms, to keep him fat, sleek, healthy*, turning all feed into *juicy fat*—so you can market at the *highest* price. Letters from hundreds of farmers tell how *Merry War POWDERED Lye saved* their hogs and *increased* their pork profits. Here is a sample:

"I have about 40 hogs and I have been feeding them *Merry War POWDERED Lye* the past three months and believe it will do all you claim. Hogs have been dying all around me, but I have not had any sick."

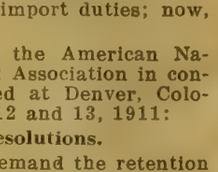
A. C. AIELSON, Vicksburg, Miss.

Now Prove All This For Your Own Self *Most dealers handle Merry War POWDERED Lye; 10c per can (120 feeds). It's convenient to buy by the case, four dozen cans, $4.80. If yours can't supply you write us stating dealers' names—we will see that you are supplied and send you, FREE, a valuable booklet on "How to Get the Biggest Profits from Hog Raising." YOU MAY ORDER DIRECT FROM US AT $4.80 PER CASE OF 48 CANS if your dealers won't supply you.*



E. MYERS LYE COMPANY,
Dept. 22 St. Louis, Mo.

Which Kind Do You Want?



Overland 1913

$985

Overland 1913

Completely Equipped F. O. B. Toledo

This Completely Equipped, Powerful, 30-Horsepower 5-Passenger Touring Car

Here Are a Few of the Big Features:

Self Starter
30 Horsepower
5 Passenger Touring Car
110-inch Wheel Base
Timken Bearings
Center Control
$50 Remy Magneto
$50 Warner Speedometer
$50 Mohair Top and Boot
$25 Clear Vision Wind Shield
$25 Prestolite Tank

THERE never has been such an astonishing automobile value offered to the American farmer. Study the specifications—the detailed values. See the unusually complete equipment—everything possible and practical for an automobile. Remember the thorough and fine Overland construction and you'll get a good idea of this exceptional worth. $985 for this complete, big, powerful car. No extras; nothing additional to buy but gasoline. Ready for service the minute you get it. This car, at this price, smashes all previous records. It even totally eclipses our 1912 values, which a year ago baffled the world. 40,000 Overlands will be made in 1913. This enormous jump in production makes possible this new car at this new price. As our production goes up, prices come down, as has been shown in each preceding year.

In this age of rapid progress it is sometimes difficult to grasp the full significance of an important, progressive manufacturing step, such as this car exemplifies. But when you sum up the extraordinary cold dollar for dollar value which this car offers, as compared to any and all competing motor car values, the giant economical manufacturing strength of the huge Overland plants is realized and recognized. It only proves the ability of this most powerful and efficient automobile factory.

Here we can but call your attention to the bare facts. This is the car—a big, powerful, beautiful, spacious, comfortable, self-starting, thirty horsepower, five-passenger touring car—fully equipped—all ready for night or day, rain or shine, service. Made of the best materials on the market, by the most skilled men known to the trade, and in the most efficient automobile shops in America. And the price is but $985.

We can make the positive statement, without any kind of a condition, that this is the automobile industry's record value.

This car can now be seen in any city in America. Over 2000 Overland dealers are waiting to give you your demonstration. Look up the one in your vicinity.

Write us at once for full information and a 1913 catalogue. Address Dept. L 69.

The Willys-Overland Company, Toledo, Ohio

Detailed Specifications—Model 69T

MOTOR—Four-cylinder, cast separately. Bore, 4 in. Stroke, 4½ in. Horsepower, 30.

Mule Quotations at St. Louis.

Mining mules were the feature of the last week in August, but, as a matter of fact, work mules of all kinds were wanted. The following quotations represent car lots. Quotations as follows: 14½ hands, $90 to $130; 15 hands, $125 to $140; 15½ hands, $160 to $240; 16 hands, $135 to $240; 16½ hands, $175 to $280. Superior matched teams can be bought at $500, $600, $800 to $1,000.

Ropp's Commercial Calculator.

This is a standard book, and a revised, enlarged and improved edition. There are millions in use. **Ropp's Commercial Calculator** is especially valuable to farmers. By its regular use many hard problems become easy. It will prevent mistakes, relieve the mind, save labor, time and money, and do your figuring in the twinkling of an eye. As handy as a watch, always ready and reliable. Anyone who will send 50 cents for one-year's subscription to this paper, The National Farmer and Stock Grower, can select one copy of **Ropp's Commercial Calculator** as a free premium. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Western Range Horses.

At the St. Louis National Stock Yards, on Thursday, September 19th, there will be held the seventh sale of Western Range Horses of the present season, and on Thursday, October 3d, the eighth sale of the season will be held. These sales are conducted with clockwork regularity and with absolute fairness by Campbell & Reid and Western Sale Stables Company. There are sales every two weeks. The season is now more than half over, and the only way to obtain some of these fine prospects is to come in and go for them. For further particulars address J. J. Searcy, Sale Manager, National Stock Yards, Ill.

Clay, Robinson & Co. at St. Louis.

Our readers will notice the advertisement of Clay, Robinson & Co., live stock commission agents at ten principal markets, including the St. Louis market at the National Stock Yards, Ill. The card is on page 17 and also refers to the other nine houses. The St. Louis establishment is making splendid sales and occasional high records. Shippers who wish to obtain superior market service for their cattle, hogs and sheep should write to Clay, Robinson & Co. at the nearest market and be placed on the list to receive their market reports.

World's Record on Grass Cattle.

On Monday, August 26, at Chicago, Clay, Robinson & Co. sold for D. N. Hartt, of Two Dot, Montana, twenty-five head of strictly grass Western range cattle, 1,321 pounds average, that they sold for the world's record price for that class of cattle of $9.50 per 100 pounds. They also sold the second cut, 123 head, 1,254 pounds average, at $9.00 per 100 pounds, and thirty-two heifers, 1,157 pounds average, at $7.75 per 100 pounds.

THE NEW ST. LOUIS FAIR

To be Open the Week of September 23d to 28th, 1912.

An army of men are at work on the grounds of the New St. Louis Fair, which are located on the edge of the city limits, on the St. Charles Rock Road. And well they may work, for the reason that the grounds will be opened for business on September 23d and there is much to be done.

Every effort is being made by the management to revive the St. Louis Fair in all its glory. The programme includes pageants, aviation meets, stock show, horse show, poultry show, sportsmen's show, harness meet, horse racing, auto racing, motorcycle racing and novelty racing.

The President of the organization is C. F. Blanke; Vice-President, Geo. W. Maxwell; Secretary, Thos. W. Garland; Treasurer, Julius Kessler. The General Manager is Joseph A. Murphy, former Secretary of the old St. Louis Fair; and the office of the company is at 1023 Chestnut street, St. Louis, Mo. The Fair Grounds are admirably located and reached by good roads for vehicles, automobiles and several lines of street cars. The farmers and stockmen who have kindly feelings for the old St. Louis Fair should remember to come in and assist the new enterprise. It does not conflict with the Missouri State Fair at Sedalia, which is a week later, September 28th to October 4th, or the Illinois State Fair, which is two weeks later, commencing October 4th and ending October 12th.

Bumper Crop of Oats.

The oats crop of 1912 will be the largest the country has gathered, surpassing by 21,000,000 bushels that of 1910, the previous record. On August 9th the United States Department of Agriculture reported: Condition, 90.3 per cent. of a normal, compared with 89.2 per cent. last month, 65.7 per cent. last year, and 81.4 per cent., the average condition for the past ten years. Indicated yield per acre, 31.9 bushels, compared with 24.4 bushels last year, and 28.4 bushels, the average for the five years, 1906-10. On the planted area, 37,844,000 acres, it is estimated the total production of oats, interpreted from condition reports, will be 1,207,000,000 bushels, compared with 922,298,00 bushels last year, 1,186,341,000 bushels in 1910, and 1,007,129,000 bushels in 1909. The amount of oats remaining on farms, August 1, is estimated at about 39,872,000 bushels, compared with 67,973,000 bushels last year, and 64,199,000 bushels in 1910.

Conservation Congress Meeting.

The Fourth National Conservation Congress will meet at Indianapolis, Ind., October 1, 2, 3 and 4, 1912. The officers are: President, J. B. White, Kansas City, Mo.; Executive Secretary, Thomas R. Shipp, Indianapolis, Ind.; Treasurer, D. Austin Latchow, Kansas City, Mo.; Recording Secretary, James C. Gipe, Indianapolis, Ind.

WESTERN RANGE HORSE SALES.

Horse raisers are advised that sales of the very best Range Horses in the country are being conducted twice each month by

Campbell & Reid and Western Sale Stables Co.,

NATIONAL STOCK YARDS, ILL.,

As usual, during the season of 1912. The Eighth and Ninth Sales will be held

Thursday, September 19, and Thursday, October 3,

And every two weeks thereafter until the close of the season. We will be glad to hear from Ranchmen having Horses for sale. The demand is very good this season, especially for well-bred Mares and Geldings in good condition, and every class is in demand, from yearlings up.

Please address,
J. J. SEARCY, Sale Manager,
NATIONAL STOCK YARDS, ILL.

Heck Thomas, for six years Chief of Police at Lawton,, Okla., is dead. He died from natural causes. He was born at Athens, Ga., in 1850, and as a boy of twelve years was riding as scout and courier in the Confederate Army. He was well known in Texas as a terror to lawless bands of desperadoes. He is probably the last of his kind, the settlement of the country having rendered it more difficult for lawbreakers to operate in gangs. He was usually a Deputy United States Marshal, and his headquarters for ten years at a time were at Fort Worth, Texas. He died on August 15th, of Bright's disease.

DR. B. J. KENDALL CO., ENOSBURG FALLS, VT.

St. Louis Horse Market.

At the opening of September business was in fine shape in the horse market. The Eastern trade was entirely satisfactory, and there was very active bidding for Southern classes. The following prices represent the general run of trade: Heavy draft, good to choice, $200 to $230; Eastern chunks, $170 to $195; Eastern chunks, lacking quality, $135 to $160; Southern horses, good to extra, $125 to $145; Southern horses, fair to good, $90 to $125; drivers, choice, $150 to $175; plugs, $20 to $30.

The Army Mule Forever.

The army mule apparently has won his fight for existence. The test of the motor truck as a substitute for the mule on the march has been extensive enough to justify the following statement from Captain M. E. Faville, according to the Pacific Horse Review: "The automobile demonstration has been such as to warrant the conclusion that it is unwise and unsafe to supersede army mules with the troops by any other form of locomotion."

Record Price For Range Grass Heifers

On August 14th, at Chicago, the firm of Clay, Robinson & Co. received from C. B. Gunkel, of Bellfield, North Dakota, twenty-six head of grass-raised heifers, averaging 1,063 pounds in market, and the firm sold them at $8.00 per 100 pounds, which is by 65 cents per 100 pounds the highest price that any live stock commission firm has ever obtained for female grass range cattle. They were a fine lot of grade Herefords raised by Mr. Gunkel.

Trusses Like These Are A Crime

Get Rid of Straps and Springs and be CURED

Simply write for our free cloth-bound Book of Advice, containing facts which took us 10 years of day-after-day experience to learn. It tells how 290,000 people were benefited or cured in a simple and inexpensive way. Book explains why drugstores should not be allowed to sell their misery-making trusses. Explains the dangers of operation and why it is no longer necessary. Exposes the humbug "discoveries," "appliances," "plasters," etc., and puts you on guard against throwing money away.

Book tells how the wonderful Cluthe Self-Massaging Pad cures Rupture by strengthening the weakened muscles while holding with ease—**Sent on 60 days' trial to prove it**—how it is waterproof—no leg-straps—no body spring—how it ends constant expense on account of rupture. 5,000 Public Endorsements sent with the book.

After you have read this book you'll know more about your condition than if you had gone to a dozen doctors. You'll know how to get immediate relief without risking a penny. Just address:

Box 776—CLUTHE CO., 125 E. 23d Street, New York City.

Sheep and Lambs at St. Louis.

At the close of August the muttons and lambs were being sold as follows on the St. Louis market: Best fat lambs were worth $6.00 to $7.00 per 100 pounds; medium kinds, $6.00 to $6.50; fair offerings, $5.50 to $6.25; however, a few of the best reached $6.50. Most of the culls are selling at $4.50, with the trashy little ones at $4.00 and under. Mutton sheep are worth $3.75 to $3.85, most of them $3.75. Good breeding ewes sold the last few days at $4.50 to $4.85; fair kinds, $4.00 to $4.50; good stockers, $2.65 to $3.50; fair, $2.25 to $2.50; old cull sheep, $1.00 to $2.00; and bucks, at $3.00—all prices quoted being by the 100 pounds.

St. Louis Hog Market.

On August 30th, at the St. Louis market, several loads of hogs brought $8.90 per 100 pounds, but the bulk of sales went at $8.65 to $8.85. What hogs suited shippers and butchers brought $8.80 and upward, while the plain mixed hogs and others that sold went at $8.50 to $8.75; best grades of pigs and lights under 150 pounds, $8.25 to $8.65; medium grades, $7.25 to $8.00; fair offerings, $6.25 to $7.00; poor little pigs, $5.75 to $6.00; and the rough throw-out packers at $7.75 to $8.00 per 100 pounds.

Southern Cattle at St. Louis.

There are quite a variety of cattle in the Southern trade, which on August 31st were quoted as follows: Choice to prime corn-fed steers, $7.50 to $8.25; good to choice fed steers, $6.25 to $7.50; medium to good fed steers, $6.25 to $7.00; common to medium fed steers, $5.75 to $6.25; good to choice grass steers, $6.00 to $7.25; medium to good grass steers, $4.75 to $5.75; common to medium grass steers, $4.00 to $4.75; medium to good cows, $4.50 to $6.50; cutters, $3.50 to $4.25; canners, $2.50 to $3.25; bulls, $3.25 to $5.00; fair to choice heavy calves, $5.25 to $6.00; heretic calves, $3.75 to $4.35; yearlings, $2.75 to $3.50—all quotations being at the price stated per 100 pounds.

Feeding Cattle Prices.

At St. Louis, August 31st, at the close of the week, a summary was made of prices paid for stock cattle, feeders and dairy cattle. The prices were as follows: Good to choice feeders, $6.50 to $7.50; good to choice stockers, $5.50 to $6.25; medium to good feeders, $5.75 to $6.50; plain to good stockers, $5.00 to $5.50; common to light stockers, $4.50 to $5.00; stock cows, $3.50 to $4.25; fancy milkers, $50 to $70; fair to choice milkers, $35 to $50; medium milkers, $25 to $35; common milkers, $15 to $25—all quotations being at the price stated per 100 pounds, except milkers, which represent the cow and calf.

Native Butcher Cattle.

At the St. Louis market, August 31st, the following were prices quoted and paid for native butcher cattle: Choice to fancy corn heifers, $8.00 to $8.75; good to choice heifers, $7.00 to $8.00; medium to good heifers, $5.50 to $6.50; common to medium heifers, $4.50 to $5.50; fancy cows, $6.50 to $7.25; good to choice cows, $5.50 to $6.50; medium to good cows, $4.50 to $5.00; cutters, $4.00 to $4.50; canners, $2.75 to $3.25; fancy heavy bulls, $6.00 to $6.50; good bulls, $5.00 to $5.50; heavy sausage bulls, $4.75 to $5.00; light sausage bulls, $4.00 to $4.50—all quotations being at the price stated per 100 pounds.

Bankers Are Conservative.

Therefore what they say carries weight. Read this unsolicited letter from a prominent banker recently received by us:

Iuka, Ill., August 3, 1912.

CLAY, ROBINSON & CO.,
National Stock Yards, Illinois:

Gentlemen:—Your account-sales just received was VERY PLEASING to me. Your sale of the cattle was EXCEPTIONALLY GOOD, and the sale of veal calves was BEYOND MY EXECTATIONS, as you TOPPED the market. Further, I consider your sale of the lambs ABOVE THE TOP, as they were not top lambs. Yours Truly,

(Signed) D. W. HOLSTAW,
President Iuka State Bank.

Native Beef Cattle Prices.

On the last day of August, 1912, the following quotations represented the native cattle trade at the St. Louis National Stock Yards and were as follows: Choice to prime steers, $9.15 to $10.25; good to choice steers, $7.75 to $8.75; medium to good steers, $6.50 to $7.50; common to medium steers, $5.50 to $6.50; choice to prime yearlings, $8.50 to $9.00; good to choice yearlings, $7.25 to $8.25; fair to good yearlings, $6.00 to $7.00; common steers, 850 to 1,000 pounds, $5.25 to $5.85—all quotations being at the price stated per 100 pounds.

VALDESSA SCOTT, 2d—ILLUSTRIOUS HOLSTEIN-FRIESIAN COW, mentioned on page 11. Official record, 33.5 pounds butter-fat from 694.6 pounds of milk in seven days and 132.388 pounds butter-fat from 2,933.9 pounds of milk in thirty days. As we understand it, VALDESSA SCOTT, 2d, has produced the largest amount of milk and the largest amount of butter-fat in seven and in thirty-day tests. The actual merchantable salted butter in seven days is 41.875 pounds, and in thirty days 164.270 pounds.

EGG-LAYING CONTEST.

Nine-months' Records—Also Observations by the Director.

At the end of July the egg-laying contest at Mountain Grove, Mo., had discovered a hen that had passed the 200-egg mark in nine months. Mr. T. E. Quisenberry, Director, wrote to us, giving report as follows:

"The Leghorns and smaller breeds do not seem to be affected by the hot weather, and are now making better records and gaining ground faster than the larger breeds and varieties.

"The hot weather, the moulting season and 355 broody hens during the month of July cut the egg yield, and it will doubtless rapidly decrease from this time on.

"No pen has yet gotten so far in the lead but what the rank of the leading pens could be changed in a single month.

"The indications are that the pen which can continue to lay a reasonable number of eggs through the hot weather is going to be the pen which will win.

"Neither is the best individual record yet settled by any means.

"While a White Plymouth Rock hen has laid 208 eggs, yet a White Orpington is only 9 eggs behind her, and a number of others are in close pursuit.

"A total of 71,280 eggs has been laid in the nine months. The record for July was 8,873 eggs. Only seven pens were able to lay 100 eggs or more during the month. The best individual record is that made by Lady Showyou, White Plymouth Rock hen, No. 717. This hen has not missed a month since she entered the contest, her record for each month being as follows:

"November, 17 eggs; December, 22 eggs; January, 5 eggs; February, 17 eggs; March, 29 eggs; April, 29 eggs; May, 31 eggs; June, 29 eggs; July, 29 eggs. Total, 208 eggs.

"She has 92 days yet left in which to complete her year's record. The only month this hen has failed to lay an unusually large number of eggs was in January. We had a snow about January 5th, which was nearly two feet deep, and the temperature went to about 24 below zero. Lady Showyou laid an egg the day following and then quit business until about the 5th of February, taking just a month's lay-off. She then began a rather remarkable period of production in the days following this, laying 146 eggs in 151 consecutive days. She is the most industrious hen among the 655 in the contest. She goes immediately from the roost about daylight each day into her trap nest. She lays the egg and is released from the nest about 8 o'clock in the morning. She then spends the remainder of the day in eating a large amount of food and drinking lots of water, out of which to manufacture eggs for future days. We can usualy tell about when she is going to miss a day. As this time aproaches, she lays a little later each day; that is, if she is to miss soon, we will not find her in the nest so early as usual. She will go on at 10 o'clock, the next day at 1 o'clock, and the day before she misses we do not find her on the nest until about 4 o'clock in the afternoon. When we find her on as late as this, she then misses the following day, but the next day has laid by 8 o'clock and keeps it up at that hour until time to miss again. She has only missed laying five days in the past five months, and this has been true of her in each case when she missed a day.

Individual Records.

"The highest individual records to date; that is, all hens which have 175 or more eggs to their credit, are as follows:

No.	Eggs.
717—White Plymouth Rock	208
541—White Orpington	199
381—Barred Plymouth Rock	191
372—S. C. Red	189
601—R. C. Red	189
602—R. C. Red	189
179—S. C. White Leghorn	188
119—S. C. White Leghorn	186
19—Ancona	185
346—S. C. Red	183
613—Barred Plymouth Rock	183
64—S. C. Brown Leghorn	182
402—Silver Wyandotte	181
545—White Orpington	181
525—Silver Wyandotte	180
198—S. C. White Leghorn	180
488—White Wyandotte	177
663—Black Langshan	176
79—R. C. White Leghorn	176
487—White Wyandotte	176
463—Barred Plymouth Rock	175
401—Silver Wyandotte	175

Pen Records.

"The rank of the different varieties and the best pen record by each of the leading varieties is as follows:

Pen No.	Eggs.
107—R. C. Reds	808
13—S. C. White Leghorns	778
52—White Wyandottes	765
112—Black Orpingtons	760
85—Barred Plymouth Rocks	759
118—Buff Orpingtons	719
59—Silver Wyandottes	720
28—R. C. Brown Leghorns	714
96—S. C. R. I. Reds	711
114—White Orpingtons	666
77—White Plymouth Rocks	662
123—Black Langshans	650
37—Anconas	629
39—S. C. Black Minorcas	624
30—R. C. White Leghorns	618

"If the above pens and eighteen other pens of the same varieties which have made equally good records did not lay another egg during the year's test, their owners would have reason to feel proud of the showing made by their hens. The average person speaks of his flock as 'laying well,' or as 'good layers,' but he does not know what it really means and what his flock can really do until put to a year's test. Nine times out of ten he will be disappointed if an accurate record is kept for a year. There is nothing startling about the above records, but it is a good, clean, creditable showing for nine months for five hens.

Critical Observations.

"But of what value is a high egg record? In our opinion, high records within themselves are but sounding brass and a tinkling cymbal unless we can learn something from them and profit by them. They mean nothing unless we can learn how to produce similar yields. Feeding and housing, of course, have much to do with it, but we place greater value on the breeding than on either housing or feeding. The trap nest is a necessity in building up a laying strain, but this within itself is of but little value. The trap nest is only a means to an end. If you trap-nest some of your flock and then mark the chicks so you will know the sire and dam of the pullets and cockerels, then trap-nest these pullets and breed each year from the hens and males which seem to be able to breed high producers; in other words, you must do some pedigreeing with the trap-nesting. Every hen has hundreds and even thousands of undeveloped eggs in her body. The problem is not one of feeding and housing eggs into the hen's body, but the problem is how to get the eggs out of her body. The hens in this contest which have not laid an egg, we will guarantee if they are killed at the close of the contest, it will be found that each of them have from 1,000 to 5,000 undeveloped eggs in their bodies, apparently normal ovaries, but the process of egg production has been upset somewhere.

More Observations.

"More depends upon the male than the upon the female in producing a strain of layers. By trap-nesting and pedigreeing, as stated above, you will soon be able to discover the males which are able to produce females which lay a large number of eggs each year. When such a male is discovered, you have made a long step toward solving the problem. More seems to depend upon the record of the male than upon the female. The trouble with most of us in the past has been that we have been breeding from high laying females and paying no attention to the breeding of the male. We could cite you to many farms in this state where we have seen good laying strains ruined in this way. Dr. Pearl, of the Maine Experiment Station, says: 'Inherited high productiveness is not transmitted from mother to daughter, but may be transmitted from mother to son, or from father to son or daughter.' He has reached this conclusion after trap-nesting and pedigreeing hundreds of birds.

"We repeat, if you wish to build up a great laying strain, more depends upon the breeding of the male than upon the female, but you should always breed from good layers to get your male birds. It is only practical for the average person to trap-nest during the winter months of November, December and January of the pullet year to select your best layers, providing the pullets are mature, of course. These are really the months which determine which are your best layers as a general rule, but some hens are the exception and lay best in summer, and some hens make their best records the second year, and some even the third year of their life."

Poultry in Late Summer and Fall.

The high cost of feed for poultry at this time makes it necessary to carry as few of the birds through the winter as possible. The lessening of the size of the flock should begin as soon as egg production decreases, and should be continued till all of the surplus fowls are disposed of. This will make a large difference in the cost of feeding during the next few months. Moreover, in summer poultry brings a larger price than later, when more of the young stock are available for marketing.

If the flock is a big one, it will pay to separate it into two flocks—one to be kept throughout the winter season and the other to be disposed of for meat. This separation is for the purpose of giving two different modes of treatment in feeding. The flock that is to go to market can be fed on corn and like feeds rich in starch, that they may lay on as much weight as possible in a short time. The extra fat gives tenderness and flavor to the flesh. The fowls being fed for market need not have so much exercise as the other fowls. The fowls being kept for the continuation of the flock should have feeds not very rich in fat-forming ingredients, and may be allowed all the range possible, as it is not desirable to have them become fat, which is against egg production. On many farms this time the fowls have the run of the entire farm and exercise is unlimited. This keeps them in shape for egg production later in the season.

There is not so much danger overcrowding the spring chickens there is of overfeeding the fowls the previous year. It is difficult put fat onto spring chickens, ev when they are closely confine When such fowls are kept by ther selves there is little danger of ove fattening. But in most flocks t old and young birds are ke together as a convenience.

If early layers are wanted, th feed should be made as nutritious a possible to hasten maturity. A goo deal of meat and ground bon should be mixed with the ration, an these will greatly hasten the ma turity of the young pullets. Eg production is largely a matter o maturity. It is surprising that mor keepers of poultry do not have bon grinders, which would make it pos sible for them to feed ground bon at a very small cost.

As much growth as possible should be secured before cold weather comes, for the cold reduces the power of the food to get results in the way of development. When the nights and days become frigid, much of the starch and fat in the food go to make heat.

There is another thing that must be kept in mind in the late summer, and that is to give the young birds sufficient protection against wet and cold, which encourage the development of such troubles as roup. As soon as the weather begins to get bad, put the younger birds into dry and protected quarters. Failing to do this has sometimes led to the development of diseases that have remained with the flock during the entire winter.

$10 A DAY
Send for Free Suit

THE SEWING AWL.

A Most Useful Premium For Subscribers to The National Farmer and Stock Grower.

It is surprising how useful this little implement is. It is the Myers Famous Lock Stitch Sewing Awl. It is the only sewing awl made with a groove running the full length of the needle and has what is known as a diamond point. In order to sew leather or any heavy, thick material without breaking or cutting the thread it requires an awl with the groove running the full length of the needle. You might just as well have no groove in the needle as to have it only part of the way. With the Myers Awl you can sew old or new harness, saddles, carpets, canvas, tents, rugs, quilts, shoes, grain bags, and many other things. You can use any kind of thread in the Myers Awl and it makes a lock stitch same as a sewing machine. It is very simple; a woman can use it as well as a man. It is one of the most practical devices ever invented. They are put up with two needles—one is straight and one curved—with a small screw-driver and wrench combined; also a reel of waxed thread with each awl ready for use. Every teamster and farmer should own a Myers Lock Stitch Sewing Awl, as there is use for one in almost every household. The Myers Awl is nicely finished, the metal parts are nickel-plated, the needles and wrench are kept in the hollow handle, which has a screw top.

Anyone who will send one dollar cash to pay in advance for two-years' subscription to The National Farmer and Stock Grower can select one of Myers' Lock Stitch Sewing Awls, which we will send by mail, postage paid, as a free premium. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Official Apple Packing.

It is said that the bill now before Congress aiming to establish a system of packing which will permit the use of the brand "U. S. Standard" stands a good chance of becoming a law. It is also said that the bill has the approval of men throughout the country in all branches of the apple industry, although one of the chief promoters of the bill, Congressman Sulzer, of New York City, does not represent an agricultural population.

This bill, should it become a law, will not compel the use of the form of package or the adoption of the grades specified—it only stipulates that packages of apples shall not be marked "U. S. Standard" unless they conform to the provisions of the bill. In the first place, three standard grades of apples are established, as follows: U. S. Standard, minimum size, 2½ inches; U. S. Standard, minimum size, 2¼ inches; U. S. Standard, minimum size, 2 inches; in each case the minimum size specified being in transverse diameter. Apples so packed are to be of one variety, hand-picked, well grown, of good color for that variety, normal shape, and practically free from bruises and other defects, or within 10 per cent. of these specifications. The standard barrel shall have dimensions as follows: Length of stave 28½ inches; diameter of head, 17⅛ inches; distance between heads, 26 inches; circumference of bulge, 64 inches, outside measurement: thus giving as nearly as possible 7,056 cubic inches. Barrels of other sizes used for apples shall not be considered as standard unless plainly marked on end and size, showing their fractional capacity in relation to the standard. The act will be effective July 1, 1913.

Laundering Table Cloths.

Many young housekeepers, and indeed not a few older ones, have never learned the value of having their table linen properly laundered, and the care the linen receives in the laundry makes years of difference in its wear.

Table linen should not be used long enough to become very soiled, as the hard rubbing necessary to get it clean will soon wear it out, and it is a good plan to remove all spots and stains from the cloth as soon as it is removed from the table, when it may be dried and put aside until ready to wash. Should table linen show any sign of turning yellow, wring out the pieces in warm suds, blue slightly, then dry and store again, and be sure that it is thoroughly dried and well aired before putting away. Some housekeepers drop a pinch of salt on a stain as soon as it is made, and this tends to its eradication.

It is nearly as essential to hang out table cloths properly as to wash them well, for if they are allowed to dry out of shape, stretching and pulling them straight wears them more than use, and the best way to keep them in shape is to gather the edge lengthwise in your hand as if about to run a seam, then wring and hang the cloth over the line. They should be hung across the line with the ends down, so that the weight while wet may come upon the lengthwise threads, as the warp threads are much stronger than the filling.

Table cloths generally wear out first in the folds, and by cutting off a few inches from one end and one side all the folds will be altered, thus giving the cloth a fresh start. A table cloth ironed with two lengthwise folds and then wound over a roller will look far better on the table than one with creases from too much folding, and any round piece of wood covered with some soft material can be used for the roller.

The table cloths and all the small cloths are given that clear white appearance so much desired by washing them through warm suds made with borax soap, and they come out white with less rubbing if they are allowed to soak for an hour in the suds before rubbing them out. There is rarely any necessity for rubbing table linen on a board; rubbing soiled spots with the hands, working up and down in the warm suds, squeezing and wringing through a wringer is sufficient.

There is nothing better than warm suds made with this Twenty-Mule Team Soap for washing all kinds of table linens from the finest cloths to the cheap, unbleached linens, as this soap makes the water very soft, and this softens the fabric so a very light rubbing gets it beautifully clean, and anything that saves rubbing is a saving to the cloth.

Table cloths should always be ironed lengthwise and from you, and if ironed quite dry and on the right side, they will have the desired gloss, hot irons and much pressure being requisites to success in laundering nice table cloths.—Martha.

Burbank's Crimson Winter Rhubarb.

A PREMIUM worth a fortune. A plant that can be grown in paying quantities on any small piece of ground, also in the house cellar. Returns $1,000 profit per acre. This is a creation by the famous plant specialist, Luther Burbank, of California. Rhubarb is a universal plant, and this Burbank's Crimson Winter Rhubarb is the King of the entire species, producing stalks of medium size, twelve to eighteen inches long, and producing them in all the fifty-two weeks of the year, whereas the productive life of common sorts is twelve weeks.

Burbank's Crimson Winter Rhubarb—Improved by Wagner.

A few roots of Crimson Winter Rhubarb will supply a large family and at the same time increase roots to enlarge the crop. We have decided to use a few roots of Burbank's Crimson Winter Rhubarb in connection with the Subscription Department of The National Farmer and Stock Grower.

The National Farmer and Stock Grower

is a nice, clean, ably-edited general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, to dairymen, to vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, to horse and mule raisers and dealers, and it contains many good poultry facts, etc., etc., etc.

THIS IS A DOLLAR PROPOSITION.

Send us One Dollar ($1.00) and we will credit you with two-years' subscription to The National Farmer and Stock Grower, we will send you by mail prepaid Six Roots of Burbank's Crimson Winter Rhubarb, and we will also send you a copy of J. B. Wagner's booklet, entitled "RHUBARB FOR PROFIT." This premium is in line with the policy of the publishers of The National Farmer and Stock Grower to furnish premiums that can be developed. Rhubarb is never dormant in warm climates, and in any country the roots can be planted any time the frost is out of the ground. Address,

THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

The 1912 Corn Crop.

According to the United States government report on August 9th, the condition of corn was 80 per cent. of a normal, compared with 81.5 last month, 69.6 last year, and 82.8, the average for the last ten years. Indicated yield, per acre, 26 bushels, compared with 23.9 last year, and 27.1, the average yield per acre for the five years, 1906-10. On the area planted, 24,744,000 acres, it is estimated the total production of corn, interpreted from condition reports, will be 2,811,000,000 bushels, compared with 2,531,488,000 last year, 2,886,260,000 in 1910, and 2,552,190,000 in 1909. It will be remembered that the corn crop of 1910 was first estimated at 3,125,968,000 bushels.

In Massachusetts, only five per cent. of the total value of crops was contributed by cereals. Hay, forage and vegetables constitute the main crops.

The state of Massachusetts devotes 2,750 acres to flowers, plants and nursery products, with an output valued at $3,000,000.

LIVE STOCK BREEDERS' CARDS.

POLAND-CHINA HEADQUARTERS.

Write for prices and you will receive an actual photograph of MASTER KEEP ON, the best Boar we ever owned. Satisfaction guaranteed in all sales.

Prairie—One car No. 3 at $10; one car No. 2 at $11; one car good No. 2 at $12; one car choice No. 2 at $14. Alfalfa—One car No. 3 at $13; one car choice at $17; one car choice at $17.50. On East Side: One split car clover-mixed at $15, delivered to St. Louis. Timothy—Two cars No. 2 at $10; one car No. 2 at $14; one car No. 1 at $16; three cars No. 1 at $16.50; one car No. 1 at $17. Clover—One car No. 1 at $15.50.

BLOODED STOCK NOTES.

On October 23d Aberdeen-Angus cattle will be sold at public auction by W. F. Eckles, of Green City, Sullivan county, Mo., who has a fine herd.

On August 16th, at Wheaton, Ill., Thos. Stanton, breeder of Berkshire swine, sold forty-one head at auction at an average of $95 per head. The top of the sale was $875, paid by Geo. J. Sayer, of McHenry, Ill., for the boar Sittyton School Boy by Schoolmaster.

Again Mr. A. F. Siefker, of Defiance, Mo., is advertising his pure-bred Poland-China hogs for sale. He has now a nice lot of sturdy pigs for sale out of sows that are good enough to be in any herd. Mr. Siefker always aims to keep a customer by treating him right.

O. Harris & Sons, of Harris, Sullivan county, Mo., will sell a draft of their fine herd of Herefords on October 23d.

Mr. J. G. Truman, Manager of Trumans' Pioneer Stud Farm, Bushnell, Ill., arrived home August 8th with an extraordinary collection of Shire, Percheron and Belgian stallions, running in ages from two to seven years old. Mr. Truman with his father and brother attended the leading shows of Europe and bought a grand collection. A catalogue of these horses is already issued and will be mailed on request. The catalogue also includes Hackney horses.

The National Dairy Show will be held at Chicago, October 24th to November 2d, and we are requested by Mr. W. E. Skinner, General Manager, to announce that entries close October 1st.

Mr. John McLaughlin, of Marmaduke, Ark., has come back again with an advertisement in order to advertise some good Poland-China pigs that he is offering for sale, also several bred gilts and sows of his own raising. Nearly all the pigs are sired by the big Missouri champion, Hutchinson Sensation, and the sows and gilts are to be bred to a son of Royal Meddler. Mr. McLaughlin is closing out his fine herd of hogs at bargain prices.

At Sterling, Ill., October 24th, the Woodland Farm Company will sell a fine lot of Holstein cattle at auction.

Mr. J. W. Kirby, of Kirby Stock Farm, says he will have one of the best offerings that he has ever made and that he will be glad to send to those really interested a photograph of one of his fine herd boars. It will be a good idea to write him. Marmaduke is an important breeding center, situated in Greene county, Northern Arkansas, on the St. Lou and Southwestern Railway, not f south of the Missouri line.

Included in public sales announc for the month of October will be sale of Shorthorns by C. J. McMast at Altona, Ill., on October 22d.

Percheron horses will be sold auction October 25th by T. H. Wei of Blairstown, Iowa.

At Shelbyville, Ky., on Octobe 30th, Giltner Bros. and Luce & Mox ley will sell a fine lot of Hereford of their own breeding. The cattl from these fine herds ought to attrac considerable attention.

On October 31st, W. P. Doolittle of Wodland, Mo., will sell a fine selection of O. I. C. hogs at public auction.

Mr. Alex Taylor, who is advertising Delaine Merino sheep in this edition, in reply to our query, reports that yearling rams will weigh from 100 to 125 pounds; two-year-olds, 140 to 160 pounds; at maturity, from 175 to 200 pounds. Ewes, about 100 pounds when full grown. The fleece is a good, long staple of fine Delaine wool, ewes shearing 8 to 12 pounds; rams, 15 to 20 pounds.

HORSEMEN WANT RESULTS.

And they get them every time they buy a bottle of Frazier's Distemper Cure, or we will refund the purchase price. Distemper, influenza, epizootic, shipping fever, catarrhal fever, coughs and colds cured in three to six days. By placing 10 drops in ground feed, it will prevent these diseases from running through your stable, no matter how horses are exposed. Absolutely safe for mares in foal, stallions in or out of stud, colts and all others at any age or under any condition. Our new size dollar bottle, holding three times the quantity of the fifty-cent-size bottle, is the most practical size for horsemen. Send for our free horse booklet, just issued. "Frazier's" may be had from all first-class druggists, or direct prepaid from the Binkley Medical Co., Dept. H, Nappanee, Indiana.

THE TRADE IN FEEDING CATTLE.

Information on the Subject From a First-class Authority.

Whenever the time comes for the farmer who has plenty of feed on hand to buy cattle for feeding purposes, he is always in need of expert advice upon the feeding-cattle situation. He first wishes to know if there are a large number of cattle already on feed, as the answer has much to do with his own programme, and he also wishes to know if the country is or is not full of feeding cattle, so as to obtain a resonable amount of information at hand upon which to arrive at conclusions upon which to base his own action.

It is absolutely useless to ask this question of even a commission firm, unless they have unusually superior means of ascertaining the answer. We usually ask the question in sufficient time to obtain the answer for publication in our September edition, and that part of the investigation which is best done by a live stock commission agent we ask of Clay, Robinson & Company, for the best of all reasons that they are able to investigate both sides and the middle of the subject, and, what is of equal importance, they make many loans to farmers for the purpose of enabling those farmers to buy feeding cattle in order to feed the cattle and sell them again at a profit, if there is any prospect of so doing. Clay, Robinson & Company are actively engaged in buying stock cattle and feeders for their customers on the ten (10) principal cattle markets of the country, and when the word goes out from the central organization that the stock cattle and feeder trade is under investigation, it is not the hog salesman or the sheep salesman who does the work, but it is the stock and feeder experts who get right down to the heart of the subject and who answer all the inquiries of that character, and all the power and force of the United States Department of Agriculture could not ascertain the facts any better or sooner. Clay, Robinson & Company advise us as follows:

"For some time it has been conceded by those in close touch with both country and market conditions that there was a big shortage of stocker and feeder cattle in this country—East, West, North and South"—say Clay, Robinson & Company, live stock commission men. "However, few realized that the supply of such cattle had reached the acute scarcity stage. But it has. And there is no relief in sight for those who would produce a late fall or winter crop of beef.

"To get up-to-date information on the prospective supply of stocker and feeder cattle at the leading markets for this season, we wrote our houses on the ten leading markets of this country with regard to this subject. The replies all tell the same story—a big decrease, with emphasis on the 'big.' They report a prospective falling off of anywhere from 25 to 75 per cent. from last year, mostly 40 to 50 per cent.

"Reasons for the shrinkage in supplies are easily detected. It is a culmination of affairs that have been working to this end for several years. Extensive Eastern and Middle West breeders of not so many years ago are now feeders. Even the Far West grower has become a feeder by reason of the great demand in winter for hay-fed cattle. Then the 1910 and 1911 drouths, along with the terrible winter, materially reduced the supply of young cattle in the corn-belt and range states through forced shipment to market, or by mortality. Also the great influx of settlers to the range country has cut the cattle supply there. For months market prices have been so high that thousands upon thousands of young and immature cattle, both steer and she stock, have been sent to the shambles instead of being kept back for maturity or breeding purposes. The slaughter of young calves of a good beef type has been on the increase, high prices being the magnet that draws them to market.

"There is no mistaking of the demand for stocker and feeder cattle this season—it will be of the insistent, hungry kind. Enormous crops of oats, corn and hay are practically assured, which, along with record prices for fat cattle, will stimulate the demand as not seen in this country in years.

"Those who intend to stock up with either stock or feeding cattle will lose instead of gain by holding back their orders with the express purpose of getting the stock on a materially lower price basis. Prospective demand and supply this season practically assure the highest average market for thin cattle in the history of the business. Place your orders early and avoid the rush, is good advice to follow."

Clay, Robinson & Company are fully equipped in all departments on the live stock markets of East St. Louis, Chicago, Kansas City, South Omaha, South St. Joseph, Sioux City, South St. Paul, East Buffalo, Fort Worth and Denver.

The 1912 Crop of Wheat.

According to the reports of the Department of Agriculture, August 9th, 1912, it is preliminarily estimated that the yield per acre of winter wheat is 15.1 bushels, compared with 14.8 bushels last year, and 15.5 bushels, the average for the five years, 1906-10. On the area planted, 24,744,000 acres, it is estimated preliminarily the total production of winter wheat is 390,000,000 bushels, compared with 430,656,000 bushels last year, 434,142,000 bushels in 1910, and 418,000,000 bushels in 1909. The quality of winter wheat is 90.7 per cent., compared with 92.0 per cent. last year, and 91.1 per cent., the five-year average, 1907-11.

The condition of spring wheat is 90.4 per cent. of a normal, compared with 89.3 per cent. last month, 59.8 per cent. last year, and 80.3 per cent., the average for the past ten years. Indicated yield per acre, 15.1 bushels, compared with 9.4 bushels last year, and 13.4 bushels, the average yield per acre for the five years, 1906-10. On the planted area, 19,201,000 acres, it is estimated the total production of spring wheat, interpreted from condition reports, will be 290,000,000 bushels, compared with 190,682,000 bushels last year, and 209,979,000 bushels in 1910.

The total production of all wheat is 680,000,000 bushels, against 624,000,000 bushels, final estimate of 1911, 635,000,000 bushels for 1910, and 683,000,000 bushels, the census report of 1909.

The Landlord's Satisfaction.

"Are you the landlord of this hotel?" asked the guest who had his baggage on the porch.

"I guess I be," answered the man with the pale eyes.

"Well, I want to hand this little sentiment to you. Your hotel is positively the worst I have ever seen in this country, and I've traveled all over it."

"I know it," answered the landlord. "And I have a kinder pride in it. Lemme tell you something about it. Every time we git beat outer a board bill it's sure some satisfaction to know that we got the best of the feller that done it."—Exchange.

I'll Rid Your Hogs of Worms I'll Prove It, or No Pay

I'll Feed Your Stock 60 Days Before You Pay

Now is the time to protect your hogs against cholera. The first step is to get rid of the worms that sap their blood and lower their vitality, making them easy victims of contagious diseases. I guarantee to make every animal on your place worm-free, or no pay. Then if disease breaks out in your neighborhood your hogs will be much less apt to contract it and far more likely to recover if attacked. Send me no money in advance. I don't ask you to pay one penny until you see with your own eyes what Sal-Vet will do for your stock; how it will make them thrive better and put on money-making flesh.

Beware of Imitations **SAL-VET** *Look at the Name Carefully*

TRADE MARK REG. U.S. PAT. OFF.

Sal-Vet works wonders on all farm stock. It kills and completely expels stomach and free intestinal worms. It saves your hogs and sheep, saves your feed and makes every animal gain faster on the same feed. All I ask is a chance to prove these things on your own farm at my risk. *Read these letters:*

"Neighbors all around me have lost hogs, but I have lost none since feeding Sal-Vet."—Walter J. Gilbert, Waltonville, Ill.

"My hogs are doing fine, although there are a lot of hogs dying throughout the neighborhood." H. C. Hancock, Narka, Kans.

Sal-Vet is easy to feed—requires no doping, no drenching, no handling. Your stock will like it. Let them run to it freely for 60 days—watch the results while they doctor themselves.

Sidney R. Feil, Registered Pharmacist, and Graduate National Institute of Pharmacy

Send No Money—Just the Coupon

Fill out the coupon at the right—mail it to me today. I'll send you enough Sal-vet to last all your stock 60 days. (It costs only one-twelfth of a cent a day for each sheep and hog and but slightly more for larger animals.) You simply pay the freight charge when it is received and when the 60 days are up report results. If you are not satisfied that Sal-Vet has done everything I claim, I'll cancel the charge—you won't owe me a penny. Fill out the coupon and mail it today.

SIDNEY R. FEIL, President
THE S. R. FEIL COMPANY, Mfg. Chemists
Dept. NF&SG. CLEVELAND, OHIO

Shipments also made from our Western and Southern Branch Warehouses, to save customers time and freight.

Read How SAL-VET Is Saving Other Farmers Thousands of Dollars

"Your Sal-Vet has done all that you claim, and perhaps more. Hog cholera has been all around me, and I have not had one sick hog. I cannot praise Sal-Vet too highly, and I do not hesitate to recommend it to all hog raisers."—(Signed) A. O. Kellogg, Troy Grove, Ill.

"I do not know that your Sal-Vet kept my hogs from cholera, but it was prevalent among all my neighbors' herds, and did not affect ours."—(Signed) Thos. Hauser, Rt. No. 1, Kyles, O.

"I fed a carload of hogs on which I made a thorough test of Sal-Vet for seventy days. Cholera or some disease like it was killing off hogs all around me, but I never had a single one sick; they remained in fine condition during the entire time."—(Signed) W. C. Grove, Box 235, Hominy, Okla.

"I just finished feeding the 200-lb. barrel of Sal-Vet. My hogs are the only ones left in this immediate locality. I haven't lost one."—James F. Martin, Little York, Ill.

PRICES: 40 lbs., $2.25; 100 lbs., $5.00; 200 lbs., $9.00; 300 lbs., $13.00; 600 lbs., $21.12. No orders filled for less than 40 lbs. Never sold in bulk; only in Trade-Marked Sal-Vet Packages.

SIDNEY R. FEIL, Pres.
The S. R. Feil Co., Cleveland, O.

Ship me enough Sal-Vet to last my stock 60 days. I will pay the freight charges when it arrives, report results in 60 days and then pay for it, if it does what you claim. If it does not, you are to cancel the charge. NF&SG 9-12

How Tom and Lucy Trained Their Children.

When Tom told Lucy that she was his heart's choice and his life would not be complete without her, and asked her if she would be his and let him be hers, his manhood was pledged to stand by that avowal. Her reply that she would settle the question as fully as human wills can settle such matters. They had yielded to one of the deepest and strongest yet tenderest commands of nature—a command which no one has ever disregarded without peril to himself. Every man and woman who join for life and all ought to be bound by a link of nature's own forging, for her forces are living ones with which no one can trifle and escape harm.

As they looked into the face of their first child they felt the heavy weight of responsibility which rested upon them. To train and quicken the powers of an unfolding mind; to mould a human character; to fit a life for beauty, truth and duty involve possibilities upon which the finest brains may well spend their best efforts.

No wonder, then, that their desires went up to the Creator and Supporter of all things for guidance and strength. The pity, hope and love induced by a young child are enough to deepen the emotions of any soul.

Nor did they stop at that point in duty's realm, but they resolved to meet life's tasks the very best they could, believing that it is wrong to be ignorant when one can know, and that it is evil to do less than one's best. They thought that before the bar of nature man can not stand acquitted until he has done his best; until he has given mankind the best there is in him.

With brave, true hearts—brave and true because pure—they asked: "What is my duty?" and endeavored to meet its demands. The intuitions of healthy manhood and womanhood taught them that one ought to be strong and keep strong; that one ought to respect his own character and his own convictions of right with the deepest respect; that one ought to be master of both his brain and his muscles; and that right and truth, based on eternal law, must win at last.

So they studied themselves; they studied the book of nature; they studied the thoughts of the best minds of the ages, that they might know well how to do their part, for duty is fulfilled not simply by yielding to mighty impulses, but also by securing for them the best channels of action. They were careful that the unfolding mind should be impressed by beautiful scenes, by gentle, tender words and by those unspeakable manifestations of love that express themselves in the face and especially through the eye. On the walls of their rooms were beautiful pictures. Everything about the house was well arranged. Flowers seemed to find their home there and their odor filled the place. Around the evening fireside they sang songs such as voice the purest sentiments. In their every action, tone and look the children read a message of love.

One of Lucy's friends while on a visit to her home said: "Your baby seems to give you very little trouble. Tell me how you managed to have such a sweet-tempered child!" "Well," said Lucy, "Tom and I have tried to learn how to train a child right. We have been careful not to indulge the baby too much. You know that if you pay them too much attention it soon comes to pass that they demand all one's time. We give all needed care and, as occasion comes, we play with the child, but never encourage the feeling that it has a right to our time at its pleasure. I am careful of my own and the child's health, because we think healthy, well-trained children ought to be happy. Health, you know, is perfect adjustment of part to part, organ to organ and individual to environment. And peace of mind is likewise due to the perfect adaptation of the mind to its conditions and surroundings. So far, we are well pleased with the results. As one by one the children of the household came to the age for learning to walk and talk they were encouraged to do their best. Tom said: 'A child ought to be looked after and helped to acquire a complete control of its hands and feet.' And when other duties would allow we would spend hours to giving attention to the movements of our children and showing and helping them to use their parts well. The outcome of it was that the neighbors thought it was wonderful how well the children

THE BOOK OF LIVE STOCK CHAMPIONS.

Edition of 1912.

Now Ready For Delivery.

True to Life Pictures Reproduced From Photographs Taken in the Principal Show Rings of the American Continent by the Greatest Animal Artists.

ONE THOUSAND CHAMPIONS,

Winners in Annual Live Stock Contests at State and National Fairs and Expositions.

THIS is a new edition of the most valuable book ever published in the interest of high-class stock raising. The pictures in The Book of Live Stock Champions are of famous animals. There are sweepstakes and championship winners at State, National and International Fairs and Expositions. These include individual awards in breeders' competitions, also herds with prize-ring honors; the beef cattle include grand champion steers and car-loads; the dairy cattle include record makers and large producers of milk and butter; the horses include thoroughbred, trotting, coach, draft, hunters, ponies, jack stock, etc. Hogs, sheep and goats are represented by the best in every breed. The book is elegantly bound in blue cloth, 352 pages, with nearly 750 separate and distinct illustrations, one, two, five or more champions to the page.

There is not a second-class animal or inferior picture in the book. Every animal is a record-maker, record-breaker, famous sire, mother of champions, or winner in the prize ring.

Issued as a Souvenir Supplement.

The Book of Live Stock Champions is published as a Souvenir Supplement to The National Farmer and Stock Grower, issued monthly at St. Louis, Mo., a splendid, clean, general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. There are thirty-two pages, four columns to the page.

Special Inducements

To Paid-in-Advance Subscribers--To Old Friends and Patrons.

We offer the first ten thousand copies of this edition at One Dollar per copy, including a two-year subscription to The National Farmer and Stock Grower. The first ten thousand copies are handsomely printed on coated paper and elegantly bound in blue cloth, with gilt title.

This is An Extraordinary Offer.

Here is a Subscription Blank.

My occupation is.....

could use their hands, and that they could talk as distinctly at three or four as most children do at eight. Some accounted for it on the ground that they had been born lucky. Tom said, though, that he didn't think luck had anything to do with it; that he considered it an essential part of parents' duty to guard well all the habits of their children; that the care we had taken accounted for our children's self-control, and that, in truth, the luck was in the painstaking of the parents, for he himself had obtained a better command of his own hands while showing the children how to use theirs."

Their mother trained their minds by reciting and reading to them beautiful stories and poems. They gave her the closest attention, and when at the close she asked them to tell her what she had read, even the youngest could repeat almost the entire piece. She made it a fixed rule to spend at least one evening a week, when the weather was fair, out in the fields and woods with them. And, as she deeply loved nature, she early inspired in them the same taste. She said that she knew no sweeter, truer pleasure than that of the sunny evenings spent among her children looking at the grass and flowers and trees, listening to the chirping insects, humming bees and singing birds and asking and answering the little ones' questions. And when at such times they would all embrace her and say: "Mamma, I love you so much!" her heart was filled with joy.

They were careful to see that the children's tempers were kept sweet. When hungry, they were given something to eat; when tired, they were put to sleep. If they became cross and fretful, search was made for the cause, and that, if possible, was removed. The sweet voice and gentle touch of the mother had charming powers for lessening grief.

Care was taken to teach them what would hurt them, and they were not allowed to tease each other. So little were their ill-humors called up that their self-possession in the face of little annoyances was often spoken of.

At an early age attention was given to make them obedient and teach them self-respect. Tom and Lucy both thought that the deepest principles of a strong character are self-respect and love of right. And they aimed to train the impulses of their children to right action, that as they grew older they would have the strongest incentives and restraints in their own breasts.

They were very careful not to require too much, and at the same time to see that their requirements were kept. If ever a little one was slow when told to do or not to do a thing, it was enough to say: "Mamma, or Papa says so and they know what is best," and the doubt at once passed away.

Early they were taught to tell the truth and to be just and generous in play; never to do anything that would make them ashamed of themselves. Of course, with their lack of foresight, they would sometimes do wrong. When questioned about it they would say: "I must tell you the truth, I did it. I am sorry." In one such case it was suggested to one of the boys that he could deny out of it and no one would ever be able to detect the falsehood. He spurned the suggestion, saying: "I would know it on myself. Do you think that I want to go around with my heart telling me that I do not tell the truth? I would rather take the punishment, whatever it is, and be done with it, than to go about ashamed of myself and thinking that I am such a big coward as to do wrong and then deny it. My word is worth too much for me to break it." So deeply was the principle impressed on their minds that they shrank at even the thought of dishonoring themselves. To encourage them in self-watchfulness, their mother would at times point out to them what was wrong in conduct and advise and warn them and thus deepen their sense of right and truth.

Knowing the disposition of children to imitate, Tom and Lucy guarded well their own actions and chose the companions of their children. Thus they had no rude, unkind or vulgar words in early life to shadow their later years.

When the time for school came, the teacher was chosen for his practical sense and fitness for his work. Tom said he was persuaded that there was an orderly unfolding of the mind and studied with deep interest the facts of child-life as brought out by our leading educational thinkers who are seeking to put education in line with nature's laws. And, too, he believed in the maxim of the great Greek teacher who held that a pupil learns nothing from a teacher he hates. Having made their selection, they joined their efforts with his in the work which under nature was theirs, but which, under existing conditions, must be done in part by others. And together they worked to develop strength of mind, strength of character, and to co-ordinate part with part. They aimed to have enough work to keep up a good interest and secure good results, but not enough to break down the health or discourage. And they wanted as much as possible of it done where the home life and school were in touch.

As the children had been trained at home to respect the rights of others, it was very seldom that they overstepped their bounds elsewhere. As love and respect for themselves and others had been the ruling forces of their lives until this period, they continued to be. When conflicts did arise their case was wisely considered, for they were forming views of right and justice which would influence all their future lives. As long as principles were at stake they were encouraged to stand kindly but firmly by them.

Industry is the moving force in nature's domain, so the boys and girls were urged to be diligent in the discharge of all their work. Their attention was called to such facts as that grains of dust make the fields drops of water make the rivers, and they were often shown that man is always making his own future. Labor beautifies and sustains all that man has to do with. By tempering the work to their strength the children came to love it and exulted in the outcome of their efforts.

In their views on money matters, as in every other thing of importance, Tom and Lucy were agreed. They thought that children ought to be taught to make and spend money, for while many evils grow out of its abuse, still money is a necessary part of our civilization. It lays our cables, builds our steamers, girdles the globe with telegraph and railroad routes, builds factories, is the blood of commerce, supports our churches, our schools and our government. So Tom talked over small business ventures with the boys and Lucy devised a way whereby her girls were taught the use and worth of money. Tom said he wanted his boys and girls to know something about how to use what he expected to give them. He had seen too many parents wear out their lives to get a fortune for their children and then see the fruits of their labors prove a curse to both. This thing of giving boys and girls a little money now and then to buy candy and toys gives a wrong view as to what money is for. It is a convenient representative of a given amount of time and labor. Trained in this way children are least likely to become spendthrifts and always have means to obtain what they desire and need.

As the years slipped away, Tom and Lucy realized that soon their children would be undertaking life's duties for themselves. Lucy would speak out the message of her heart to her girls one by one in some such words as these: "My dear child, you want to spend a happy, useful life. Love is the power that opens up to woman the sweetest and best treasures of life. The blessings you give out to others come back and enrich your own being. A woman's strength is her purity. Mankind lay their tributes of honor, respect and love at the feet of pure, loving womanhood. One of their dearest joys is to do her honor. For her every manly heart is a true defense. Character is woman's treasure, her all. Let no one ever have any cause to question yours. You cannot prize character too highly."

Tom mingled with his children and had both their respect and love. When his boys were turning into their teens he would advise them in regard to their future. "In this wide world, my boy, you will need friends. It costs very little to treat people kindly and with resuect. And you may be sure that what you give out will come back to you. Love, kindness and good faith were never lost. Let your interest in others be genuine and flow from a heart full of good will and sympathy. Mankind are looking for people whom they can trust. Honor your own word. Stand by your promises. It is not kindness but weakness to promise a favor that you know you cannot fulfill. To make your word good will require a great deol of firmness, decision and judgment. Weigh well before you promise, and, having promised, with another depending on you, keep your word to the end. Every man sets his price on his word, and, in the long run, others accept the value one sets for himself. Honesty and judgment are the sustaining forces of progress and commerce, as purity is of the social realm. Reason, judgment and will ought to rule the conduct of men. My boy. a true, brave man respets and loves womanhood. Always treat the daughters and sisters of other men as you would have your own sisters treated. Draw the line for yourself where you would have your sisters draw it. Follow the golden rule in this as in all other respects. It will be a good, safe guide to you. It is a crime against all that is purest and best to either wreck a woman's confidence or character. Let others be and do as they may; be sure you are in the right and never, never go back on your own character. Respect your own and another's good name and character as though a special gift from heaven to you."

Their children grew to be strong, pure-minded, warm-hearted, self-respecting men and women. Wherever they went they were noble representatives of manhood and womanhood. And their lives were a blessing to all within reach of their influence. The joy awakened by their successes and achievements made the evening of life sunny for Tom and Lucy. And their children's tribute of love and respect well repaid the parents for the care spent in training them right.—L. C. McLeod.

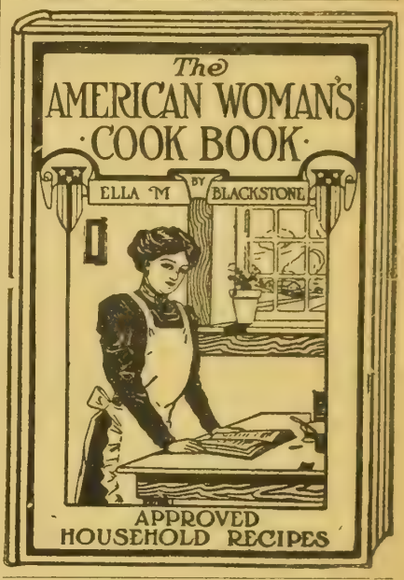
THE BEST COOK BOOK.

The American Woman's Cook Book.

This is a splendidly-bound book that weighs nearly two pounds. There are three hundred and eighty-four pages of approved household recipes, including many excellent dishes never before presented in a Cook Book.

The American Woman's Cook Book is by Ella M. Blackstone, who is famous for clearing the road for the student of domestic science by giving the reasons for everything. It is so easy to learn from her when everything having a bearing on the subject is explained so clearly.

The book includes chapters devoted to foods for each month; time required to digest different articles of food; menus for all occasions; table etiquette; kitchen don'ts; kitchen equipment, and useful hints and recipes for the home in general; specially-drawn articles upon various subjects, such as soups, fish, poultry, beef, veal, mutton, pork, salads, vegetables, and all classes of dishes, besides beverages, candies, pickles, and preserves, ice cream and ices; also ruled pages for new recipes to be preserved.



The thorough alphabetical index is a wonderful help to all subjects. A good book is known by its index, which in this case is eighteen pages, three columns to the page.

The publisher's price for single copies of the American Woman's Cook Book is $1.50 per copy and 15 cents postage, but we have contracted for such a large number we have obtained the benefit of a reduced rate. Therefore we will send one copy of the American Woman's Cook Book, postage paid, for One Dollar and include one-year's subscription to The National Farmer and Stock Grower. Address, THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

May Be Worth the Money.

"Did you have any luck with the shrubs you bought from that agent last fall?"

"Yes, indeed. One or two of the dozen now look as though they may grow."—Detroit Free Press.

A Bad One.

Binks—"Which is the most dangerous, the automobile or the aeroplane?"

Jinks—"Well, the aeroplane runs over more people than the automobile."—Cincinnati Enquirer.

Dressmaking in Ten Weeks.

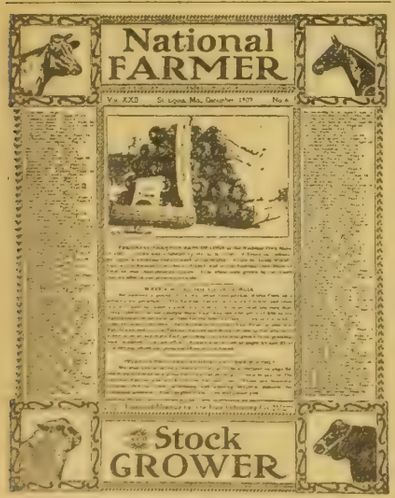
For several years we have been seeking something in the form of an instructor that was able to impart instruction in dressmaking that could be understood. We have seen charts and diagrams and had all kinds of methods explained, which indicated that it all led up to personal instruction. After you had studied the book you then had to go over it again with the teacher, and very likely the book cost more than it was worth.

We have obtained a book at last that we can plainly see is a guide and a helper to the beginner, and with it an intelligent girl or woman may learn to be independent, to

MRS. EDITH M. CARENS,
Author of the Book entitled "Dressmaking in Ten Weeks."

make her own clothes, to make clothes for others, to earn a living and to be able to enter one of the best-paid professions open to women.

There is just as much pleasure in work as there is in play if you only know how, and idleness at best is a sort of cultivated uselessness. The time is coming fast when incapable people, whether men or women, will be pushed aside from the industrial walks of life.



The book we have selected as the best known to us is by Mrs. Edith M. Carens, who is Principal of a College of Dressmaking. The picture presented herewith is of Mrs. Carens, and was made from her photograuh, although our office boy remarks that it must have been taken when she was learning and before she commenced teaching. The youthful appearance of the author does not detract from the book, which is all right. The book entitled "Dressmaking in Ten Weeks" is a condensed course of twenty complete lessons, and especially arranged for home study work. Each line is the result of careful preparation and years of study by an expert. There is information found here that can be obtained nowhere else.

There is an entire lesson on hand sewing, which alone is a book within itself, dealing with all kinds of fancy stitches, different kinds of hems and seams, proper method of buttonholes, also the making of hand-made trimming.

There are lessons on the drafting of garments to measure, also directions on the proper handling of patterns.

The book instructs you on the buying of materials, the preparing of the cloth before it is cut, the designing, cutting, fitting and finishing of every kind of clothing in a woman's wardrobe.

There are lessons on sleeves, infants' and children's clothes, underwear, shirt waists, fancy waists, the making of separate skirts, one-piece frocks, Princess and lingerie dresses, evening coats and gowns, mourning attire and tailoring, also the designing and making of fancy trimmings that give the snap and style to the finished garment. The last lesson in the course deals in detail with the proper management of an establishment for profit; how to organize and conduct a Dressmaking School; in fact, it goes on to explain the different branches in dressmaking and suggests specializing, teaching the pupil how to properly handle these special features to make money.

Each lesson is followed by a set of questions, and there are many rules and much valuable advice to the learner all through the course, which make the study of this manual so simple that a child can grasp the ideas involved. No mother should bring up a daughter without teaching her to sew, for how many girls are heard to say: "I wish I could make my own dresses," when her friends had more and prettier clothes. A few yards of material and a bit of trimming artistically arranged will make a stunning garment, costing but a few dollars if made by yourself, and by carefully following the instructions in this book, the girl or woman with little knowledge can in a few weeks become quite proficient in dressmaking.

The size of the book is 5x8 inches, contains 128 pages, and has fifty illustrations.

Our Subscription Proposition.

What we wish to do is to please every girl and woman on the farm. We wish them to say to husband, to father or brother and to uncle: "I would like you to subscribe for The National Farmer and Stock Grower. It pleases me and will please you. The price is 50 cents a year. It is full of good articles on general farming and stock and poultry raising in all branches. And besides all that, if you do subscribe, I will receive as a commission or premium a copy of the book 'Dressmaking in Ten Weeks,' postage free and safe delivery guaranteed. I need that book, and the best way to get it is to send 50 cents for one-year's subscription to The National Farmer and Stock Grower." Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Low Rate For the Fair.

The railroads have given a uniform rate of two cents a mile for Fair Week at St. Louis, also for Veiled Prophet's Week. All who intend to come in to attend the Fair should see about their railroad rates at once. Fair Week is from September 23 to 28.

The Army and Navy Needle Book.

A TEN-CENT PROPOSITION WORTH TEN TIMES AS MUCH. The Army and Navy Needle Book contains five packages of Peerless Steel Needles, warranted; sizes, 3 to 9, 5 to 10, 6 to 7. THE MEXICAN RESURRECTION PLANT.

This is a great and pleasing novelty. Without water it dries up and is apparently dead. Place it in a shallow tank of water and it revives to a beautiful, living, fern-like plant. Let it dry out again and it curls up like a ball and can be kept for years. It will revive again directly it is placed in water. It requires no soil, no nourishment, no attention.

We have adopted the Resurrection Plant as a subscription premium to the **Universal Magazine.** The magazine is most interesting and is published monthly. It is an illustrated publication, with genuine stories, splendid poetry and home reading. Send 25 cents for one-year's subscription to the **Universal Magazine** and we will mail you one of these genuine Resurrection Plants as a free premium.

Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Send stamps or coin at once. Don't miss this great offer, because our supply will not last very long. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

In the Canning Season.

The first thing is to test the cans. If for tomatoes, use new rubbers. Rubbers may be used a second time for most fruits, and if one seems a bit thin, use two together, but be sure that one does not slip past the other and so make an uneven pressure in spots.

Rub up each cover until bright and shining. This will make your fruit look better when the work is done; more important, if there is even the tiny hole in a cover, the scouring process will disclose the fact. Then fit each to its proper can, fill the can half full of water, fasten on rubber and cover and invert for an hour. If there is a leakage, a better fitting cover must be found.

After the fruit is sealed, some say to invert the cans over night. We prefer to use this test only an hour, or even less. When left for so long in this position the strain is apt to start a leak, even though the fruit would have kept perfectly as put up. The test which assures no present leakage is sufficient and does not provoke one.

Molasses cans, with the fitting cover, may be reserved for canning tomatoes, providing the tin is perfect. Seal with wax, and they serve the purpose as well as the new cans for the purpose. Many have success with tomatoes only when using tin, but we have found no cause to complain when using glass and have wondered if it were not because we always pare the fruit instead of scalding to remove skins. Cook just enough to heat through, add a little salt and seal.

Combinations of fruit juice left over make excellent jelly. A little plum juice added to peach juice will make it jell more readily as well as improve the flavor. A few apples will also serve the same purpose. By thus combining and piecing out left-overs, nothing is wasted, and the shelf of canned goods is very nicely stocked with a variety.—Bessie L. Putnam.

The Trip to Town.

There are families in which the man of the household attends exclusively to this detail, marketing the butter and eggs and buying the household supplies. It would be quite a waste of time for the wife to leave her household duties, and he can do this while the dew is on, or on some rainy day. But does he ever consider that she can in many ways make the time spent profitable if only given a chance?

First, she needs a play hour occasionally, just as much as anyone, and while the farmer who thus takes upon himself all the errands outside may not realize it, it is a rest to get out, even for a little while.

But there are many little things which she observes that will enable her to save the pennies in another way. Every window has in it possibilities. The economizing woman sees in the ready-made dress an idea which with the aid of a new pattern is the means of revolutionizing the outgrown dress into a stylish one which will serve the child for best another season.

The crochet bags, so stylish now and retailing at one or two dollars, may be readily made at home by anyone familiar with the hook, and this during spare moments. One may read about how to make this or that, but when it is shown already made the impression is stronger and one sees just what results are. Those bags, by the way, are a most convenient as well as durable article, and can be made to match the dress. A large rose in the Irish crochet serves for the center, with the standard filling stitch to complete the pattern.

The display of fancy work will give some new hint for a doily, perhaps evolved from a piece of left-over linen, or a worn tablecloth. There are lessons at every step, and the woman who so determines can make her trip to town pay, even though there were no butter to market.—Bessie L. Putnam.

Pure Water.

It is a strange fact that even those who fully realize the importance of pure drinking water in the family seem to think that so long as there is water of any kind in the pasture there is no reason for concern. It may be a mud-hole, continually roiled by the endeavors of the animals to quench thirst. So long as it is wet it is supposed to answer all purposes.

Even if the cow drinks this filthy water freely, and most likely she will do just as we would under similar circumstances, drink the smallest quantity possible, can she be expected to furnish wholesome milk out of such material? More than 84 per cent. of milk is water. When we compel her to drink water which we would not dare to drink ourselves, she literally though innocently pays us back in our own coin by using this same water in the filling of the milk pail.

Ah! But it no longer fills the pail. Bereft of the most of her foundation material, she cannot keep up the milk supply. We grumble about the shortage in pasture and buy grain to make up the deficit, when an abundance of pure water would do more toward counteracting it than the extra feed. We cannot keep in the best physical condition without an abundance of drink in some form. Is it reasonable to expect the best from our domestic animals when hampered by thirst?

At this season there is the added danger of typhoid. This disease is too often traced to the milk supply. Stagnant water is almost sure to be foul with it, and if stock is permitted to wade through it at will the danger is greatly increased. If you have an abundance of running water, good. But look carefully at its source and see that there are no contaminating influences during transit. A good drilled well with a gasoline engine will be cheaper, if this is lacking, than the doctor's bills invited by impure water.—Bessie L. Putnam.

Marking Clothing.

This is especially necessary where there are several children nearly of an age. The rubbers which fit Johnny may be squeezed upon Tom's more plump foot, but at the risk of tearing. And even at best, everyone has a special gait and way of fitting the foot to the shoe, and a change, a running-down of the heel in another way, helps to hasten the end of the article. If the rubbers are stamped in the inside with a big black initial, the danger from this will be lessened, especially if the children are taught to watch for the proper letter.

In under garments there may be a provoking confusion or doubt unless each garment is properly marked. By writing the initial on a slip of paper and basting it over the garment one can quickly stitch the letter upon the machine so that it will not easily be erased. If done in white thread, there is is no danger of any stain, and yet it is sure to be always legible.

Handkerchiefs are neatly marked with an embroidered initial, or the name may be written on the cloth with a lead pencil and then a line run in with fine thread. The latter method takes but a moment and serves the purpose fully. This is one of the articles most likely to become interchanged unless precaution is taken, and yet neatness as well as the sense of ownership should serve to guard for each his very own.

The practice of letting things get "mixed up" creates chances for discord and dispute; it discourages the efforts of those naturally tidy when one with careless habits has an excuse for appropriating their belongings. Individuality should begin early in the ownership and care of clothing. And it saves time to mark each garment when new rather than to try over the various heads to find out which it fits best. If the label is regarded as a part of its completion, all trouble is ended.—Bessie L. Putnam.

Table Manners.

The little one may become one of the most agreeable members of the company at mealtime by looking carefully after the details of behavior at the start. As soon as baby is old enough to eat solid food it is old enough to learn that it is expected to eat and not to muss over and throw away food; and when it insists upon playing rather than eating, remove it from the table without further parley.

Prepare it neatly for the table. Clean napkins, an unbreakable plate and small spoon should be its equipment. A cup of milk or water is its individual property, but not the coffee of any adult within its reach. Place the spoon properly in its right hand. While there are special occasions in which a left-over is pardonable, aim as a rule to give only as much food as should be eaten, and insist upon this being done in a neat manner. Show that papa does not play with his food or try to help himself to that of others. An ill-mannered child is in no place so annoying as at the table; the well-behaved one is a continual source of delight. And the difference between the two is marked by the old cable, Habit.—Bessie L. Putnam.

Was Used to More Rain.

Lambert Kaspers, a Chicago attorney, told the following story at a recent Y. M. C. A. banquet:

A Kansas farmer, a Dane, applied for naturalization papers. The Judge asked him: "Are you satisfied with the general conditions of the country?"

"Yas," drawled the Dane.

"Does the government suit you?" queried the Judge.

"Yas, yas, only I would like to see more rain," replied the farmer.—Chicago Tribune.

Appreciated.

"You are the most precious thing in the world!" sighs the young man.

"Nonsense!" replies the young woman, albeit pleased nevertheless.

"Nonsense nothing! Why, if I married you abroad I'd have to smuggle you into this country!"—Judge's Library.

Can you always eat all that you "can"?

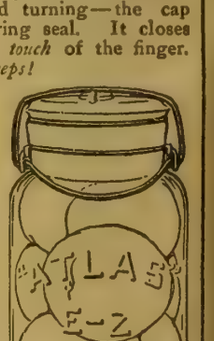
After the work of "canning" do you find much of your fruit is spoiled? Then, why persist in using old-style, narrow-necked, tin-topped, screw-capped jars? That was the old way of "canning." The new way, the easier, safer, *better* way is called "jarring," preserving in the all-glass

E-Z SEAL JAR

Try putting up beets, beans, corn and tomatoes for winter use. It is *fun* when you use the E-Z Seal Jar. It has the sanitary all-glass cap—no metal at *all*. No twisting and turning—the cap clamps with a spring seal. It closes and opens with a *touch* of the finger. And—your fruit *keeps!*

Free Jar— Free Book

Cut out this coupon, take it to your grocer—he will give you one E-Z Seal Jar—FREE. Be sure and write us for FREE Book of Recipes—it tells many things you should know. Get the Jar from the *grocer*. Get the Book from *us*.



HAZEL-ATLAS GLASS COMPANY
Wheeling, W. Va.

1-Qt. E-Z Seal Jar CG FREE for the Coupon

Please note—In order to secure free jar this *coupon must* be presented to your dealer before Sept. 1st, 1912, with blank spaces properly filled out.

HAZEL-ATLAS GLASS CO.,
Wheeling, W. Va.

This is to certify, That I have this day received one "Atlas" E-Z Seal Jar Free of all cost and without any obligation on my part. This is the first coupon presented by any member of my family.

THE SMITH FAMILY DOWN THE ROAD.

The Mortgage is Cleared and Plans Are Made For the Future.

Three years after the Smith family began to "find itself," John Smith finished paying off the mortgage on the farm. He did it wholly from the profits of his share of the farming. Mrs. Smith had offered to help with the money she was making from her poultry, fruit and vegetables, but her husband had replied to her offer: "I want to pay it out of the actual farming and stock raising that I do. You'll find a use, and a good one, too, I bet, for every cent you earn. I see now that it was all my fault that a mortgage was ever put on this place. The farm was yours to start with, so I want to be man enough to clear off my own debt."

The night he came home with the canceled mortgage there was a celebration in the house down the road. The neighbor woman and her husband were invited to it, just as they were included in nearly all the pleasures of the Smith family, for Mr. and Mrs. Smith gratefully remembered that the neighbor woman had never forgotten them when they were living at their worst.

Do you remember that first cheerless glimpse into the Smith home? Suppose to-night at this celebration we look in again and note the changes these three years have wrought, not alone in the house and its furnishings, but in every member of the family as well—the transformation that marks the man or the woman living a purposeful life. Let us now enter with the neighbor woman and her husband.

Mrs. Smith, wearing a soft gray dress with white frills of lace at neck and sleeves, meets her guests at the door and greets them heartily while she leads them into the living room. This room is the best in the house. Perhaps in some homes it might be called the parlor. But Mrs. Smith's reading during the past years has borne fruit. She decided that she wanted a comfortable room in which the family could spend their spare hours in place of the stiff, stuffy parlor. Also she wished to feel that it was a fit place to which she could welcome her visitors, which were now not infrequent. Dovetailing with these plans there appeared in one of Mrs. Smith's papers the plans for a remodeled farm house and the living room in this plan exactly suited her taste. A big bowed window stretched across the south end of the room and a seat was built around it. Book shelves were built across the other end of the room. An arch was cut through the partition that had separated the old sitting room and the parlor. This old sitting room was converted into a dining room.

The furnishings of the living room are simple and in good taste. A brown paper, plain save for a golden line running through it, covers the walls, with a cream paper relieving the ceiling. The old floors are replaced with Southern pine. A rag rug in brown and tan, with just a glint of yellow through the border, covers the floor, except for the space of about a foot and a half, where a border of the floor shows. Several comfortable chairs, a couch and a big library table are in the room. Mrs. Smith seems to have a true sense of the artistic. Barren as her early married life had been, it would seem probable that in selecting furniture she might choose cheaply-covered, highly-ornamented stuff. It was otherwise. After visiting the village store, where she was shown a medley of plush-upholstered, cheaply-veneered furniture at ridiculously high prices, she sent for the catalogue of a mail-order house. Here she found displayed a good assortment of a better grade of furniture at lower prices. And so she selected the several pieces of solid oak modeled along good lines. She also bought a good reading lamp. Many were the pleasant evenings spent around the big table.

The children had had some study of famous paintings at school, and with their help Mrs. Smith selected reproductions in sepia tints of Breton's "Song of the Lark" and Millet's "The Gleaners" and "Bringing Home the New-born Calf." It was the mail-order catalogue that helped her in this matter also.

A second-hand piano, an old-fashioned square but of excellent tone, had been purchased, and on this evening it is brought into use, for the neighbor woman is a fair musician, while Mary's stumbling fingers as yet evoke but little music from the instrument.

After the serving of a dainty lunch, consisting of chicken salad with mayonnaise dressing, hot rolls, olives, coffee, ice cream and cake (Mrs. Smith meanwhile proudly explaining that the salad dressing and the rolls had been made by Mary just as she had learned to make them at the cooking class), the elders fell to talking of the children and their future.

"I expect in about two years from now John'll be away at the Agricultural College learning farming," remarked Mr. Smith. "He's got over a hundred saved for it and now that the mortgage is out of the way, I can help some, for what he'll learn he'll pass on to me. That's a bargain, ain't it, Johnny?"

"You bet!" replied Johnny. "And I'll just have to work awfully hard learning for two people all at once."

"And has Mary any plans?" asked the neighbor woman.

"Oh, you know Mary's daffy about cooking, and she says she's going to keep on studying domestic science until she can teach it. She beats me at the cooking already."

"Why, here's a letter I forgot to give you, Martha," interrupted Mr. Smith, who had been rummaging through his pockets. "I took it out of the box as I came up from the field this noon."

As Mrs. Smith read the letter, she gave an exclamation of surprise and then passed it on to Mr. Smith without comment.

"Well, by jingo!" cried he. "Here's Martha been left a fortune. And so she needn't farm it any longer. Listen, neighbors, her uncle's died and she gets $15,000 in cash and a little four-hundred-acre piece of the best farming land besides. Now she can live like a lady in town."

"No, John," replied the wife. "That money doesn't mean so much to me now. I'd never be satisfied with any other life than this, and neither would you or the children. It will mean that we can have some extras that we couldn't have had otherwise. A few more good books, a good music teacher for the children, some traveling every year when we are least busy on the farm, and a couple of homeless children from the city to bring up right. This legacy is all right now, John, but I'm mighty glad it didn't come three years ago, before we knew the pleasure and profit of real work. Then it would have meant our ruination. Now it gives us a chance to help somebody along, just as our neighbors helped us at a time when we semed too blind to see for ourselves."

"Bravo, I knew I was safe in saying we might go to live in town!" cried her husband; "and as for helping somebody else, what's that song of your neighbor woman— the somebody song?"

The neighbor woman took her place at the piano and began to softly play and sing while the little company joined in one by one:

Somebody did a golden deed,
Proving himself a friend in need;
Somebody sang a cheerful song,
Bright'ning the skies the whole day long.
Was that somebody you? Was that somebody you?

Somebody tho't 'tis sweet to live,
Willingly said: "I'm glad to give;"
Somebody fought a valiant fight,
Bravely he lived to shield the right.
Was that somebody you? Was that somebody you?

—Janet Thomas Van Osdel.

The Universal Magazine

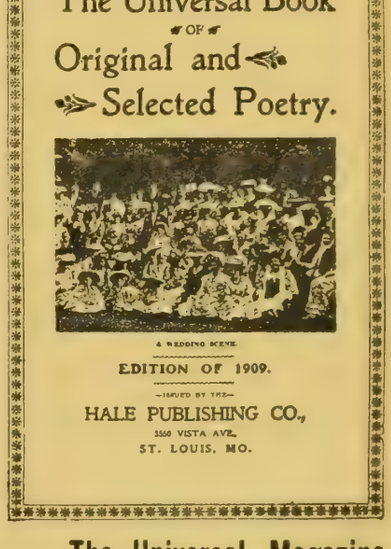
AND THE

UNIVERSAL POETRY BOOK

Two Excellent Publications.

The Universal Poetry Book

CONSISTS of One Hundred Pages, containing three hundred and ninety beautiful, interesting, pathetic, descriptive, humorous and delightful poems. These poems have been selected from the very best of the ancient and modern authors and the occasional pieces which have attracted favorable attention. It is a book to be kept by the bedside to compose one to sleep, a book to carry in the satchel or to read on the train and street car. It is a book for all people at all times. We issued the UNIVERSAL POETRY BOOK for the purpose of using it as a subscription premium in connection with our own new successful paper, the UNIVERSAL MAGAZINE.



The Universal Magazine

is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, patterns, fashions and poetry—a splendid publication. One thing about the UNIVERSAL MAGAZINE is, that it is not loaded down with advertisements. Notwithstanding it is a cheap magazine, the subscription price being 25 cents a year, it was supported by subscriptions alone for 5 years.

A Ten-Cent Proposition.

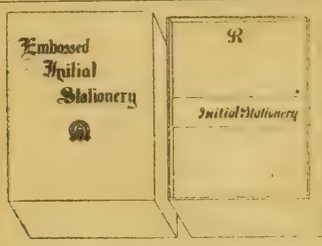
Anyone who will send 10 cents to pay for four-months' trial subscription to the UNIVERSAL MAGAZINE can select one copy of the UNIVERSAL POETRY BOOK as a free premium, and we will send it by mail, prepaid, safe delivery in good order guaranteed.

THE HALE PUBLISHING CO.,
3550 Vista Ave., St. Louis, Mo.

A Stationery Premium.

This is not for men and boys, but it is for girls and women. Fine stationery is an indication of refinement and delicacy. Fine stationery is hard to get, because there is so much trash on the market. We have purchased many boxes of the best cloth finish, white, initial stationery on the market. It is put up in elegant boxes and ready to mail out.

Every sheet of paper is embossed in blue with one letter as indicated in the illustration, and each sheet of paper has an envelope to match. The Universal Magazine is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three

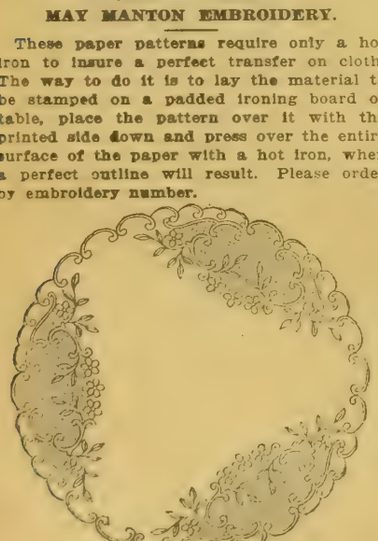


Embossed Initial Stationery.

columns to the page, containing home reading, stories, fashions, patterns and poetry—a splendid publication for the money. To anyone who will send fifty cents to pay for the Universal Magazine for two years can select their own initial letter, and we will send a box of stationery prepaid, safe delivery and satisfaction guaranteed. Wherever one box is sent we expect to sell a dozen, because we are offering the right kind of premium—one we will be glad to send to any lady in the land. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

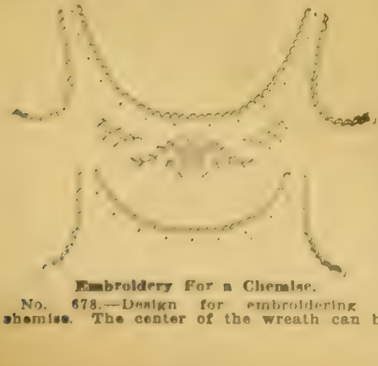
MAY MANTON EMBROIDERY.

These paper patterns require only a hot iron to insure a perfect transfer on cloth. The way to do it is to lay the material to be stamped on a padded ironing board or table, place the pattern over it with the printed side down and press over the entire surface of the paper with a hot iron, when a perfect outline will result. Please order by embroidery number.



Splendid Center Piece.

No. 674.—Design for an embroidered center cloth with punched work background. The design is twenty-two inches in diameter. One transfer is given. The price of the pattern is 10 cents.



Embroidery For a Chemise.

No. 678.—Design for embroidering a chemise. The center of the wreath can be filled with punched work or with French knots.

For a Book Cover.

No. 673.—Design for embroidering a magazine or book cover. The price of the pattern is 10 cents.

Beautiful Blouse Design.

No. 672.—Design for embroidering a blouse front, collar and sleeves. The dots within the circles can be used for punched work or for French knots. The price of the pattern is 10 cents.

Low-neck Night Gown.

No. 675.—Design for embroidering a low-neck night gown with short sleeves. The centers of the wreaths can be worked in punched work or French knots. The price of the pattern is 10 cents.

Please send all orders for these embroidery patterns by number to the **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

The National Style Book.

The greatest and best ladies' outfitters are the National Cloak and Suit Company, of New York City. They offer to send the National Style Book free. There are 200 pages in the Style Book and it is full of the latest patterns and up-to-date costumes. Style and quality without extravagance go together in the books of the National Cloak and Suit Company. Write for the National Style Book and address National Cloak and Suit Company, 280 West Twenty-fourth street, New York City, N. Y.

Vegetable Market at St. Louis.

On the last business day of August the wholesale vegetable market at St. Louis was doing business as follows:

Potatoes.—Sales loose from farmers' wagons at range of 65 to 70 cents per bushel, mainly at 60 cents. Some sacked lots on levee, but, being poor, were going at 60 cents.

Onions.—Iowa sacked Red Globe at 45 cents on track to 50 cents delivered; Missouri sacked yellow and pale red at 35 to 40 cents, delivered; heated less; North Missouri red at 40 to 50 cents, and white at 60 to 65 cents per bushel. Sales: North Missouri—Twenty-eight sacks red at 40 cents; thirty sacks do. at 50 cents; 100 sacks do. at 45 to 48 cents; thirty-one sacks small do. at 40 cents.

Beets.—Home-grown at 25 cents per bushel box loose, and 10 to 15 cents per dozen bunches.

Butter beans.—Home-grown at 75 cents to $1.00, and Lima beans at $1.00 to $1.25 per peck basket loose.

Cabbage.—Home-grown kraut stock at 30 to 32½ cents per 100 pounds, by weight; green quotable on orders at $1.10 per crate in shipping order.

Carrots.—Lot Northern sold at 60 to 70 cents per seventy-pound sack, delivered; home-grown, 15 to 20 cents per dozen bunches.

Cauliflower.—Choice Buffalo (express receipts) sold at $2.50 per crate.

Celery.—Fancy Michigan (Tecumseh) Golden Heart at 20 to 25 cents per dozen for x, 30 to 35 cents for xx, and 35 to 40 cents for xxx; Kalamazoo White Plume and Golden Heart at 10 to 20 cents per dozen for small to medium and 25 to 30 cents for fancy large; iced in barrels at 10 to 15 cents per dozen; square boxes and flat crates of Golden Heart (2 to 2½ dozen) at 30 to 40 cents; and White Plume at 20 to 35 cents—damaged and heated much less.

Cucumbers.—Home-grown green loose at 25 to 50 cents, and yellow mustard at 40 to 50 cents per bushel; Dill pickles and salt pickles at 40 to 60 cents, and small vinegar pickles at 75 cents to $1.00 per bushel loose.

Eggplant.—Home-grown sold at 50 to 60 cents per bushel loose.

Gumbo.—Home-grown sold at 20 to 25 cents per peck basket.

Green corn.—Home-grown sold at 5 to 8 cents per dozen.

Lettuce.—Lower again; receipts larger. New York hampers head lettuce at $1.00 to $1.25 per hamper; Chicago cases at 75 cents for choice fresh—held stock sold at 50 cents; home-grown sold at 10 to 15 cents per bushel box loose.

Peppers.—Steady. Home-grown at 40 to 50 cents per bushel box loose—small and poor less.

Spinach.—Home-grown loose at 20 cents per bushel.

Squash.—Home-grown at 10 to 15 cents per bushel loose.

String beans.—Home-grown round green and corn beans at 15 to 20 cents per bushel loose.

Sweet potatoes.—Bermuda selling at 75 to 85 cents, and Red Nansemond at $1.00 per bushel box loose. Alabama Southern Queen at 50 cents per hamper—car sold at 50 cents, delivered; Tennessee Bermuda at 75 to 80 cents per hamper, and 35 to 40 cents per melon basket; Virginia yellow at $2.85 to $3.00 per barrel.

Tomatoes.—Home-grown ripe loose at 15 to 30 cents per bushel, as in quality; yellow preserving plum tomatoes at 10 to 15 cents per one-third-bushel basket.

Turnips.—Home-grown at 25 cents per bushel box loose—top for Globe.

Rice Fields of Arkansas Making Farmers Rich.

Hickory Ridge, Ark., August 25.

A night's ride from St. Louis, and one finds himself in the northern edge of what has come to be known as the great Arkansas prairie rice belt. Until the train passes through Jonesboro, just a little way north of this place, the traveler does not realize that the topography is much different from that which he has viewed from the car window since daylight. But just before reaching Obear the fact becomes apparent that the hills are disappearing and that almost as far as the eye can see there is a vast, almost level prairie. It is the Grand Prairie, which embraces most of five counties in Eastern Arkansas. To the eye it appears almost a deal level. In fact, it is slightly undulating. Every acre is perfectly drained. At Obear the first rice fields are seen. As the Cotton Belt train nears Weiner the development appears more general. From Weiner, Waldenburg, Fisher, Hickory Ridge and to the south stretch thousands upon thousands of acres of waving rice, the sturdy stalks standing to their middles in a shallow sea of pure, fresh water. It is the marvel of the age. To one who has not watched the progress of this wonderful development it is a mystery. To one who has kept in touch with it it remains a miracle.

Values Increase Rapidly.

Two or three years ago these waving fields, which will this season return a net profit of from $40 to $60 an acre, could be bought for from $5.00 to $15 per acre. To-day unimproved lands are selling at from $25 to $50, and improved lands, ready for rice growing, bring from $60 to $100. But sales of improved lands are few, it would seem, because they are worth more to hold and crop than to sell.

It cannot be said that lands in any section along the Cotton Belt Line from Jonesboro to south of Stuttgart have yet reached a point where they are held too high for profitable investment. Lands which yield an annual net profit of from $40 to $60 per acre each year are really worth much more than any owner or speculator in the Arkansas rice district had dreamed of asking for them. The really wonderful thing about it all is that improved and unimproved lands may be bought at so reasonable a figure. Thousands of acres near Hickory Ridge, Waldenburg and Weiner, part prairie and part sparsely wooded, are held at from $25 to $50 per acre. One wonders, when he sees the rapid development going on in all directions, how long this condition will prevail. At Weiner the crop area this season is more than double that of last year, or about 10,000 acres.

Rice is not an experiment in the territory around Weiner and Hickory Ridge. But it has just come into real commercial importance. On account of the development of rice culture in this section it was necessary to build a large mill at Weiner last year for the treatment of the grain before marketing. The milling process consists of hulling and polishing the grain. This process is tedious and expensive, but the American trade has demanded the fancy article.

Recently the United States Department of Agriculture has called attention to the fact that polishing of the rice, though improving the looks of the grain, does not in the least increase the food value and there has been an effort to popularize the unpolished rice among the individual consumers, whose likes and dislikes, of course, guide the millers, and it is likely that before very long brown rice will be extensively used.

Donate Mill Site.

With this end in view the Buck Head Rice Company has erected an extensive plant for the milling of unpolished rice at Hickory Ridge, Ark., on the Cotton Belt Route, in the heart of the great Arkansas Rice Belt. Citizens of Hickory Ridge donated a site for the mill, which has a capacity of 500 barrels a day.

The same company that built the mill at Hickory Ridge purchased 4,820 acres of rice land in the same vicinity, and this will be developed for rice production, and all of the crop will be run through the mill at Hickory Ridge and put on the market in an unpolished condition.

Charles Thompson, a Weiner rice farmer, raised a 160-acre rice crop last season. The crop thrashed out almost sixty-five bushels to the acre for the entire field. He cleared up a net profit of just about $6,100. This was the second crop on the larger part of Mr. Thompson's tract. This year the area of his fields is greatly increased.

In the Hickory Ridge section the development this year has been wonderful. The crop promises to be as fine as ever grew, and the area is three or four times as great as last year. It is such a simple and so comparatively inexpensive a process to convert non-producing land into farms which yield a net return of $40 to $60 an acre annually that men with even moderate means are not going to let the opportunity pass.

Water at Small Cost.

One mile west of Hickory Ridge is the model rice farm of Burnham & Young. Their field of 230 acres was irrigated with water from one well. These Hickory Ridge and Weiner farmers seem to be demonstrating the possibility of putting an abundant supply of water on their fields at a minimum cost. Formerly the belief was that one well could supply water for not more than 100 to 140 acres. But the limit has been nearly doubled in the newer fields, due largely to the fact that the water level is higher and that the pumps can handle the supply from wells of large bore.

A farmer, well known in Cambridge, Ill., who owns 160 acres in the Arkansas rice district, gathered 7,500 bushels of rice last season from 135 acres, and sold his entire crop for 83½ cents a bushel. This is what he says:

"We have in Illinois 400 acres of land that is worth on the market $200 per acre, or $80,000. Last year our returns from that tract were $2,000 in rentals, yet here in Arkansas my 160 acres (which are worth about $12,000) returned me a net profit of $2,100. The Illinois land pays $5.00 per acre rent and the Arkansas $15.55 per acre rent."

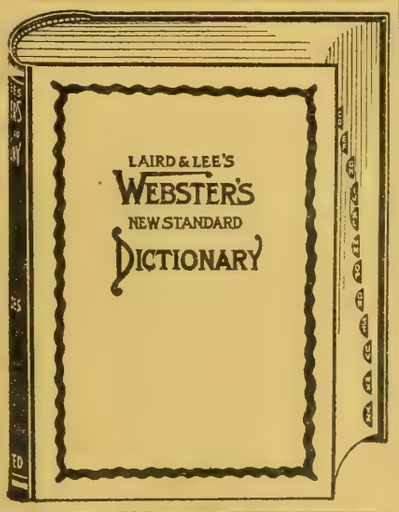
The farmer of the North who has never seen a rice field need not depend upon any one individual's success. There is at hand any amount of authenticated data which prove not only the possibilities, but give the actual results in all parts of the great Rice Belt. Along the Cotton Belt Route, from a point north of Weiner, in Poinsett county, to the south and extending for miles east and west, hundreds of thousands af perfectly adapted lands await development.

For further particulars concerning the rice fields of Arkansas write to E. W. LaBeaume, 1651 Pierce Building, St. Louis, Mo., and ask for Free Rice Book.

Harvesting Rice at Waldenburg, Arkansas, on the line of the St. Louis and Southwestern Railway.

WEBSTER'S DICTIONARY.

This is Laird & Lee's Webster's New Standard Dictionary of the English Language, a wonderful book, 750 pages, in all, 840 illustrations, substantianlly bound, gilt title, red edges, patent thumb index. Special edition for office and general use on farms, estates, ranches, etc.; massive but handy; contains ten encyclopedic features, supplement of new words, dictionaries of biography, geography, musical terms, Biblical,



classical, historical and mythological names, foreign phrases, English word-building, rules in orthography, current abbreviations, metric system with conversion tables; weighs twenty-eight ounces.

Our offer to you: Send us one dollar and we will send you The National Farmer and Stock Grower for two years and we will also send you, postage paid, safe delivery guaranteed, one copy of this great Webster's Dictionary. We also agree to refund money and pay return postage to anyone who is not satisfied with the bargain. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Seven Commandments of Alfalfa Growing.

Thou shalt not sow alfalfa seed on wet or undrained land.

Thou shalt not sow alfalfa seed on acid or sour land, but shall apply calcium in the form of lime, or ground limestone rock.

Thou shalt supply alfalfa land with an abundance of stable manure.

Thou shalt thoroughly prepare the alfalfa seed bed.

Thou shalt sow only good alfalfa seed, free from noxious weeds.

Thou shalt inoculate the soil if thou wouldst reap the best benefits from the alfalfa crop.

Thou shalt not sow in late fall, if thou wouldst obtain a creditable stand.—I. H. C. Service Bulletin.

A Famous Nurseryman.

The death roll for the month of June included Mr. James J. Harrison, President of the Storrs & Harrison Company, Painesville, Ohio. Mr. Harrison was born in England, in the county of Kent, in 1829, and died at the ripe old age of 83. He was a fruit and flower specialist, and, commencing with a few acres, his firm owned a thousand acres of cultivated stock when he died. His partnership with Jesse Storrs dates back to the year 1858.

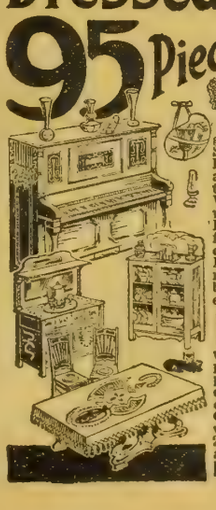
Dressed Doll & 95 Piece Furniture Set, all FREE



Here is a doll and nearly a hundred other articles that will delight the heart of any little girl. All are given away absolutely free. Dollie is a little beauty. Sweet little face, ruby lips and blue eyes, soft curly hair. She is nicely and **COMPLETELY DRESSED** and makes a perfect little lady. She is jointed, can turn her head, sit down. This is **A REAL DOLL.** With dollie comes her entire outfit of toy cut-out furniture—95 Different pieces. There is complete **DAINTY FURNITURE FOR THE WHOLE HOUSE.** Kitchen furniture including a big range. Dining room set with china closet and side-board. Parlor furniture including **DOLLIE'S PIANO,** standing lamp, etc. Bed room furniture complete and lots of little pieces, such as wash-board, duster, kitchen utensils, water-set, foot-stool, etc., etc. Don't fail to get this beautiful and wonderful set.

FREE OFFER Send us your name and address and we will send you six new beautiful art pictures and six coupons, each good for 35 patterns. Collect 25 cents with each picture and pattern coupon on our big offer which includes more. Send us the $1.50 collected and Dollie and her complete outfit of 95 pieces will be sent you, **ALL CHARGES PREPAID,** at once. You can do this little work **IN AN HOUR.** This is all we ask—just make six 25 cent sales giving with each sale extra a beautiful picture and pattern coupon. Did you ever hear of a better offer?

H. GUEST, 501 Plymouth Ct., Doll Dept. 131 CHICAGO, ILL.

SELECTED POETRY.

WHERE'S THE OLD-TIME BOY?

Where is the boy—the real boy—the boy
that used to be;
The boy that planned to run away and go
to sail the sea;
The boy that yearned to twist a brake upon
the local freight;
The boy that thought a circus ring held all
of proud estate?
And where's the boy—the boy-est boy that
ever lived at all,
Who whistled on his fingers in a wild, ear-
splitting call?

Boys nowadays go solemnly at learning this
and that,
Which he held in the busy brain beneath
his rugged hat—
Oh, where's the hat he used to wear?—the
"coffee straw," whose peak
Rose high, while all the sagging brim
slapped him on neck and cheek,
Or else it was a "hickory," a shoestring for
a band—
The dealer strung them on a card, all ready
to his hand.

He was a Boy! He knew more things than
you and I may learn;
He knew where Indian turnips grow, and
how they itch and burn;
He knew the birds familiarly, he watched
May apples grow,
And had his private fishing place, where
only he might go;
He went farefooted—how his feet got
stone-bruised right away!
He never had his two front teeth. Where
is that boy to-day?

Ah, how he'd whistle! First and little
finger in his lips,
And then a blast that cut the air like to a
hundred whips!
And how he looked! His mouth stretched
wide, his eyes all strained and set—
It's strange that such a boy as that is now
no longer met.
Becollared and beshoed, our boys go aim-
lessly through life
And never stand red-faced and blow upon
their finger-fife.

—Chicago Evening Post.

CALENDAR OF DISCONTENT.

SPRING.

Too well I knew you, Spring, and so restrain
My foolish muse from all such flatterings
vain
As "mild" and "gentle"—lest I be repaid,
Even as Marsyas of old, and flayed,
This time by icy hail and cutting sleet,
Instead—I pray your going may be fleet,
That soon I may forget and drowse away,
My weariness beneath dear Summer's sway.

SUMMER.

Insufferable season of the sun,
When will your endless reign of fire be done?
When will your noisy insect court take
flight?
Your orchestra that rests not—day or night;
Your armies with unconquerable stings;
When will they flee—what for do they have
wings?
How long before brave Autumn with a shout
Will succor me and put them all to rout?

AUTUMN.

You dismal mourner, wailing by the bier
Of Summer dead, with lamentations drear,
Driving me frantic, ever and anon
With reminiscences of Summer gone,
Now mimicking her tenderest airs and tones,
Now harrowing me with horrid shrieks and
groans.
Were good, old, jolly Winter only here
I'd soon forget you and your evil cheer!

WINTER.

Hoary impostor! with mock jovial air,
You took the green earth prisoner unaware
And pinioned the trees that moan and call
To Spring to free them from your icy thrall.
You manacled the stream who tugs in vain
To loose himself from your relentless chain.
And I—my heart is sad, my lyre is dumb;
Mild, gentle Spring—Oh! will you ever come?

—Oliver Herford, in Scribner's.

THE SPEED-FIEND'S "EXCELSIOR."

The afternoon was fading fast,
As down the road there scooted past
An auto, and the man inside
Oft muttered, as he "let her slide,"
"Faster!"

His brow was glad; his feet were braced;
His eyes in goggles were encased.
And as adown the road he swung,
One cry alone rang from his tongue:
"Faster!"

In happy homes as he dashed past,
The people stood and stared, aghast;
He opened up another notch,
And yelled at passers-by: "Now, watch!"
"Faster!"

"Don't go too fast!" one did adjure,
"The motor cops will get you sure."
The roar of his exhaust replied,
As he then yanked the throttle wide:
"Faster!"

"Oh, stay," one beauteous maiden cried,
"Take me with you on your joy-ride!"
He only smiled and shook his head,
And yelled one word, 'twas this he said:
"Faster!"

"Beware the fences and the holes,
The chickens, dogs, the cats and poles."
This was the speed-fiend's last "Good-night,"
As on he went at break-neck flight,
"Faster!"

At break of day a farmer ran
Out to the road, and stopped to scan
The dusty highway, when, ker-smash!
He heard a roar, a yell, a crash!
"Faster!"

Our traveler in his auto car,
Had landed with a jolt and jar.
He whispered as they pulled the wreck
From off his bruised and battered neck:
"Faster!"

There in the sunlight, cold and gray,
Covered with grease and oil he lay,
And just before his spirit passed,
One word he whispered—'twas his last:
"Faster!"

—E. A. Briningstool.

THE WONDER CHILD.

The night that wonder child was born I
heard
A fitful calling as of some wild bird,
Some sudden wind that went about the
hill;
With cadenced sorrow and with laughter
shrill.
When morning showed the child my heart
knew night,
For both his eyes were sealed against the
light.

His ivory lids were closed. But to and fro
He saw the elemental beings go;
The spirits of the storm and of the sea,
The dancing fauns, the dryads in the tree.
And all glad goddesses and garden sprites,
He ran to me with tales of their delights.

Nothing I heard, until the night he came,
I lay in silent tension in the gloom,
Watching, lest I might see some spirit
pale,
Listening, lest I might hear some trailing
veil.
Nothing I heard, until the night he came,
With "Mother, listen. Sorrow cries your
name."

I held his tender shape against my heart
And listened. All the shadowed world
seemed part
Of one great symphony that sang of grief.
The wind, the clouds, and every moving
leaf
Sang of the road whereof I had no choice,
And, suddenly, my heart heard Sorrow's
voice.

All night the child lay closely at my side,
But when the morning came his body died.
Then, as I went to seek the garden air,
I saw the idle dreams upon the chair,
And Hope, black-veiled, sat weeping by my
flame,
And all day long gray Sorrow cried my
name.

—Ethel Clifford, in Harper's Weekly.

FATHER'S RETICENCE.

Father doesn't always answer when I'm
anxiousest to know,
When I asked him just this morning why
no peaches ever grow
On the apple tree, he told me: "'Cause it's
nature's way." Then I
Feeling not the least bit wiser, asked the
simple question: "Why?"
Father took his hat and muttered: "Guess
it's time for me to go."
Wonder why he never answers when I want
the most to know?

Once I asked him how the oak roots that
were all mixed up with beech
Picked out just the sap for oak laves—each
the rightful stuff for each,
From the self-same soil and moisture, never
making a mistake.
Father turned to mother, saying: "How my
poor old head does ache!"
Mother told me: "Please be quiet. Don't
disturb your father so!"
Now, why doesn't father answer when I'm
anxiousest to know?

Yesterday down at our garden we were
pulling up some weeds
And were wondering why no sprouts came
from the dwarf nasturtium seeds.
Then I said: "Say, father, tell me why the
things that are the best
Are so hard to start to growing, when this
sorrel and the rest
Grow so swiftly if they've even just a tiny
root or so?"
Father only sighed in silence, though I'm
anxious still to know.

—Chicago News.

A CALL TO MEN.

Let us be kindlier, men!
We are brutes, without meaning it, oft;
The least things displease us—they just
mean to tease us—
Let's make our answering soft!
Let us remember how human
It is to be not always sweet;
Let us forgive and forget,
And be first with a kiss when we meet.
Let us be nobler, men,
In our daily habits with those
Who stand by our side whatever betide,
Who help us, whatever our foes.

Let us be kindlier, men!
Let's put the harsh word away;
Let's fill the lives of the women with song,
The lives of the children with play.
Let us remember how soon
The storm settles down, and the ship
Goes foundering deep, with eternal sleep
Sealed upon each loved lip.
Let us be thoughtful and fair,
Considerate, earnest and true;
Let us be kindlier, men,
And that is the call unto you!

—The Bentztown Bard.

BOB WHITE'S SUMMER CALL.

Sumac leaves are turning red,
Sort o' hazy overhead;
Field doves in the shattered wheat
Findin' lots of grains to eat;
Yellow primrose shinin' there
Where the rabbit makes his lair;
Crickets singin' as if death
Counted out the longest breath;
Then, in rhythmic beat o'er all,
The magic Bob White's summer call!

In the bottom, peer and look
At that circle in a nook
Of the tall, rank grass and weeds,
Where at night where no path leads,
Heads turned outward in a ring,
There they nest—that whirr of wing.
How it startles, as if light
Suddenly took thought of flight,
And before your eyes whirred up
Bubbling in the blue sky's cup!

Later summer brings it back—
Ah, that call along the track
Of the old fields and the lanes—
How it sobs with thoughts of rains
Washed with autumn, fairly chill,
And the mists along the hill
Rolling sunward through the morn
Over tasseled tops of corn;
Ripe persimmons in it, too,
And dark grape skins wet with dew!

Bob White! From the wood it comes,
Then the stirring of those drums
Of the beating wings—that rattle
Of the unborn dreams of battle
As a startled cock or hen
Darts across the field again,
Or goes running down the road
Faster than your whip can goad
Dobbin onward, so you'll see
What makes all the mystery.

Bob White! Through the dusk so clear
Sounds that call upon the ear!
Bob White! Other side the way
Answering echoes have their say;
Moon flowers open on the porch,
Firefly sparks his fairy torch,
Tree frog gurgles on the elm—
God's great heart is at the helm
Of this green world after all—
Says the Bob White's summer call!

—Baltimore Sun.

BLOSSOMS OF PEACE.

The Spirit of Peace to the battlefield came,
The cannon had blackened the earth with
its flame,
The drums were all hushed and the bugles
were still.
The smoke-wreaths had vanished from
valley and hill;
The swords that were red, though it was
not with rust,
Were broken and tarnished and ground in
the dust;
And she gazed with a tear at the blue and
the gray,
Where silent and stark in the shadows they
lay.

She summoned a cricket to pipe them a
mass
While she wove them a pall of the daisies
and grass;
She fashioned of violets sheaths for the
swords,
To buttercups charged all the cavalry cords,
And out of the blood of the soldiery brave
Commanded the wild rose to blossom and
wave;
And buried in myrtle, starred over with dew,
The bayonets dropped by the gray and the
blue.

She bade from the forest the woodpecker
come,
And to each of the birds she presented a
drum;
Then, calling the wood-thrushes brown, on
parade,
She gave them the bugles that heralds had
played.
The trumpets she hung on a slender green
vine
That she taught o'er the door of a cottage
to twine;
And when she had broidered on caisson and
gun
Her name in white clover, her labors were
done.

—Minna Irving.

MY STRENGTHENER.

Little fellow, do you know
How you cheer me on the way;
How you give me strength to grow
Stronger-hearted, day by day?
Do you know that your wee hand
Leads me onward, hour by hour?
Tell me, do you understand
All your magic, hidden power?

In your bonnie eyes I see
Hints of heaven's beauties rare,
And your childish songs lead me
To a country fine and fair.
All my burdens roll aside
When I clasp and hold you tight;
Every step my path you guide,
Every day you make more bright.

Little toddler, can you guess
How you aid me hour by hour?
Do you know that each caress
Seems to give me unseen power?
When the day is drear and long,
Your sweet smile gives strength anew;
I am cheered by every song
Dropping from the lips of you.

When temptations lure my feet,
And I seem about to fall,
In your love I have complete
Strength to conquer over all.
I am aided by your smile,
When to sordid tasks I go,
And my worries flee the while
I have you to love and know.

Little toulehead, I toil
Gladly, just for your dear sake;
In the tumult and turmoil,
Any task I'll undertake.
Even when disasters smite,
And ill-luck seems to pursue,
I can always win the fight,
For I have the love of you.

—E. A. Briningstool, in Los Angeles Express.

THE NEW VILLAGE BLACKSMITH.

Under a costly canopy
The village blacksmith sits,
Before him is a touring car
Broken in little bits,
And the owner and the chauffeur, too,
Have almost lost their wits.

The village blacksmith smiles with glee
As he lights his fat cigar.
He tells the helpers what to do
To strengthen up the car,
And the owner and the chauffeur, too,
Stand humbly where they are.

The village blacksmith puffs his weed
And smiles a smile of cheer
The while his helpers pump the tires
And monkey at the gear,
And the owner and the chauffeur, too,
Stand reverently near.

Behind the village blacksmith is
The portal of his shop;
The shop is very large in size,
With a tiled roof on top,
And the owner and the chauffeur, too,
At it were glad to stop.

The children, going home from school,
Look in at the open door;
They like to see him make big bills
And hear the owners roar,
And the chauffeurs weep as they declare
They ne'er paid that before.

He goes each morning to the bank
And salts away his cash;
A high silk hat and long frock coat
Help him to cut a dash;
But the owner and the chauffeur, too,
Their teeth all vainly gnash.

The chestnut tree long since has died,
The smith does not repine;
His humble shop has grown into
A building big and fine,
And it bears "Garage" above the door
On a large electric sign

—Dublin Evening Telegram.

RICH.

The love that's in my baby's eyes, the play
times that we have at night,
The joy that's in my lady's smile, her
cheering words that all is right,
The little home where we abide that rings
with laughter—aye, and song,
I would not risk in any way by any act
that I deem wrong.

There is no price that I would take to tinge
my loved one's cheeks with shame,
To rob them of their pride in me, and dull
the eyes with love aflame;
There is no profit that I'd take to cloud my
home now sunshine filled,
No sum of gold that could bring back the
laughter once it had been stilled.

They do not ask that I be rich, they do not
urge me to be great,
To climb the mountain heights of fame or
claim the honors of the state;
They ask me merely to be kind; they want
me only to be true,
And in return they give me love when each
long day of work is through.

I'll keep my home a dwelling place for
merry laughter and for song;
I would not risk one little smile by barter-
ing with what is wrong.
I'll keep those eyes aglow with pride, unto
their love I'll fondly cling;
For though I may be poor in purse—in love
I'm richer than a king.

—Detroit Free Press.

BUSINESS IS RUSHING.

They're wagin' war in Africa in real old
Sherman style;
They're shooting folks in China and man-
euvering a pile;
The rebels down in Paraguay are kicking
up their heels,
And the moving picture feller, he is busy
making reels.

They're ski racing up in Norway and they're
scalin' the Swiss Alps,
And the Yaquis down in Mexico are out in
search of scalps;
The suffragetttes in England are all busy
raisin' bob,
And the movin' picture feller, he is strictly
on the job.

All the well-known "possibilities" are
speakin' every day
And most every noted orator is mixed up in
the fray.
The special trains are whizzin' round the
country with a yank,
And the movin' picture feller, he is turnin'
off his crank.

The earthquakes and volcanoes and prize
fighters do their share,
And there's plenty of excitement every day
and everywhere;
But we do not have to travel round to find
it, for we know
That we'll see the whole blamed business at
the movin' picture show.

—Richmond Times-Dispatch.

THE SMILER.

There's an idiotic fellow whom I meet
where'er I go;
He's the crazy kind of fellow all the little
children know.
You wouldn't think him silly from his
manner or his style;
Still, it seems he must be foolish, for he
always wears a smile.

When the way is long and weary and the
load is hard to bear,
When you're weighted down with trouble
and there's no one seems to care,
That's the time this foolish fellow comes
a-singing up the road,
With a word and smile to cheer you and to
help you with your load.

With his smiling "Buck up, partner, 'cause
we're bound to pull it through;
Though your load's too big for one man, it's
a little load for two."
And you feel yourself uplifted with the
strength to play your part,
With his arm to aid your body and his smile
to brace your heart.

No, he hasn't got ambition, but his lifework
never ends;
He knows a million people, and he's got a
million friends.
He doesn't strive for fame and wealth, he
hasn't got a goal;
He's just a simple fellow, with God's sun-
shine in his soul.

Yes, he's just a foolish fellow, with the eyes
that cannot see
All the misery and sadness that are plain
to you and me,
But he knows the joy of living, all that
makes the world worth while;
And I'd like to be as foolish as the man
behind the smile.
—Eugene Black, in New York Times.

WHEN MA'LL GET HER VACATION.

I'm glad—the kids all are, I guess—
When school vacation's here. We dress
Ourselves just any way we choose;
No stockin's on our feet, nor shoes,
Just breeches, waist, an' hat, an' they
Are plenty for a summer day;
An' when we go to swim we jest
Give one good shake, an' we're undressed!

But mother has an awful time!
When she sees us kids start to climb
She hollers to us: "Don't do that!"
An' if she don't know where we're at
She worries till we're home again.
She tells us to be "little men"
An' not climb trees an' make a noise—
But dad tells us to "just be boys."

Dad says he likes to see us run,
Play ball an' swim an' jest have fun,
Dad says that bein' men is tough
An' that we'll be men soon enough.
He tells ma that she goes "Cluck, cluck!"
Like an old hen that's hatched a duck;
An' then they both laugh, like that wuz
A joke, an' ma says p'raps she does.

But though vacation's just begun
I guess ma'll be glad when it's done;
She says when we are safe in school
She knows that no old swimmin' pool
Will git us drowned. Ever since
I slipped and tumbled off the fence
She says vacations wear her thin,
An' she'll need hers when school takes in!
—Atlanta Journal.

Progress at Panama.

While the official date of opening of the Panama Canal is January 1, 1915, such excellent progress is being made that a year from next fall water will probably be admitted.

Comparatively few of those who live inland realize what an increase of trade is likely to result from the traffic through the canal. There is no question but what it will be enormous, and affect all of us in greater or less measure. The canal is a matter of such general interest that facts apout it are worth attention, as most people are not accurately informed on the subject.

For instance, the estimated total cost of the canal is $375,000,000, or almost four dollars each for every resident of the United States. Most people do not realize that the canal is cut from the northwest to the southeast, the Atlantic, or northern, terminal being west of the Pacific terminal.

From deep water to deep water its length is about fifty miles; from shore line to shore line about forty. Three hundred feet is the minimum bottom width of the canal, and the depth will vary from forty-one to eighty-five feet.

The working dimensions of the lock chambers are 110 by 1,000 feet and 79 feet in depth. There are three locks near the Atlantic and three near the Pacific side, raising the main channel of the canal to eighty-five feet above the mean sea level of both oceans.

It is estimated that there will be 5,000,000 cubic yards of concrete work in the canal, calling for between 4,500,000 and 5,000,000 barrels of Atlas Portland cement, which is being used exclusively.

The probable time of transit through the canal will be ten to twelve hours, vessels steaming under their own power except in the locks, where they will be handled by donkey engines.

These are facts which give one an idea of the magnitude of the undertaking.

As the opening approaches, preparations are going on quietly all over the world in anticipation of the great increase in over-seas and costal traffic which will result. South America is on the verge of a tremendous industrial development. The Far East shows vivid signs of an awakening.

It is to be feared that other nations are more alive than we to the certain commercial benefits of the canal, and will profit thereby at our expense, unless legislation favoring American shipping using the canal is passed. Such legislation would be certain to favorably affect the entire country, as offering wider markets and consequently increased consumption of raw materials and home-grown products.

Ship building would also revive, forming additional employment, and a merchant marine to back our navy.

The subject in all its phases is worthy of careful study by every patriotic citizen.

Ribbon Flowers.

Seldom does fashion touch upon a more charming thought than the ribbon flowers, now so much worn in place of a brooch. They are easily put in place, quickly evolved from a bit of inexpensive material, perhaps a left-over which would go to the scrap-bag, and one may have enough changes that each dress will be supplied with the flower best in harmony with it.

Wild roses are quickly made from a narrow strip of bias silk folded through the middle and the two edges gathered together, the raw edges being first turned in. Then draw up the gathering thread, shaping into a single or semi-double rose, and cover the center with French knots in gold thread to simulate stamens. Two or three of these arranged together, with a few loops of dark green baby ribbon for a background, make a beautiful setting for the pink or white blossoms. More double roses may be made in a similar way, with the ribbon or silk petals filling to the entire center.

Sweet peas are very easily made, and the realistic effect in their simple fashioning must be seen to be realized. A cluster of a dozen will require a yard of one and three-fourths-inch satin ribbon and a couple of yards of soutache braid. Choose the braid of a dull, blue-green tint, to simulate stems. The ribbon should be of various colors, white, rose and lavender being a good combination, and if you can chance upon one or two pieces with shaded colors, fortunate. A mauve may also be used in the combination.

Cut the braid into ten or eleven-inch pieces, and the ribbon into three-inch strips. Taking one of the pieces of ribbon, fold the end in slip, one end of the braid between them, and pleat the ends of the ribbon tight about it in about two pleats. Now bring the braid down on one side of this ribbon in a loop about half an inch long and catch in place at the side with a stitch to form a part of the calyx. Bring over and down again on the other side in the same way. Then return to top for stem, which should hang perfectly straight. To finish the flower, catch in the very middle of the little bag thus formed, drawing the edges of the ribbon together on the inside. This will make a V-shaped finish to the flower, which gives a very close resemblance to the sweet pea blossoms.

Make a second flower of the same color on the other end of the stem, or, rather, the piece of braid. Make the next pair of blossoms of a different color, and when you have completed the sixth pair, tie the stems together loosely in the middle with a bit of baby ribbon, and then clip some of them past the middle, so grading that they will depend in uneven lengths.

Another way to make the sweet peas is to take small pieces of silk or satin and gather or tie at the top. Place two of these together, one slipped just past the other. Over the two slip a calyx purchased at the shop or one slipped from a discarded millinery flower.

Daisies are made with baby ribbon tied at the ends to mark the petals and the center filled in with French knots. Many other flowers may be imitated in a similar way, and it is quite a pleasure to note how the fashioning of one after a model will lead to the originating of another, especially if natural flowers are at hand for a pattern. A few pieces of delicate silks or satins and some dull, olive-green ribbon for a setting will accomplish wonders. It is so gratifying to be able to get something artistic out of mere scraps, and then one can well afford to share the results with friends, and a dainty ribbon flower for the neck is a gift which will be always appreciated.—Bessie L. Putnam.

The Range With a Reputation
The Economy of A New Range
It is a mistaken idea of economy to try to get along—to attempt to get results with an old worn out range or cook stove merely to save the price of a new one. You can probably stick a knife blade anywhere in the seams of your worn out range where the bolts are loose and the stove putty has crumbled away and you're burning twice the fuel necessary. You can save the price of a Great Majestic in the saving of fuel alone—and that would be good management and real economy. Don't trust wholly to a printed description in buying a range, because a very glowing description can be given of a very ordinary range. If you are considering a new range, it will pay you, before investing your money in any range to go to some dealer who handles them and carefully compare, point for point, with any other—the
Great Majestic
Malleable and Charcoal Iron Range
A Perfect Baker—Fuel Saver—Outwears Three Ordinary Ranges
ONLY range made of malleable iron and charcoal iron. Charcoal iron won't rust like steel—malleable iron can't break. Put together with rivets—joints and seams absolutely air-tight always. Oven lined with guaranteed pure asbestos board, covered with an iron grate—you can see it— insuring a dependable baking heat with half the fuel required in ordinary ranges.
All Copper Movable Reservoir—Other Exclusive Features
Reservoir is in direct contact with fire, heats through pocket stamped from one piece of copper—patented feature only in Majestic. Oven Thermometer—open end ash pan—ventilated ash pit—ash cup. Sold by dealers in nearly every county in 40 states. Write for our booklet, "Range Comparison."

It Should Be In Your Kitchen

The Christian Life.

To believe without proof God is love, and prove that faith true by finding love the life we are made for; to trust Christ at first simply as our best teacher, and let the sense of His godliness grow as His life is reproduced in us; to own men of every race, class and creed as our brothers whom we are to help Christ save from physical injury, human unkindness, social injustice, and their own wrong-thinking, wrong-feeling, wrong-doing, as the greatest evils of all; to bear cheerfully whatever sacrifice of pleasure or burden of pain this saving service involves; to struggle strenuously for better economic, political and social conditions, in the calm assurance that God's best gifts are spiritual, to be had by us all for the asking; to do all in the modest and reverent sense of how little our best efforts add to the glorious work God's good spirit is doing through institutions so much greater and men so much better than we—faith proved by life; trust tested in experience; love without limit; the passion to serve and to save; the willingness to suffer and to sacrifice; the striving for the temporal in the peace and power of the eternal; so they may be clothed with modesty and crowned with reverence — these are the Christian Life.

Fruit Market at St. Louis.

The following sales were made on the last day of August:

Apples.—Practically none save small, green, specked, overripe and inferior fruit offering, and this is hard to sell and low-priced, at, say, 75 cents to $1.15—mainly at $1.00 per bushel. Sound, hard, of good size and color would bring more if here; New York Duchess dull at $2.50 to $2.85 per barrel, delivered. Home-grown boxed fruit in large supply and slow at from 15 to 40 cents, according to quality. Sales: River receipts—Twenty, twenty-three and fifteen barrels Shackleford at $1.00; sixteen barrels Grimes Golden at $1.40; eight barrels Maidenblush at $1.75; fifteen barrels Ben Davis and fifteen barrels Shackleford at $1.25; twenty-eight barrels fancy Grimes Golden at $2.25; twenty-four barrels Ben Davis and Jonathan at $1.10; fifteen barrels Shackleford and Stark also at $1.10; twelve barrels choice Maidenblush at $2.35; eighteen barrels Shackleford at $1.05; thirteen barrels Shackleford at 75 cents; twenty-two barrels Shackleford at $1.25; twenty-two barrels Orange Pippin at $1.47; fourteen barrels Jonathan at $1.87; fifteen barrels Grimes Golden at $1.75; thirty-two barrels Shackleford at $1.15; eighteen barrels Shackleford at $1.20; thirty-two barrels Grimes Golden at $1.65; eighteen barrels Grimes Golden at $1.21; eighteen barrels Shackleford at $1.25; ninety-four barrels and ten barrels Shackleford at $1.20; thirty barrels Stark at $1.00; twelve barrels Senator and Bellefleur and Walbridge at $2.00; forty-four barrels Grimes Golden at $1.25; eleven barrels Pewaukee at $1.00; twenty-four barrels Shackleford at $1.30; twelve barrels Senator and Minkler at $2.25; thirty-five barrels Ben Davis and Jonathan at $1.50; two barrels Grimes Golden at $1.00; one barrel Wolf River at $1.25; and 145 barrels No. 1 Grimes Golden at $1.90. About 1,100 barrels in by boat—nearly all windfall and poor stock.

Peaches. — Fancy, sound, high-colored fruit in pretty good demand, firm and not overplentiful; soft and overripe stock, which has to be moved quickly, sells at low prices. Sales included: One car Oklahoma flat crates Elbertas at 50 cents, delivered; two cars Oklahoma flat crates at 65 cents, delivered; two cars Arkansas flat crates fancy Elbertas at 70 cents, delivered; one car Oklahoma six-basket crates fancy Elbertas at $1.40, delivered; one car bushel baskets Arkansas Salways at $1.10 to $1.25, delivered.

Pears.—Plentiful; only a quiet demand for choice eating varieties; common, small, green, very dull. Quote: Michigan bushel baskets Clapp's Favorite at $1.00 to $1.25: Alabama Kiefer at 25 cents for melon baskets and 40 to 60 cents per hamper; home-grown and near-by common green varieties at 25 to 50 cents per bushel box, and 10 to 25 cents per one-half bushel basket; and Seckel at 35 to 40 cents per one-half bushel basket and 75 cents per bushel box; bushel baskets Illinois Seckel at 60 to 85 cents; Duchess and Howell at 75 to 80 cents; Bartlett at $1.00 to $1.25.

Plums.—Damsons slow sale and barely steady in price; red varieties dull. Quote: Home-grown and near-by red varieties at 20 to 25 cents for one-half bushel basket; Damsons at 50 to 60 cents per one-half bushel basket and 2 cents per pound, by weight.

Grapes.—Offerings large and demand quiet. Quote: Home-grown Concords and white varieties at 15 to 25 cents per twenty-pound basket —jelly stock less.

62 INDIVIDUAL PRESENTS, INCLUDING 20 INCH FULLY DRESSED DOLL, JUST AS SHOWN HERE, ALL ARE REAL ARTICLES POSITIVELY NO "CUT-OUTS" all Free

This is the greatest doll combination ever offered and all 62 articles are **given as one gift**—all free. The big doll is **life size**—nearly two feet high, dressed complete from her pretty picture hat with feather, lace and gilded buckle, to her dainty slippers, including **complete underwear**, petticoat, stockings, etc., her dress is very prettily made, half length and trimmed with lace. Her little chatelaine watch with fleur de lis pin is a beauty. The little baby doll is 4½ inches high and has long flaxen hair **nearly to her knees.** The barking dog is half a foot high, brown head, white body, collar with bell, push doggie's head and he opens his mouth and **barks just like a real puppy.** The dining room set is made of bamboo, dining table and four upright chairs. The 24 piece **Tea Set is a beauty,** nice decorated tray with six little cups and saucers, six tea spoons, tea pot and cover, sugar and cover and creamer all to match. The 3 baby rings are made of white metal, each with a **different stone setting.** Dollie's house is decorated in colors with gable roof and very pretty. The 3 piece garden set of rake, hoe and shovel, the 7 piece tool set of saw, hammer, hatchet, file, trowel, wrench and chisel, are **all made of white metal,** perfect little instruments. Dollie's lantern, mail car, street car and opera glasses, also the ten pet animals, are also made of white metal and **stand up** as natural as life. The baby whistle looks and sounds like a small policeman's whistle.

HOW FREE: As stated above, all these 62 doll articles ARE FREE--to advertise our business. SEND NO MONEY, just your name and address and we will send you postpaid 12 new style wall picture paintings and 12 coupons, each good for 35 patterns. You hand out one picture painting and one coupon on a big offer including more and collect 25 cents. You only need to make these twelve 25 cent sales--NO MORE or less--and we will then send you the big dressed doll and ALL the other fascinating doll presents. You can do this work in an hour. Our pictures, pattern coupons and other things GO LIKE "HOT CAKES." We run all the risk. Just send your name today if you want this wonderful 62 doll combination.

H. B. PATTERSON, Secy., 501-509 Plymouth Ct., Dept. 137, CHICAGO

FREE

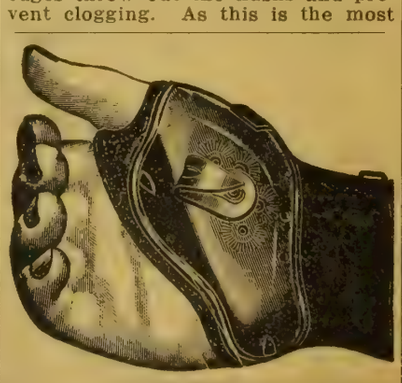
Watermelons. — Receipts: Seven cars on 'Frisco, twenty-eight cars (eighteen cars through) on Iron Mountain, one car on Wabash; three cars on R. I. Offerings liberal, and include a good many cars of stale and sunburnt melons, although tracks are gradually cleaning up; no shipping demand and local trade mainly of a cheap character. A car Arkansas melons (refused for charges) sold for $50 on track Quote: Car lots Missouri at from $40 to $80, according to size and quality of melons and loading of cars. Sales on track: Missouri—One car thirty-five-pound (stale, bad order) at $45; one car eighteen to twenty-pound (fresh) at $55; one car twenty-two to twenty-three pound (fresh) at $60; one car twenty-five-pound (fresh) at $35; one car eighteen to twenty-pound and one car twenty-four-pound at $50; one car at $45; one car at $50; one car at $52.50; one car at $55; one car at $57.50; one car at $60; one car at $65; one car at $67.50.

Cantaloupes. — Colorado Rocky Fords lower, with sales at $2.50 to $3.00 per crate for Standards and Jumbo in jobbing way delivered and Standard flat crates at 90 cents. Illinois (Poag) baskets dull at 20 to 25 cents. Home-grown Hackensacks and Gems plentiful and slow at 25 to 50 cents per bushel loose.

Crab apples.—Dull. Quote: Michigan bushel baskets fancy Siberian at $1.50; Missouri bushel baskets at $1.00; barrels quotable at $2.00 to $2.50.

Favorite Corn Husker.

Clark's Corn King with its new self-shedding hook. The spear point enters the husks easily. The slant bend turns the husks for shredding, and the rounded, curved and beveled edges throw out the husks and prevent clogging. As this is the most



approved hand husker on the market, we have selected it as a seasonable subscription premium. The hook sets at any angle; two positions for a thumb hook and five positions as a palm hook. Opening and closing the small end of the plate makes the adjustment perfect for any width of hand and prevents chafing. The strap passes through the leather tongue and the first ring and over the hand to the opposite ring and back through the first ring. Be sure and have the strap enter the ring from the outer side. It brings the pulling strap underneath, forms the sinch draw and gives you the full benefit of the sinch-lock, which is the same as a half-hitch. The strap then passes to the last ring and then to the buckle; the half-hitch forms one fastening and the buckle holds the end of the strap. We will send The National Farmer and Stock Grower for one year and Clark's Corn King Husker for 50 cents. The Husker is a free premium. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Gainsford Marquis, a famous Shorthorn bull, has just been sold for $7,000. His picture is in the Book of Live Stock Champions, page 302. See page 22 of this paper.

During the first week in August, a draft horse weighing 1,750 pounds was sold at auction by Holland, Nugent & Maxwell Bros., at the St. Louis National Stock Yards, for $345.

and Stock GROWER

The Unused Temperature of the Soil.

We come but slowly to make use of great natural forces. The world for long centuries fully understood the principles of air pressure, yet it is only in our day that the pneumatic cleaner has come on the market. We are not yet using the force produced by the wind, though it has been slightly utilized by windmills for a few hundred years. Tide mills have been in use here and there for decades of years, yet no general effort is yet being made to utilize the energies stored up in the great movement of the ocean waters.

It is so with the temperature of the earth. It has been utilized only in a small degree in any country, though it has in it great possibilities of comfort for the human race. We have not yet realized its importance enough to utilize it extensively.

Here and there, however, it is being used in a small way, but very effectively.

The great fact is that in the temperate zones the temperature of the earth a short distance below the surface is about constant the year around. Scientists have named this layer of even temperature the "zone of thermal equilibrium." Therma means heat and thermal means pertaining to heat. It is assumed that this zone in the cool regions of the world is about 100 feet in thickness, though its thickness varies. The immediate surface of the ground varies in temperature according to the temperature of the air above it. But this variation decreases as we go deeper in the soil, till, at about eighteen feet a point has been reached where the temperature is the same, whether the month be December or May.

Some years ago the writer tested the temperature of some deep wells in Northern Illinois, and in almost all cases the water was at 50 degrees, though the time was midsummer. The water from these wells was being used in creameries. It was a great help in the saving of ice and was used in the washing of butter.

Now, this is nothing new to multitudes of farmers that have wells that are deep or on whose farms are springs where the water apparently comes from great depths. This is no new thing, but it is an old fact that should be called to mind with emphasis. The water from such deep wells has a cash value on the farm. Yet many of the wells on our farms are only shallow affairs.

Wherever a well is to be put down it should go deep into the zone of thermal equilibrium. Then the water will be cool and is more likely to be free from germ life than is the water from a shallow well.

Farther north the temperature of the zone of thermal equilibrium falls rapidly. In Wisconsin it is about 45. In Canada it gets down to about the freezing point, and the writer has seen Canadian wells that, as late as the first of June, were coated with ice. This is a magnificent condition for the pursuit of dairying.

Homes and barns can be so constructed as to make the most of these conditions. Some of the great stone buildings in the big cities are always cool on their first floors, even in hot weather. The writer has in mind a great stone structure that cost four millions of dollars. There is a mass of cool air always present on its lower floors and in the basement, even when people are suffering with excessive heat in the streets.

To take advantage of this, houses should cover large space on the ground and have roofs that are constructed to be non-conductive of heat. The cellars should be deep and perfectly drained. Shallow cellars seem to be coming to be more common, but they can never give the good results of the deep cellars.

Seeing Is Believing

You Can't Afford To Buy Any Range Unsight Unseen

If you were buying a horse, you wouldn't want any printed description—you would want to look him over mighty carefully so as to know you were getting your money's worth. So before deciding upon any range the wise woman will go to the local dealer and examine closely into the superior points of merit of the *Great Majestic Range*—it will stand the test of comparison, point for point, with any range ever made. When you have made this comparison—your choice will be the range with a reputation—built on honor—the

Great Majestic

Malleable and Charcoal Iron Range

Aluminum Top Reservoir

A Perfect Baker

A Fuel Saver

Outwears Three Ordinary Ranges

It is the only range made of malleable iron and charcoal iron. Charcoal iron won't rust like steel—malleable iron can't break. It outwears three ordinary ranges.

Economical—Saves Half Your Fuel

The *Majestic* is put together with rivets oints and seams remain air tight forever. Oven lined with *pure asbestos board you can see it.* Takes but half the fuel—assures perfect baking.

All Copper Reservoir—Against Fire Box

The reservoir is *all copper* and heats through copper pocket, stamped from one piece, setting against fire box. Holds 15 gallons of water. Just turn lever and it is instantly moved away from the fire.

Greatest Improvement Put In a Range

—increasing strength and wear of a *Great Majestic* more than 300% at a point where other ranges are weakest—many other exclusive features. *Ask to see it.*

It Should Be In Your Kitchen

East Indian Grain.

Consul General E. D. Winslow at Copenhagen, Denmark, reports that country as receiving quantities of East Indian gram (Cicer arie-tinum) which is displacing American corn in that market. It is said that the unmonly high price of American maize (corn) that has ruled during the last few years has compelled the Danish farmers to look about for a cheaper substitute, and that a good feeding stuff has been found in the East Indian gram.

Gram is principally used as a food for hogs. It is fed ground and it is said that experiments have proved it to be of great feeding value and fully equal to corn. According to statistics available, the importation into Denmark of gram has been about 40,000 tons.

From the Kansas Farmer.

Breeders of pure-bred stock will remember the Book of Champions issued by Philip H. Hale, of 3550 Vista Ave., St. Louis, Mo., about the time of the Louisiana Purchase Exposition, and will be glad to know that a new edition for 1912 has been issued. This book contains photographs of 750 champion animals of all breeds in the United States and is a splendid volume for the library of the breeder and farmer. The price of the book is one dollar. (See page 22).

American Breeders' Association.

The ninth annual meeting of the American Breeders' Association will be held at Columbia, South Carolina, January 24, 25 and 27, 1913, just preceding the opening of the American Corn Exposition.

Students of Heredity and Eugenics, improvers and breeders of live stock, poultry, field, garden and horticultural crops are invited to attend.

Write for programme and particulars, reduced rates, etc., to Hon. Willett M. Hays, Secretary, United States Department of Agriculture, Washington, D. C.

Death of a Pioneer Plow Maker.

On September 2d, it was reported from Sparta, Ill., that Mr. F. R. Crothers had died at his home at the age of 83 years. He was born on a farm where now stands a part of Indianapolis, Ind., December 23, 1820. He came to Illinois in 1838 and settled in Coulterville. In 1843 he established the Crothers Plow Works, which has grown into a large manufacturing establishment. The first steel plow made in the state of Illinois was manufactured in these works in 1860.

At the New York State Fair, the gold medal for the highest quality market milk was awarded to Henry N. Corwith, Bridgehamton, N. Y., on a score of 96½.

RAW ROCK PHOSPHATE.

Of No Value in General Farm Practice—Mixing Manure With It Does Not Cause It to Become an Available Plant Food.

In previous issues of The National Farmer and Stock Grower we have made mention of raw rock phosphate as being of no value as a fertilizer, for the reason that the phosphoric acid contained therein is locked up by nature and may require generations to become available as plant food. The phosphoric acid contained in the rock can be rendered available by chemical process, but in the raw, untreated state the farmer who buys it can obtain no returns.

In this connection we publish a letter which is from a most prominent authority upon the subject of commercial fertilizers, one who has been in the business during his entire business career, and now, although retired from active work, is still a student of chemistry and an investigator of plant foods.

The Letter.

43 Chatham street, Boston, Mass., September 13, 1912.

Philip H. Hale, Editor National Farmer and Stock Grower, St. Louis, Mo.:

Dear Mr. Hale:—I have read with interest your editorial in your September issue concerning raw rock phosphate and I agree in the main with your conclusion that it is of doubtful value in general farm practice.

Raw rock phosphate, whether Tennessee or Florida, contains large quantities of phosphoric acid. Thus it has largely taken the place of bone and become the basis of acid phosphate and commercial manures; but in its raw state, it is unavailable to plants, and therefore is not used to any extent by fertilizer manufacturerers. It is first washed, then ground and finally dissolved with sulphuric acid, making acid phosphate, which contains its phosphoric acid or phosphorus in an available form. In this form it not only supplies the available phosphorus for growing crops, but for some reason or other, which we do not understand, it has a stimulating or catalytic action on plant growth, either directly in the assimilation of plant food, or indirectly in promoting the growth of beneficial bacteria in the soil, which we know is necessary to crop production. Raw rock phosphate does not supply available phosphoric acid to the crop, and on that account probably does not promote bacterial development.

It has been claimed by some that the mixing of raw phosphate rock with manure will render some part or all the phosphorus available. A very interesting bulletin has just been issued by the Rhode Island Experiment Station (No. 151) which details "the effect of cow dung on the availability of rock phosphate." The concluding paragraph of this bulletin reads as follows:

"The experiment indicates that practically no increase in the amount of available phosphorus results from mixing fresh cow dung and floats (that is, very finely ground phosphate rock) together for a number of months before applying them to the land."

If fresh cow dung (solid excrement), free from extraneous material, which was the kind used in this expperiment, will not render phosphate rock (ground so fine that it will float) available, then what form of stable manure will do it? Moreover, if stable manure will not render the phosphorus available, is it reasonable to suppose that ordinary soil, even when rich in humus, will accomplish the same thing in time for current crops to assimilate?

Farmers who engage in intensive agriculture, and all farmers should engage in that kind of agriculture, for it is the kind that pays, must have available plant food for the growing crop, since it is the growing crop that pays the bills. A bird in the hand is worth two in the bush.

I agree with you that it is not right to advertise raw rock phosphate as a fertilizer. It should be licensed and inspected in all the states and sold for just what it is—not as a fertilizer, but as a source of phosphorus which is insoluble, unavailable and in its raw state unsafe for the commercial farmer to rely upon in growing crops which are planted and mature in one season.

Yours Very Truly,
(Signed) W. H. BOWKER.

The Chestnut Bark Disease.

The growing appreciation of nuts and their products as foods renders the situation regarding the chestnut tree of special interest. Once its chief value consisted in the number of rails it could produce; but now, aside from the fact that it is valuable in many ways for its timber, is a rapid grower and not fastidious regarding location, its importance as a producer of nutritious foods gives a double regret at the edict in many places now official, and fast threatening a far wider area, "The chestnut tree must go."

But eight years ago it was first recognized as a serious menace around New York City, though it had infested the trees of Long Island for some time before, and now the chestnut in the vicinity of the metropolis is destroyed. Pennsylvania was the first state to take up the matter systematically, and well she might, for while four years ago but two counties were known to be inoculated, today the four counties near Philadelphia have 80 per cent. of their timber infested, and a line diagonally covering almost the entire eastern half of the state marks diseased land, while isolated tracts are located in many parts of the western half, some of them bordering the Ohio line.

The disease is due to a fungus growth which attacks the inner bark, and is thus not available for insecticides. Thus far there has been no remedy found but the ax, specialists advising all chestnut trees near the badly-infested lands to be cut, the bark, stumps and brush to be burned, in order, if possible, to stamp out the westward march. Drastic measures must be employed or the chestnut will soon be a thing of the past. The native variety, chinquapin and European chestnut all readily succumb, though the Japanese and other Asiatic varieties seem to have stronger resisting power. Every owner of chestnut timber should acquaint himself with the symptoms, and park authorities or those purchasing nursery stock will do well to keep a watchful eye out for any indications of the blight, and consult at once with specialists if its appearance is suspected.—Bessie L. Putnam.

Telephones on Farms.

The Western Electric Company, with headquarters at 463 West street, New York, report that during the past five years they have sold a half million "Bell" Telephones to farmers, that the demand shows no signs of abating, and it is only a matter of steady progress when the proportion of country homes with telephone service will equal that of the cities.

Great, Big, Free Bargain Book!

Free to YOU right now—the big, beautiful "NATIONAL" Style Book—America's greatest bargain book.

This wonderful book contains the very newest, most up-to-date *fashion information*—is just full of illustrations and descriptions of the latest styles and gives pages and pages of complete details about remarkable money-saving opportunities—for instance, such as:

Free Book For Cow Owners.

Our readers who will look on page 11 will find something of value that they can obtain free by writing for. It is the De Laval Handbook, published for the purpose of furnishing farmers with information concerning all that relates to dairying. Although it is issued by the De Laval Cream Separator Company and is to be had for filling out and mailing to them a blank form at the bottom of the advertisement, the book is just as valuable as if the price was a dollar, for books not as good have been sold for a dollar a copy. The blank form to be filled out asks what make of cream separator you use, and, if you are not using a cream separator, simply say that you have none. What the book contains is fully set forth in the advertisement, and it ought to appeal to anyone who owns cows. Cut out the coupon, sign and send it in and you will receive the book promptly. Address, The De Laval Separator Company, 165 Broadway, New York, N. Y.

Wheat Harvest Time.

It will be seen from the following that every month in the year has a wheat harvest somewhere:

January—Australasia, Chili, Argentina.

The Oats Market Situation.

Oats continue at a low range of prices and the market report will not be cheerful reading to farmers who have any considerable number of bushels of oats for sale. But so far as we have gone prices have not been pulled down to the low level of two years ago, when there was another large crop to be disposed of.

On August 31st, St. Louis cash oats were selling at 31 to 32 cents a bushel, and on September 30th the price was the same to a half cent higher. When we review the speculative market the appearances are not so good. The September option passed away at 31 cents a bushel, showing a loss of five-eighths of a cent per bushel in thirty days. December, the next active option, declined from 32¼ cents on August 31st to 31⅝ cents on September 30th. The December option has ninety days to run from September 30th before it matures, and if farmers will only restrain the selling of oats that quotation can be advanced five to six cents a bushel before maturity.

After the December quotation is matured it is five months before another active option is traded in, and for the reason that the crop is exhausting itself all the time May is usually a higher month than December. The May option was quoted at 33¾ cents a bushel on August 31st, and was reduced to 33½ cents by September 30th, a decline of a cent and a quarter in thirty days. And yet this is a fair prospect, for the reason that the situation might be very much worse. We contend, however, that the market is in the power of farmers, and that slow marketing of oats will be followed by advanced figures; that prices will advance from natural causes if farmers having oats to sell will have a reasonable amount of patience.

The Corn Market Situation.

The price of corn is no longer high. Indeed, the people who buy and sell the corn in market have an idea that prices will be reduced in consequence of the immensity of the crop. We have been told that the export trade is going to be brisk on account of the shortness of grain crops of Europe, but market prices, market prospects and market operators cannot prove it.

On August 31st, on the cash market of St. Louis, No. 2 corn sold at 80 cents a bushel, and on September 30th the sales were at 68 to 69 cents a bushel, showing an actual decline of 11 cents a bushel.

In the speculative market, which is responsible for all contracts for future delivery, the decline on the September option was 3¼ cents in thirty days, the quotation falling from 72¼ cents on August 31st to 69 cents when it was closed to a final delivery on September 30th.

But the real decline in the price of corn shows itself in the contracts for delivery on December 31st. That option was quoted at 55¼ cents on August 31st and declined to 49⅝ cents by September 30th, which is 19 cents less than the December option matured at last year.

The option that does not mature until May 31st of next year declined from 54 cents, quoted August 31st. to 50⅝ cents on September 30th. Farmers can here see the penalty of large production, because if there is any product that has the benefit of the law of supply and demand it is corn, for the reason that farmers can hold the corn, or feed it to stock, or send it to mill before they are obliged to ship it to market. At any rate, other countries cannot raise corn in any abundance and Uncle Sam is in control of the supply.

The Wheat Market Situation.

The figures of the wheat trade were not much changed when the September option was closed out at 91½ cents a bushel. Our readers can see something by going back five months to look at the September option. On May 31st it was quoted at $1.06 per bushel; on June 29th the quotation was $1.06⅛ per bushel; on July 31st it was quoted at 93½ cents a bushel; on August 31st the quotation was 92⅝ cents a bushel, and, as before observed, it was closed out at 91½ cents a bushel on September 30th.

Having done with the September option, the next delivery is the December option, maturing on December 31st, 1912. On August 31st we left the quotation at 93 cents a bushel, and it was quoted at 91 cents at Chicago at the close on September 30th, showing a two-cent decline during the month of September.

The option in which all traders take an interest is May. It is at the finish of one crop and the opening of another, the new crop being pretty safely estimated as to quantity. We left the May option at 97¼ cents and we find it again on September 30th at 95¼ cents a bushel, this particular option being two cents a bushel lower than the month before.

Farmers will now see that the people who call themselves consumers have no room for complaint, so far as the cost of wheat is concerned. From a farmer's standpoint the market is low, and many a farmer will not receive in net cash the amount of money that the wheat cost him to raise.

Fruits at St. Louis.

Wholesale quotations on basis of early October trading:

Apples.—Ben Davis at $1.00 to $1.25 for small, poor No. 2 and windfall, to $1.50 to $1.60 for good to choice; $1:75 to $1.85 for fancy, with color; Jonathan at $1.50 to $2.25 for No. 2; $2.25 to $2.85 for choice up to $3.25 to $3.50 for fancy and extra fancy high colored; Grimes' Golden, $1.50 to $1.75 for small and No. 2; $1.75 to $2.25 for choice; $2.40 to $2.60 for fancy; Gano, $1.00 to $1.25 for small and poor No. 2; $1.00 to $1.75 for choice; and $1.90 to $2.00 for fancy high colored; Huntsman's Favorite at $1.40 for No. 2 to $1.75 for choice and $2.40 for fancy; Roman Beauty, $1.50 to $2.00 for poor color to $2.50 to $2.75 for well colored.

Concerning Parcels Post.

Heretofore the limit in weight for a package of merchandise was four pounds. Parcels post will raise the limit to eleven pounds.

Heretofore the merchandise rate of postage was 16 cents a pound for any distance, and under the new law the highest rate will be 12 cents a pound.

After January 1st, on rural routes and city delivery, the rate will be five cents for the first pound and one cent for each additional pound.

After January 1st, packages sent inside of fifty miles of the mailing office will cost five cents for the first pound and three cents for each additional pound.

After January 1st, for distances from 51 to 150 miles, the rate will be six cents for the first pound and four cents for each additional pound.

After January 1st, in the zone extending from 151 to 300 miles the rate will be seven cents for the first pound and five cents for each additional pound.

After January 1st, in a zone ranging from 301 to 600 miles, the first pound will cost eight cents and each additional pound will cost six cents.

After January 1st, in the 601 to 1,000-mile zone, the rate will be nine cents for the first pound and seven cents for each additional pound.

After January 1st, in a zone 1,001 miles to 1,400 miles, the rate will be ten cents for the first pound and nine cents for each additional pound.

After January 1st, in a zone 1,401 miles to 1,800 miles, the rate will be eleven cents for the first pound and ten cents for each additional pound.

After January 1st, a package going over 1,800 miles will cost the maximum rate of twelve cents a pound.

Each additional pound means each full pound, and a fraction of a pound will be charged as a full pound.

The Pleasant Hill Produce Association.

In our last edition mention was made of this organization, with headquarters at Allen, Miss. The Secretary now writes as follows:

"We are glad to see the great interest being shown everywhere in this movement. The association is meeting a fundamental need as deep as life itself.

"Too much money is being spent by our government, railway companies, etc., in telling the producer 'how to raise two blades of grass where one grew before, and the necessity of raising a variety of crops.' More of this money should be spent on the source of our troubles.

"If our producer could find a ready market for everything he is already raising he would diversify, rotate and grow the two blades instead of one. Our farmers know enough to practice these things, if they only had some sure monetary encouragement along the line of marketing. There is too much waste and profits lost in marketing.

"To solve in a practical way this vital problem, the Pleasant Hill Produce Association was formed and is working. We want, and are working to that end, the whole state to join us in this move. The producers will help, of course. The progressive papers, as always, will be glad to join; the transportation companies will aid as a mere matter of business, as better farm conditions spell increased traffic for them, and our merchants will aid, for their meat and bread is a direct product of the producer.

"By a concerted move we can make our efforts so much more effective."

Write the Secretary of the Pleasant Hill Association, Mr. P. S. Mangum, Allen, Miss., who will be glad to answer anyone wishing information along the lines of the proposed action.

The Sale of Roots.

Roots shipped to the St. Louis market were selling as follows, October 1st: Golden Seal, $3.70; Lady Slipper, 15 cents; Seneca, 36 to 38 cents; Pink, 20 cents; Black, 8 cents; May Apple, 3½ cents; Snake, 24 to 26 cents—stemmy and leafy less; Kansas Blacksnake (Echinacea), 10 cents—split root half price; Oklahoma Blacksnake, 9c.—Missouri worthless; Angelica, 5c.; Wahoo—Bark of root, 20 cents; bark of tree, 5 cents; Blood, 4½ cents; Blueflag, 5 cents; Sassafras, bark of root, 5 cents; Wild Ginger, 2 cents; Spikenard, 3 cents; Scullcap leaves—Bright, 9 cents, but dark worthless; Wild Ginseng, $6.00 to $6.25; cultivated do., $3.00 to $4.00 per pound.

The biggest pain a man with a million has is over the fact that it isn't two.—New York Press.

Avoid Winter Killing of Wheat.

The past winter with its unusual cold has made several things in wheat growing very plain. Some sections suffered severely on account of winter killing. We have in mind several fields of wheat near our home in Southern Indiana. One field of thirty acres produced 105 bushels; another field of forty acres yielded 160 bushels. These are about average yields for a great many fields.

Most of this wheat was put in late and made very little growth before cold weather. It was planted late partly on account of unseasonable weather and partly to avoid damage by the fly. The winter was extremely severe and in trying to avoid insect damage the wheat growers ran right into an equal and greater peril—that of winter killing.

While the winter was unusual, it is apt to repeat itself any year, and it often happens that fields of late wheat are injured where little growth is made in the fall. It would seem proper to sow early to obtain more growth before winter, but here we have the danger of Hessian fly. The problem is to get a fair growth after danger of fly is largely past. This can usually be accomplished very profitably by early plowing of the field combined with frequent harrowing with smoothing harrow and with disc harrow if heavy rains pack the ground. The effort should be made to conserve moisture, liberate plant food and form a well-compacted seed bed with an inch or two of loose soil on the surface. This preparation combined with good seed will do much to insure a crop the following summer.

However, there is another insurance not so much nor so widely used as it deserves which should be given attention, i. e., commercial fertilizers. If we put all the work suggested on the field it is only the part of wisdom to add fertilizers and thus give the crop every chance. The wheat plants need plenty of good food to make a quick, strong growth, and a good fertilizer supplies parts of food apt to be lacking. It furnishes the plant food in a form which the wheat can use freely. It is easily possible to sow fertilized wheat several days later than unfertilized and obtain an equal or greater growth before winter. This enables us to avoid the fly and at the same time obtain a growth of wheat which will be unaffected by ordinary winters and will make a profitable crop after such a winter as that of 1911-12.

The high-grade fertilizers are best for making fall growth and for supplying the needs of the crop the following spring. By high-grade we mean a fertilizer made of good, easily available materials and one which carries a large per cent. of the plant food. These high-grade goods usually cost a little more, but they are cheaper per pound of plant food.

There are several good formulas for wheat fertilizers. One containing 2 to 3 per cent. nitrogen, 8 to 10 per cent. phosphoric acid and 5 to 6 per cent. potash is excellent. This can be used very profitably at the rate of 200 to 300 pounds per acre and the effect will show not only on the wheat but on the clover which follows.—J. G. Gentry, Indiana.

Planting Onion Seed.

The Experiment Station has conducted experiments in the growing of onions by transplanting from a seed bed to the field and by planting the seed in the field where the onions were to grow, and, when large enough, thinning them in the row to the proper distance. It has been found that, everything considered, the transplanting plan is the best and most economical. The thinning of onions in the field beds is exceedingly tedious and expensive, under our method of irrigation. Aside from the extra work and cost of thinning, there are always considerably more weeds in these beds, which make it necessary to start weeding earlier and more frequently. In the germination of onion seed under field conditions there are always a few places, though small they may be, where the seed fails to come up. In these vacant places onions must be transplanted, in order to have a uniform stand in the row.

In order to grow onions by the transplanting method, the seed must be started in the fall or winter. The results at the Experiment Station show that the best seeding period is comparatively short. That is to say, if the seed is planted too early, most of the plants will go to seed the following summer. If, on the other hand, tthe seed is planted too late, the young plants will not be large enough for transplanting at the proper time in the spring. This "best period of seeding" has been found to be, at the Experiment Station, from about the 20th of September to the 10th of October. The practice at the Station is to plant the seed in the field seed beds about the last of September. This period of starting the seed may vary a little, according to the altitude and climatic conditions in different parts of the state. The grower should, however, keep in mind not to start the seed too early or too late, or else the plants will either go to seed or not be large enough for transplanting at the proper time in the spring.

The preparations of the seed bed is of much importance. The land should be plowed thoroughly, and disced or acmed, if necessary. It should be gotten as level as possible. It is best not to have the beds or plats too large. If the soil is somewhat light, it is advised that a light dressing of well-rotted manure be put on it, and be disked in before the seed is planted.

The seed can be drilled in rows about four inches apart. This is best done by using a garden drill, such as the Planet Junior. Great care should be taken in regard to the depth. If it were possible under field conditions, it would be best to have the seed about one-half inch in depth. Since this is a hard matter to do, three-fourths inch to one inch depth should be the limit. Immediately after planting the seed it should be irrigated, to produce germination. As a rule, another irrigation is given the plats while the plants are coming through and before germination is completed. During the winter two or three irrigations may be given the seed bed. The number of these irrigations will depend upon the winter —whether it is dry or wet. If the germination were ideal and everything went on all right during the winter, we could probably count on three pounds of seed producing enough plants for one acre; but to be on the safe side in practice, we usually count on four to five pounds of seed. The winter temperatures in the Mesilla Valley do not injure the little onion plants. During the last two winters they have stood a zero temperature without material injury.

In the Mesilla Valley, it is the practice to transplant from the 1st to the 15th of March. Transplanting at this time gives the best results. The later the transplanting is done the poorer the results. The old rule in regard to the proper size of onions for transplanting was that the onion was ready for transplanting when it was as large as a pencil. This rule does not have to be followed in the transplanting of this crop in this climate, as all of the onions are transplanted long before they are that large. Oftentimes when they are not more than twice as large as a toothpick. —Fabian Garcia, New Mexico College of Agriculture.

Up to September 17th, New York City had received this year 4,026,597 cases of eggs for sale, which is 325,855 cases less than were received during the same period last year.

CONCRETE MILK HOUSE

ATLAS PORTLAND CEMENT

"THE STANDARD BY WHICH ALL OTHER MAKES ARE MEASURED"

Think of the tests skilled engineers must give a cement when deciding on a big job!

You may not have the facilities to do this, but you can buy Atlas Portland Cement and get the same unvarying quality in large quantities or small, with the same certainty as the Government in buying Atlas for the Panama Canal and the builders of the great Mississippi dam—the two biggest concrete jobs in the country.

"Concrete Construction About the Home and on the Farm"
Our book for farmers

is a mine of practical information. It is not a catalog. It is a text-book. Send for the book today. It is free.

Items on Soil Feeding.

It pays to feed soil well. If soil is well fed it will in turn feed its owner.

It takes something more than soil, sunshine and water to make good crops—it takes available plant food in the soil. Much of the plant food is latent, and long processes are required to make it over into a condition in which the plants can use it.

One thing that surprises one often is the readiness with which a certain kind of plant food is utilized by the soil, even when it is not lacking in that kind of plant food. The writer put some potash on soil on which he believed potash already existed in sufficient quantities, but the results were remarkable. He had similar experiences with nitrogen. There is a probability that the fertilizer applied was more available than that already in the soil.

It is hard to feed a soggy soil. If a soil is not well drained, it will be of little use to give it a large amount of fertilizer. Manure or commercial fertilizer cannot produce results under such adverse conditions as those furnished by water-logged soil. The air must get in, and that cannot be till the water is first taken out. If the air does not get in, aeration cannot take place. Aeration is necessary to permit the soil bacteria to live and perform their functions, which are allied to the growth of plants.

Soil feeding will be ineffective if the soil remains cold, which it will do if not well drained. This fact accounts for unfavorable reports on fertilizers applied to certain fields. Overabundant water makes soil impossible to warm, which is another argument in favor of drainage.

Often fertilizer applied to the soil fails to do its work because the soil has in it too much acid. It is then said to be sour. An application of ground lime rock or of air-slaked lime or of hydrated lime, will cure the sourness. Sour soils are not suited to the growing of any legumes. If legumes will grow well in a soil, it is not sour. Some of the legumes are peas, beans, clover and alfalfa. If any of these do well in a soil, it is not sour. This kind of a test will do where a chemical test is not possible.

All kinds of fertilizer are good for soil, but especially those fertilizers that have bulk, made so by vegetable matter. Barnyard manure is always good when it does not carry too many weed seeds into the plowed ground. The barnyard manure has with the plant food some carbonaceous matter, which gives food to the bacteria engaged in elaborating plant food.

The man that wishes to keep up the fertility of his farm should make it a point to put on as much fertilizer as he takes off in crops each year. This will keep his soil in a condition to respond to every cultural operation.

The growing of clover and the turning under of clover sod every third year will greatly increase the amount of nitrogen in the soil. The roots of clover are more valuable for this purpose than are the roots of cowpeas or soy beans.

Exhaustion of the Soil.

Prof. E. H. Farrington, of the Wisconsin Agricultural College, in speaking of soil exhaustion, made a very interesting statement regarding the selling of dairy products from the farm as compared with selling the grain productions directly off the farm. Here is what he says:

"There is a great difference in the amount of soil fertility removed from the farm by selling crops as compared with the selling of cream and butter. The constituents of the soil that become most easily exhausted by farming operations are the nitrogen, the phosphoric acid and the potash. These each have a market value per pound and can be bought in commercial fertilizers. They are also contained in farm manures.

"An analysis of different crops and of milk, butter and cheese will show how much of these various constituents are removed from the farm when a certain quantity of these products are sold. For instance, by using the same prices per pound for the following crops, etc., we find that the fertilizing constituents taken from the soil when one ton of hay is sold from the farm have a value of $4.34, one ton of corn $5.36, one ton of wheat, $6.63, one ton of milk $2.17, one ton of skim milk $2.31, one ton of butter 49 cents, one ton of whey 84 cents, and one ton of cheese $14.19. The value of each ton of these different products is well known. For instance, the ton of hay may be sold for $20.00, while the ton of butter is worth $600.00, and a ton of cheese $200.00. These figures show, however, that if the crops raised on the farm are fed to the cows and either cream or butter only is sold, then for every $600.00 worth of butter sold only 50 cents' worth of fertility is drawn from the farm."

In encouraging the farmers to engage in dairying, Prof. Farrington says:

"Dairying keeps up the fertility of the soil as already explained.

"Skim milk is very valuable to the farmer not only for the reasons given, but because it is profitable for a farmer to become a stock raiser; that is, raise calves, pigs, poultry, etc., rather than a crop producer and a seller of grain.

"Dairy products, butter and cheese, are not bulky to market, being much more concentrated and the cost of transportation less than it is for hay, grain, etc.

"Dairying utilizes waste land, such as stony pastures, timber and swamp land, which may be used for pasturing the cows, if these are kept, but which otherwise would give no returns.

"Dairying gives profitable employment during the entire year and idleness is not good for either man or beast."

A visit to the National Dairy Show at Chicago, October 24th to November 2d next, will give every one a short course in dairying that cannot be equaled anywhere in the world, and all such matters as here discussed by Prof. Farrington will be illustrated by the world's experts in every branch of the dairy industry.

Fortune in Rindless Ham.

There is a handsome fortune awaiting the person who will invent a method of curing hams and bacon from which the skin has been removed. Albert Halstead, American Consul at Birmingham, reports that the increasing use of pigskin as leather and its tendency to advance in price have made the leather manufacturers cast wistful eyes at the skin that is wasted by being left on pork products. The Leather Trades Review estimates that there is a yearly loss of skins amounting to about $3,000,000 in Great Britain and Ireland alone.—Milwaukee Sentinel.

Farmers and the Election.

The National Farmer and Stock Grower will not take the liberty of advising farmers how to vote at the coming election and will do very little more than remind farmers that it is a duty they owe to themselves and to the country to vote upon the general election and particularly for the Congressional candidates.

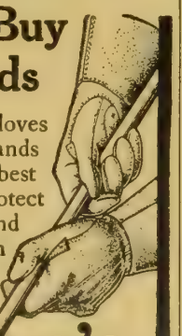
The main question before the people is the tariff question. Shall foreign grain, meat, butter and vegetables and all other farm products being imported contribute to the support of the government or not? Shall the home productions be taxed and foreign productions come in free?

One vote in the House of Representatives may decide the tariff question. It is therefore good policy to get acquainted with the views of the Congressional candidates.

It is not wise to concentrate your attention upon the Presidential nominees, because Presidents do not legislate. Legislation begins with your member of the House. No matter what your views are, vote for the Congressional candidate who holds those views, and make him announce his tariff views in advance whether he is or is not in favor of the same duties on farm products as on what the farmer has to buy.

You Can't Buy New Hands

But you *can* buy gloves that will *keep* your hands good as new The best way to do this—to protect them from cold and hurt; to give them added quickness and skill is to buy



Hansen's Gloves

You may send me Free and postpaid your book showing Hansen Gloves. I am most interested in the styles for following purposes

.....

Mention above what kind of work, driving or sport.

Name .....

Town .....

R. F. D. .....State.....

The farmer has been taught a lesson during the past year, and that lesson is in two parts. The first is, that it is well to have the Congressmen understand the farmers' principles; and the second is, that the farmer ought to understand his candidate's intention in voting upon matters distinctly relating to the agricultural interest.

Send a man to Congress without knowing his views in advance, and when he votes it will most likely be against your interest.

The Acetylene Farm Light.

In this edition of The National Farmer and Stock Grower we have on page 19 an advertisement of the apparatus which is used to install the Acetylene Light on country properties. Naturally enough, it may appear to be a new thing, this making light by generating gas from crushed stone, and it looks almost too good to be true; but on page 25 we have printed a letter on the same subject, which is the story of the acetylene plant on an important plant-growing establishment that is devoted to growing ornamental trees and shrubs, to large and small fruits and flowers, such an establishment being fully up to date in all plantings. The manager of such an establisment is able to pass an opinion which all can respect as a basis for their own judgment. The trifling cost of operation is the most astonishing because in cities we are paying five times as much for coal gas or for electric light. Our readers who wish to light up their own homes, their barns and buildings and heat their own cooking ranges, should ask for more light on the subject in writing to The Oxweld Acetylene Co., 68 Adams street, Chicago, Ill.

The Story of Baby Beef.

It is now nearly thirty years since we first heard about what is called "Baby Beef." We were then acting as assistant editor of a weekly publication, long since deceased, entitled the Texas Live Stock Journal. It was mainly devoted to cattle raising as a ranch interest and was the official paper of the "round-up" organizations then gathering the cattle on the free range, and it was always an advocate of improved stock.

The editor-in-chief and owner of the publication was Mr. George B. Loving, a native Texan, who had been identified with the Texas cattle business from his youth up. His father had been killed by Indians while driving cattle upon the Chisholm trail, in New Mexico, and his brother was the head of a cattle company and the pioneer Secretary of the Texas Cattle Raisers' Association. In addition to his connection with the publishing business Mr. George B. Loving was interested in selling ranches on commission. He sold a number of them, and this branch of his business took him to England, where he had the honor of being entertained by Mrs. Adair, who lived in London, but who was an American lady, the true Cattle Queen of Texas, as owner of several ranches in the Panhandle.

During his visit to London Mr. Loving heard the expression "Baby Beef," and he asked an explanation of what was meant by it, and that explantion was furnished by Mrs. Adair, whose husband owned an estate near Dublin, in Ireland, where the principal operations consisted of raising and fattening young cattle, mostly calves and yearlings, for shipment to England, there to be sold at the nearest and best market, which was, according to circumstances, either London or Liverpool. These young cattle were known as "baby beef."

The writer has a clear recollection of Mr. Loving bringing into the office an article in the beautiful handwriting of Mrs. Adair, setting forth the reasons why calves had to be forced to market maturity, the main reason being that heavier and older cattle were scarce and did not respond in gain per day in proportion to the amount and cost of feed consumed.

It appears to us that it was about the year 1884 that George Loving returned from his trip to England and bringing with him the manuscript referred to.

Since then "baby beef" has been the subject of many an Agricultural College bulletin, and stock feeders in the United States have come of necessity to feed and finish younger cattle because of the difficulty of obtaining heavier and older cattle as feeders.

In this country it was the late John D. Gillett, of Elkhart, Ill., himself the great feeder and finisher of heavy beef cattle, who was the first to realize in a wholesale way that it was more profitable to feed calves from birth to market and send the steer to the butcher before he was two years old, than to feed the animal until reaching true maturity and heavy weight.

Mr. Gillett fed many a car-load of beef steers to weigh upward of two thousand pounds per head, and was well satisfied when he received eight cents a pound for show steers; but he finally discovered that it was cheaper to produce two steers of one thousand pounds each than one steer weighing two thousand pounds, providing the calves could be obtained at a fair price.

When Mr. Gillett was in his prime as a cattle feeder steers had to weigh 1,600 pounds or better to bring the top of the market, and if he lived to the present day there would be a broad smile of satisfaction upon his genial countenance to learn that two steers of 1,000 pounds each will bring more money, even on a Christmas market, than one steer weighing 2,000 pounds.

This country will never be so badly off for feeding steers as to stop the production of good-weight cattle, say 1,400 to 1,600 pounds, but from this time forward, even among good cattle, those weights will be comparatively scarce, and the majority of the cattle fed for market will be marketed at less than 1,200 pounds.

Even now finished beef cattle are scarce weighing 1,300 pounds and upward, and will surely be scarcer in the future. The stock farmer and feeder can take comfort from the new situation. It indicates that a less quantity of feed is required to produce a marketable steer. It requires less time, and a calf is just as profitable an animal to work on as a grown steer; furthermore, in the future there is less possibility of overstocked markets. Twenty thousand cattle do not count for much in Chicago if the average steer weights are under 1,000 pounds. Under the circumstances it appears that even with an abundance of corn there will be no overproduction of beef cattle, and it looks as though cattle feeders have a prospect they need not be afraid of.

"Baby beef" that are "butter balls" are in the fashion, and heavy beef steers cost more to raise and to finish for market, and do not outsell "baby beef," pound for pound, under present conditions.

Steel Shoes For Economy.

It is said that Down South the negro farm workers are supremely happy when they are plowing with patent-leather shoes on. But patent-leather shoes do not last very long when used in farm work. Now the saving by wearing shoes with the sole of steel will pay for several shoes of leather. There are other advantages. See page 10.

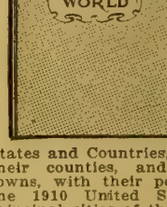
L. L. POATES & CO.'S
Complete Atlas of the World

Contains Maps of the United States, its 48 States, all Territories Canada and Countries in the World. Plates are new; the Maps are in five and six colors. Many points of superiority over all similar publications. The latest geographical changes to date, political changes in Canadian Provinces, French and German Boundaries in Africa, as well as the latest changes India and China, are shown on these Maps. This Atlas, in Octavo, has 193 pages of Maps, Alphabetical Index of States and Countries, besides the States with their counties, and important cities and towns, with their populations, according to the 1910 United States Census, and the principal cities of the world.



It is bound in cloth at $1.50, and in leather at $2.00, and will be sent prepaid to any point in the United States on receipt of price.

STORAGE HOUSE WEBER NURSERY, AT NURSERY, ST. LOUIS COUNTY, MO.

THE ACETYLENE LIGHT.

Letter on the Subject From One of the Foremost Nurserymen and Florists in the United States.

Nursery, St. Louis County, Mo.,
September 27th, 1912.

Mr. Philip H. Hale, Editor The National Farmer and Stock Grower, St. Louis, Mo.:

Dear Sir:—Your valued favor of the 23d inst. has been duly received and contents carefully noted. In reply will say that during the month of August, 1909, we installed a 100-light Acetylene Plant in our storage house, which is 80x120 feet, 14 feet high. In this house we have between forty-five and fifty one-foot burners. In addition to this, we are piping the gas to our greenhouses, about 170 feet from the plant. We have about eight lights here. Then we have piped a second storage house, 24x50 feet, which is used as a work shop, in which we have ten lights. This is about 250 feet from the plant. Then we have part of the residence supplied with light with four burners. This is also about 250 feet from the plant.

In addition to this we are piping the gas to our office, which is about 400 feet from the plant, in which we use three to four lights.

We have a carbide feed machine and like it very much. In fact, we have had no trouble in the working of this machine and it has given us the very best of satisfaction with the least amount of work.

During the packing season, which is usually during the short-day period, the latter part of October and November and in spring from March 1st to April 15th, when considerable night work is going on, our extreme light expense has been 100 pounds of carbide per week, or about $3.75. During this time we have an average of from thirty to fifty lights burning for five or six hours every evening, a number of them all night and during dark and cloudy weather, five or ten lights burning all day in the storage house.

During the summer months 100 pounds of carbide usually last us from two and a half to three months, giving us practically three months of light, when needed, for $3.75. Thus, you see, that when you are not burning any lights, you are not using carbide, as the machine is self-regulating, and when the drum has sufficient gas the machinery is automatically stopped and does not begin to work until the gas gets below a certain point.

We certainly would not be without Acetylene Light, as we find that the light given is such that it is easy upon the eyes, and people who have weak eyes find that they can read and work by the Acetylene Gas Light much better and easier than they can with any other forms of light. The mellow, yellow, steady light is very easy on the eyes, and the writer can vouch for it, as he is very frequently compelled to burn midnight oil during the rush season in order to get work out for the next day, and assure you that it is a great difference between the old-time coal oil that we formerly had to be content with.

We are sending you a photograph of our storage house, built in the fall of 1909, and which is lighted with the above Acetylene plant.

We are sorry that we have no photo showing the inside of this storage house during our busy season, when every available space is taken up with the various kinds of nursery stock carried in same, usually some 600 to 700 varieties of fruit, ornamental trees, shrubs, etc., for our mail-order and early shipping trade. This house is built of solid concrete, one building inside of the other, with an air chamber around the entire building between the walls. The roof is also double insulated with continuous air chamber and double-glass skylights, the skylights facing north so that we do not have any sunshine in the house.

Some day this fall or winter, when you have an opportunity, we will be glad to have you visit us and we will show you the method of storing nursery stock in this building. This invitation we also cordially extend to any of the readers of your valuable publication.

We believe this will be of much interest to you. Yours Truly,
H. J. Weber & Sons Nursery Co.,
Per F. A. Weber, Sec'y and Treas.

The St. Louis Fair.

During the week of September 23d to the 28th the St. Louis Fair was revived on the new grounds, situated on the St. Charles Rock Road, just outside the city limits. The attendance for the week was 239,757 admissions, and the Thursday patronage exceeded some of the big days at the World's Fair.

The present organization does business under the name or title of the Universal Exposition Company, and the original intention was to revive both the World's Fair and St. Louis Fair. With the means at command very much has been done in a very creditable manner. The grounds consist of one hundred and fifty acres, not any too even in conformation but capable of being made into a superior site for a great Fair. Very much has already been done to beautify and grade the site, to lay out roadways, and with an equal effort between now and next fall the grounds will be surprisingly beautiful. The race track is already graded and in use for saddle and harness events, for motor contests and for military drills.

The programme for the week was full of stirring contests and pleasurable sport. The splendid club house is a delightful resort for visitors, and, taken all in all, the Fair gave pretty general satisfaction, notwithstanding a number of noticeable features usual at State Fairs were totally absent.

The agricultural exhibits were good but small. The horticultural exhibit was superior, but one large tent contained it all; the dairy show was missing and the poultry show had quality without quantity, and the live stock show was on a vacation. And yet everything passed off beautifully and with the finest weather a Fair ever experienced the management gave entertainments that suited the people and they were well satisfied.

Next year there will be more buildings, complete departments, and there will be a live stock exhibit up to all modern standards. When the grounds were turned over to the Exposition management by the graders it was too late to give a live stock show this year, not so much on account of the management, but because the stockmen who were appealed to for exhibits begged hard to have the show postponed until next year.

Vote Against Single Tax.

Again we advise farmers, and all others for that matter, to vote against the humbug misnamed "Single Tax." Single tax is supposed to be one tax, but it does not mean single; it means double, and more. The law they are trying to pass provides for one tax taxing land, and another tax taxing corporations. The real intent, however, is to take the taxes off the buildings in the cities and stick it onto farms in the country. If a farm or orchard was incorporated, as some of them are, they would have to pay a land tax and a corporation tax, and, of course, that would not be a single tax.

Single tax simply means a rearrangement of state taxes in an unpractical manner, and just as soon as single tax is voted, some other taxes will be imposed, and in the end there will be double tax and treble tax and a number of taxes, all imposed just as fast as the taxing power can impose them.

In cities it is improvements that constitute the earning power, and it would ve very fine to do away with taxes on the great city buildings and pro-rate the taxes thus taken off on the farms of the country. And then after that is done, the federal government will step in and find some new form of taxation to replace the money collected in customs duties under the tariff laws. As stated in the September number, farmers, one and all, should stand in line and, if necessary, stand all night in line to vote against the misnamed humbug called "Single Tax." This time it is Missouri where the vote will be taken; next time it will be Illinois.

The National Style Book.

The greatest and best ladies' outfitters are the National Cloak and Suit Company, of New York City. They offer to send The National Style Book free. There are 200 pages in the Style Book and it is full of the latest patterns and up-to-date costumes. Style and quality without extravagance go together in the books of the National Cloak and Suit Company. Write for theNational Style Book and address National Cloak and Suit Company, 280 West Twenty-fourth street, New York City, N. Y.

FARM AND RANCH LANDS.

ALABAMA.—2,240 acres fertile farm land. Thirty-three tenant houses. 900 acres fenced. Fine land for alfalfa, cotton or cane. One-fourth mile from station. Buy from owner and save commissions. **D. Vaughan,** Catherine, Ala.

ARKANSAS.—FREE HOMESTEADS IN ARKANSAS under new three-year law. 500,000 acres good land vacant near railroads and markets. Our Homesteader's Guidebook tells just how to locate, acquire title, number of acres open in each county, and full text of new law. Price, 25c. Farm **Pub. Co.,** Little Rock, Ark.

COLORADO.—The Land of Opportunity (Eastern Colorado) for the man of small means. 320-acre Homestead Relinquishment for $350.00. Smooth, level, fertile; big crops; good neighbors and school close; shallow water; small improvements; ten miles from town; can be proved up under new three-year Homestead Law. Presbyterian buyer preferred. **Elder S. R. Smith,** Sheridan Lake, Colorado.

FLORIDA LAND.—I will sell a part or all of one section of land just west of Jacksonville for less than one-half the price that adjoining land is now selling for. This is all good land. Extra good roadways and railroads in to Jacksonville. **Miss N. Ryan,** 2627 Clifton Ave., St. Louis, Mo.

MISSISSIPPI, ALABAMA AND FLORIDA FARMS; highly productive, harvesting something every month in the year; where winters don't consume what summers produce; healthy, delightful climate; low prices; easy terms. Land salesmen wanted. Big commissions. **American Land Company,** 1208 Boyce Building, Chicago.

MISSOURI.—8,080-ACRE STOCK RANCH far half its value for quick sale. Address owner for further information. **A. J. Johnson,** Merchants' National Bank Building, Springfield, Mo.

MISSOURI.—Farm Lands in Western Missouri, by far the richest section of the state, are for sale at prices that are more than reasonable, considering the income that can be made. Will be pleased to show a few tracts that are worth the money. **J. H. Lipscomb,** 306 Fidelity Trust Building, Kansas City, Mo.

FARMS WANTED.—We have direct buyers. Don't pay commissions. Write describing property, naming lowest price. We help buyers locate desirable property **FREE. American Investment Association, 55 Palace Bldg., Minneapolis, Minn.**

CASH FOR YOUR FARM OR BUSINESS. I bring buyers and sellers together. If you want to buy, sell or trade any kind of property anywhere, write me. Established 1881. **FRANK P. CLEVELAND,** 7910 Adams Express Building, Chicago.

Southern Farm Facts

Land at $10 an acre up

Alfalfa makes 4 to 6 tons per acre; Corn 60 to 100 bu. All hay crops yield heavily. Beef and Pork produced at 3 to 4 cents per lb.—Apples pay $100 to $500 an acre; Truck crops $100 to $400; other yields in proportion.

The Sole of Steel

THE FUTURE MILK DEMAND.

Encouraging Prospect For All Who Are Earnestly and Permanently Engaged in the Dairy Business.

Milk production has not reached the limit, neither has the demand reached its limit. And what may be said of milk applies equally well to cream and to butter.

It is only a few years ago when the consumption was considerably less than the average production, and then, in order to allow consumption to come up to the supply, something had to happen to reduce the supply temporarily so as to prevent the markets being smashed with milk. What usually happened was that some of the dairy farmers, being tired of dairying, would turn out their cows and do something else.

To-day, in the fall of the year 1912, it is safe to assert that consumption of milk and cream has increased sufficiently that it will hereafter be necessary for every dairy farmer in the country to bring into operation all the resources at their command in order to furnish the population of the country the milk, cream and butter in the proportion to which those people have been accustomed, and it will be done at a fair profit.

Since the writer of this article first milked a cow the population of this country has increased from sixty millions to one hundred millions of people, and the cow population has not increased in proportion. It is therefore easy to see that whereas formerly production was large and consumption could not catch up with it, now conditions are reversed; it is consumption that is unsatisfied, and the producer has to hump himself in order to fully supply the market requirements.

Right now the population continues to increase, and it is very doubtful if the increase in dairy cows can keep up with the procession. This new condition ought to be very satisfactory to all farmers with an inclination towards dairying. The dairy farmer has an assurance of a permanent market that he never had before. There is absolutely no brighter prospect than that of the dairy farmer. He may not be in a bonanza business, yet he can rest assured that his product will sell higher in the future than it has in the past.

It is therefore up to the dairy farmer to make a new declaration, that declaration being that he will not turn to any strange gods but stick to his farm and to his business and determine to obtain and sell a larger product, a better product and at less cost of production. All that is possible and in many instances is very much easier than it looks.

To increase production is easy, increased production at less cost is not difficult, and a better product is possible to obtain on ninety farms out of every hundred. The main difficulty in a majority of instances will be the making the new declaration, that come what may, dairying in one form or another is to be the chief business of the farm.

When the programme is fixed, then in earnest will begin the work of improvement, and most questions will be answered as they arise without hesitation. Heretofore it has been easy to get in and get out of the dairy business, almost as easy as going to bed at night and getting up in the morning. But in future the coming back will be more difficult. It will be easy to get out, but coming back will not bring back the good old cows that formerly formed the milking herd or the fine young heifers that went to market for beef; neither will the coming back make up for lost time and the lost opportunities. Dairying is a permanent occupation, and it is one of the few occupations having the guarantee of a demand greater than the supply and better prices in the future than in the past.

The Cable Plowing in Europe.

United States Consul J. S. Brittain at Prague, Austria, reports to the United States Department of Commerce that the deep plowing on the large sugar estates is mostly done by portable engines. One of these engines is placed at each side of the field, and by the aid of a cable draws a five to eight-share plow from side to side across the field. An argument in favor of these plows is that the ground is not packed by the weight of the engine, as when the engine passes over the land. The gasoline-driven engines being so much lighter, it is thought they will gradually take the place of the plows operated by cable. Deep plowing can be done with less expense by gasoline engines drawing the plow direct. One obstacle in the way to large sales of gasoline engines is the high price of gasoline in Austria.

Economy in Operating a Dairy.

If you have been operating a dairy farm or a creamery or a milk-delivery business for years without getting in step with modern economical methods, and some hard-fisted chap would come along some day and show you that the same energy, the same feed and the same love of your business, properly directed, would net you 50 per cent. more money at the end of the year, you would feel sore at yourself, now, wouldn't you? Well, the only way to be sure that you are up to date is to take a squint at what your neighbors are doing. For this purpose a milestone of working progress in all that pertains to dairying has been planted by the creation of the National Dairy Show, which encompasses every branch of the dairy industry in the simplest possible form, giving everyone who attends an opportunity to see what the world is doing in the dairy business. You ought to spend a few days at it each year. This year's show is October 24 to November 2, at Chicago. The railroads are doing all that they can to interest the people and will afford reasonable rates and service to enable you to go.

When the Field Work is Over

and on rainy days, the farm that is equipped with an efficient assortment of tools sees much waste time made valuable. Improvements and repairs to machinery, buildings and wagons, together with numerous kinds of work in the woods become easy and profitable tasks.

DAIRY AND CREAMERY NOTES.

The Borden milk contract price for the six months commencing October 1st is $1.70 per 100 pounds for the period contracted for. Other condensing milk companies paying the same price are Kee & Chapel, Ira J. Mix Dairy Company and Oatman Condensed Milk Company.

Milk shippers in the New York 26-cent freight zone are receiving 3½ cents a quart net at the shipping station, which makes the cost delivered in New York to be $1.71 per 40-quart can. New York received in September 315,000 cans of milk and 14,600 cans of cream.

At the New York State Fair, the highest scoring butter, 99½ points, was exhibited by Mrs. H. G. Fullerton, wife of the manager of the Long Island Agricultural Society. It was pretty near perfection, and the score is the highest we have any record of.

PROFITABLE DAIRYING.

A very elegant, illustrated, cloth-bound book of 200 pages is called **Profitable Dairying.** It is all good, satisfactory reading matter relating to the successful management of the dairy business under all circumstances, including the management of the cows and construction of the barn. We have discovered this book lately and we find that there is a better demand for it than for all other dairy books combined. For one dollar we will send **The National Farmer and Stock Grower** for two years and we will send the book, **Profitable Dairying,** as a premium. Address,

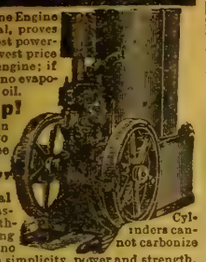
Use KEROSENE Engine Free!



Amazing "DETROIT" Kerosene Engine shipped on 15 days' FREE Trial, proves Kerosene cheapest, safest, most powerful fuel. If satisfied, pay lowest price ever given on reliable farm engine; if not, pay nothing. No waste, no evaporation, no explosion from coal oil.

Gasoline Going Up!

Gasoline is 9c to 15c higher than coal oil. Still going up. Two pints of coal oil do work of three pints gasoline.

Amazing "DETROIT"

—only engine running on coal oil successfully, uses alcohol, gasoline and benzine, too. Starts without cranking. Only three moving parts—no cams—no sprockets—no gears—no valves—the utmost in simplicity, power and strength. Mounted on skids. All sizes, 2 to 20 h. p., in stock ready to ship. Engine tested before crating. Comes all ready to run. Pumps, saws, threshes, churns, separates milk, grinds feed, shells corn, runs home electric lighting plant. Prices (stripped), $29.50 up. Sent any place on 15 days' Free Trial. Don't buy an engine till you investigate the money-saving, power-saving "DETROIT." Thousands in use. Costs only postal to find out. If you are first in your neighborhood to write, you get Special Extra-Low Introductory price. Write! (138)

Cylinders cannot carbonize

Detroit Engine Works, 383 Bellevue Ave., Detroit, Mich.

Sample Dairy Rations.

Where alfalfa hay, or cowpea hay, or good silage is fed, grain should be fed at the rate of about one pound daily for each four to five pounds of milk produced. When such roughages as timothy, stover and clover are given, much more grain should be fed.

The richer the milk, the more grain should be fed per pound of milk produced. The amount given below in each ration is about an average ration sufficient for a 1,000-pound cow.

No. 1. Roughage—Alfalfa hay at will. Corn silage, thirty-five to forty pounds. Grain—Ground corn or ground corn and cob, fed one pound per day for each four pounds of milk produced. For very heavy milkers add a little bran. For very light milkers the hay can be reduced.

No. 2. Roughage—Alfalfa hay, ten pounds. Corn stover at will. Corn silage, thirty to forty pounds. Grain—Ground corn, five pounds; wheat bran, five pounds; linseed meal, one and one-half pounds. One pound grain to three to four pounds milk daily.

No. 3. Roughage—Alfalfa hay, ten pounds. Clover hay at will. Corn silage, thirty to forty pounds. Grain—Corn and cob meal, five pounds; wheat bran, three pounds; cotton-seed meal, one and one-half pounds. One pound grain to four to five pounds milk daily.

No. 4. Roughage—Clover hay at will. Corn silage, thirty to forty pounds. Grain—Ground corn, five pounds; ground oats, five pounds; cotton-seed meal, one and one-half pounds. One pound grain to four to five pounds milk daily.

No. 5. Roughage—Clover hay, ten pounds; corn stover at will; corn silage, thirty to forty pounds. Grain—Ground corn, five pounds; wheat bran, four pounds; gluten feed, three pounds; cotton-seed meal, one pound. One pound grain to four pounds milk daily.

No. 6. Roughage—Cowpea hay at will. Corn silage, thirty to forty pounds. Grain—Ground corn, five pounds; ground oats, five pounds. For very light milkers reduce amount of hay or oats. One pound grain to four and one-half pounds milk daily.

No. 7. Cowpea hay, ten pounds; clover hay, ten pounds; corn silage, thirty to forty pounds. Grain—Ground corn, five pounds; ground oats, four pounds; linseed meal, one pound. One pound grain to four pounds milk daily.

No. 8. Roughage—Clover hay, ten pounds; corn stover at will; corn silage, thirty to forty pounds. Grain—Ground corn, five pounds; wheat bran, five pounds; cotton-seed meal, one and one-half pounds; gluten feed, three pounds. One pound grain to three and one-half pounds milk daily.

No. 9. Roughage—Corn stover, ten pounds; millet hay at will; corn silage, thirty to forty pounds. Grain—Ground corn, four pounds; ground oats, four pounds; wheat bran, four pounds; cotton-seed meal, two pounds. One pound grain to three pounds milk daily.

No. 10. Roughage—Oat hay at will; corn silage, thirty to forty pounds. Grain—Ground corn, four pounds; wheat bran, four pounds; cotton-seed meal, one pound; gluten feed, three pounds. One pound grain to three pounds milk daily.

The following feeds are interchangeable in the above rations:

1. Alfalfa, cowpea, one and one-half times as much clover.
2. Millet, Hungarian, oat hay, red top, sorghum, corn stover, timothy, etc.
3. Silage, beets, mangels.
4. Ground corn may be replaced by oats, barley, emmer, rye or Kaffir corn.
5. Other grains may be substitued. For example, in any grain mixture, one pound of cotton-seed meal can be replaced by two and six-tenths pounds of gluten feed without materially affecting the balance.—C. C. Hayden.

Illinois Butter Scoring.

The August scoring for Illinois buttermakers was held at Urbana on Friday, August 23. The butter was judged by John Crawford, of Elgin; Frank Collyer, of Chicago; and N. W. Hepburn, of the University Dairy Department, Urbana.

Of the twenty-two (22) tubs exhibited, ten received scores of 90 or above; nine scored between 88 and 90; while three received scores below 88. The average score was 90.34; the highest 94, received by W. F. Conway, of Sharon, Wisconsin; and the lowest 84. In general, this lot of butter was much like the July exhibit, the defects being partly caused by seasonal conditions, several creameries showing the effects of infrequent deliveries, due, no doubt, to the shortage of cream at this time of the year.

The following is a brief statement taken from the method blanks, showing how the butter with a score above 90 was made.

Sam Grimm, Crete; no method blank; score 93.66.

F. J. Weddige, Big Rock; average 92.66. Exhibit made from both whole milk and cream, not pasteurized; no starter used; held eighteen hours before churning; churned at 54 degrees; washed at 55 degrees; salted wet with 40 pounds salt to 476 pounds of butter. Analysis, moisture 12.89; fat 84.06; salt 2.10; curd, .95.

Spring Valley Creamery, Thomson, Ill. Average score 93.50; no method blank. Analysis, moisture 14.86; fat 80.78; salt 3.53; curd .83.

F. R. Palmer, Union, Ill. Average score 93.16; exhibit made from whole milk pasteurized at 160 degrees; forty gallons of starter added; held three hours before churning; churned at 56 degrees; washed at 58 degrees; salted wet with 40 pounds salt to 389 pounds butter. Analysis, moisture 13.44; fat 83.74; salt 2.06; curd, .76.

W. F. Conway, Sharon, Wis. Average score 94; exhibit made from both milk and cream, not pasteurized; 15 per cent. starter added; held three hours before churning; churned at 52 degrees; washed at 54 degrees; salted wet with 30 pounds salt to 619 pounds butter. Analysis, moisture, 14.10; fat 82.21; salt 2.67; curd, 1.02.

Chas. Fildes, Olney, Ill. Average score 92.83; exhibit made from gathered cream, not pasteurized, and no starter was added. Churned at once; churning temperature 56 degrees; washed at 56 degrees; salted wet with 72 pounds salt to 990 pounds of butter. Analysis, moisture 16.50; fat 79.06; salt 3.16; curd, .74.

J. R. Newberry, Newton, Ill. Average score 91; exhibit made from gathered cream, pasteurized in cans at 150 degrees; no starter added; held twelve hours; churning temperature 51 degrees; temperature of wash water 56 degrees; salted wet with 11 pounds salt to 312 pounds butter. Analysis, moisture 13.42; fat 84.09; salt, 1.69; curd, .80.

G. A. Cutler, Belvidere, Ill. Average score 93; exhibit made from whole milk not pasteurized; 10 per cent. starter added; held nine hours before churning; churning temperature 50 degrees; temperature of wash water 56 degrees; 17 pounds salt added to 232 pounds butter. Analysis, moisture 14.18; fat 82.36; salt 2.42; curd, 1.04.

L. R. Weckerly, Dakota, Ill. Average score 92.66; exhibit made from both whole milk and cream, pasteurized at 150 degrees, and 25 per cent. starter added; cream held over night and churned at 51 degrees; temperature of wash water 56 degrees; 250 pounds butter salted at the rate of 9 pounds per 100. Analysis, moisture 14.24; fat 82.66; salt 2.08; curd, 1.02.

O. W. Albright, Scales Mound, Ill. Average score 93.33; exhibit made from gathered cream not pasteurized; ripened with 30 gallons starter; held 1¾ hours; churning temperature 50 degrees; temperature of wash water 54 degrees; salted dry with 35 pounds salt to 598 pounds of butter. Analysis, moisture 13.83; fat 83.32; salt 1.90; curd, .95.

Analysis.

Several tubs ran high in moisture, three being above 16 per cent., one running as high as 17.56. Four other samples ran above 15. The average moisture content was 14.32; this is nearly 1½ per cent. above the market average for moisture. The average salt content was 2.34, the highest 3.20, and the lowest 1.58.—N. W. Hepburn, in charge of scoring exhibition.

FREE UPON REQUEST
A book that every Cow Owner should have

AT an expense of thousands of dollars we have gathered together in this book a great fund of valuable information covering very fully those questions which are of vital interest to every owner of cows.

The very best and highest authorities in the land have written a number of chapters especially prepared for this handbook upon a wide range of dairy subjects.

Dr. Coburn, Secretary of the Kansas Department of Agriculture, the great alfalfa expert, has written a chapter on ALFALFA.

Dr. Alexander, Professor of Veterinary Science, University of Wisconsin, discusses DAIRY COW DISEASES AND THEIR PROPER TREATMENT.

Prof. Hugh G. Van Pelt, the Iowa State Dairy Expert, and one of the Editors of Kimball's Dairy Farmer, has contributed a most interesting discussion on PROPER DAIRY FEEDING AND BALANCED RATIONS.

Dr. Burkett, Editor of the American Agriculturist, tells about the MOST SUITABLE DAIRY CROPS, and other widely known authorities discuss SOIL FERTILITY, DAIRYING FOR PROFIT, FARM BUTTER MAKING, SILOS AND SILAGE, etc., etc.

A series of photographs illustrating the desirable points in selecting a dairy cow are shown, and also photos of representative cows of the various well-known dairy breeds, together with statements from the secretaries of the various dairy cattle associations setting forth the claims for consideration of each breed.

The HANDBOOK also contains much general information such as tables of weights and measures, silo capacities, etc., that every dairyman at some time or other has occasion to refer to.

While the DE LAVAL DAIRY HANDBOOK covers the various phases of dairy farming most completely, it is in no wise technical, but is **written in plain every-day language so that even the children can understand it.**

You certainly ought to have this book. It's absolutely free. Just fill out the coupon and mail it to

The Fall Army Worm.

The terrible destruction of the fall army worm to wheat, rye and alfalfa a year ago is still fresh in the minds of many Missouri farmers. The fear that the pest will reappear again this fall has led many to inquire concerning the pest. There is little that can be done to control this pest, but this must be done in time. It is already appearing in some sections, and one should be ready to do what he can to check it.

The pest passes the winter in the ground in the chrysalis or resting stage. From these the moth appears in the spring to deposit eggs for a spring brood of worms. These mature and a second brood appears in midsummer. These mature normally by September, when the destructive fall brood appears to devour wheat, rye, alfalfa and other green crops. The spring and summer broods are of little importance, but the fall brood is extremely destructive when natural conditions are favorable.

The cold winter greatly reduced the pest and the summer has been favorable for its enemies so that until recently it has not been able to increase greatly. Fall rains bring out the grass, alfalfa, wheat and other crops and provide plenty of young green food for the pest and the cool weather checks its enemies. This favorable change will probably enable it to cause considerable trouble before frost.

Remedies.

The fall army worm, like the chinchbug and Hessian fly, is not troublesome every year. Natural conditions keep it in check. It is seldom extremely destructive two years in succession, though this is possible. To protect wheat and rye one should plan on sowing just as late as possible, as the parent moth usually arrives by early September, and if no wheat or rye is up, it must deposit on other crops of less importance. Once the pest is in wheat, rye or alfalfa, some relief can be gotten by using a heavy roller or a weighted brush. If the ground is dry and fairly firm many will be destroyed in this way. Last year we had so much rain that relief was almost out of the question. This pest does not migrate rapidly, like the true army worm. It first appears in patches, and if one is watchful he can often stamp it out in such patches by the use of poison or other means and thus keep it from destroying the entire crop. Hogs, poultry and birds are also helpful in destroying the caterpillar.

Data recently collected indicates that where fields of wheat, rye and alfalfa were completely stripped last fall the crops were a complete failure.

Greatest Watermelon County.

Scott county, in Southeastern Missouri, is the greatest watermelon shipping county in the United States. Melons are shipped from there to almost every Northern city of size in this country. Shipments are also made to Canada. From 900 to 1,100 melons make a car-load, and they bring the grower an average of about $100 per car. Information compiled by the Missouri State Board of Agriculture and which will be used in a bulletin is full of interest. It is shown that one dealer alone has handled 2,500 car-loads of melons.

Fatal Epidemics in Stock.

Hog cholera or a disease resembling it very closely is reported breaking out in many different parts of the country. Many of our readers will remember that last year a similar epidemic carried off thousands of hogs, especially in the Central West. In view of this fact, we urgently advise everyone to take prompt methods to prevent this costly disease getting a foothold on their farms. See to it that your feeding troughs and sleeping pens are clean and sanitary and especially watch out for worms.

Ninety per cent. of the diseases of farm animals are caused by worms. They not only rob your stock of feed, sap their vitality, but derange their digestion, making them an easy prey to contagious epidemics. Stock that is free from worms stand a much better chance of throwing off these contagious diseases. Their digestion is usually good, the food they eat gives them strength and vitality and makes them practically immune from such diseases.

In some sections there is also a new and serious epidemic among horses. The losses already amount to hundreds of thousands of dollars. Veterinarians are puzzled as to what it is, many being of the opinion that it is caused by worms. There is little question that worms are the starting point of such puzzling plagues.

If farmers and live stock owners would give more attention to preventing and ridding their stock of these costly pests, we are confident it would lessen the spreading of disastrous epidemics and save millions of dollars' worth of stock. Now that veterinary science has placed within our reach remedial agents which have proven so efficacious and which can be tested without risk, there is little excuse for much of the losses caused by worms to-day. For instance, just turn to page 21 and read the offer Mr. Sidney R. Feil, President of the S. R. Feil Company, Cleveland, Ohio, makes in their advertisement of "Sal Vet," a worm destroyer and conditioner. Read the letters from farmers who have used it, and, above all, fill out the coupon and send for a supply of "Sal Vet." You take no risk. Mr. Feil will ship you enough "Sal Vet" to last all your stock sixty days; no charge is made at the end of sixty days if it does not prove satisfactory. We have carried this advertising for two years, and if "Sal Vet" was not a highly successful remedy, they could not continue to offer it on such a liberal "make-good" selling plan. Dr. C. D. Smead, New York State Veterinarian, says: "In my judgment, if farmers would keep 'Sal Vet' before their stock all the time the worm problem would be solved."

Selecting Seed Corn.

A beautifuly illustrated and thoroughly practical bulletin on the selection and care of seed corn may be had free by addressing T. C. Wilson, Secretary of the Missouri State Board of Agriculture, Columbia, Mo. In the fall is the time to select corn, and now is the time to send for the bulletin.

The Right Way to Wean Calves.

There are many advantages in weaning calves by the modern method in using the **Humane Calf Weaner** illustrated on page 8 of this paper. Perhaps the greatest advantage is that the cow and calf can be left together. This keeps both contented and both will do better than when kept apart all day worrying and calling for each other. The **Humane Weaner** is especially well built, easily put on and off, is adjustable to any size, and is so made that it cannot come off and get lost. Every farm should have several. They can be bought by mail at 35 cents each from the Jacobsen Farm Supplies Co., Dept. A, Racine, Wis.

Is Your Purse Full?

YOUR farm is the purse from which you take the necessities and luxuries of life. What provision are you making to keep your purse full—to insure a constant supply of food, clothing, heat, light, protection, and worldly wealth?

No purse can stand a steady drain—no soil can produce constant yearly crops—without an adequate income. The purse must be supplied with money, the soil with plant food. It is easier, and far cheaper to maintain a fertile condition of the soil than it is to build it up after it is once exhausted. Be wise—begin now to use faithfully an

I H C Manure Spreader
Kemp 20th Century, Corn King or Cloverleaf

Use your I H C spreader to distribute stable manure and saturated bedding while it is still fresh. Spread in light coats so that the plant food elements of the manure may combine quickly and thoroughly with the soil and become available for the use of growing plants. Spread quick-decaying straw to increase the moisture holding capacity of the soil and make it easier to till.

If you would have the spreading well done, do it with an I H C manure spreader, built to accomplish a definite purpose in the proper manner, at the least expense, and with the least strain on horses. Make the quantity of manure usually spread by the fork do twice the amount of good by distributing it properly with an I H C spreader and leaving the ground better and more evenly fertilized and in greatly improved condition. The driving mechanism of the I H C spreader is strong and thoroughly protected. The aprons, both endless and return, run on large rollers. The feed is positive. The manure is spread evenly, light or heavy as may be necessary, the quantity spread never changing until the feed is changed.

See the I H C local dealer and have him show you the spreader best suited to your needs. Get catalogues and full information from him, or, write

THE SEWING AWL.

A Most Useful Premium For Subscribers to The National Farmer and Stock Grower.

It is surprising how useful this little implement is. It is the Myers Famous Lock Stitch Sewing Awl. It is the only sewing awl made with a groove running the full length of the needle and has what is known as a diamond point. In order to sew leather or any heavy, thick material without breaking or cutting the thread it requires an awl with the groove running the full length of the needle. You might just as well have no groove in the needle as to have it only part of the way. With the Myers Awl you can sew old or new harness, saddles, carpets, canvas, tents, rugs, quilts, shoes, grain bags, and many other things. You can use any kind of thread in the Myers Awl and it makes a lock stitch same as a sewing machine. It is very simple; a woman can use it as well as a man. It is one of the most practical devices ever invented. They are put up with two needles—one is straight and one curved—with a small screw-driver and wrench combined; also a reel of waxed thread with each awl ready for use. Every teamster and farmer should own a Myers Lock Stitch Sewing Awl, as there is use for one in almost every household. The Myers Awl is nicely finished, the metal parts are nickel-plated, the needles and wrench are kept in the hollow handle, which has a screw top. Anyone who will send one dollar cash to pay in advance for two-years' subscription to The National Farmer and Stock Grower can select one of Myers' Lock Stitch Sewing Awls, which we will send by mail, postage paid, as a free premium. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

St. Louis Vegetable Market.

The following represents the wholesale market at St. Louis, October 1st, 1912:

Potatoes.—Sacked Wisconsin white stock at 59 to 60 cents per bushel on track; Michigan Rural at 61 to 64 cents; red stock from 56 to 58 cents; common poor less.

Onions.—Sacked Red Globe at 50 to 65 cents per bushel, delivered, as in quality; sacked white at 75 to 80 cents.

White Pickling Onions.—Chicago boxes at $1.00; home-grown at $1.50 to $2.00 per bushel loose.

Beets.—Home-grown at 30 to 40 cents per bushel box loose, and 15 to 20 cents per dozen bunches.

Butter Beans.—Home-grown at $1.40 to $1.65, and Lima beans at $1.50 to $2.00 per peck basket loose.

Cabbage.—Minnesota domestic at $7.00 per ton on track—car sold at that; Eastern Danish at $14, and Holland seed at $15 per ton in bulk, delivered. Home-grown sold at 50 to 60 cents per 100 pounds by weight; shipping stock or orders at $1.10 per crate in shipping order. Chicago red cabbage at $1.50 per barrel.

Carrots.—Sacked Northern at 90 cents to $1.00 per 100 pounds, delivered. Home-grown at 20 cents per dozen bunches.

Cauliflower.—Choice New York sold at $1.25 to $1.35 per crate.

Celery.—Home-grown at 20 to 25 cents per bunch; celery roots at 30 to 40 cents per dozen.

Cucumbers.—New York bushel baskets at 75 to 90 cents; dill pickles at $1.00, and small pickles at $1.50 to $1.75. Home-grown yellow mustard at 50 to 60 cents per bushel loose.

Egg Plant.—Home-grown at 40 to 75 cents per bushel loose.

Green Corn.—Choice home-grown at 8 to 15 cents per dozen.

Horseradish.—Home-grown from wagons at $4.25 to $4.85 per barrel loose.

Lettuce.—New York hampers at $1.00 to $1.25. Buffalo cases at 25 to 50 cents. Home-grown at 10 to 25 cents per bushel box loose.

Parsnips.—Home-grown at 50 to 60 cents per bushel loose.

Peppers.—Average offerings home-grown at 40 to 50 cents per bushel box loose—extra large at 85 to 90 cents.

Rutabagas.—At 45 cents per bushel in bulk, delivered.

Spinach.—Home-grown loose at 20 to 50 cents per bushel.

String Beans.—Home-grown choice round green at $1.25 to $1.40 per bushel loose. Southern Illinois wax and green at 50 cents per melon basket.

Tomatoes.—Home-grown ripes at 30 to 75 cents, as in quality, and green at 15 cents per bushel loose; yellow preserving plum tomatoes at 35 cents per bushel loose.

Sweet Potatoes.—Home-grown Bermuda at 50 cents; Queen at 60 cents; yellow and red Nansemond at 60 to 65 cents per bushel box loose; Virginia yellow at $2.50 per barrel, delivered.

Turnips.—Home-grown washed at 75 to 90 cents per bushel box loose.

New York Egg Grades.

The following quotations, dated October 1st, will show the New York grades: Western-gathered white, 29 to 34 cents; fresh-gathered extras, 31 to 34 cents; extra firsts, 28 to 30 cents; firsts, 25 to 27 cents; seconds, 22 to 24 cents; thirds, 20 to 21 cents; poor, 19 cents. Dirties—No. 1, 20 to 20½ cents; No. 2, 18 to 19 cents; inferior, 12 to 17 cents. Checks—Good to fine, 18 to 19 cents; poor to fair, 9 to 17 cents.

Our First-page Index.

We advise our readers to make a study of the comprehensive index which appears on the first page. This index will direct you to one hundred and eighty-six articles or advertisements. It is so handy to find things by this index that when once accustomed to it, no other way of looking through the paper gives any such satisfaction.

COUGHS and DISTEMPER

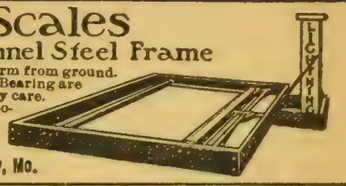
Among Colts, Mares and Stallions cured with one bottle of FRAZIER'S DISTEMPER CURE, or your money refunded. One dose placed in trough or feed will prevent all cases. Influenza, Pink-Eye, Catarrhal Fever, Colds and all forms of Nose and Throat Troubles cured in four to eight days. $1.00 bottle holds three 50 ct. size bottles. Send postal for free booklet on the horse. Sold by druggists or prepaid from

BINKLEY MEDICAL COMPANY, Dept. H, Nappanee, Ind.

Lightning Pitless Scales

New Pattern. Solid Channel Steel Frame

Channels are seven inches which is the height of platform from ground. Levers are octagon in shape giving greater strength. Bearing are Toolsteel. This scale will last a life time with ordinary care. Equipped with compound Beam Free. Furnished absolutely complete except platform planks. Guaranteed accurate and tested to more than its capacity. Write for our prices and description before buying.



KANSAS CITY HAY PRESS CO., 425 Mill St., Kansas City, Mo.

NEW WHEELS For Your Old Wagon

"ELECTRIC" STEELS to fit any wagon—old or new. Make a new wagon of your old gear at small cost. We guarantee fit. Give a low lift—you get more work done in less time, with less labor. Cost less than wood wheels and last longer. Do not rut fields and meadows. Investigate "Electric" Steel Wheels.

ELECTRIC HANDY WAGON—made of Oak, Hickory and Steel. Just what you want for all kinds of knock-about work. Will last a lifetime. Has unbreakable steel wheels. Easy draft. Let us show you how to save yourself and your team. Write us today for free book. Address

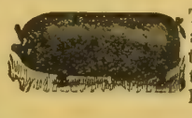
Co-operative Clubbing Arrangement.

Four Great Papers . . For One Year . . . . . For Only One Dollar.

FOUR STERLING, UP-TO-DATE SPECIAL FARM PAPERS.

THE NATIONAL FARMER AND STOCK GROWER—issued monthly—a magnificent guide and counsellor in all branches of farming, grain growing, fruit growing, dairying, stock raising and feeding, markets, etc.



THE AMERICAN SWINEHERD—issued monthly—a leader in its class. The hog paper, the pig paper, the brood-sow paper and strictly first-class in teaching how to top the market by producing top hogs.

THE SHEPHERDS' JOURNAL is devoted to sheep husbandry on the farm and on the range. It is equally valuable for the breeder as for the herdsman. It is issued monthly, printed on elegant paper, splendidly illustrated and edited by practical men.

THE AMERICAN POULTRY JOURNAL—the oldest, best and most elegant poultry journal issued in the United States. Great on breeding points, and splendid articles on raising, feeding and shipping poultry. THE AMERICAN POULTRY JOURNAL is distinctly practical in all articles. The writers are thoroughly expert in their particular branches of Poultry Husbandry and retain the peculiar quality of being good instructors. You gain something every time you read THE AMERICAN POULTRY JOURNAL.

The four papers above mentioned ought to be on every farm and ranch. Taken singly they cost $2.00 a year. By our co-operative clubbing arrangement we are enabled to offer all four papers one year for One Dollar. Address us at once without fail.

THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

Mr. Jeffries got 93 bu. of corn per acre

on a tract of land near Clarendon, Ark. Of course, that's some yield; but taking seasons *as they come*, you could raise as much corn down there on $20 land as you can on the *best* corn lands of Iowa or Illinois.

[*Frank Tate's corn Camden, Ark.*]

Take the case of Chas. E. Crigger of Blytheville. His 200 acres, ready for the plow, stood him only $3000. "Now I am getting 50 bu. of corn per acre regularly," says Mr. Crigger. Last year my crops brought me $10,400." You could get *twice* as much profit from land that cost *half* as much — along the

Cotton Belt Route in Arkansas and Texas

— besides cutting your winter expenses *'way down*, on account of the milder climate.

Frank Tate, near Camden, Ark., told me he made 63 bu. of corn per acre. Mr. Tilson, who owns a Red River Valley farm in East Texas, says his section has the irrigated lands northwest beat a mile for alfalfa. He is getting $50 per acre from alfalfa on his *low*-priced land—with no need for irrigation.

These lands won't stay cheap always. They have already doubled in value since 1905; but even this year you can buy at $12 to $25 per acre, as good land there as you are farming now. And you'd have *every* advantage of schools, churches, close neighbors, good local markets, phones, rural free delivery, etc. This proposition deserves serious thought.

On the 1st and 3rd Tuesdays of each month there are low round trip excursions to Arkansas and Texas via Cotton Belt Route, allowing 25 days' time and free stopovers. Go on the *next* one.

Get our free books!

Written by a farm man who knows farming from A to Z. He traveled over thousands of miles in these sections to learn where the *real* farm opportunities were—the kind he knew *you* would grasp if you saw them. He tells you, in plain words, all about them. 100 pages and farm pictures. Send a postal today for your *free* copies.

General Passenger Agent
1466 Pierce Bldg., St. Louis

COTTON BELT ROUTE

Peaty Land Made Valuable.

Peaty swamp lands frequently prove a disappointment in cropping. Proper drainage is apparently the only problem in reclaiming such soil for farming purposes, and the first two or three crops may be fairly satisfactory. Generally the third crop, however, proves very poor and later very little or no sound grain is produced. Corn and other crops grow plenty of forage and straw, but are failures so far as maturing a good crop of grain is concerned. This has been the universal experience of farmers on this kind of land, and, if no remedy other than drainage is applied, the soil remains as unproductive as ever, although the system of drainage may be entirely efficient in relieving the land of excess moisture.

Peaty swamp lands are usually very black and very rich in organic matter. They generally contain an excess of nitrogen in comparison to the other plant foods, and this fact explains why crops may grow exceedingly well and yet fail to give the desired results at maturity. Phosphorus is also generally very plentiful, potassium being the element of plant food in which the soil is very deficient. This being the case, it is logical to expect that an addition of the plant food which is lacking will bring about proper conditions for assuring a good harvest of mature grain. The application of potassium invariably corrects the deficiency of peaty soils, as both experiments and general practice in the use of same have clearly demonstrated. To just what extent the addition of the plant food will improve the conditions in the cultivation of this type of land is best shown by results obtained by actual farmers who have tried the use of potash. The following results were obtained on the farms of Mr. J. H. Milligan, in Whiteside county, Illinois, and Mr. C. C. Porter, Kankakee county, Illinois, as reported by the Illinois Experiment Station in Bulletin No. 157:

The soil on the Milligan farm consists of black, peaty material, rich in organic matter to a depth of sixteen inches. Below this lies soil that is lighter in color, containing considerable sand and with very little organic matter. The soil was of very low productive capacity, especially for corn, and would produce practically no ear corn. Potash fertilizer was applied in the form of potassium chloride (commonly called muriate of potash) and potassium sulphate, each material containing about 42 per cent. of potassium. About 200 pounds of the fertilizer were applied the first year and 100 to 200 pounds per acre each succeeding year.

As a result of the use of this fertilizer, good crops of corn were produced, yielding from 41 to 55 bushels per acre as a three-year average. Not an ear of corn was produced on the same kind of soil in the same field which had not been treated with the potassium. The corn on this soil receiving no potassium failed to produce even a fair yield of stalks, all of which were barren of grain. The use of the potash made a fifty-bushel crop of corn per acre, against no corn at all, conclusive evidence of the value of the fertilizer and the wisdom of its application to peaty land.

Other fertilizers were used on the same soil, including applications of nitrogen in the form of dried blood and phosphorus in the form of steamed bone meal. Lime was also added to the soil, but in no case was there any grain produced except on the soil to which the potash had also been applied.

On the Porter field similar results were obtained, with the exception that the untreated soil did yield a small amount of grain, amounting to an average of 3.6 bushels per acre per year for a period of nine years, in comparison to an average yearly yield of 44.6 bushels per acre on the soil which was treated with potash. The soil in this case was of black, peaty material, underlaid with about twelve inches of yellow sand and impure limestone formation. The fertilizer application was at the average of 154 pounds of potassium sulphate per acre per year.

E. Myers, President, E. Myers Lye Company.

No More Hog Cholera —No Hog Worms— Bigger Pork Profits

By Feeding Daily Merry War POWDERED Lye

Are you going to wait until there is an outbreak of hog cholera in *your* neighborhood—when it spreads from herd to herd killing off hogs like flies—or will you take steps *right now* to *prevent* any possible outbreak in *your own* herd? You need have no fear of hog cholera wiping out *your* pork profits if you will feed a little *Merry War POWDERED Lye* twice *each day* with the regular rations. *It costs only 5c per month per hog*, and thousands of farmers can tell you it *prevents* hog cholera. This awful disease may be raging in a neighborhood, but hogs that are on a *Merry War POWDERED Lye* diet, are conditioned against it, as surely as a vaccinated person is protected against smallpox. Besides it destroys hog worms, keeps the digestion in such perfect condition that every pound of feed is changed into firm flesh thus preventing feed waste and greatly increasing pork profits.

The use of *Merry War POWDERED Lye* as a hog remedy, conditioner and fattener is *not* an experiment. It is a *specially prepared, powdered* lye that has been *tried* and *proven safe* and *effective* for those purposes. Full directions on every can. Don't experiment with an untried, old fashioned, ordinary lye. Get *Merry War POWDERED Lye*—the *time-tried* remedy that *actual experience* has *proved* to be the safest, surest preventive of hog cholera the world has ever known.

These Hogs Could Not Take Cholera

"We have had hog cholera all through our district. Those who have been using *Merry War POWDERED Lye* have missed it. One man in particular, who buys it by the case, has cholera all around him, but so far his hogs have escaped." C. M. COOPER, Proprietor of "The Right Place" Dawson, Neb.

Make a test for yourself. Merry War POWDERED Lye comes in 10c cans (120 feeds per can). It is convenient to buy in case lots—4 dozen cans for $4.80 at Grocers', Druggists' or Feed Dealers' Everywhere. There are no substitutes. WE WILL SUPPLY YOU DIRECT, $4.80 FOR 4 DOZ. CANS, IF YOUR DEALERS WON'T SUPPLY YOU. Write for our valuab.. booklet "How To Get The Biggest Profits From Hog Raising." Sent FREE for the asking.

E. MYERS LYE COMPANY,
Dept. 22 St. Louis, Mo.

Which Kind Do You Want?

[Please mention National Farmer and Stock Grower.]

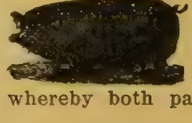
The yearly average value of the nine crops of corn at 70 cents per bushel on the soil receiving no potash amounted to $2.52, while the yearly average value of the nine crops of corn on the soil receiving the potash amounted to $31.22, a difference in favor of the fertilizer of $28.70.

The cost of the potassium at $50 per ton for potassium sulphate was $34.74, or an average annual cost of $3.86 per acre. The average yearly increase on the nine crops of corn due to the application of potash amounted to 41 bushels per acre, which at 70 cents per bushel was worth $28.70. The average net gain per acre, therefore, amounted to $24.84, which amounts to a cash return of 644 per cent. on the investment. Where can a farmer, or other business man for that matter, earn such a per cent. on money invested in legitimate lines of enterprise?

These experiences are not exceptional ones. They can be verified by the experiences of hundreds of other farmers who have made their peaty soils profitable by the use of potash. As one farmer expresses it: "It was just like finding an extra corn crop each year and at but very little extra expense. By thus making available to profitable cultivation my black muck soil I have practically enlarged my farm area without buying more land, by adding to my use several acres of most excellent productive soil, which before were not worth the taxes. The cost of the fertilizer is insignificant compared with the excellent annual returns I can now expect from this formerly waste land."—H. E. Trebor.

The American Swineherd.

A FARMER who wishes to subscribe for a paper that is specially devoted to Swine Raising can do no better than subscribe for THE AMERICAN SWINEHERD. It is published monthly at Chicago, Ill. There are generally about sixty pages of instructive matter and very useful reading. The price is 50 cents a year. THE NATIONAL FARMER AND STOCK GROWER has an arrangement with THE AMERICAN SWINEHERD whereby both papers can be subscribed for at the price of one.



The National Farmer and Stock Grower

Is a nice, clean, general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, to vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, to horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. The best live stock illustrations appear in THE NATIONAL FARMER AND STOCK GROWER. There are thirty-two pages, four columns to the page. It is published monthly.

Send us Fifty Cents and we will send you THE AMERICAN SWINEHERD and THE NATIONAL FARMER AND STOCK GROWER, both papers, for one year.

In 24 Hours the Demand for This Car Was Greater Than Our Annual Supply

AND yet we are shipping better than 150 cars a day. Think of it! Nearly 1000 cars a week, and still the public refused to be satisfied. We could ship 500 cars a day and at that we could not wipe out our immediate orders. But 150 a day is the very best we can do just now. That is our present production limit. Later on when our new factories are swung into working operation we can improve this condition; for this season we will make 40,000 Overlands, which nearly doubles our production of the season that just closed.

We announced this car to the general public the latter part of August. The instantaneous effect took our breath away. Inside of twenty-four hours we heard from practically every corner of the globe. It seemed to jar the entire automobile universe. Cables from abroad were almost as thick as American telegrams. Distributors, dealers and the appreciative motor buying public alike, telephoned, wired, wrote and traveled from every direction. Our headquarters in Toledo were swamped with requests, demands and threats. Everybody wanted a Model 69 at the same time. Nothing could curb the demand. We simply had to close our doors and ears to the riot and allot the cars as best we could.

This car took the country by storm. The very fact that a car of this size and power, a car of this magnificence, strength and comfort, a car so fully equipped with the very best of everything, could be had for $985 was beyond all belief.

Everyone said "Why that car is identical with lots of $1,200 and $1,500 cars I have seen." And so it is.

The self-starter, big wheel base, powerful motor, rugged rear system, the unusually large brakes, the beautiful finish, rich upholstery, and the complete equipment, which includes practically everything made for an automobile, are specifications that square up with cars that cost twenty and thirty per cent. more money. These specifications are all $1200 specifications.

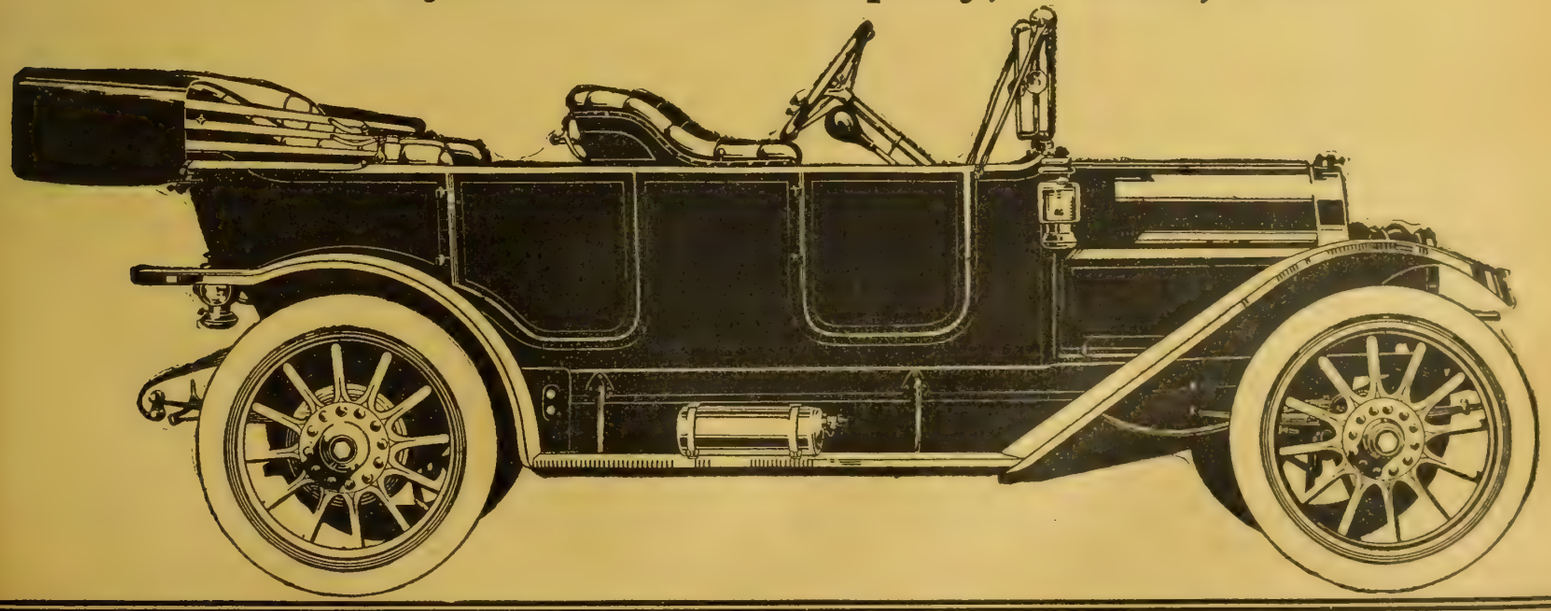
Then there is the cold rolled pressed steel frame, the selective transmission—three speeds forward and reverse, fitted with annular bearings; the well known Remy magneto; the I section drop forged front axle which is forged in one heat and is fitted with the famous Timken bearings; the three quarter floating rear axle fitted with Hyatt bearings. This car is finished in that superb Overland blue with gray wheels, trimmed in black and nickel plate, making a most striking and stylish car of rich design. You cannot duplicate this car from any other maker for less than $1200 and some want $1500.

We have but one suggestion to make. Get your "69" order in early. Don't delay, put off or stall. Just get busy. If you want to enjoy your automobile this fall you will have to step pretty lively. "First come first served," is an old expression but it fits. The demand right now is treble the supply. We never in the wide world will be able to catch up with the orders, so if you want one of these world's record cars, act quick.

Get in touch with our dealer in your locality. If you cannot find him, wire us. There are over 2000 of them delivering these cars right and left just as fast as we can ship them. Don't you get left.

Write us for a catalogue describing this model—the car that broke all preceding automobile values. Please ask for Book L 610.

The Willys-Overland Company, Toledo, Ohio



HORSE AND MULE SALESMEN.

Holland, Nugent & Maxwell Brothers.

NATIONAL STOCK YARDS,
EAST ST. LOUIS, ILLINOIS.

Horse Auctions Every Monday and Tuesday.

Horse and Mule consignments are solicited for sale by the most competent firm on the Best Market in the United States. Every consignment given personal attention. Keep in touch with us. Don't Have a Blind One

"VISIO"

An Absolute Cure for
Moon Blindness

(Opthalmia), Cataract and Conjunctivitis
Shying horses all suffer from diseased eyes.
"Visio" will convince any horse owner that it will absolutely cure defects of the eye, irrespective of the length of time the animal has been afflicted. No matter how many doctors have tried and failed, use "VISIO" under our GUARANTEE to refund money if it does not cure.
$2.00 per bottle, postpaid on receipt of price.
VISIO Remedy Ass'n, 2472 Calumet Ave., Chicago, Ill.

Bog Spavin

Cure the lameness and remove the bunch without scarring the horse—have the part looking just as it did before the blemish came.

Fleming's Spavin Cure(Liquid)
is a special remedy for soft and semi-solid blemishes—Bog Spavin, Thoroughpin, Splint, Curb, Capped Hock, etc. It is neither a liniment nor a simple blister, but a remedy unlike any other—doesn't imitate and can't be imitated. Easy to use, only a little required, and your money back if it ever fails.

Fleming's Vest-Pocket Veterinary Adviser
describes and illustrates all kinds of blemishes and tells you how to treat them. Covers over 200 veterinary subjects. 192 pages, 69 illustrations. Write for a free copy.

FLEMING BROS., Chemists,
218 Union Stock Yards, Chicago, Ill.

ABSORBINE STOPS LAMENESS

from a Bone Spavin, Ring Bone, Splint, Curb, Side Bone or similar trouble and gets horse going sound. Does not blister or remove the hair and horse can be worked. Page 17 in pamphlet with each bottle tells how. $2.00 a bottle delivered. Horse Book 9 E free.
ABSORBINE, JR., liniment for mankind. Removes Painful Swellings, Enlarged Glands, Goitre, Wens, Bruises, Varicose Veins, Varicosities, Old Sores. Allays Pain. Will tell you more if you write. $1 and $2 a bottle at dealers or delivered. Manufactured only by
W.F.YOUNG, P.D.F., 106 Temple St., Springfield, Mass.

Read about the Book of Live Stock Champions on page 22.

Texas and Oklahoma Cattle.

At the opening of the month of October, choice to prime corn-fed Oklahoma steers were quoted at $7.50 to $8.00 per 100 pounds on the St. Louis market; good to choice fed steers, $6.25 to $7.50; medium to good fed steers, $6.25 to $7.00; common to medium fed steers, $5.75 to $6.25; good to choice grass steers, $6.00 to $7.25; medium to good grass steers, $5.00 to $5.75; common to medium grass steers, $4.00 to $4.75; medium to good cows, $4.00 to $5.00; cutters, $3.50 to $4.25; canners, $3.00 to $3.50; bulls, $3.25 to $5.00; fair to choice heavy calves, $5.25 to $6.00; heretics, $3.50 to $4.50; yearlings, $2.75 to $3.50—all quotations being at the price stated per 100 pounds.

Advice to Eat Mutton.

"I see no hope of beef getting much cheaper," said Secretary Wilson, of the Department of Agriculture, Washington, D. C., October 1st. Fresh from a vacation in the West, Mr. Wilson declared there was a much greater scarcity of cattle than he had realized. "The breeding grounds of stock cattle," said Mr. Wilson, "heretofore sent to the corn field to be finished by fattening on corn, cannot furnish much more of that class of cattle. There is a supply of meat that people should become accustomed to eating—mutton. Mutton on the hoof is less than half the price of beef."

Because of the Scarcity.

"With prime heavy beeves up to $11 and fancy yearling steers and heifers mixed at $10.65, unprecedented prices on the open market, there is wonder where such high-costing beef can find outlet. Cattle of this class are conspicuous by their scarcity and command war-time prices for this reason. The outlet for such high-costing meats is limited to patrons of high-class restaurants, hotels and steamships, who do not object to paying $3.50 for a fine, thick, juicy steak."—Clay, Robinson & Co.'s Live Stock Report.

Shortage of Western Feeding Cattle.

Mr. John Clay, of Messrs. Clay, Robinson & Co., live stock commission agents at ten principal markets, on his return from his annual survey of the Northwestern range country said: "I have never seen more luxurtant growth of feed or better conditions for making beef. While the 1912 range beef supply will be short in a numerical sense, cattle will come to market in generally good killing condition, and much superior to that of last year. The hay crop of the Northwest is the largest in history, a condition calculated to expand hay-feeding operations and keep thin cattle away from Eastern markets. Sections that have never given winter feeding any attention heretofore are now considering it." Mr. Clay found a conspicuous shortage of good young cattle available for distillery and other feeding purposes everywhere in the Northwest.

St. Louis Horse Market.

At the St. Louis National Stock Yards, Holland, Nugent & Maxwell Bros. are doing a remarkable business selling a large proportion of the 15,877 horses and mules that arrived on the market in the month of September. This firm sells at auction Monday and Tuesday of each week, and the first auction in October was remarkably successful, the market being extra good for big horses, medium-weight work horses and top Southerners. Shippers who are sending their horses to be sold at cold and dull markets should turn to St. Louis and get a touch of real life and activity. First write to T. H. Holland, National Stock Yards, Ill., and give him an idea what you generally expect to ship.

Range Cattle at Chicago.

On September 17th, 1912, Clay, Robinson & Co., at Chicago Ill., sold for Richards & Wilcox, of North Dakota, sixteen head 1,275-pound grass steers at $9.60 per 100 pounds, the highest price ever obtained for that weight and class of cattle. On the 18th ult., the same firm sold twenty head of double-wintered Texas steers, 1,287 pounds average, for $8.50 per 100 pounds, also the record figure for that class of cattle. See page 17.

The Shire Mare Sale.

Every year Trumans' Pioneer Stud Farm, of Bushnell, Ill., hold an important sale of mares of the English Shire Draft breed. This year the sale will occupy Thursday and Friday, December 12th and 13th. All who are interested should write for catalogue.

Western Range Horses.

Horses are going to be scarce, and first-class market horses will be hard to buy. The material out of which first-class market horses are made are the superior Western range-raised horses which are brought to St. Louis and sold at auction. Usually these horses range from colts to mature geldings, from light harness stock to the heaviest draft breeds, and from yearling fillies to mature mares. None of them are scrubs, and a majority of them are better bred than an equal number of farm-raised foals. Messrs. Campbell & Reid and Western Sale Stables Company will hold three more sales this season, 1,200 to 2,000 head at each sale. The dates are Thursday, October 17th and 31st, and Thursday, November 14th. Just come in and look at these horses and take a load home to prepare for the domestic market. They are not wild horses. J. J. Searcy, P. O. National Stock Yards, Ill., is Sale Manager.

St. Louis Wheat Receipts.

Wheat receipts in St. Louis during the month of September amounted to 4,345,494 bushels, or 3,058,657 bushels more than were received during corresponding month last year. A large portion of the grain was received during the early part of the month. September figures compare with 1,286,837 bushels in 1911, 2,514,202 bushels in 1910, and 2,421,268 bushels in 1909.

Rules For Measuring Corn.

There are many rules for measuring corn. Inquiries conducted by the Missouri State Board of Agriculture show the following in common use: Sixteen cubic feet of corn in the shuck (or, if extra well settled, fifteen feet) make a barrel. The number of cubic feet multiplied by the decimal .4 gives bushels. Multiply together the length, width and height of the pen or crib, in inches, and divide by 4,200 for old corn, or 4,300 for new corn, to get bushels. When it can be done, corn should be weighed, rather than measured.

Prime sorghum shipped in to the market is selling at 40 cents a gallon.

WESTERN RANGE HORSE SALES.

Horse raisers are advised that sales of the very best Range Horses in the country are being conducted twice each month by

Campbell & Reid and Western Sale Stables Co.,

NATIONAL STOCK YARDS, ILL.
There are three sales yet to be held.

Thursday, October 17th,
Thursday, October 31st,
—and—
Thursday, November 14th.

These are the last three sales of the season. We will have for sale the best Horses to be had from the Western ranges, Mares, Colts and Geldings. There are no other Range Horses to be had. The bulk are sired by fine Draft Stallions.

Please address,
J. J. SEARCY, Sale Manager,
NATIONAL STOCK YARDS, ILL.

CURE THAT SPAVIN

—or that Curb, Splint, Ringbone or other lameness with Kendall's Spavin Cure. Mr. Montgomery Sheppard of Richfield, N. J. writes this about

Kendall's Spavin Cure

"I have been using your Spavin Cure and have found it a sure cure for Spavins, Splints, Ringbone, Lameness, etc." Let us send you other letters. Get a bottle of Kendall's at once. You may need it any day. At your druggists $1 a bottle. 6 for $5. Ask for "Treatise on the Horse"—Free, or write to

Dr. B. J. Kendall Co., Enosburg Falls, Vermont, U. S. A.

SAVE-THE-HORSE

(Trade Mark Registered)

SPAVIN REMEDY

A retail druggist in a "live horse town" within 30 minutes ride from New York City, writes: "I am selling three times more Save-the-Horse than any other Veterinary remedy; when they want the GOODS that cures they come back for Save-the-Horse."

Whether on Spavin, Ringbone (except Low), Curb, Thoroughpin, Splint, Shoe Boil, Windpuff, Injured tendons or other disease, a perfect and permanent cure is guaranteed, no scar or loss of hair, horse works as usual. 16 YEARS A SUCCESS.

WE Originated the Plan of—Treating Horses—Under Signed Contract to Return Money if Remedy Fails. But write, describing your case, and we will send our—BOOK—sample contract, letters from Breeders and business men the world over, on every kind of case, and advice—all free (to horse owners and managers).

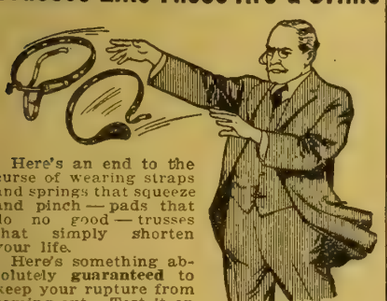
TROY CHEMICAL CO., 62 Commerce St., Binghamton, N.Y.

Druggists everywhere sell Save-the-Horse WITH CONTRACT or sent by us Express Prepaid.

The Horse High Jump.

According to the Spirit of the West, a good horse paper published weekly at Des Moines, Iowa, the Canadian high jumper Confidence, owned by the Hon. Clifford Sifton, is now the champion high jumper of the world. At the late Horse Show at Cobourg, Ontario, he cleared the bars at 7:10⅝ inches, breaking the record of 7:10 inches set by Heatherbloom some years ago at Norfolk, Va. If you think that isn't some jumping, just measure off that height on the wall and take a squint at it. So far as we have heard, there has never been but one jump to beat it, and that was when "the cow jumped over the moon;" but it was not an official performance, according to the rules, and so is open to doubt.

Trusses Like These Are a Crime



Here's an end to the curse of wearing straps and springs that squeeze and pinch—pads that do no good—trusses that simply shorten your life.

Here's something absolutely **guaranteed** to keep your rupture from coming out. Test it on 60 days trial and see. If it doesn't hold at all times, then it won't cost you a single cent.

Has overcome some of the worst cases on record. Doctors and surgeons who know of it recommend it instead of operation. No belt, no leg-straps, no springs. Is waterproof—will hold in bath.

Write for Free Book and find out all about it. Book is full of facts never before put in print. Cloth-bound, 96 pages. Explains why elastic and spring trusses cannot help you. Shows dangers of operation. Exposes the humbug "appliances," "methods," "plasters," etc. Will save you from wasting money. Shows why 60 days trial is the only safe way to test anything for rupture and how we offer you the only thing good enough to stand such a long test.

Book gives over 5,00 voluntary endorsements. Write for it to-day—it tells you things you could never find out by going to doctors or drugstores. Address:

Box 776—CLUTHE CO., 125 E. 23d St., New York City.

Kentucky's New Saddle Queen.

Hazel Dawn, the new saddle queen of Kentucky, is a chestnut mare under fifteen hands, is six years old, sired by Rex Peavine, out of Gladys T Wigg by Chester Dare. She won the Commissioner of Agriculture $1,000 stake at the Kentucky State Fair, when she defeated the richest array of saddle horses ever shown in Kentucky. Hazel Dawn is owned by Matlack & Shropshire, of Winchester, Kentucky.

The Horse Sickness.

In Kansas there is a horse disease which, if it was among stabled animals, would be known by the familiar name of "horse sickness." Without being a veterinarian, we can safely class the disease as a form of distemper that is caused by malignant germs taken into the stomach with the feed, the same as the Southern fever or tick fever was caused in the case of cattle that were not immune from the effects of the tick. All that professional skill has been able to do is to advise change of food and water as preventive measures, and the treatment to the sick is so complicated as to require the services of a veterinarian. The disease is attributed in the main to stagnant pools, moldy vegetation, caused by rank growth and fermentation. At last reports the situation is very much improved, and it appears also that the first alarmist accounts were very much in the nature of exaggeration. The disease and its extent indicate that it is not possible at times for individuals to prevent disease-breeding conditions, for it appears that the infected country through alternating rains and sunshine had rank grass that near the roots had molded and that could not be helped until it was discovered.

HORSE AND MULE NOTES.

On September 11th, in New York City, at a public auction sale by Van Tassel & Kearney, an average of $1,560 was obtained for a consignment of polo ponies placed on the market by Mr. E. S. Reynal, a crack polo player, who retired from the sport.

Acting for S. D. Riddle, a wealthy horse fancier of Glen Riddle, Pa., George Watson, of New York City, purchased from George Wallen, of New York, the chestnut saddle mare My Butterfly, champion of the Plainfield, Long Branch, Newport and Syracuse shows. The price paid for her was $5,000, which is close to the record for a saddle horse.

Cattle Receipts at St. Louis.

During the month of September, at the St. Louis National Stock Yards, total cattle receipts were 167,594 head, the heaviest run of the year to date and within a few hundred head of the biggest month's supply ever known at these yards. The record month in cattle at the St. Louis market occurred in September, 1910, when 168,346 head got in.

Native Steers at $10.60.

At the St. Louis National Stock Yards, on October 1st, Henry Heyton, from Callaway county, Missouri, was represented on the market by a consignment of steers that sold for $10.60 per 100 pounds. There were seventeen head included in the consignment and they crossed the scales for an average of 1,539 pounds. The cattle were fed on a ration of corn, blue grass and cotton-seed meal and were in a very good condition for the packer. This was the only load of heavy beef cattle on the market that day.

National Egg-laying Contest.

At Mountain Grove, Mo., the egg-laying contest is drawing to the close. There are 130 pens, five hens to the pen, and one hen in reserve to fill a vacancy, should there be any loss in the original five pens.

At the end of the tenth month, fourteen hens had passed the 200-egg mark, and there being sixty-one days yet to be heard from, it may be shown that the 200 or more eggs per hen in a year is by no means a rare production.

The leading individual record in ten months was 237 eggs, laid by No. 717, the White Plymouth Rock. Other top records are by a Barred Plymouth Rock, 216 eggs; R. C. Rhode Island Red, 215 eggs; S. C. Rhode Island Red, 215; and S. C. Rhode Island Red, 213 eggs.

The best pen records at the end of the tenth month were as follows:

	Eggs.
R. C. Reds, Missouri	899
White Wyandottes, Arkansas	871
S. C. White Leghorns, Georgia	856
Barred Plymouth Rocks, Illinois	843
Black Orpingtons, Indiana	823

The manager of the contest reported that most of the hens were in full moult August 31, at the end of the tenth month, which set back the laying considerably. August temperature was 95 to 101 in the shade for several days.

In regard to breed averages, the sixty S. C. Rhode Island Red hens averaged 139 eggs each; ten Black Orpingtons, 137 eggs each; ten Black Langshans, 137 eggs each; thirty Silver Wyandottes, 136 eggs each; twenty White Orpingtons, 135 eggs each; thirty Buff Orpingtons, 132 eggs each; thirty R. C. Rhode Island Reds, 132 eggs each; twenty Black Minorcas, 132 eggs each; and ninety White Leghorns, 127 eggs each.

The present contest ends October 31st, and a new contest commences November 15th. Mr. T. E. Quisenberry is Director, and his address is Mountain Grove, Mo.

About Eggs and Poultry.

Every person that raises fowls should be well versed in the troubles that are likely to come to fowls. This should be done from the standpoint of kindness to the birds subject to our care.

How many people know what "egg-bound" means? Yet the ignorance concerning that difficulty has caused much suffering among the dumb creatures. Every experienced poultry raiser knows that fowls sometimes die in the process of producing an egg. Perhaps these are generally first eggs. The writer has had several experiences with fowls so troubled. The remedy is to remove the egg by the help of a little lubricating oil. This will save the life of the fowl and at once relieve the pain. A man that did not know how to deal with this kind of a case lost a valuable pullet that he had very carefully raised. She died in the effort to produce her first egg.

The preservation of eggs is a matter that has been engaging the attention of many of our experts for a good many years. Extensive tests have been carried on in Germany, all of which seem to favor the immersing of eggs in water-glass. In some cases eggs varnished in vaseline have kept well. Eggs immersed in lime water have kept well in some cases and not well in others. Many methods proved of no value.

The simplest method of preserving eggs seems to be that of immersing in lime water. The solution is made by putting one pound of freshly-burned lime in two gallons of water and letting it stand till the lime is all slaked and the liquid has cleared. Then put the eggs in an earthen or glass jar and cover with the lime water. It is claimed that eggs will keep well for eight months if so treated, but it is safest to put them in a cool place.

Water-glass can be obtained at drug stores, and the solution should be what is known as a 10 per cent. solution. It must be remembered, however, that there are few fresh eggs, and that an egg several days old has progressed some toward the point where it is considered a spoiled egg.

The writer observes that confined fowls have generally too little space allotted them. This applies both to the farms and to the yards of the professional poultrymen. All kinds of common fowls are great foragers and grazers. The amount of land given to each flock should be determined largely by the character of the land and its productiveness. The area should be great enough so that the verdure will not be destroyed. The writer notices that in some good-size yards there is not a blade of grass to be seen, which means that the sod has been destroyed by the fowls. This is not profitable poultry raising. With enough land, the pasture for the fowls would be continuous, and there would be a large saving in feed.

In this day of high-priced feed it is advisable to make the grass land carry as large a burden as it will. Poultry pasturage must become a prominent factor in the raising of fowls. If not overstocked, it can be utilized from early spring to late fall, and the land will be constantly improving under the treatment, for it will have the droppings of the fowls to enrich it.

POULTRY NEWS AND ITEMS.

At the Missouri National Egg-laying Contest male birds were kept in the pens in order to test the fertility of eggs of high producers as compared with the fertility of eggs from low producers.

At the next Missouri National Egg-laying Contest to have an equal number of pens of each breed is the intention of the management.

At the Missouri National Egg-laying Contest, eight of the hens out of 625 have never laid an egg, and several others have laid less than half a dozen.

At the Missouri National Egg-laying Contest, in August, a pen of five Barred Plymouth Rocks, owned by Miss Lillian C. Adams, of Boonville, Mo., won the Golden Egg Silver Cup for August by laying 107 eggs.

We are clubbing the Reliable Poultry Journal and The National Farmer and Stock Grower—both publications one year for 50 cents. It is a magnificent proposition for our subscribers. Send in your money without delay.

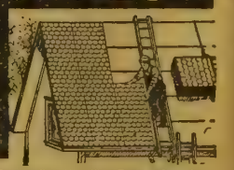
GREAT PHOSPHATE FIELDS.

Geologic Work has Added Many Millions of Tons to Known Reserve of this Necessary Fertilizing Element.

The largest known phosphate field in the world lies in the Rocky Mountain region in the states of Idaho, Montana, Utah and Wyoming, and most of the deposits belong to the United States, being on public land. Phosphate rock, as is well known, is the principal source of phosphorus, one of the three necessary plant foods. The exact boundary of this phosphate-bearing area is still undetermined, but each year as investigation has been pushed by the United States Geological Survey its limits have been more accurately defined by extension in some directions and retraction in others. Phosphate in this general region was first discovered in Northeastern Utah and Southeastern Idaho in the vicinity of the Idaho-Utah-Wyoming state lines. From this locality the deposits have been traced north, southeast, and west halfway across the states of Idaho, Utah and Wyoming, and northward to the vicinity of Helena, in West-Central Montana, until now the phosphate beds are known over an area extending approximately 220 miles in an east-west direction and 420 miles from north to south. Only a small part of this territory, of course, is underlain by phosphate deposits that are commercially valuable. In many places the phosphate beds, although present, occur at such great depths below the surface that they will probably never be mined; and in other parts of this completely folded area the phosphate beds have been entirely removed by erosion. However, the tonnage of high-grade phosphate rock in this region is enormous, the estimates running up into the billions of tons.

The rock phosphate itself can usually be recognized in the field by its oolitic texture—that is, by the fact that it is a mass of grains like small shot cemented together. The rock varies in color from coaly black—in some places it was originally mistaken for coal—to dull gray or iron stained. Most of the phosphate rock emits, when broken or struck, a fetid odor, which is supposed to be characteristic of these minerals. Its "float" is characteristically marked with a thin film of bluish-white bone-like coating, resembling chalcedony. This coating is useful is tracing the concealed outcrop in the field by means of scattered fragments to be found in the overlying soil.—From Press Bulletin of the United States Geological Survey.

Roof Your Building With Edwards "REO" STEEL Shingles



No Freight! No Repairs! No Painting! No Labor Cost! No Extras of Any Kind! Write for Low Prices!

A genuine "REO" Steel Shingle roof at the bare cost of factory making, plus one small profit!

Send roof dimensions and get low price on completed job. You will be amazed at how cheaply, easily and quickly you can have a No. 1 roof.

Outwear Four Ordinary Roofs

Edwards "REO" Steel Shingles far outwear best cedar shingles, corrugated iron or composition paper roofing. The Edwards "Tightcote" process of galvanizing and the Edwards Interlocking Device do the trick. They multiply the life of a roof by four. And remember, no freight to pay, no extra materials to buy, no workmen to hire, no tools to borrow. Just nail "REO" Shingles on yourself with a hammer—right over sheathing or old roof.

Our $10,000 Guarantee Against Lightning

Edwards "REO" Steel Shingles are not only rust-proof, rot-proof and weather-proof, but are also fire-proof. You get a signed guarantee against loss by lightning backed by $10,000 bond. We also guarantee safe, prompt deliveries any place in the U. S.

Postal Brings Catalog and Factory Prices

Don't buy roofing material of ANY kind till you've had our Factory Prices and Catalog, which explains our famous "Tightcote" Process. A postal brings all. Give roof dimensions if you can. But if you can't, send postal anyway for Prices and Catalog 1007 (84)

Poultry and Farm Paper Club.

We are often asked which is the best poultry paper in the United States, and the answer is **The Reliable Poultry Journal.** There are other excellent poultry papers, but the one we take home to read and one the family is determined to read is **The Reliable Poultry Journal.** We have made arrangements whereby we can send The National Farmer and Stock Grower and **The Reliable Poultry Journal,** both papers, one year, for fifty cents. This is a bargain that should be accepted at once. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

What Good Care Will Do.

Almost anything on the farm may be made to pay at least wages if the proper attention is given to it; almost anything may be made to lose money through neglect or indifference. A striking illustration of this came to us recently in the different methods of beekeeping in vogue in a single neighborhood.

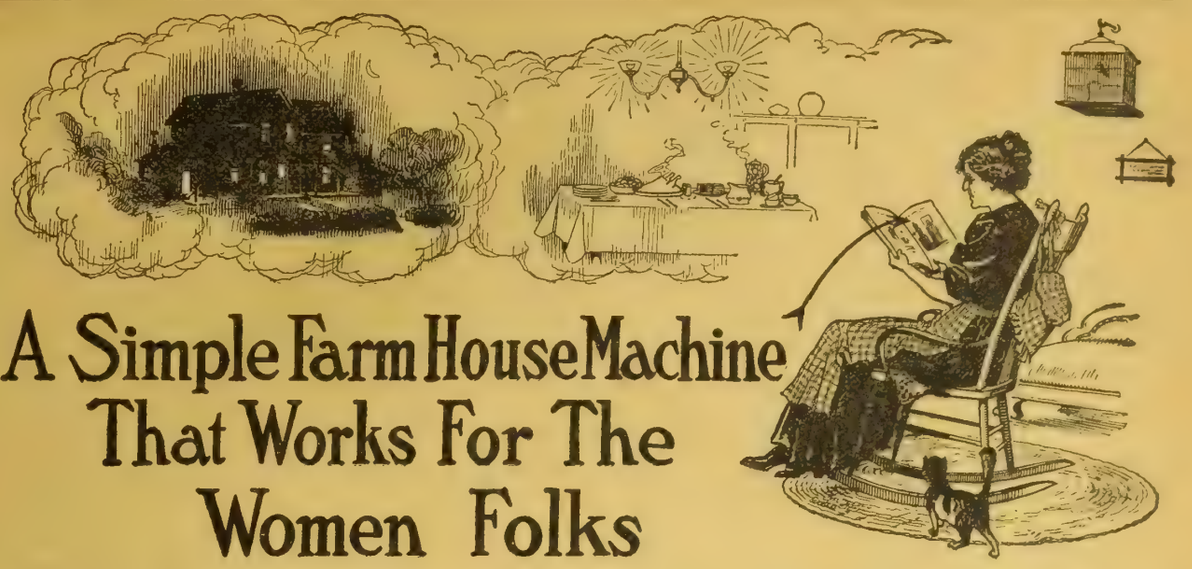
One swarm, purchased last autumn at a nominal price, was in the hands of one who had kept bees very little, though well versed in modern bee literature. The plan of forcing in early spring to have a strong swarm ready for the first real honey flow was cut short by sickness in the family, and the swarm started in the summer work with no special preparation.

The year before there had been a generous sowing of alsike and timothy mixed, and the clover soon proved a drawing card for the bees. Alfalfa would have been better, but the location was not in the zone for this crop, and so the alsike was chosen. Ordinary Italian bees cannot reach the nectar in red clover with their short tongue, but that of the alsike is as readily accessible as the small white clover. The bees worked hard, and the swarm grew almost too large for its quarters, but the owner was working for honey rather than new colonies, and so added more section boxes until there were at one time seven tiers of twenty-eight-pound boxes each, and extra ventilation was given by raising the hive a little from the ground. Over a hundred pounds of first-grade clover honey was the result of this pasture near the hive, aided by the precautions to discourage swarming.

After this came the buckwheat, which was also comparatively near, thus saving the bees much work in the garnering of the harvest. At the present time over fifty pounds of dark honey have been taken off and there is as much more filled and practically finished save the capping over, which the bees know how to defer until their sweets are properly ripened. Some twenty new sections were added to give more room for work, for the hive is actually packed with bees, and the way they are piling in with honey promises that these and perhaps more will be filled before the buckwheat blossoms are gone. Then there will be the golden-rod, perhaps a short crop so far as the owner is concerned, but a most useful one to keep the bees supplied with food for a month or two, when they would otherwise be forced to depend upon the stores already garnered.

And now as to the lessons. Others with from five to ten colonies report an off-year, with perhaps some swarming, but only a few pounds of honey taken off. Clearly, the enormous honey yield of the one man who knew every week and during the busy season almost every day what was going on in the hive several times balances the increase in colonies. The bees have paid for themselves several times over in cash returns besides supplying the family with one of the choicest of sweets. And it is doubtful if another beekeeper in the vicinity, though some have from six to a dozen colonies of bees, will have as much honey as this single swarm, worked for all there was in it, has yielded.

It would have swarmed, no question about that, had not the extra precaution been taken. And then there would have been a division of labor, with correspondingly less results. There were times when a moth miller, unless discovered and removed, would have done serious mischief in the hive; times when the entrance needed enlarging to meet the increased number of workers. And the newly-seeded field, which in the making seemed almost extravagant, considering the enormous price of seed, paid for the seed in the bountiful honey crop.—Bessie L. Putnam.



A Simple Farm House Machine That Works For The Women Folks

Why Not Put This One Small Machine In the Farm Home—To Make Mother's Work Easy? = When Father Has a Dozen Or More Bigger Ones to Lighten His Labors.

Why not present Mother with a "Pilot Country Home Carbide Machine?" A machine that will cut the good woman's work in half and make the old farm house a better place to live in.

Father has his riding plows, cultivators, binders, mowers, corn cutters and manure spreaders—he needs them all to make the farm pay—incidentally they make farm work twice as easy as it was a generation ago.

In the meantime the woman's end of it—the house work—is every bit as hard as it ever was. It is certainly mother's turn. She is clearly entitled to anything in the way of machine help to lighten her labors as much as one of these little gas plants will.

With less than fifteen minutes' attention once a month one of these Pilot machines will provide all the gas necessary for light and fuel in a big house. And in every such home the housewife will be forever relieved from the trouble and labor of handling coal, fire-wood, ashes, kerosene and greasy, smelly oil lamps.

Already over two hundred thousand farmers' wives are enjoying this wonderful convenience. For fully that many Carbide machines have been sold and installed in farm homes to date.

We ship with these Pilot light and fuel plants, the light chandeliers and the gas cooking range, all ready to set up. And this outfit can be installed in three days without injuring walls or floors.

The Pilot machine will set in your basement or an out-building. The iron pipes will run inside your walls just as in all city houses. The chandeliers, in brass or bronze, you can select from a catalogue of a hundred beautiful designs.

The lights you can have fixed to light up without matches—by simply pulling a chain that hangs from the burners in every room, barn, shed and out-building.

Every light will be as white and brilliant as sunlight itself. So clear and soft that it is often referred to by scientific writers as "Artificial Sunlight." No other light will add half so much to the beauty of a room. And no other light can equal it for reading purposes.

The cooking range will be just like the "Gas Ranges" used in millions of city kitchens. The ever-ready fire can be turned on or off with a thumb screw. Like the city gas range this Carbide Gas Range insures a cool kitchen in hot weather and cuts the work of cooking meals in half at all seasons of the year.

If you will write and ask us for it, we will be glad to send you our free wonder book.

It tells about the magical gas producing stone, "Union Carbide"—how the Pilot machine releases the gas from this stone automatically—just the amount you use, no more, no less. It tells why the Union Carbide can't burn or explode. It tells why it can be kept for years. It tells how the light can be used in barns and other farm buildings. It tells why it is better than electricity and cheaper than kerosene. It tells why it is not poisonous to breathe. It tells why insurance authorities pronounce it the safest of all available illuminants for country homes. It tells what sized and priced machines different sized farms use.

All these facts are explained in the book in a manner that will make it perfectly clear why this HOME MADE GAS is now used by over two hundred thousand farm families.

Send us your address NOW, before you forget it, and we will mail you the book and full particulars promptly.

Just write to THE OXWELD ACETYLENE CO.—68 Adams St., Chicago, Ill.

Large Yield and Sale of Apples.

On September 14th, from St. Joseph, Mo., it was reported that Mr. Cal Hyde had sold a crop of apples from an orchard of 400 trees for $2,850, which is a fraction more than $7.10 a tree. The buyers said it was the most productive crop of its size known. The orchard is a part of the Hyde farm, and the fruit consists of Jonathan, Gano, Ben Davis and Black Twig varieties. The trees are seventeen years old and in the nine years they have borne Hyde has realized more than $10,000 from the sale of the fruit.

Alfalfa a Bonanza.

Those farmers who have not yet determined to have a first-class stand of alfalfa should read about the C. M. Gregory farm, in Chase county, Kansas. On an early cutting $25 an acre was obtained in seed. The next cutting produced six and one-half bushels an acre, which sold for $7.00 a bushel. The final cutting will produce about three tons of hay to the acre. No matter how this is figured, it amounts to a bonanza crop.

St. Louis Record Wheat Receipts.

In the month of August the St. Louis market received 8,288,393 bushels of wheat, which surpassed all previous records for that month. Last year the August receipts were 1,752,319 bushels, and in August, 1910, the figure was 4,327,111 bushels. The previous high record of wheat receipts for a single month was 6,243,347 bushels, in August, 1902. The gain in favor of August, 1912, is over 2,000,000 bushels.

The September edition of the Reliable Poultry Journal contained a picture of six roasting chickens weighing in all 57½ pounds dressed, that sold in Boston for $3.64 each. They were 7½ months old and brought 38 cents a pound during the first week in May. They were crossbred White Plymouth Rocks and Light Brahmas.

Lady Showyou, the White Plymouth Rock hen that lay a total of 237 eggs in ten months, weighs six pounds, and has laid five times her own weight in eggs in ten months. She was not broody in that time, neither has she moulted. Her owner is J. A. Bickerdike, of Millersville, Ill.

The gold medal cheese award at the New York State Fair went to F. W. Weatherup, Rensselaer Falls, on a score of 99.

LIVE STOCK BREEDERS' CARDS.

POLAND-CHINA HEADQUARTERS.

Write for prices and you will receive an actual photograph of MASTER KEEP ON, the best Boar we ever owned. Satisfaction guaranteed in all sales.

KIRBY STOCK FARM, Marmaduke, Ark.

DICKINSON MERINO RAMS AND EWES.

For sale: Dickinson Merino Rams that have the constitution and size for wool and mutton. Write for further particulars. **ALEX. TAYLOR, Moundsville, West Virginia.**

Scientific Meat Curing.

There is a book on meat curing. It is descriptive of the methods used by the most expert of all the butchers and packers. It is actually a text book for the curing of all meat products. It includes elimination of animal heat, difference between weight alive, dressed and cold, with shrinkages; tables for making different strengths of pickle, mild and strong cured meats The book includes table giving average weights of the various cuts of pork, veal and mutton, lists of the different standard brands of sausages, giving per cent. of beef and pork used, parts of the carcasses and the amounts of cereal used, and the constituents of the cereal used in sausage, etc. There are but twenty-four pages, but each page is full of good value in practical instruction.

Our Subscription Proposition.

We have adopted the booklet "Scientific Meat Curing" as a subscription premium to be furnished subscribers to The National Farmer and Stock Grower. Send us sixty (60) cents by money order and we will send you The National Farmer and Stock Grower for one year and you can select one copy "Scientific Meat Curing" as a premium, to be sent postpaid, safe delivery guaranteed. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

BLOODED STOCK NOTES.

Look up the advertisement of Chas. Dorr, Osage City, Kas., one of the oldest breeders of Duroc-Jersey red hogs in the state, offering pigs at $8.00 a head, pedigree with each one. As well bred herd as there is in Kansas.

Mr. R. Fleming, of Cuba, Kas., has a few more of his fine Collie pups for sale. They are the rough-coated, useful kind.

Right in the heart of the Illinois milk-producing district is Mr. J. W. Farrell, owner of "The Pines" Herd of Holstein Cattle, and he will furnish pure-bred and high-grade Holstein calves at reasonable prices. His card is in our breeders' columns.

Reliable Seed House.

We take pleasure in recommending the A. W. Schisler Grain Company, of St. Louis, as a buyer of seeds direct from seed-growing farmers. The firm also sells direct to farmers all seeds they need. The way to get acquainted with this firm in the first place is to write for their Golden Arrow Seed Catalogue. Address, A. W. Schisler Grain Company, 708 North Fourth street, St. Louis, Mo.

A WONDERFUL HORSE—THE JEW.

Dr. W. F. Young, of Springfield, Mass., owns a remarkable horse belonging to the High School branch of the saddle horse family. THE JEW was raised in Kentucky, sired by "Monte Cristo," trained and exhibited by Mat Cohn, of Jacksonville. He won in High School class in three exhibitions in Kentucky, Lawrenceburg, Sheldonville and Louisville. He was the best horse among a bunch of forty at Wabash, Ind., at the time Dr. Young bought him in 1906. THE JEW was foaled in 1890 and is now twenty-two years old. He weighs a little over 1,100 pounds and stands sixteen hands. Dr. Young says of THE JEW: "I think he can do more useful things, including more tricks and gaits under saddle, than any horse that I have ever been acquainted with. He is a straight-away, beautiful driver, animated, good life. Under saddle THE JEW will take any gait at signal, doing it promptly without protest. Likes to carry you in saddle apparently as well as a boy likes to play base ball. Mrs. Young and I both ride horseback, and when the saddles are on, we lead THE JEW out to the lawn and he kneels at signal for us to get on. Would do it just as well for Mrs. Young as for myself. At signal he will kneel down for the rider to dismount, and do it anywhere, out on the country road or at the accustomed place on the lawn after returning from a ride. Regarding his gaits, he will start away at signal with the step and pace or fox trot, the running walk, the straight walk, the Spanish march. Should you meet a friend on the road and feel like treating him to a bottle of wine, THE JEW will do the corkscrew act for you, make a bow to the lady by dropping on one knee, side pace either to the right or to the left, kneel on both knees with his nose in the dirt saying his prayers, do the pedestal mount. The picture shows him starting up the steps of my residence. I had just said to the photographer that this fellow would do the pedestal mount, and in looking about for a place for him to mount his forward feet, the steps caught my eye. I pointed him, and he started right along up. He would have gone right up into the house if I had not stopped him. He will sit up like a dog, lie down, and if you are feeling a little hilarious yourself and the hurdy-gurdy or street bands start to play, Mr. Horse will throw his ears and get a little chesty, and, at signal, will do the two-step, 'Hootche Kootche,' the high trot, the Spanish walk, go the high march, backwards, will apparently stay in his tracks and imitate a rocking horse, guides promptly and quickly by the neck or by swinging in the saddle."

The owner of THE JEW is Dr. W. F. Young, of 106 Temple street, Springfield, Mass., proprietor of Absorbine, the horse medicine advertised on page 16. He has just issued a horse booklet entitled "How to Remove Blemishes," which he will be glad to send free to readers of this paper on request.

CHAMPION SEED CORN PREMIUMS.

Offered to Our Readers Who Send Us a Special Subscription—Yellow Dent Corn Pure Bred Since 1847.

October is the month in which to select your seed corn from your own crop. Go out to the field and select your best ears and dry them and keep them for next year's planting. In selecting your ears of corn for seed, do not make size the first consideration. The best ear of corn at one of the greatest show contests was pure-bred Yellow Dent, only 10¼ inches long, 7⅞ inches in circumference at a line three inches from the butt, was 6⅞ inches in circumference at a point two inches from the tip. It weighed 19 ounces when thoroughly dry, and it carried twenty rows of kernels. The picture presented herewith will show that it had a good butt; that it had a good tip; that the lines between kernels were straight; the ear was splendidly proportioned, and it was bright with life and vitality. When you go out to the field, carry with you a stick 10¼ inches long and a piece of tape to measure around the ears of corn that at first glance look good to you. When you find fat ears of corn, be sure that the fatness is not an undue proportion of cob.

The picture presented herewith represents the ear of corn referred to, grown by Mr. D. L. Pascal, of Iowa, who with it won a trophy worth $1,500.00, and it was the best ear grown that year in Iowa, and it is the single ear of corn that was shown in a glass case at the first National Corn Show. Mr. Pascal has a strain of Yellow Dent corn, bought from the originator and kept pure for sixty-six years.

For several years The National Farmer and Stock Grower has purchased of Mr. Pascal a quantity of seed corn related to this grand champion ear, and we have distributed it in pound lots to our subscribers, who have started growing their own seed corn from the Pascal seed furnished by this paper. Furthermore, many of our subscribers have won prizes at their own State Fair with ears of corn grown from the Pascal seed we furnished them. Some of them were first prizes and one of them was the championship prize for an exhibit of ten ears at the State Fair of Louisiana.

We have again purchased Yellow Dent Seed Corn from Mr. Pascal and we intend to send it out as subscription premiums as near free as we can arrange to do so. The corn is absolutely free and our subscriber is simply paying the postage on it.

Our Subscription Proposition.

The postage on twenty ounces of seed is ten cents; therefore we make this proposition: Anyone who will send us the amount of sixty (60) cents we will send The National Farmer and Stock Grower for one year, and we will send a package containing twenty ounces of Yellow Dent Seed Corn grown by Mr. Pascal from his breeding corn that grew the grand champion ear. Address, THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

High Sale of Berkshires.

At a recent sale of Berkshire hogs held at Kinlock Farms, Kirksville, Mo., by Dr. C. E. Still, the highest average of the season was made. The great boar, Rival's Lord Premier, was purchased by Stanton & Sayers for $4,050; and Artful Belle, 30th, eleven years old, sold for $805, and an under-year daughter of hers, by Rival's Lord Premier, brought $1,075. These two purchases went to Thos. Stanton, Wheaton, Ill., who was the largest buyer, who secured thirty-three head for $8,287.50, the largest number and highest price ever paid by a Berkshire breeder at a public sale.

Top For the Year, Week and Day.

On Monday, September 9th, at the St. Louis National Stock Yards, Clay, Robinson & Co., live stock commission agents, sold for the account of J. D. McClure, of Cincinnati, Iowa, one load of hogs, averaging 191 pounds, that brought $9.30 per 100 pounds. This sale was remarkable for the reason that the price was the top of the market for the day, for the week and for the year, and for the day topping all the Western markets.

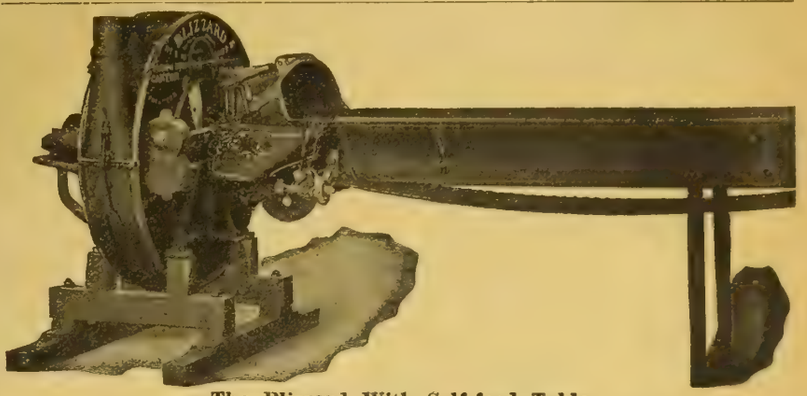
Government Land Report.

According to a statement issued by the United States Land Office on September 26th, a total of 14,574,688 acres of public land and Indian lands were opened to settlers by original entries during the fiscal year ended June 30, 1912. During the same period patents were issued by the Land Office to 10,135,475 acres, giving the landholders clear title to the properties.

Despite the fact that homestead tracts are steadily growing less suitable for cultivation, the Land Office shows that over 5,011,948 acres of public lands were patented under the homestead law. The total receipts of the Land Office for the last fiscal year were $9,973,048; expenditures and estimated liabilities $3,573,693, leaving a net surplus of $6,399,355.

THE BLIZZARD ENSILAGE CUTTER.

The picture presented herewith is an illustration of the Blizzard Ensilage Cutter manufactured by the Joseph Dick Mfg. Co. It is actually the most powerful forage cutter so far manufactured. The illustration shows "The Blizzard" with self-feed table, the end of table being cut off to bring the picture inside of two columns.



The Blizzard With Self-feed Table.

The Blizzard is made in several sizes, L 9 weighing 700 pounds, capacity four to six tons per hour of green ensilage; L 11, weight 1,100 pounds, capacity five to eight tons per hour; L 13, weight 1,300 pounds, capacity seven to twelve tons per hour; L 15, weight 1,500 pounds, capacity ten to fifteen tons of green ensilage per hour. The silage distributer will deliver the cut material at any height in any direction in silo desired. For special descriptive pamphlet showing all points of superiority over any and all other makes address Weber Implement and Auto Company, Sales Agents, 1900 Locust street, St. Louis, Mo.

St. Louis Sheep Market.

Secretary of Agriculture Wilson is telling the people that on the hoof mutton is half the price of beef. At St. Louis, October 1st, the best lambs offered brought $6.85 per 100 pounds, with other good ones at $6.35 to $6.75, but strictly choice ones would have sold a little higher and might have reached $7.00. Medium lambs went at $6.00 to $6.35; fair grades, $5.25 to $5.85; and the culls, $3.50 to $4.75. Southwest lambs sold largely at $5.85 to $6.35. Good Southwest lambs sold at $6.50 per 100 pounds. Most of the sheep that went to the slaughterers brought $3.75 per 100 pounds, with those that were not strictly good at $3.65. Stockers went largely at $2.50 to $3.00, with a few up to $3.35 and some of the poorer grades at $2.00 to $2.40. Bucks continue to bring $3.00. Most of the goats brought $2.85 to $3.00—all quotations being at the price stated per 100 pounds.

Special Hog Information.

Clay, Robinson & Co., live stock commission agents at the St. Louis National Stock Yards, reported on the 1st of October that $8.95 was the top of the hog market and the top load averaged 180 pounds. Good lights to medium weights sold at $8.75 to $8.95, averaging 160 to 210 pounds. Choice mediums to heavies, weighing 220 to 250 pounds, $8.85 to $8.95. Good heavies, 275 to 350 pounds, $8.75 to $8.95. Throw-out stags and sows, $8.00 to $8.25. The bulk of light-weights sold from $8.80 to $8.90; the bulk of heavies, $8.80 to $8.90—all quotations being at the price stated per 100 pounds.

Pigs Without Worms

I'll Stop Your Losses from Worms—I'll Prove It 60 Days Before You Pay

Little pigs only a few weeks old are often found loaded with worms. Hogs of all ages suffer from these deadly parasites. Then cholera, swine plague and other contagious diseases get in their destructive work. Stock troubled with worms don't thrive; they cough, have fever, act dull, and don't gain a pound. Your feed is wasted; your profits are stolen. Your animals frequently die, causing total loss of many dollars. I'll stop all this quick with Sal-Vet, the great worm destroyer and conditioner. I have done it for thousands of others. I'll do it for you, before you pay me a penny, if you will just send me the coupon.

Prices 40 lbs. $2.25, 100 lbs. $5.00, 200 lbs. $9.00, 500 lbs. $13.00, 600 lbs. $21.12. No order filled less than 40 lbs.

Read This Letter: "Have fed Sal-Vet to my hogs and lost none. Neighbors both sides of me, east and west, have had cholera bad. One west of me, on adjoining farm, lost about forty hogs and pigs with cholera; the one east, on adjoining farm, lost all he he had, excepting four."
A. J. HOFFMAN, Leipsic, Ohio.

SAL-VET

Send No Money—Just the Coupon

If you will fill out the coupon—tell me how many head of stock you have—mail it to me, I'll ship enough Sal-Vet to last them 60 days. You simply pay the small freight charge when it arrives, and when the 60 days are up report results. If it does not rid all your stock of the deadly stomach and intestinal worms, I'll cancel the charge—you won't owe me a cent. (72)

Forget It!"

There is something about that slang phrase which appeals to me. The people most to be pitied are those who do not know how to forget; those who carry about with them all the worries of the past, the burdens of the present and the possible problems of the future.

For instance, Mrs. Jones—no, let's ferget Jones, Brown and Smith and say Papadoupolos, for a change—Mrs. Papadoupolos and her two children, Petranella and Mehistopheles, are on a day's outing. Presumably it is a care-free day, and should be one of unalloyed pleasure. And so it would be for Petranella and Mehistopheles, could they have left their mother at home. But Mrs. Papadoupolos is a damper to every joy. She cannot forget anything that ever happened nor anything that ever may happen. Mrs. Papadoupolos never does thoroughly enjoy herself, because she once had a great-aunt who died of heart failure, and so she is continually worrying for fear she will be carried off in the same way. She has already lived half the allotted time of man and looks as though she might be good for the other half. She probably will die of heart failure, as that seems to be the common fate of all mankind. Suppose she just forgets all about death and enjoys the warm sunshine and the blue sky with white clouds scudding across it; suppose she becomes as one of her children in their untrammeled enjoyment, isn't there every likelihood that her heart will beat with renewed vigor and take a longer lease on life?

But that's only one worry. Mehistopheles' hair is red, and why must it fall to her lot to have a red-headed boy? And Petranella is skinny and awkward instead of plump and graceful like Grace Hammond; and she doesn't make any headway with her music; and this week's batch of bread is sour; there's sewing enough at home to keep ten hands busy for as many weeks, and she ought never to have taken this day off; and that cold that's been bothering Mr. Papadoupelos, suppose it should be something serious that would carry him off? The grapes must be done up and there's an awfully big wash for next week. Did Mrs. Graeme Hollenbeck really mean to slight her or did it just happen so, and—oh, forget it, forget it, Mrs. Papadoupolos. Do anything to make your mind stop wandering about in this silly, senseless, harmful way. Play hide and seek with the children, or base ball, if you are not too stiff. Look out on the ocean and up at the hills and draw strength and help from them. Lie under the trees and be just happy because you have this day for pleasure. Look deep into the heart of a flower and read its language if you can. Forget your dull, petty cares in the great things all about you—the great essentials which God has lavished upon even the poorest of His creatures.

Forget the gnawing jealousy, the withering slight, the hasty word, the feverish anxiety. Forget them by remembering the good, the merry, the true, the beautiful, the eternal. —Janet Thomas Van Osdel.

Fisherman's Luck.

The lady bather had got into a hole and she couldn't swim. Neither could the young man on the end of the pier, but when she came up for the first time and he caught sight of her face he shrieked:

"Help!"

A burly fisherman sauntered to his side.

"Wot's up?" he hoarsely cried.

"My wife! Drowning! I can't swim! Twenty pounds for you if you save her!"

In a moment the fisherman was in the sea. In another moment he was out of it, with the rescued lady bather. Swelling with expectation he approached the young man again.

"Well, what about the twenty quid?" he asked.

But if the young man's face had been ashen before, it was deadly pale as he gazed upon the features of the recovering dame.

"Y-e-s, I know!" he gasped. "But when I made the offer I thought it was my wife who was drowning, and now—now it turns out it was my wife's mother!"

The fisherman pulled a long face.

"Just my luck!" he muttered, thrusting his hand into his trousers pocket. "How much do I owe you?" Tit-Bits.

THE BOOK OF LIVE STOCK CHAMPIONS.

Edition of 1912.

Now Ready For Delivery.

True to Life Pictures Reproduced From Photographs Taken in the Principal Show Rings of the American Continent by the Greatest Animal Artists.

ONE THOUSAND CHAMPIONS,

Winners in Annual Live Stock Contests at State and National Fairs and Expositions.

THIS is a new edition of the most valuable book ever published in the interest of high-class stock raising. The pictures in The Book of Live Stock Champions are of famous animals. There are sweepstakes and championship winners at State, National and International Fairs and Expositions. These include individual awards in breeders' competitions, also herds with prize-ring honors; the beef cattle include grand champion steers and car-loads; the dairy cattle include record makers and large producers of milk and butter; the horses include thoroughbred, trotting, coach, draft, hunters, ponies, jack stock, etc. Hogs, sheep and goats are represented by the best in every breed. The book is elegantly bound in blue cloth, 352 pages, with nearly 750 separate and distinct illustrations, one, two, five or more champions to the page.

There is not a second-class animal or inferior picture in the book. Every animal is a record-maker, record-breaker, famous sire, mother of champions, or winner in the prize ring.

Issued as a Souvenir Supplement.

The Book of Live Stock Champions is published as a Souvenir Supplement to The National Farmer and Stock Grower, issued monthly at St. Louis, Mo., a splendid, clean, general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. There are thirty-two pages, four columns to the page.

Special Inducements

To Paid-in-Advance Subscribers--To Old Friends and Patrons.

We offer the first ten thousand copies of this edition at One Dollar per copy, including a two-year subscription to The National Farmer and Stock Grower. The first ten thousand copies are handsomely printed on coated paper and elegantly bound in blue cloth, with gilt title.

This is An Extraordinary Offer.

Here is a Subscription Blank.

HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.:

IT IS THE RANGE THAT MAKES THE COOK.

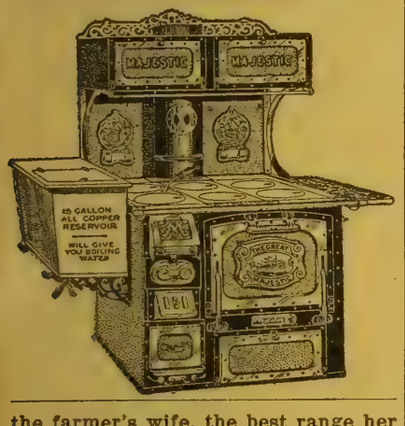
The Wise Farmer's Wife Chooses the Range With a Repuatation.

If it is indeed true that "the way to a man's heart is through his stomach," then it is very wise to look most carefully into the range question, for it is quite often the range that makes the cook—that makes or mars the cooking.

The perfect range is that one which meets every requirement. Whatever other good points it may have, it must be a perfect baker, not now and again, but 365 days in the year. Then it must be durable, giving a lifetime of satisfactory service.

It must be a good cooker and it must be economical in its consumption of fuel. Many housewives burn up the price of a new range repeatedly trying to get results from an old worn-out range or stove. This is poor economy.

These prosperous times warrant the best of everything on the farm. The best stock—the best implements—the best automobiles are none too good for the prosperous Twentieth Century Farmer—and for



the farmer's wife, the best range her money can buy is none too good.

Before deciding on the purchase of a range, the wise woman will examine closely into the merits of the Great and Grand MAJESTIC—it is indeed a "Range With a Reputation"—it is a perfect baker at all times.

The body of the Great MAJESTIC is made of Charcoal Iron, which gives it wearing quality that will outlast three ordinary ranges. All top doors and frames are made of Malleable Iron—they won't break, crack or rust, like a steel and cast iron range. Malleable iron is absolutely necessary for perfectly air-tight joints and on the MAJESTIC Range all joints are riveted perfectly air-tight—no heat escapes and no cold air can enter—it is completely lined with pure asbestos—thus the oven can be heated quickly with about half the fuel used in the ordinary range.

The Great MAJESTIC has a fifteen-gallon all-copper reservoir, that gives boiling hot water in a very few minutes.

The Great and Grand MAJESTIC is justly called "The Range With a Reputation," because it has a reputation of a reliable manufacturer behind it and because there are hundreds of thousands MAJESTIC Ranges in use all over the country, each one of which is giving perfect satisfaction. Some have been in constant use for more than twenty-five years and still give excellent results.

MAJESTIC Ranges are for sale in nearly every county in forty states. If your dealer doesn't handle them you will do well to write the Majestic Manufacturing Company of St. Louis, Mo., for their interesting booklet, "Range Comparison;" it is well worth reading. At the same time they will tell you where you can see and examine the MAJESTIC and settle the range question. Address, Majestic Manufacturing Company, Dept. 131, St. Louis, Mo.

Rag Rugs.

A local merchant advertised a special sale of rugs, and they proved to be of styles which were greatly admired. And this is what they were: The old-fashioned way of making rag carpet was followed, the warp being white and the ends left long enough to knot into a handsome fringe. The rags were cut not over an inch wide.

The conspicuous feature in the colonial rug is its simplicity. While the rag carpet of a generation ago showed all the colors of the rainbow, these rugs are inconspicuous in their coloring. One which was specially beautiful showed the main portion entirely of a dull, olive-green, which, if made in the olden times, might have been colored through the agency of oak bark. The border, probably a foot wide, was of a light, almost cream color, and there were a few inches of the olive green added to complete the ends.

On this plain cream was stenciled a quaint Japanese design in soft colors. The colors were all in perfect harmony, and they were very few. Other rugs appeared in different colors, but the general scheme was the same, a soft, dull color for the main portion, broken a few inches from the end by a stenciled stripe of a lighter color. Whether the pattern for the stencil work was Japanese figures or flowers, there was always harmony and a restful look. One or two of the rugs were bordered with plain or twisted stripes of white with the dominating color, a pattern which any old-fashioned carpet maker could readily imitate.

A rug a yard and a half long would require not over a pound and a half or two pounds of rags. If there are remnants, these could be easily combined into pleasing rugs which will make some cosy corner, or fill in over a worn piece of carpet. A light brown stenciled with dark brown would be in good taste for almost any room.

The rug for common use will be chosen of a dark hue, which does not readily soil. Some of the old brown-and-white calico dresses may be worked into it without coloring. If the border is to be stenciled it should be lighter in tone, and the pattern stenciled must be in colors which combine well. But for a more common room two or three narrow stripes of a dark brown, alternating with others of the main color, will make a neat border, a few inches at each end being always of the main color of the rug.

For the blue room, there are the combinations of light and dark blue and white. Or the main part may be "tea color," simply cold tea set with copperas, the blue being worked into the border. For a guest room done in white nothing would be more desirable than a rug entirely in white, with some dainty vine stenciled upon the border in oil colors.

Cotton rugs make the smoothest work and wear the best when fine rags are used. Care should be taken that all rags are of uniform size and sewed to leave no unsightly ends. Select a weaver who makes a smooth selvedge, for this is quite an essential in the finished appearance. The weaving should not cost over a shilling a yard, the warp probably as much more. The rags count for practically nothing, as they are good for this purpose when practically useless for any other. And the time—one is glad to spend a few evenings in this way, since it is a means of making the home so much more comfortable and home-like.

After you have seen one you will know what to improve upon and the happy combinations will suggest others. But remember these rules: A ground color and a lighter border design are all the things to be considered; the soft, dull, restful colors are the ones which give the best results.—Bessie L. Putnam.

Universal Magazine Subscription Premiums For Children.

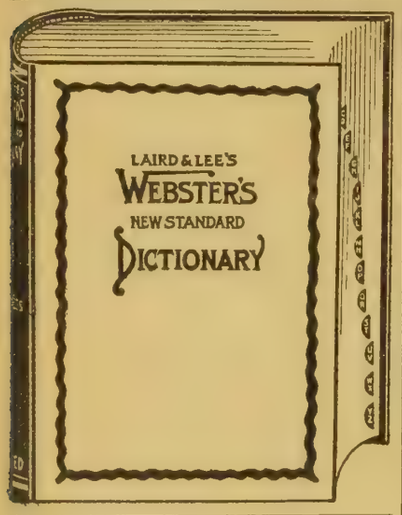
An Oilcloth Apron.

A much-appreciated apron is one made of oilcloth, large enough to amply cover the front and the sides of the dress. It is made after the fashion of a man's work apron. A rectangular piece of oilcloth is used and the two upper corners are turned back so as to make a triangular-shaped bib. A strip of the desired length is fastened from one corner to the other of the bib, which makes a slip-over for the neck. Strings are fastened a couple of inches below the waist line, so as to hold the apron close to the skirts. A big, circular pocket is attached to each side. Worn on wash days, this apron keeps the dress from getting wet and the big pockets provide convenient receptacles for clothes-pins. It is a handy apron to have on during the preserving or pickling season or at any time when mussy or sloppy work is to be done. It is also a good plan to have oilcloth aprons for the wee ones to wear at meal time and for the older children to wear when helping with the dishes.—Janet Thomas Van Osdel.

Read about the Book of Live Stock Champions on page 22.

WEBSTER'S DICTIONARY.

This is Laird & Lee's Webster's New Standard Dictionary of the English Language, a wonderful book, 750 pages in all, 840 illustrations, substantially bound, gilt title, red edges, patent thumb index. Special edition for office and general use on farms, estates, ranches, etc.; massive but handy; contains ten encyclopedic features, supplement of new words, dictionaries of biography, geography, musical terms, Biblical, classical, historical and mythological names, foreign phrases, English word-building, rules in orthography,



current abbreviations, metric system with conversion tables; weighs twenty-eight ounces.

Our offer to you: Send us one dollar and we will send you The National Farmer and Stock Grower for two years and we will also send you, postage paid, safe delivery guaranteed, one copy of this great Webster's Dictionary. We also agree to refund money and pay return postage to anyone who is not satisfied with the bargain. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Household Recipes.

While gasoline is very explosive, it is a great help in house cleaning and perfectly safe to use if carefully handled. Lace curtains that are not quite soiled enough to be washed can be freshened considerably by putting them in a tub with enough gasoline to cover them and allowing to soak for several hours; and curtain shades of any color can be cleaned and freshened by laying them on a table and going over them with a cloth dipped in gasoline.

The best way to clean straw matting is to go over it with a soft cloth and gasoline; and add a half cupful of gasoline to your hot suds when scrubbing the kitchen floor, and the floor will be much more easily and quickly cleaned and grease spots removed.

An excellent wall paper cleaner is made by adding half a cupful of gasoline to a quart of water and then stirring in enough flour to make a stiff dough. Take a ball of this dough, rub the paper with it, and as it removes the dirt, fold it inside and continue until the dough is used up and the entire surface of the wall cleaned.

To fill cracks in walls, mix plaster of Paris with vinegar instead of water, as this can be nicely smoothed over before it is hard.

To restore gilt frames, boil some flour of sulphur in a pint and a half of water and boil four or five onions in this water and strain. When sold, wash the frame in the wash with a soft brush.

To clean oil paintings, use about one teaspoonful of whisky and water mixed. Use a soft, clean sponge, and as soon as clean go over the surface with a soft piece of silk until perfectly dry.

A good way to clean oilcloth or linoleum is to use skim milk and a soft cloth. This keeps the colors from fading or the cloth from rot by moisture.

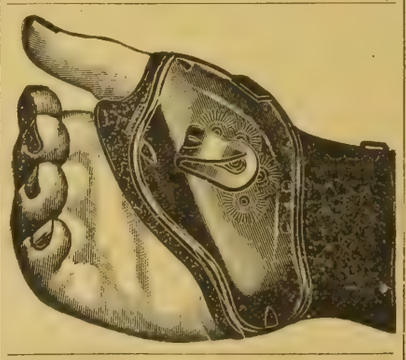
To remove grease spots from straw matting, cover them with a mixture of prepared chalk wet with turpentine, allow it to remain for two days, and remove with a stiff brush.

An excellent carpet cleaner can be made at home with very little trouble or expense, and it not only cleans well but brightens the colors. Cut up one bar of good laundry soap into one gallon of soft, water, then add four ounces each of powdered borax, alum and sal soda. Let boil fifteen minutes, then add four gallons of cold water. Have the carpet well shaken and stretched on a clean floor, then scrub with a brush, rinse with clear water and wipe up quickly and when perfectly dry the carpet can be lifted and the papers placed underneath. It is a good plan to wash the floor with strong borax water while the carpet is up, as this will kill disease germs and small insects, if there are any in the cracks and crevices, and then it purifies and disinfects.

Warm suds in which a little borax is dissolved is fine for cleaning very soiled woodwork, and there is nothing better than borax water without soap for wiping up light-colored straw mattings and for washing window panes, and after washing clean rub dry with soft cloths and polish with soft tissue paper and they will be shiningly clean.—A. M. H.

Favorite Corn Husker.

Clark's Corn King with its new self-shedding hook. The spear point enters the husks easily. The slant bend turns the husks for shredding, and the rounded, curved and beveled edges throw out the husks and prevent clogging. As this is the most approved hand husker on the market, we have selected it as a seasonable subscription premium. The hook sets at any angle; two positions for a thumb hook and five positions as a palm hook. Opening and closing the small end of the plate makes the adjustment perfect for any width of hand and prevents chafing. The



strap passes through the leather tongue and the first ring and over the hand to the opposite ring and back through the first ring. Be sure and have the strap enter the ring from the outer side. It brings the pulling strap underneath, forms the sinch draw and gives you the full benefit of the sinch-lock, which is the same as a half-hitch. The strap then passes to the last ring and then to the buckle; the half-hitch forms one fastening and the buckle holds the end of the strap. We will send The National Farmer and Stock Grower for one year and Clark's Corn King Husker for 50 cents. The Husker is a free premium. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

The Butcher's Calculation.

Lady Customer (pleasantly)—"I hear you are about to get married, Mr. Ribbs. I suppose I must congratulate you."

Mr. Ribbs (the local butcher, doubtfully)—"Well, I dunno so much about congraterlations, mum. It's costing me a pretty penny, I can tell you. Mrs. Ribbs as is to be, she wants 'er trousseau, you know; an' then there's the furnishin' an' the license, an' the parson's fee; an' then I 'ave to give 'er an' 'er sister a piece of joolery each. An' wot with one thing an' 'nother—she's a 'eavy woman, as you know, mum, 180 pounds—an' I reckon she'll cost the best part of $60 before I git 'er 'ome!"—New York Examiner.

Money in Making Sausage.

On page 31 will be found an advertisement of a meat and food chopper and sausage stuffer that is used in all the first-class butcher shops and packing houses and should be used on all farms where they mean business when they put up any meat products, and especially where they put up country sausage. When parcels post is in operation in good shape and farm products up to eleven-pound packages can be transported at reasonable rates, the first product to get the benefit of it will be country sausage, properly made.

Even now there are farms marketing their hogs as hams and country sausage, and they have agents in the cities selling hundreds of thousands of pounds of it at good prices. It is a trade that every farmer can engage in, and after samples have been sent by mail the larger trade can be followed up by packages to be sent by freight or express. But every pound of meat that is butchered and hacked to pieces and chopped up with a broadaxe, mixed with lumps of bread and seasoned with a lot of herbs, is not sausage, neither is it a fair imitation thereof. The people of the cities are tired of most of the so-called country sausage that appears on the bill of fare in restaurants and they are calling for the good packing-house sausage, that, with all its faults, is made by people who know how to make it. What the people live in hopes of getting is country sausage made by packing-house methods. Proper machinery for sausage making costs very little. See page 31. Furthermore, if you have no book on meat curing and sausage making, see page 20.

Rural Home Cook Book.

At last we have discovered a satisfactory cook book for farmers' wives and daughters, one that is within our power to present to them as a subscription premium without any payment except the subscription price of The National Farmer and Stock Grower, which is only 50 cents a year. The Rural Home Cook Book, 328 pages, is bound with a stiff card cover, thoroughly indexed so that each recipe can be found immediately. It was edited by Mrs. Ellen Watts McVey, Mrs. Helen M. Laughlin and Mrs. A. H. Wing, with three hundred contributions from practical housekeepers in country homes. The book is equal to all demands upon it, and we guarantee perfect satisfaction to all who receive it from us.

Anyone who will send 50 cents to pay for The National Farmer and Stock Grower for one year can select the Rural Home Cook Book as a free premium, and it will be sent to any address, postpaid, safe delivery and satisfaction guaranteed. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

We also agree to refund money and pay return postage to anyone who is not satisfied with the bargain. Address,

THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

Best Book in Twenty Years.

Every man and boy should own a library. It is easy to obtain a nice lot of books. A splendid book to begin with is "The American Government," by Frederick J. Haskin, which is a valuable book for any American between the age of nine and ninety years.

No other book explains so clearly what our government consists of. The articles upon the Presidency, the Senate, the House of Representatives are alone sufficient to place the book on the top shelf of the home libraries, and in the 386 pages there are thirty distinct articles, each one of them complete with information concerning a government department.

"The American Government" clears the mind of many doubts and answers many questions. A Congressman serving his first term needs such a book before he goes to Washington, and Mr. Haskin has produced a book of which 175,000 copies were sold the first year.

MR. FREDERICK J. HASKIN,
Author of the valuable book entitled "The American Government."

We will recommend other books, but "The American Government" is a first-class book for No. 1 in a farm library. We have adopted "The American Government," handsome cloth-bound edition, as a subscription premium in connection with The National Farmer and Stock Grower. Anyone who will send One Dollar for two-years' subscription to The National Farmer and Stock Grower can select a copy of "The American Government" as a subscription premium, and we will send it postpaid, safe delivery and satisfaction guaranteed.

Child Culture by Mental Suggestion.

Editor The National Farmer and Stock Grower:

To many thoughtful minds the most vital problem in the world today is the moral education of the child. It is comparatively easy to mold aright the little mind and soul during the plastic, formative period, but if this is neglected the result is often a malformed brain that may rule to ruin in after years. Many parents and teachers, including the writer, have employed mental suggestion with remarkable success in character building. A brief outline of the method may prove helpful to some of the readers of The National Farmer and Stock Grower.

First win the child's love and confidence. Explain to it that you wish to help it develop a noble character, and that if it will work with you you will surely succeed. Every morning have it repeat after you these or similar words: "This day, God helping me, I will be kind, good, pure and true. I will do all I can to make others happy. I can and will do right." If it has any fault to overcome, earnestly and impressively repeat to it affirmations adapted to its need, and have it also repeat them several times each day and at bedtime every night, but always when it is in a passive, receptive mood. For instance, if it is selfish, say to it: "Deep down in your little heart you are kind and loving. You will always do unto others as you would have them do unto you." Embrace every opportunity to praise it for the desired virtue. If you put your whole soul into these affirmations, believe them yourself and repeat them a sufficient number of times to make a deep, abiding impression on the child's mind and heart, experience proves that they will almost invariably become controlling factors in its character.

Every true life and every noble need is inspired by an enlightened intellect, conscience and love. To develop these qualities in the child they must be constantly appealed to and made the ruling motives or conduct. Teach what is right and wrong, and why, and urge it to do right for right's sake, not from fear of punishment or hope of reward. Seek to have it obey its conscience as the voice of God in its soul. Encourage it to do acts of kindness and helpfulness. Teach it the laws of personal purity. Impress upon it that every good thought and act help to develop a beautiful soul—that one absolutely essential condition of highest happiness in this life and that to come; that every evil thought and act deform its soul and must invariably result in misery and unhappiness. Above all, exemplify in your own life what you would have the child become. "Like begets like." Love awakens love; anger excites anger. Scolding and harsh treatment aggravate the worst elements in its character. By always living, thinking and desiring the pure, the good and the true, you may most surely create these conditions in the child.

When the little mind is unfolding beneath the mother's heart, then is her golden opportunity to implant noble talents and tendencies, if she will. According to the new psychology, every absorbing thought and earnest desire she entertains during the prenatal period is telepathed to the forming brain cells of her babe, leaving there its impress of good or ill—"a chisel that cuts to mar or beautify the statue of a soul." All that is best and purest within her should awaken to meet the needs of her little one. She should cherish only beautiful, kindly, happy thoughts and aspirations, and pray silently, earnestly, every waking hour that it may be lovely, pure and good. She thus attunes herself to all holy influences, and the Power of the Highest will overshadow her and fashion a beautiful soul—may we not hope a great spiritual genius?—that will ever prove a joy to the parents and a blessing to mankind.—Frank M. Craig, Denver, Colo., September 4, 1912.

The choice Missouri and Illinois medium wools are selling at St.Louis at 26 to 26½ cents per pound; middle to good grades, 20 to 25 cents; and inferior at 16 to 19 cents. Other wools are variously quoted at a shade less. Angora fleece is quoted at 14 to 30 cents, according to quality.

Burbank's Crimson Winter Rhubarb.

A PREMIUM worth a fortune. A plant that can be grown in paying quantities on any small piece of ground, also in the house cellar. Returns $1,000 profit per acre. This is a creation by the famous plant specialist, Luther Burbank, of California. Rhubarb is a universal plant, and this Burbank's Crimson Winter Rhubarb is the King of the entire species, producing stalks of medium size, twelve to eighteen inches long, and producing them in all the fifty-two weeks of the year, whereas the productive life of common sorts is twelve weeks.

Burbank's Crimson Winter Rhubarb—Improved by Wagner.

A few roots of Crimson Winter Rhubarb will supply a large family and at the same time increase roots to enlarge the crop. We have decided to use a few roots of Burbank's Crimson Winter Rhubarb in connection with the Subscription Department of The National Farmer and Stock Grower.

The National Farmer and Stock Grower

is a nice, clean, ably-edited general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, to dairymen, to vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, to horse and mule raisers and dealers, and it contains many good poultry facts, etc., etc., etc.

THIS IS A DOLLAR PROPOSITION.

Send us One Dollar ($1.00) and we will credit you with two-years' subscription to The National Farmer and Stock Grower, we will send you by mail prepaid Six Roots of Burbank's Crimson Winter Rhubarb, and we will also send you a copy of J. B. Wagner's booklet, entitled "RHUBARB FOR PROFIT." This premium is in line with the policy of the publishers of The National Farmer and Stock Grower to furnish premiums that can be developed. Rhubarb is never dormant in warm climates, and in any country the roots can be planted any time the frost is out of the ground. Address,

THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

The Army and Navy Needle Book.

A TEN-CENT PROPOSITION WORTH TEN TIMES AS MUCH. The Army and Navy Needle Book contains five packages of Peerless Steel Needles, warranted; sizes, 3 to 9, 5 to 10, 6 to 7. There is no needle in the market better. There is also an assortment of fifteen other cloth-stuck needles, such as darners, mending needles, stitching needles, crewel needles, glove needles, straw-working needles, worsted needles, etc. The book as a whole cannot be beat. We have adopted the Army and Navy Needle Book as a subscription premium with the **Universal Magazine**, our own publication. It is a thirty-two-page, three-column illustrated monthly magazine. It contains interesting reading, stories, poetry, history, and useful information, fashions, patterns, etc. It is a magazine that recommends itself. Send us 10 cents in silver and we will send you the **Universal Magazine** on a trial subscription for three months, and we will send you one Army and Navy Needle Book. Beautiful Apron Premium.

To introduce our splendid Universal Magazine we are offering a useful fancy apron as a premium. Hand-embroidered tea aprons are always in great demand among ladies and girls, and this is an article anyone would be proud to own. We offer this beautiful apron, stamped on fine white lawn, including piece for pocket and strings, also a year's subscription to our popular Universal Magazine, filled with choice stories, departments for all the family, thirty-two pages, etc., all for only thirty cents. Send stamps or coin at once. Don't miss this great offer, because our supply will not last very long. Address, HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

Making a Rag Carpet.

The necessary requirements for a pretty and serviceable home-made carpet are good colors, stout warp and smooth weaving, and the carpet cannot be smooth unless the balls have been very carefully prepared for the weaver; and it certainly pays in the end, for a carpet with a smooth surface will wear twice as long as a coarse one, and, above all, have all the pieces perfectly clean before cutting into strips. In estimating the amount of rags needed, remember that one and one-fourth pounds will make a yard of carpet, and a pound of chain will be enough for three yards. All pieces should be cut straight, as far as possible, as cutting back and forth and round leaves corners to stand up on the woven surface, and the finer the sewing the smoother the carpet and the better it wears. Cut out all seams and other rough places in the goods, as they not only make ugly places in the carpet, but a knot in the filling will soon cut out the warp and leave a hole in the carpet.

The hit-or-miss pattern is decidedly the prettiest way to arrange the colors, and to make this kind of a carpet some housekeepers mix the rags thoroughly before any sewing is done; but an easier way is to put each color into a small pasteboard box. After filling the boxes, begin with black; then take a strip from each of the other boxes in regular order. Try to have the same colors in each ball, and if every ball weighs one and one-half pounds it will represent one yard of carpet, if the rags are cut fine and of equal width.

Only the best warp should be used, as it is always the warp that wears out first, and white warp makes the cleanest-looking carpet and wears better than any other.

When sewing the strips together, sew woolens with woolens and cottons with cottons and never mix fine rags with coarse, as it is impossible to pack them well.

One economical housekeeper who made a handsome hit-and-miss carpet gathered together a lot of faded woolen pieces and colored them pretty shades of red, green and blue with the Diamond dyes for wool and by weakening the dye she obtained several shades of the same color, and these colors made the necessary variety for the carpet. Another lady colored all of her old white and faded woolen pieces a dark shade of blue with the dyes for wool and her carpet was made hit-or-miss and entirely of blue and white rags and the carpet was woven with dark blue warp, and this made a nice carpet for a spare bed room furnished in blue.

In making a hit-or-miss carpet, none of the strips of each color should be over two feet long, as this will give the carpet the strangely mixed-up effect that is very pleasing, and in the warp use two colors—one thread of black and one of red alternately throughout and you will have a very neat-looking carpet.—M. H.

Flowers in October.

The frosts are fast threatening the tender plants, and those designed for the window garden must be protected before they are injured if satisfactory results are expected. The cosmos is a beautiful plant, both in flower and in foliage. You have now tested each plant and found some of the blossoms extremely beautiful in color, others less desirable. Select two or three of the favorites for indoor decoration. A few hours before potting thoroughly drench the soil around the roots with water and thus allow the plant to drink up the moisture. Then carefully reset in a large pail, water well and keep in the shade for a few days. With this precaution the plant will scarcely notice the change and will remain a source of beauty for weeks.

Try planting hollyhock seed in various colors this fall and the plants will be ready for blooming next season. Some of the colors are superb, and while the plants are too stiff to adapt themselves to all situations, as a screen for some unsightly spot they can scarcely be excelled. They are a busy woman's plant, as the roots, when once started, will continue to grow for years, becoming stronger with each year, as well as sowing seeds without the aid of human hands. Some of the double ones are almost as beautiful as roses.

The dahlias should be left in the ground until cut down by frost. Then choose a sunny, drying day for their care. Lift them and let dry for the day, shaking off any loose dirt which may cling. When the roots are well dried they may be packed away in a dry cellar or closet, where they will not freeze. Do not detach them from the stem. When ready to plant in the spring, each tuber should be carefully detached with a piece of the stem.—Bessie L. Futnam.

Doctor of Agriculture.

The "World's Work," a magazine publication, advances the idea that the time is coming when every rural community of sufficient size will have one or more agricultural experts—men professionally trained to serve in an advisory way all the farmers of the community for a fee.

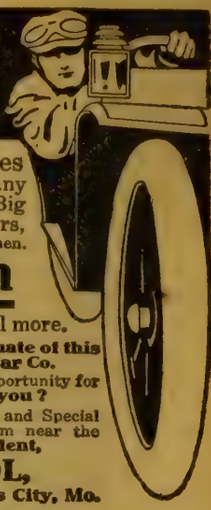
These men will understand the chemistry of the soil and of plant growth, their laboratories will be busy with soil analysis and the study of local plant diseases; they will be entomologists and bacteriologists, and their value will be obvious to the enlightened farmers of a new age.

Then farmers, no longer content to depend on the free clinic of the State Experiment Station, will seek the advice and prescription of the local Doctor of Agriculture. The dignity and the rewards of this profession are bound to increase, for it is founded upon the basis of our greatest industry.

The State Board of Horticulture at Columbia, Mo., is endeavoring to find an enlarged market for the apple crop and will assist growers who write to the Secretary, saying what they have for sale.

The Interstate Commerce Commission does not believe in advancing live stock rates, which are high enough already.

Learn to be An Auto Expert



Six weeks from the day you commence your studies in this great practical school you will be able to repair any make of automobile and drive any car on the market. Big demand for our graduates as Repair Men, Salesmen, Drivers, and demonstrators. Automobile companies and owners need competent men.

Earn $75 to $200 a Month

Auto experts make $75 to $200 a month—many a great deal more.

The Universal Magazine

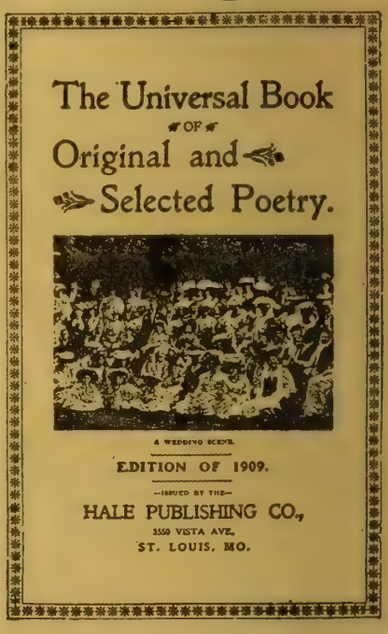
AND THE

UNIVERSAL POETRY BOOK

Two Excellent Publications.

The Universal Poetry Book

CONSISTS of One Hundred Pages, containing three hundred and ninety beautiful, interesting, pathetic, descriptive, humorous and delightful poems. These poems have been selected from the very best of the ancient and modern authors and the occasional pieces which have attracted favorable attention. It is a book to be kept by the bedside to compose one to sleep, a book to carry in the satchel or to read on the train and street car. It is a book for all people at all times. We issued the UNIVERSAL POETRY BOOK for the purpose of using it as a subscription premium in connection with our own new successful paper, the UNIVERSAL MAGAZINE.



The Universal Magazine

is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, patterns, fashions and poetry—a splendid publication. One thing about the UNIVERSAL MAGAZINE is, that it is not loaded down with advertisements. Notwithstanding it is a cheap magazine, the subscription price being 25 cents a year, it was supported by subscriptions alone for 5 years.

A Ten-Cent Proposition.

Anyone who will send 10 cents to pay for four-months' trial subscription to the UNIVERSAL MAGAZINE can select one copy of the UNIVERSAL POETRY BOOK as a free premium, and we will send it by mail, prepaid, safe delivery in good order guaranteed.

THE HALE PUBLISHING CO.,

3550 Vista Ave., St. Louis, Mo.

Closed Windows.

A middle-aged woman appeared before a physician and complained of headaches almost all of the time, frequently colds and a generally depressed feeling. After asking several leading questions, the man said: "Do you sleep with your window open?" "No, sir," replied the woman confidently, "I never slept with a window open in my life." "Don't you leave it open even an inch?" the doctor continued. "No, sir," answered the patient, "nor the hundredth part of an inch. You can't lay any of these ailments to my sleeping with open windows."

"No, madam, I cannot," answered the physician. "I can only say that you must be a remarkably strong woman to have stood sleeping with closed windows all of these years. Had you thrown your window open as high as it would go, two windows or three windows, if you have that many in your room, you would very probably never have a headache, a cold, nor this feeling of general depression. Every night of your life you have been poisoning your system by taking into the body through the lungs poisoned air. All the medicine in the world that you need is fresh air in generous doses at all hours of the day and night. You need not sleep in a draught, you have plenty of covers, but you must have plenty of air, and it must be fresh and invigorating, not stale and enervating."

After a little demur, the woman agreed to follow the advice given her. Result, she soon slept like a baby, never had a headache and seldom a cold. Her complexion improved and so did her appetite.

All through the summer the windows have been thrown wide open. Now is the time when the chilly nights begin and it is so easy to pull down a window. Don't get the habit. Leave them just as they have been all summer. Pile on extra bed clothes and put a screen before the window, if that is necessary; but don't shut off the fresh air. What is the use of having colds and headaches and general ill feelings when they can so easily be prevented?—Janet Thomas Van Osdel.

Frightening Children.

A too frequent method of compelling obedience on the part of children is by frightening them. When little Fred demurs at being ordered to desist from play at twilight, his mother says: "Come in the house. Bogie man is in the dark. He'll get little boys who stay out."

The little fellow shrinks into the house and shivers at the thought of going upstairs to bed. And then he is soundly scolded and sometimes slapped and called a coward when he whines that he is afraid to go to bed. Why shouldn't he be afraid? The big, wise people whom he trusts tell him that there's a Bogie man in the dark. It's dark upstairs. There's probably a Bogie man there. Any child with reasoning powers would come to a similar conclusion.

A wise woman who deserves the name of mother will simply tell little Fred that it is time for him to come indoors. She will expect to be obeyed and she will be obeyed without making any foolish, wicked or false threats. Instead of peopling the dark with horrors, which the imagination of a child can make so vivid, she will speak to the boy of the beauty of the night, calling his attention to the darkness falling over the earth like a covering, so that birds and flowers and all nature may rest. She will point out to him the stars and other beauties which the night reveals. Her son will never be a coward through his mother's instrumentality.

Another threat made to children is that if they are naughty the policeman will get them and put them in jail. Instead, the policeman should be looked upon simply as a guardian of the law—one to be appealed to in time of difficulty. Once a little girl to whom the policeman threat had often been made wandered away from home and was lost in the streets of a city. She was standing at a corner whimpering, when she saw a policeman approaching. Instantly she thought that he was about to lock her up in jail and then perhaps she would be hung. With a hysterical scream of terror she darted away and ran almost under the feet of a passing team of horses. It was a miracle that a fatal accident was avoided. She ran for her very life, but in a few strides the policeman had overtaken her. Shrieking with terror she was caught up in his arms, and it was some moments before she was quiet enough to realize that the big, blue-coated man was whispering pet names to her, just as her own father did.

At last he found out where she lived and carried her to her home. But before he put her into the mother's arms the woman received a severe reprimand for teaching an innocent child to fear the guardians of the law, and a promise was exacted from the little girl that she would ask their help if ever she became frightened when out on the street.—Janet Thomas Van Osdel.

Dressmaking in Ten Weeks.

For several years we have been seeking something in the form of an instructor that was able to impart instruction in dressmaking that could be understood. We have seen charts and diagrams and had all kinds of methods explained, which all led up to personal instruction.

We have obtained a book at last that we can plainly see is a guide and a helper to the beginner, and with it an intelligent girl or woman may learn to be independent, to make her own clothes, to make clothes for others, to earn a living and to be able to enter one of the best-paid professions open to women.

MRS. EDITH M. CARENS,
Author of the book entitled "Dressmaking in Ten Weeks."

The book we have selected as the best known to us is by Mrs. Edith M. Carens, who is Principal of a College of Dressmaking. It is entitled "Dressmaking in Ten Weeks" and is a condensed course of twenty complete lessons, and especially arranged for home study work. Each line is the result of careful preparation and years of study by an expert. There is information found here that can be obtained nowhere else.

There is an entire lesson on hand sewing, which alone is a book within itself, dealing with all kinds of fancy stitches, different kinds of hems and seams, proper method of buttonholes, also the making of hand-made trimming.

There are lessons on the drafting of garments to measure, also directions on the proper handling of patterns.

The book instructs you on the buying of materials, the preparing of the cloth before it is cut, the designing, cutting, fitting and finishing of every kind of clothing in a woman's wardrobe.

The size of the book is 5x8 inches, contains 127 pages, and has fifty illustrations.

Our Subscription Proposition.

What we wish to do is to please every girl and woman on the farm. We wish them to say to husband, to father or brother and to uncle: "I would like you to subscribe for The National Farmer and Stock Grower. It pleases me and will please you. The price is 50 cents a year. It is full of good articles on general farming and stock and poultry raising in all branches. And besides all that, if you do subscribe, I will receive as a commission or premium a copy of the book 'Dressmaking in Ten Weeks,' postage free and safe delivery guaranteed. I need that book, and the best way to get it is to send 50 cents for one-year's subscription to The National Farmer and Stock Grower. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

PAINLESS CORN CURE.
To be applied a few times, when you can easily remove the corn.
Sent by mail on receipt of 25 cents.
OTTO UDE, Pharmacist,
Grand and Gravois, ST. LOUIS, MO.

THE MEXICAN RESURRECTION PLANT.
This is a great and pleasing novelty. Without water it dries up and is apparently dead. Place it in a shallow tank of water and it revives to a beautiful, living, fern-like plant. Let it dry out again and it curls up like a ball and can be kept for years. It will revive again directly it is placed in water. It requires no soil, no nourishment, no attention.

We have adopted the Resurrection Plant as a subscription premium to the **Universal Magazine.** The magazine is most interesting and is published monthly. It is an illustrated publication, with genuine stories, splendid poetry and home reading. Send 25 cents for one-year's subscription to the **Universal Magazine** and we will mail you one of these genuine Resurrection Plants as a free premium.
Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

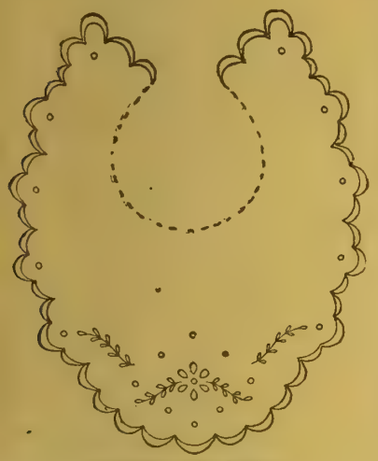
MAY MANTON EMBROIDERY.

These paper patterns require only a hot iron to insure a perfect transfer on cloth. The way to do it is to lay the material to be stamped on a padded ironing board or table, place the pattern over it with the printed side down and press over the entire surface of the paper with a hot iron, when a perfect transfer will result. Please order by embroidery number.



Effective Bib Design.

No. 681.—Design for embroidering an infant's bib.

No. 679.—Design for embroidering a pillow slip or towel end. One complete design, eighteen inches in width, and scallops for two yards are given.

Six-inch Doylies.

No. 682.—Design for embroidering a doylie six inches in diameter. Six transfers are given.

Each embroidery pattern is 10 cents, and is well worth the money.

Please send all orders for these embroidery patterns by number to the **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

An Excellent Atlas.

An up-to-date, complete and reliable atlas is not only a convenience in the home or office, but an absolute necessity in these times of easy communication and far-reaching industrial relations. An office without an atlas is as bad off as if there was no dictionary.

A new, complete atlas of the world is issued from the press of L. L. Poates Publishing Company. It contains 193 pages of maps, showing our country with its forty-eight states, territories and insular possessions; the Canadian provinces in full detail, including the new Northwestern portions, besides adequate maps of every other country in the world.

The latest geographical changes, such as every county in the United States to date, French and German boundaries in Africa, the latest changes in India and China are incorporated in this atlas. There are more than thirty pages of counties with important cities and towns, with their populations according to the 1910 census, as well as the latest figures from the great cities of the world.

The Poates Complete Atlas of the World will fill every requirement; it is astonishing value for the money. Bound in cloth the price is $1.50 per copy, and in leather $2.00, and delivered by the publisher at any point in the United States on receipt of price.

A Pocket Book Circulation Premium.

THE NATIONAL FARMER Folding Bill Book.

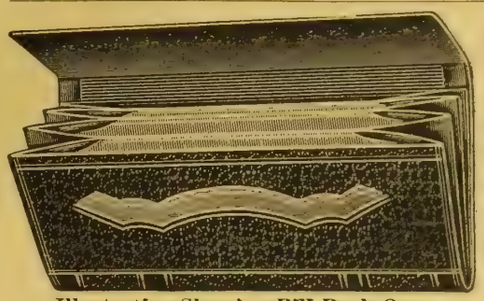

Illustration Showing Bill Book Open.

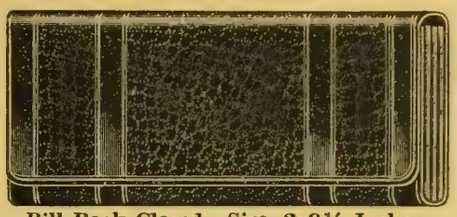


Bill Book Closed—Size, 3x8½ Inches.

Convenient to carry Currency, Bills, Notes, Receipts, Railroad Tickets, Lodge Identification Cards, Stamps, Etc.

BEST VALUE AND MOST SERVICEABLE PREMIUM EVER OFFERED.

Every Prospective Subscriber Wants One and Needs One.

National Farmer Folding Pocket Bill Book, Genuine Seal Grain Leather Cover, Very Fine Finish, Fancy Embossed, Good Quality Throughout.

Our Subscription Offer.

WE have adopted THE NATIONAL FARMER FOLDING BILL BOOK as a subscription premium with the best monthly farm paper in the United States.

The National Farmer and Stock Grower

is a nice, clean, ably-edited general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, to dairymen, to vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, to horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. The best live stock illustrations appear in The National Farmer and Stock Grower. There are thirty-two pages, four columns to the page. It is published monthly.

What To Send Us.

Send us a postoffice money order for sixty (60) cents, or 60 cents in clean, new one-cent stamps, and we will send you the good publication, The National Farmer and Stock Grower, for one full year, and we will mail you one NATIONAL FARMER FOLDING BILL BOOK, postpaid, safe delivery and satisfaction guaranteed. Address,

THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

New York Dressed Poultry.

At New York, October 1st, dressed poultry was selling as follows: Fresh-killed: Chickens, broilers, small boxes, milk-fed, 24 pounds to dozen and under, 26 cents; 26 to 30 pounds, 24 cents; corn-fed, 24 pounds to dozen and under, 22 to 23 cents; 26 to 30 pounds, 20 cents; milk-fed fryers, 31 to 36 pounds and over, 21 cents. Chickens, barrels, Western, dry-picked, milk-fed, 20 cents; corn-fed, 3½ pounds each, 18 cents; mixed sizes, 17 cents; scalded, 16½ cents; poor, 14 to 15 cents. Turkeys, old hens and Toms, mixed, 16 to 17 cents. Fowls, dry-picked, Western, boxes, 60 pounds and over to dozen, 17½ to 18 cents; 48 to 55 pounds, 17 to 17½ cents; 36 to 42 pounds, 16 to 16½ cents; under 36 pounds, 15 to 15½ cents. Other poultry, old cocks, per pound, 13 cents. Squabs—White, ten pounds to dozen, $4.00; nine pounds, $3.50 to $3.75; eight pounds, $3.00 to $3.25; seven pounds, $2.50 to $2.75; six to six and one-half pounds, $2.00 to $2.25; dark, $1.75.

Did Not Need a Cow.

"Do these people keep a cow?" asked one city girl.

"No," replied the other, "they don't have to. They have a fine patch of milkweed growing back of the barn."—Washington Star.

Trees and Lawns.

Trees and lawns are large factors in the beautifying of the country home, as well as of the home in the more thickly-populated locality. Where there is room for both of these, the home can soon be made a paradise, at least in outward appearance.

Trees do more than add to the beauty of the scene—they purify the air, and, in a measure, cool it, for trees are perpetually sending off moisture into the air.

So the grass on the lawn helps to purify the air because it prevents the soil from becoming dust and being blown about. The leaves of both trees and grass absorb injurious gases, like those arising from carbonaceous substances. The air is thus constantly being purified, both directly and indirectly.

The roots of trees and of grass perform another great service, which is seldom considered. They draw up water and change it into aqueous vapor, which water otherwise would go to swell the streams and the rivers and cause disastrous floods. But on the house lot, they by that much reduce the soil water and lessen the amount of water that gets into houses and causes dampness. This action is far greater than the thoughtless person would suppose.

Recently the New York County Medical Society adopted the following resolution:

"Resolved, That one of the most effective means for mitigating the intense heat of the summer months and diminishing the death rate among children is the cultivation of an adequate number of trees in the streets."

If that is true in the city, it is also true in the country, especially in those localities where the farm houses are surrounded by miles of corn fields, wheat fields and pastures.

Trees arrest the dust that would be blown into the homes. The moist leaves hold it fast more certainly than would any substance that does not give off moisture. It is asserted by foresters that the interiors of houses surrounded by trees are less dusty than those not so protected.

The home that is surrounded by trees and lawns is the home where the people in the summer time live much out of doors, for they have the cooling shade of the trees for a protection against the fierce heat of the summer sun.

This is another element making for health, for the people living in the houses exposed to the full heat of the sun remain indoors, that being the only place where they are safe from the heat.

Trees and lawns add real value to any place. The real estate man appreciates this, and can get more money for a place so beautified than for the place that is bare of all such adornment.

The lawn has another value, and that is its value as a playground for the children. Lawn tennis, croquet and other games are possible where a good lawn exists. Play is now recognized as having great value to the whole family. Health and happiness are thereby increased.

There are by far too many homes that have no delightful surroundings. Especially in the country, we still find numerous farm houses with neither lawns nor trees. Such homes will not be green spots in the memories of the children when they have grown into men and women.

Storing Potatoes.

In a dry climate and with a low temperature it is very easy to store potatoes so that they will keep well. But in a moist climate and with varying temperatures the keeping of potatoes for months at a time becomes a problem that is not easily solved.

If potatoes are properly stored, if the conditions of storage are perfect, the potatoes will remain hard until spring and they will not sprout. If they get soft and sprout, it is an indication that conditions for keeping have been bad and that the temperature has been favorable to growth.

The potatoes that are set aside for seed must be kept perfectly hard till they are wanted for planting purposes in the spring. It is more difficult to keep seed potatoes perfectly than it is to keep commercial potatoes, for the reason that seed potatoes need to be kept longer, on the average.

The practice in the North has been quite generally to keep potatoes in the cellars in open bins. So much has this been detrimental to the keeping of seed potatoes that many of the farmers living within a few miles of a cold-storage house now haul their potatoes to such cold-storage houses and pay for their storage rather than get along with a deteriorated lot of seed in the spring.

Where potatoes are kept in open bins, and the temperature of the cellar is that of most cellars, the farmer can expect at least two jobs of "sprouting potatoes" during the winter. Where the potatoes are not to be used for some months, they should be put in barrels or tight boxes, or the bins should be covered.

This will keep the air from circulating among the tubers, and will prevent the drying out of the potatoes. If the air is kept from moving, the temperature will also be easier to regulate, for the reason that the air in the bins, boxes and barrels, once brought to near the freezing point, can be retained at a low point with little trouble.

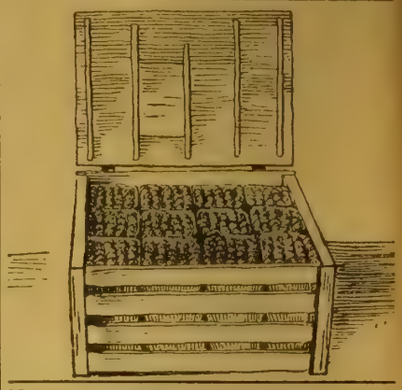
It is not a difficult matter to change the open bin to a closed bin and thus secure in the closed bin all the advantage of boxes and barrels. The bins will hold more potatoes per cubic foot of space than the barrels. The smaller the package the greater the loss of space, due to open packing around the sides.

The out-door cellar or pit for the storing of potatoes is good in the hands of a man that understands it. Such a pit or cellar needs to be well drained, so that it will be impossible for water to get in. Water makes the pit risky except in soil that is porous and can be perfectly drained. The covering with straw and dirt has to be complete enough to keep out the frost. When all things are properly adjusted the pit is an excellent keeper of potatoes, because it is almost impossible for the temperature to rise above fifty degrees till very late in the winter.

An ideal storage place for potatoes would be a separate building, partly under ground, with walls and roof so well supplied with air spaces that the temperature would be kept about that of the ground just below the frost line. This would permit of the house being visited every day, if need be, to make sure that all conditions were right.

The Strawberry Culturist.

This is a handy little jewel of a book. It is by Andrew S. Fuller, one of the greatest horticulturists. It contains all the necessary information to enable everybody to raise their own strawberries. It is fully illustrated; bound in flexible cloth; is 5x7 inches. The strawberry crop is equal to all the other small fruit crops combined. This little book contains that which a beginner should have to start on and an expert needs to rely on. We will send a copy of the Strawberry Culturist post free by mail and The



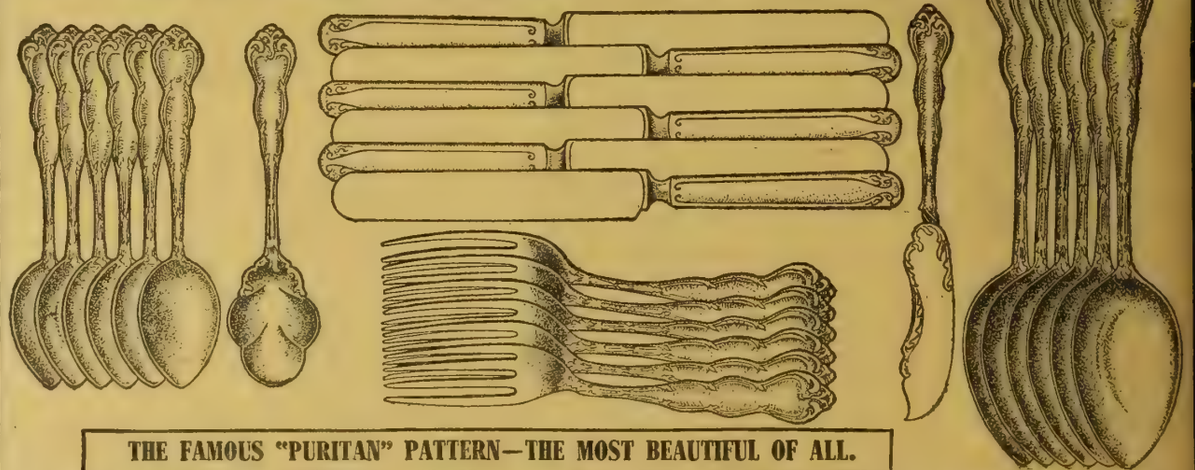
National Farmer and Stock Grower for one year for fifty (50) cents. This is a splendid opportunity to get a good farm paper and a valuable book as a premium. An average crop of strawberries is 1,701 quarts to the acre. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Fancy butter is scarce, and always will be scarce, for the reason that not one dairyman in ten can make fancy butter. There is plenty of room at the top in buttermaking.

At the New York State Fair, a big cheese, made by H. A. Reis, of Lowville, weighed 6,047 pounds, and it required 63,493 pounds of milk to make it.

FREE 26-Piece Set Complete IMPERIAL SILVERWARE FREE

We Pay All Express Charges—You Pay Nothing



THE FAMOUS "PURITAN" PATTERN—THE MOST BEAUTIFUL OF ALL.

THE MOST WONDERFUL OFFER EVER MADE

We Want One of These Beautiful Silver Sets in the Home of Every Reader

Send No Money Just write us a letter or a postal card saying that you want one of these 26-piece **Imperial Silver Sets.** We don't even ask you to pay the express charges. **We pay all the express charges** and guarantee the set to reach you. This is a most unusual offer and we will give away many thousands of these sets before our offer is 30 days old. You do not want to miss this opportunity to own a complete 26-piece Imperial Silver Set without it costing you one penny. We are determined to place one of these handsome sets in the home of every reader of this paper who will write us at once. Every woman, girl or boy can get one of these sets, but only one will be placed in each family.

Guaranteed These Silver Sets are made by one of the largest silverware manufacturers in the United States. Every piece is full size and weight with an extra heavy plate of genuine silver upon a hard metal base. It will wear and last for years. The simplicity and beauty of the design is making this Puritan pattern one of the most popular silver sets ever offered to the public. There are 6 knives, 6 forks, 6 table spoons, 6 tea spoons, 1 butter knife and 1 sugar shell in each set. Both the handles and the blades are bright finish which is the height of perfection in silverware. When you possess one of these 26-piece Puritan Pattern Silver Sets, you will have the satisfaction of knowing that you will have one of the very finest of its kind ever given away. Remember we guarantee them.

Our Offer Just write us a letter and enclose 10c as evidence of your good faith. For your 10 cents we will mail you a fine book of needles, all sizes up to a big darning needle. These needles are really worth 25 cents. Now we ask you to send us the 10 cents to keep out curiosity seekers and children. All that we ask of you is that you help us among your friends and neighbors on our great introductory offer. Something you can do easily and quickly. Write us today enclosing 10 cents to convince us that you really want one of these 26-piece silver sets and that you are not a mere curiosity seeker. We will then send you the book of needles and our wonderful free offer of a **26-piece Silver Set in your home, all charges prepaid.**

United Silverware Distributors, 61 Friend Bldg., Kansas City, Mo.

SELECTED POETRY.

APOSTROPHE TO $1.00 BILL.

In my inside pocket, Bill, you're snugly hid and lyin',
You'll never get away from me—'tain't no use a-tryin';
I may trade you for an aeroplane for an airy spin;
Maybe it'll be an automobile—it's a shame an' sin
To blow in all that money—yes, it is a bitter pill
To bid you "good-by," my honey, so much against my will;
It will make me holler when I say: "Farewell," old dollar"—
My last old dollar bill.

You stood by me last winter, Bill—an' Bill, I clung to you,
Tho' your face is rather grimy, you're a friend that's ever true;
You have got an education—all languages you speak;
I understand your English, Bill, so never mind the Greek;
You're friend to everybody, in palace or in cot,
They're very glad to know you, for you're Johnnie-on-the-spot;
Dear Bill, I hate to use you, 'twould pain me, Bill, to lose you,
My chummy dollar bill.

You're are high with Rocky fellows, to me you are a boon,
Sometimes your notes are crispy, but you always are in tune;
I hustled long to win you, Bill—'twould be a cruel blow
To lose your sterling friendship—grieves my soul to see you go;
Thou dear old faithful dollar, Pal, to me both drink and crust,
Image of your silv'ry brother, his name's "In God We Trust;"
"Here our pathways part," you say—Ah! we'll meet again some day—
Thou fleeting dollar bill.
—Henry June Patee.

THE WISE DAIRYMAN.

There was a man in our town,
And he was wondrous wise;
He knew, if he produced clean milk,
He must all dirt despise.
He knew the feeds that made milk
And how to weigh and test,
And all the cows that he did own
Were of their breed the best.

"It's clearly very wrong," said he,
"To keep cows on a nasty floor;
So, if I would clean milk produce,
I must bed the cattle more.
And this will help to keep them clean
On hips and flanks and side,
For this is the very place, you know,
Where the little germs reside."

"Now, it's quite impossible," said he,
"To make good milk in a dingy stable,
And so I'll let the sunshine in
As much as I am able."
So he put in windows, large and many,
To help him in his fight,
For he knew that his best weapons
Were pure air and sunlight.

Now, when he'd finished all these things,
To make success more sure,
He built a shed outside the barn
For storing the manure.
"This," said he, "is the most important
Of all the things to do,
For, besides being more clean,
It saves manure, too."

And then, with care to keep the pails
And all utensils clean,
That man produced the cleanest milk
That e'er the town had seen.
—Prof. E. D. Waid, Massachusetts Agricultural College.

THE COURT RUN.

"Good morning, judge," the culprit said,
"Good morning," said hizzoner.
"Now speak the truth," the jurist spake,
Or else you are a goner."

"'Twas just like this," the culprit quoth,
"My wife, the timid creature,
Became annoyed at my remarks
And smote me on the feature."

"Methinks," the wise old judge remarked,
"You need a long vacation
To swing a sledge and shatter stones,
Or some such occupation.

"Or maybe you would rather meet
Your wife in deep repentance."
"Oh, nix!" the prisoner replied;
"I'd rather take a sentence."
—Milwaukee Sentinel.

HUSHABY.

Awful tired baby,
All-a-lone in bed.
Muvver comin', maybe,
When I sleep, she said.
Wis I had my Teddy,
Guess I suck my fum'—
If the san' man weady—
Why he doesn't come?

Light goes "twinkle, twinkle,"
"Lord, my soul to take"
Nightie in a w'inkle—
All my piggies ache.
Now I los' my cover—
Froat is gettin' dry—
Muvver, Muvver, Muvver!
Put me hushaby.
—Ethel M. Kelley, in Harper's Bazar.

Why the Sky is Blue Explained by Professor Ingersoll.

Why is the sky blue? has been asked so often of Prof. L. R. Ingersoll, of the Physics Department of the University of Wisconsin that he has prepared the following brief explanation of the phenomena:

"It would seem as if the explanation of such a universally observed fact should be generally well known, but the truth is that the real reason for our sky colors and beautiful sunset tints has been known even by scientists for only a comparatively few years, although the general principles of color have been understood for a long time.

"A leaf appears green because it reflects or sends back to use more of the green than of the other colors which go to make up the white light with which it is illuminated. White paper or paint appears white because it reflects all colors equally well, and black looks black because it absorbs all colors, sending back none.

"All these facts have been known for many years, but they apparently led to no explanation of sky color for the simple reason that the air itself is colorless. Lord Raymond, the English scientist, finally attacked the problem from a somewhat different standpoint and so discovered the true reason for the sky color. Realizing that even the purest air always contains more or less of fine dust suspended, he studied the effect of such particles on a beam of light and found that they could turn aside or shatter in all directions a certain small share of this light, and that the finer the particles were the more blue would be the shattered light. The general blue of the sky is due, therefore, to this shattered light turned aside in all directions by these fine particles of dust in the atmosphere. The higher we go the finer the dust we should expect to find, and consequently the deeper the blue color. This is the reason for the deep blue or even the indigo blue sky seen from high mountain tops. Conversely, the lower levels of the air have relatively larger dust motes, and these turn aside all colors equally, hence the whitish appearance of the horizon sky.

"The sun and the surrounding clouds at sunset appear red because the light has been robbed of so much of its blue color by its passage through the great thickness of air through which we see the rising or setting sun. Anything that tends to increase the amount of fine dust or smoke in the air enhances the beauty and brilliancy of the sunset, as was illustrated in the years 1883 and 1884, after the eruption of Krakotoa, which literally filled all the air in the world full of very fine dust.

The Muse in the Claim Office.

A North Missouri farmer, whose hog was killed by a train, wrote to the company's claim agent for a settlement, says a writer in the Columbia Statesman. He penned his communication thus: "Dear Sir: My razorback strolled down your track a week ago to-day. Your 29 came down the line and snuffed his life away. You can't blame me, the hog, you see, slipped through a cattle gate; so kindly pen a check for ten, the debt to liquidate." He received the following reply: "Old 29 came down the line and killed your hog, we know, but razorbacks on railroad tracks quite often meet with woe. Therefore, my friend, we cannot send the check for which you pine. Just plant the dead, place o'er his head: 'Here lies a foolish swine.'" —Linneus (Mo.) Bulletin.

More Money in Making Sausage than in Selling Hogs on the Hoof —Use Enterprise Machines

Market conditions for farm-made pork products were never better than right now. Don't lose several dollars per hog by selling them alive. Cut them up yourself. Use an **Enterprise Meat AND Food Chopper**—and a combination **Enterprise Sausage Stuffer and Lard Press** and realize the most money out of your hogs.

The ENTERPRISE Meat AND Food Chopper

enables you to make the sweetest, juiciest and most nourishing sausage meat you ever produced.

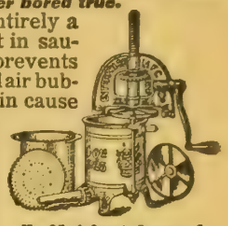
The big use for a chopper is to cut meat, less frequently to cut other food. But both are important. Therefore, be sure you get a *Meat AND Food Chopper.* It's useful not only at hog-killing time—but always useful in the kitchen. The exquisite dishes you can prepare from left-overs and bits of food that otherwise would be wasted are a source of delight to the family that lives well. It also contributes so much to economy in furnishing the table that it is really indispensable. It repays its cost almost every week in the farm home.

There are lots of choppers that cut meat by crushing and mangling it, but only one that really cuts—the **ENTERPRISE Meat AND Food Chopper.** Has four-bladed knife—four *cuts* at every turn of the handle.

"ENTERPRISE" Meat AND Food Choppers are made in 45 sizes and styles for hand, steam and electric power. We also make *cheaper* food choppers, but recommend the above.

No. 5.	**Family size**	.	.	**$1.75**
No. 12.	**Farmers' size**	.	.	**2.25**
No. 22.	**Farmers' size**	.	.	**4.00**

The ENTERPRISE Sausage Stuffer and Lard Press
Cylinder bored true.



No. 25, 4-Quart, Japanned
Price, $6.50
Tinned and Japanned

makes failure entirely a thing of the past in sausage making. It prevents air bubbles—and air bubbles are the main cause of sausage spoilage. To have good sausage *always*—keep out the air. It can be done surely and easily *only* by using an **Enterprise Sausage Stuffer** with the patented corrugated spout. Other machines offer corrugated spouts—but such corrugations are more for looks than for any practical purpose, for the corrugated spout of the **ENTERPRISE** is *patented* and cannot be used or imitated by any other machine. It can be had only with the **Enterprise Sausage Stuffer and Lard and Fruit Press**—three machines in one. The change to either use is instantly made. They can be had in 9 sizes and styles—up to eight-quart capacity. All are accurately machined. Plate fits closely without binding. Meat does not squeeze out. These presses are an absolute necessity at butchering time. Illustrated catalogue on request.

"The Enterprising Housekeeper," 200-Recipe Cook Book, sent for postage, 4c.
Enterprise specialties are for sale at hardware and general stores everywhere.

THE ENTERPRISE MFG. CO. OF PENNA.
Dept. 87, Philadelphia, Penna.

Universal Salt and Pepper Shakers.

The Universal Magazine ought to be known to all our readers, for the reason that it is a nice publication that is very good company on a farm.

The Universal Magazine is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, patterns, fashions and poetry—a splendid publication. One thing about the Universal Magazine is, that it is not loaded down with advertisements.

When we send out the Universal Magazine we also like to send out a useful and meritorious subscription premium with it.

Universal Salt and Pepper Shakers—Reduced Size.

To this end we have adopted a pair of Aluminum Salt and Pepper Shakers, regulation size, 2¾ inches, mailing weight six ounces. They are artistic and elegant, and aluminum ware is always light, always bright, and will last a lifetime.

To anyone who will send us twenty-five (25) cents we will send the Universal Magazine for ten months, and we will send the pair of Universal Aluminum Salt and Pepper Shakers as a premium, postage paid, safe delivery and satisfaction guaranteed.

SUBSCRIPTION BLANK.

Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen:—Herewith please find Twenty-five (25) Cents to pay for ten-months' subscription to the Universal Magazine, for which please give me credit. You will please send me as a subscription premium, post free, safe delivery guaranteed, one pair of Universal Salt and Pepper Shakers.

FREE TO GIRLS

We want to send to every little girl a **Talking and Sleeping Doll** She is the prettiest, daintiest and sweetest dolly you ever saw. She closes her pretty eyes and goes to sleep. She will say "Papa" and "Mama" as plain as a real little girl, whenever you want her to. Stylishly dressed with lace trimmed hat and gown, shoes and stockings; a foot and a half tall.

Send No Money Just your name and address and say you want a "Mama" and "Papa" Talking Doll and I will tell you how to get her.

Not One Cent of Your Money is Required

UP-TO-DATE, Dept. 10 Indianapolis, Ind

After 60,000 Cars

By R. E. Olds, Designer

I have built to date over 60,000 cars.
For 25 years I have watched their performance. I have found out and corrected a myriad shortcomings. I've acquired a world of caution.
Some say I'm "old-maidish"—too careful, too slow. But I call these things standards. I've made them my code.

My Latest Extreme—Big Tires

The new Reo the Fifth—out Oct. 1—is equipped with 34x4-inch tires.

That is 22 per cent. greater tire capacity than I have ever used on a car of this size. Yet this car was always much over-tired, compared with usual standards.

These oversize tires add 30 per cent. to my tire cost. But they add 65 per cent. to the average tire mileage. They should save you in tire waste some hundreds of dollars during the life of the car.

Remember this fact when you come to compare cars. The tires on Reo the Fifth are now 34x4.

Make Some Other Comparisons

In judging cars, in these days of close prices, it is very important to make other comparisons.

There are dollars saved sometimes which cost buyers ten dollars. What you want is final economy.

Watch points like these:

Reo the Fifth has *190 drop forgings*. All makers use some of them to get lightness and strength. But Reo the Fifth has 190. And its racy lines, its lightness and strength are due largely to those costly forgings.

My springs are *two inches wide*. Each spring has *seven leaves*. The front springs are 38 inches long—the rear are 46.

I use *fifteen roller bearings*—11 of the Timken, 4 of the Hyatt High Duty.

Every important bearing has *bronze bushings*—even the smallest of them.

For safety's sake I use *14-inch brake drums*. I use a centrifugal pump.

I use a $75 magneto, to insure a hot spark when the car runs slowly. You can start on this magneto.

My carburetor is *double heated*—with hot air and hot water. So poor gasoline can't give trouble.

For big margin of safety, every driving part in this car is built for *45-horsepower requirements*.

No Chances

I take no chances on any part of this car, for chances sometimes cost dearly.

Each lot of steel is *analyzed twice*. Gears are tested in a crushing machine, to stand 75,000 pounds.

Each engine gets *five tests*—about ten hours each. It is run for 28 hours in the chassis.

I limit my output to an easy capacity of 50 cars a day. So the cars are built slowly and carefully—no man is ever rushed.

Parts are ground over and over. Our factory system insures a thousand inspections.

Petty Savings

I abhor petty savings. I could save, perhaps, $50 to $75 per car in the finish and upholstering if I cared to skimp.

But I put on this car a special body which costs more than wood or metal. I save by this 50 pounds in weight, and the body takes a wondrous finish.

I give 17 coats to each body. The fenders, radiator, hood, etc., have two coats of rubber enamel baked on.

The upholstering is deep, and of genuine leather. It is filled with the best curled hair. The backs as well as the seats are filled with springs, to give you the utmost comfort.

Every part shows the final touch. Even the engine is nickel trimmed. I believe that folks like these perfections.

Center Control

Reo the Fifth has my center control—a single light handle, out of the way, which does all of the gear shifting by moving *three inches* in each of four directions.

Both brakes are operated by foot pedals. So there are no levers to clog the front doors.

The driver sits on the left side, as in electrics, close to the cars he passes. Yet the gear-shifting lever is at his right hand. Note how many great cars are following me in this. The old way of driving will be soon out of date.

Do These Precautions Pay?

The result of all this is that Reo the Fifth sells on a mighty small margin. I am keeping the price under $1,100, with all the new features, including these big tires.

Our profit per car is now a very small item, despite the fact that we make every part ourselves.

Yet there are cars which, at passing glance, seem to undersell this car.

I have told you the facts, so you may judge for yourself if these are things which you care to go without. Would you wish me to save you a little on price by trebling your cost of upkeep?

I am sure you'll say no. I am also sure that the time is coming when most cars must be built like this. Men won't have them otherwise.

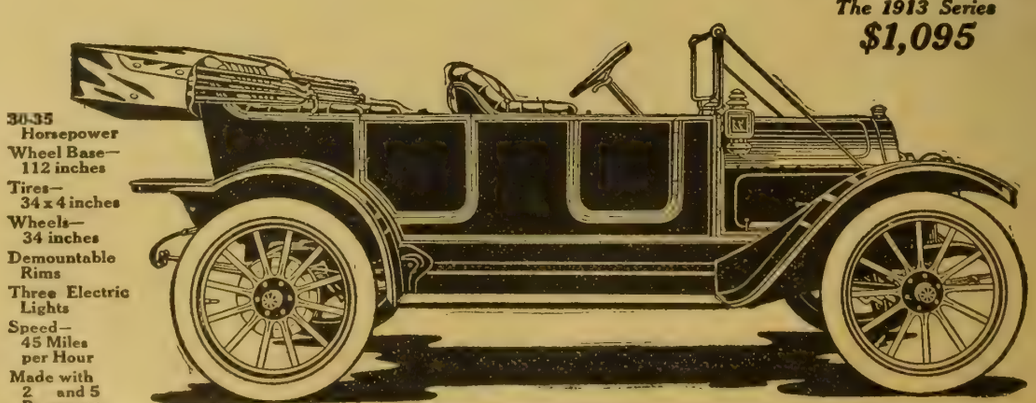
Here's the greatest value any man can give you in a car. If you want such value I want your trade. And you'll be very glad, in years to come, that you picked a car like this.

In 1,000 Towns

A thousand dealers in a thousand towns now offer this new type of Reo the Fifth.

Our 1913 catalog pictures all the details, and shows styles of bodies. Write us for it now.

Reo the Fifth
The 1913 Series
$1,095



30-35 Horsepower
Wheel Base—112 inches
Tires—34 x 4 inches
Wheels—34 inches
Demountable Rims
Three Electric Lights
Speed—45 Miles per Hour
Made with 2 and 5 Passenger Bodies

Top and windshield not included in price. We equip this car with mohair top, side curtains and slip cover, windshield, gas tank for headlights, speedometer and self-starter—all for $100 extra.

and Stock GROWER

FEEDING DRAFT HORSES.

Three Rations Used—The Results of the Experiment—Interesting Individual Comparisons.

Bulletin No. 117 of the Pennsylvania State College Station, by W. A. Cochel, is on the above subject.

Taking town and country together, horses are more widely distributed than any other species of live stock; hence their economic care and feeding are of almost universal interest.

Horses are more liable to loss or depreciation because of sickness or injuries that produce blemishes than any other species of live stock, and prices of horses fluctuate more than those of any other domestic animals. Therefore good judgment in the selection and ceaseless vigilance in the care of horses count for much.

The primary object of the experiments of which this bulletin treats was to test the relative efficiency of three different rations for fattening horses of draft type; all feedstuffs used being home-grown, excepting cotton-seed meal. Secondary objects of the experiments were to test the relative economy of oats and cotton-seed meal as sources of protein, and whether silage could be fed to horses in considerable quantity without injuriously affecting their health.

Twenty-one horses, four to eight years old, mostly of Percheron and Belgian blood, were divided into three lots of seven horses each, so distributing the old and the young and the smoother and the rougher as to make the three lots as nearly equal in general merit as possible. They were fed for a period of eighty-four days, November 3 to January 26, the following rations:

Lot 1.—Corn, cotton-seed meal, corn silage, mixed hay.

Lot 2.—Corn, cotton-seed meal, mixed hay.

Lot 3.—Corn, oats, mixed hay.

All feedstuffs used were of good quality, the hay being clover and timothy, about half and half; and their market values were as follows: Corn, 50 cents per bushel; oats, 35 cents per bushel; cotton-seed meal, $32 per ton; hay, $12 per ton; silage, $2.50 per ton.

All were fed grain three times a day and were watered and given roughage night and morning, Lot 1 being given silage in the morning and hay at night in order that any digestive disturbance produced by the silage might be quickly detected.

At the beginning each horse was given eight pounds of grain daily, and this was gradually increased till each received all it would eat up clean. Those receiving silage were commenced on five pounds daily, and this was gradually increased to twenty, which was all they would eat without waste. Each had throughout as much hay as it would clean up.

The following facts were ascertained:

The average cost per 100 pounds from each ration was as follows:

Lot Not 1	$13.40
Lot No. 2	13.90
Lot No. 3	17.77
Average	15.62

Also that the horses fed silage ate less grain, kept in good health and were sleeker and fatter finished than the others.

Also that owing to difference in age, temperament, smoothness, etc., the cost per 100 pounds of gain between individual horses in the same lot varied from $9.54 to $19.83 in Lot 1; from $10.83 to $19.05 in Lot 2; and from $11.53 to $29.63 in Lot 3.

From these ascertained facts the following deductions are made:

That cotton-seed meal is a cheaper source of protein than oats; that silage may profitably and with decided advantage be substituted for hay in the morning ration of horses, and that the most profitable horse to feed is a young, smooth draft horse having clean, short legs, wide cannons and deep and wide in the chest and middle, and of quiet, kindly temperament.

Measurements showed that the fattening process added little to the depth or length of the body but much to the width of the body and the height of the croup, the additions being on those portions of the body where the natural covering of muscles is thickest.

IMPROVEMENT IN HORSES.

Pure-bred Animals Displacing Grades and Scrubs in Wisconsin—An Example For Other States.

A decrease of two per cent. in the number of grade and scrub stallions used for public service in Wisconsin is shown by the records of the Department of Horse Breeding of the College of Agriculture of the University of Wisconsin for the horse breeding season of 1912.

In 1907, when statistics were made available for the first time as a result of the enforcement of the stallion enrollment law, it was found that 65 per cent. of the public service stallions were of grade or scrub breeding. In 1910 the percentage of these undesirable stallions had fallen to 55.5 per cent., and in 1911 to 53.6 per cent. For 1912 the figures are 51.5 per cent. for grade and scrub stallions and 48.5 per cent. for pure-bred stallions. The number of new pure-bred stallions enrolled in Wisconsin during 1912 was 256. A great many pure-bred mares have also come into the state. During the year 194 grade stallions and 190 scrub stallions were retired from service. Of the new pure-bred stallions 143 are Percherons, 21 Belgians, 13 Clydesdales, 12 French Drafts, 7 Shires and 49 Standard Breds. Of the 1,554 pure-bred stallions in Wisconsin, 821 are Percherons, 103 Belgians, 80 Clydesdales, 59 French Drafts, 49 Shires and 326 Standard Breds. The total number of grade and scrub stallions in the state is 1,650. Nine county horse breeders' clubs have been organized during the year.

The College of Agriculture in Every County.

Not every county can have a great institution like the Missouri College of Agriculture located within its borders; but under a new plan devised by the College it is now possible for each county to have an agent or Farm Adviser located at the county seat and devoting his whole time to the agricultural interests of the county. The object of this plan is to bring directly to the individual farmer on his own farm the benefits of the investigations and discoveries made by the College of Agriculture.

Not only will the departments of the College be able to give instruction on soils, farm crops, orcharding, live stock farming, poultry keeping and saving hogs from cholera, but a demonstration farm will be conducted in co-operation with the County Court for the purpose of actually demonstrating the most profitable methods of farm practice.

This plan has been approved by the Missouri Federation of Commercial Clubs, the Missouri Bankers' Association and farmers' organizations. At present only a limited number of Farm Advisers can be appointed, but it is expected that in another year many counties can be organized under this new plan.

The College is now aiding Missouri farmers by holding Branch Short Courses in Agriculture, distributing hog cholera serum, conducting a soil survey, making soil investigations in seventeen different localities of the state, judging live stock at County Fairs, making educational exhibits at State and County Fairs and in many other ways, carrying directly to the farmer the practical work being done at Columbia.

Great Majestic
Malleable and Charcoal Iron Range

The Range With A Reputation

Buying a new range is a matter worthy of your most careful consideration. It is a mistake to buy from pretty pictures and glowing printed descriptions—very inferior ranges are plentifully applied with both. Before deciding upon a range, the wise woman will go to the local dealer handling them and examine closely into the superior points of merit of the *Great Majestic*—the range with a reputation, built on honor—of the best materials

Won't Break or Rust Like Steel—Outwears Three Ordinary Ranges

It is the ONLY range made of malleable iron and charcoal iron. Charcoal iron won't rust like steel—malleable iron can't break, and while the first cost of a ***Great Majestic*** may be more than others, ***it outwears 3 ordinary ranges.***

All Copper Movable Reservoir

Heated through copper pocket stamped from one piece of copper, setting against fire. Holds 15 gal. By turning lever, frame and reservoir—moves away from fire—patented feature only on *Majestic.*

Perfect Baker—Fuel Saver

The *Majestic* is put together with rivets—joints and seams remain air tight.

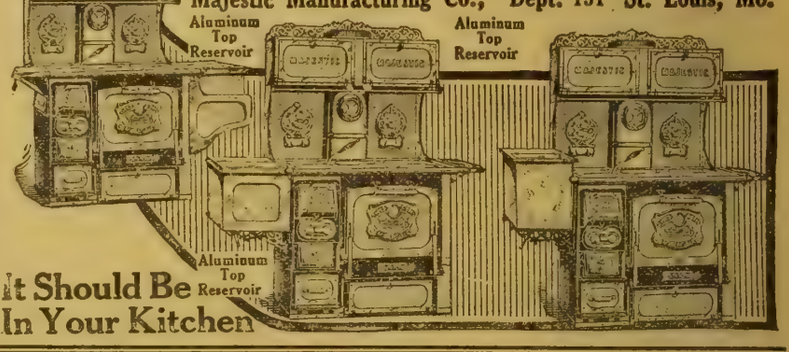
The oven is lined with guaranteed *pure asbestos board,* put there to stay covered with an iron grate—*you can see it.* Uses but half the fuel used in other ranges, gives an absolutely even dependable baking heat.

The *Majestic* is for sale by the best dealers in nearly every county in 40 states. Write for our booklet, *"Range Comparison."*

Other Exclusive Features

All doors drop down and form perfect and rigid shelves. No springs anywhere to get out of fix. *Malleable oven racks* slide out automatically, holding anything they contain. *Open end ash pan*—no more shoveling ashes out of ash pit. *Ventilated ash pit* prevents floor from burning. *Ash cup* catches ashes. It's the best range at any price, and should be in YOUR kitchen. *All Malleable front insures the Majestic 300% greater strength at a point where all other ranges are weakest. One piece body, no seams. It's worth your your while to investigate.*

Majestic Manufacturing Co., Dept. 131 St. Louis, Mo.



It Should Be In Your Kitchen

"And He Worried About It"—

Such things, if you remember, as the cooling of the sun, the drying up of the ocean, the exhaustion of coal.

If "he" still lives he probably worries about the giving out of the Chilean nitrate deposits. Some people do, although there is enough Chilean nitrate in sight to last 400 years at the average rate of annual consumption.

There are one billion tons (estimated) of nitrate deposits and the yearly demand is only about two and one-half million tons.

In recent papers there appeared an advertisement that very strikingly shows the different method that Chili pursues for disposing of her natural resources from that which we must believe is practiced in the United States.

This advertisement announces the auction sale, on December 2d, 1912, by the government of Chili, of certain nitrate deposits. A full description of the six tracts follows, with the estimated amount of deposits and the minimum bid that will be accepted on the nitrate of each lot.

Under such conservation we may be certain that the nitrate deposits of Chili will not be wasted and that there will be nitrate for the farmer of A. D. 2313. At any rate, let him, not us, worry about the nitrate deposits of Chili.

An Agricultural Course at Home.

Last year 645 Missouri farmers took a five-day course in agriculture without leaving their homes. Nine different communities in as many different counties received the benefit of these courses. They are known as Branch Short Courses in Agriculture and are given under the direction of the Missouri College of Agriculture by members of its regular staff. Probably no enterprise of the College has ever been received with greater enthusiasm. Every community which had a course last winter wants it back again.

The College of Agriculture is prepared to give a much larger number of Branch Short Courses this fall and winter than was possible a year ago. Every community in the state has an equal opportunity to secure one. Instead of hundreds there should be thousands of Missouri farmers getting the benefit of these five-day courses. Prompt action is necessary. Late applicants are likely to find a full schedule with every date filled. This is one of the finest opportunities that has come the way of Missouri farmers in a long time. Write to the College of Agriculture, Columbia, Mo., for full particulars. Other conditions being equal, applications will be considered in the order they reach the College.

FARM BOOKKEEPING.

A Discussion of the Principles Upon Which the Books of the Farm Should Be Based.

Farmers' Bulletin No. 511, issued by the United States Department of Agriculture, contains some interesting facts and recommendations in connection with bookkeeping on the farm. "That there are over six million farms in the country which utilize land, labor and capital as means of income making," gives the author the opportunity to discuss the subject of the value of the farmer keeping an accurate and systematic account of his farm management, the same as the business man or the railroad magnate.

This bulletin is not an attempt to outline a system of bookkeeping for the farmer. It is rather a discussion of the principles which are applicable to accounts on the farm. It is believed that any farmer who studies this bulletin sufficiently to grasp these principles will be able to devise a system suited to his particular needs.

Two important points must be considered in an attempt at farm bookkeeping. What does it cost to produce farm products? By selling at market prices, what profit is made on them?

"The problem of the farmer is to meet conditions on his own farm in a way which will give him the greatest net returns for his labor and the use of his capital. He should receive interest on his capital as well as wages for his labor, but owing to the lack of proper records few farmers know what wages they actually receive. There is reason to believe that the majority of farmers are really living on the interest of their investments rather than on the profits of their farms."

These suggestions are offered:

1. Consider as one unit all that may be termed real estate, as land, farm buildings, fences, ditches, etc., whether the farm is rented or owned by the operator.

2. Do not consider that the farmer or his family receive anything for their labor unless they are paid in cash, the same as hired labor. If there is a surplus at the end of the year, it is their compensation. In this way the accounts will not be confused with items not strictly cash.

3. Farm products used by the household should not be credited to the farm in the cash account along with the products sold, but should be taken care of separately.

The Farmers' Bulletin can be had by farmers who address the Hon. Secretary of Agriculture, Washington, D. C.

FORAGE FOR GROWING HORSES.

Interesting Conclusions Obtained From an Experiment in Nebraska.

Tests of different hays and pasture grasses were made at the North Platte, Nebraska, Station, and recorded in Bulletin No. 130 by W. P. Snyder and E. A. Burnett.

Thirty weanling colts, six of them mules, were purchased off a horse ranch twenty miles from the Station. The mules cost $55 each, fifteen geldings cost $45 each, and nine mare colts $65 each. The dams weighed 900 to 1,400 pounds, and the sire of the mules was a large jack, and of the colts a thoroughbred Percheron, weighing 1,800 pounds. To these were added a gelding and a mule raised at the Station.

From weaning time, October 1, to January 1, all these colts ran together on alfalfa pasture. Then they were divided into three lots of approximately even weight per head, the average weights of Lots 2 and 3 being within three ounces of the same notch, while the average weights of Lot 1 were 29 pounds lighter.

During the next three years these lots of colts were fed the same grain ration, and Lots 1 and 2 ran together and had the same ration of alfalfa hay in winter, but Lot 1 ran on alfalfa pasture in summer, while Lots 2 and 3 ran together on a native canyon meadow pasture. Lot 3 was kept separate in winter and fed a mixture of sorghum hay and native prairie hay.

During the last summer, when they were three years old, they were broken and worked and received grain during the time.

During March of the first year, Lots 1 and 2 suffered a severe attack of distemper, and three colts died. Lot 3 were promptly vaccinated, but they had a mild attack of the malady the next month. Whether the milder form was due to the vaccination or milder weather, or both, could not be determined.

The purpose of the tests was to determine the relative merits and economy for growing horses of alfalfa hay and mixed prairie and sorghum hay, and also of alfalfa pasturage and native pasturage.

The general conclusions reached are as follows:

The alfalfa pasturage put the colts in excellent condition and was profitable the first summer, but not thereafter, the native pasturage proving more profitable during the second and third summers.

During the first winter the gain of the colts fed alfalfa hay was about 50 per cent. more than the gain of those not fed alfalfa hay. After the first year the rate of gain depended largely on the condition of flesh of the colts at the beginning of the period under consideration. The colts fed prairie hay and cane hay in the winter made a faster gain during the summer than those which had been fed alfalfa during the winter. Also the colts that grazed on native grass pasture in the summer made more gain during the winter when fed alfalfa than the colts which grazed on alfalfa pasture in the summer and were fed alfalfa in the winter. This may be explained by the fact that an animal thin in flesh gains faster when given good conditions than an animal already in good flesh.

During the entire experiment the relative gains of the three lots were: Lot 1, 100; Lot 2, 90; Lot 3, 80. The colts in Lot 1 gained 70 pounds more per head than those in Lot 2 and 140 pounds more per head than those in Lot 3. The cost of growing the colts in Lot 1 was $65.30 per head; of those in Lot 2, $52.48 per head; and of those in Lot 3, $45.48 per head. The profit per colt was $27.46 after paying for all feed eaten, interest on the investment and loss. The labor of caring for the colts is not considered.

Confirming the general experience in feeding live stock of all kinds, it was found that the cost per pound of the increase in weight was greater as the colts increased in age.

Notwithstanding the death of three colts and the depreciation of others to amount of $200 by blemishes received during the three years the twenty-nine colts sold at the end of the tests, when they were a little the rise of three and a half years old, for a net profit of $793.38—not an excessive return for the labor and care bestowed upon them.

FREE Style-Book
Contains Bargains and Bargains

TWO great things in this beautiful, useful, FREE "NATIONAL" Style-Book. First, it gives pages and pages of very latest fashions. Second, it contains bargain after bargain for YOU—shows how you and all the family can be better dressed than most people at far less cost. Because there are lower prices at the "NATIONAL" this Fall—lower prices made possible by a larger business. For example:

Waists,	69 cents to $6.98	Hats,	$1.49 to $9.98
Skirts,	$2.98 to $9.98	Ladies' Ready-Made Suits,	$9.98 to $17.98
Ladies' Coats,	$6.75 to $29.75		
Ladies' Dresses,	$7.98 to $17.98	Misses' & Junior Suits,	$8.98 to $15.98
Furs,	$1.95 to $18.57	Raincoats,	$4.98 to $11.98

Also a full line of Underwear, Hosiery, Scarfs, Veils, Gloves, Sweaters, Leather Goods, Jewelry, and a complete line of Boys', Misses' and Children's Wearing Apparel.

"National" Tailored Suits

Made to Measure **$10.95 to $35.** Samples of Materials Sent Free

NATIONAL CLOAK & SUIT COMPANY
NEW YORK CITY

Each Made-to-Measure Suit is actually cut and made to order. We guarantee each suit to be perfectly satisfactory in every way, or we will cheerfully refund your money.

The "National" Policy:
We prepay postage and express charges on all our goods to any part of the United States. You may return any "National" garment not satisfactory to you and we will refund your money and pay express charges both ways.

In writing for your Style-Book, be sure to state whether you desire samples of materials used for "NATIONAL" Made-to-Measure Tailored Suits. Samples are sent gladly, *but only when asked for*—and they are well worth asking for.

Don't delay—don't forget—but write for the FREE money-saving book TODAY—and be better dressed at smaller cost.

CATTLE-FEEDING TRIALS.

Cleverly Arranged For Stockmen to See the Beginning and the End.

The sixth annual fall meeting of the Indiana Cattle Feeders' Association has been called by President J. P. Prigg, of Daleville, to meet in Lafayette, Ind., Friday, November 22, 1912. At that time the cattle-feeding trial at Purdue to test different rations will be started. The cattle will be fed until fat, when the spring meeting of the association will be called. Opportunity is thus afforded for cattle feeders to see the cattle before and after fattening. The difference in profits between some of the rations fed in the last trial was more than $17 per steer. An opportunity should not be lost to inspect, both before and after fattening, cattle fed on different rations.

A programme, consisting of addresses by some of the most prominent authorities on subjects of interest to cattle feeders will be rendered. Everyone interested in cattle feeding, whether a member of the association or not, is cordially invited to attend this meeting.

The headquarters of the Indiana Cattle Feeders' Association is at Lafayette, Ind., and the Secretary, Mr. F. G. King, has requested us to say that cattle feeders from any state will be welcome at the meeting.

To Sneak on the Oats.

A young chap of the city had been going the route, and his father resolved to correct him. He was shipped to his uncle's farm to work along with the hands.

He had been in the habit of going to bed at a couple o'clock and staying there until noon. His first night at the farm saw him in the hay at 9, and it was some time before he got to sleep. He had not been overpowered by work at that time.

Around daybreak he was aroused by his uncle, who came into the room and stood over the bed.

"Come, come, my boy," he said. "You've got to get up. You're on the farm now, you know."

The light was not secure, and the sleepy city chap raised himself on his elbow and rubbed his eyes.

"What's up?" he asked.

"We're going out to cut the oats."

"Holy mackerel! Do you have to sneak up on them in the dark?"—Chicago Post.

WHEAT MARKET SITUATION.

A Monthly Review—From the Last Day of One Month to the Last Day of Another.

This being a monthly publication, we have fallen into the habit of making a monthly review of the grain market, and we date it from the last day of one month to the closing day of the other. This is the review of the wheat market, and it could be reviewed in very few words, but from the force of habit we will stretch it out a little.

Last May, St. Louis cash wheat was bringing $1.20 a bushel. That was on the closing day, an excitable day, and was the high day, because wheat did not sell within considerable distance of that figure since then. On June 29th, the closing day of that month, the high figure was $1.12; on July 31st the close was $1.03; on August 31st the price was $1.05½; on September 30th the best price was $1.06½; and our last monthly closing day, on October 31st, cash wheat was selling on the St. Louis market at $1.04 to $1.07 per bushel. And we may ask ourselves why not higher? The answer is, no scarcity and prices are above the normal and higher than the speculative market by 13 cents a bushel. We might also ask the question, why not lower? The answer is, plenty population to be fed, and that prevents prices going lower.

Turning to the market for wheat for future delivery we naturally shift the scene to Chicago. Our readers will remember that the September wheat option went to rest at 91½ cents a bushel, with the December option then quoted at 91 cents, and the next May quotation at 95½ cents. On October 31st we find the December quotation at 91¼ cents, the next May quotation at 96½ cents, and now comes in a quotation for next July at 92⅝ cents. All that is clear reading. The general expectation is that wheat will change but very little until next May, and then it will not advance in price. It is said that a farmer does not know what he will get for his crops, but many a man in other lines of business would be very glad to be as well posted in regard to the prices he is likely to receive for the fruit of his labors. Wheat is not selling high enough to pay a fair profit to farmers, but the future of the farmer, even for the wheat farmer, is likely to be far better than the past.

OATS MARKET SITUATION.

The Largest Crop Ever Grown, But No Reason For Low Prices.

According to the recent reports of the Agricultural Department, the oats crop amounts to 1,417,172,000 bushels, and farmers must remember that the crop looks twice as big in figures than the crop really is. A bushel of oats is only thirty-two pounds, and a bushel of wheat is sixty pounds, which means that the largest crop of oats is only equal to the very ordinary crop of wheat.

If there had been any disposition towards a lower market we have an idea that it would have shown itself in October, but the trade went stronger on October 31st than it was thirty days previous. The great crop of oats has all been discounted, and farmers have it in their hands to get better prices if they will just act as though the market would advance to 50 cents a bushel before next May.

On September 30th, cash oats at St. Louis were selling at 32 to 32½ cents a bushel, and thirty-one days later, on October 31st, cash oats were selling at 32½ to 33 cents a bushel. There was no slump, and according to traders' views oats have reached bottom. The September quotation was extinguished at 31 cents but on October 31st the December option was quoted at 32 cents. There was no slump there. On September 30th, the May quotation of next year was 33½ cents, and on October 31st the quotation was 33⅞ cents. The only quotation for the July option of next year was 33⅝ cents, not a bad quotation, considering previous prices. The market continues, for the time being, very much in the 32-cent groove, but farmers ought to hold their oats and wait for a higher market, and if they will but act together they can gradually put up the price.

Soil Fertility and Fertilizers.

There are two ways to handle the subject of soil fertilty.

One way is to make a chemical analysis of the soil and then supply any deficiencies.

The second way is to put on the land available fertilizer what you have taken off in crops.

The first way is obstructed, because the analysis will not tell how much of the material is available as plant food, but our good sense ought to tell us that what the soil does not contain is certainly not available and must be supplied.

The second way is open. It is easy to calculate what has been taken from the soil by the crops, and the fertilizer books generally show the tables by which calculations can be made.

For instance, 70 bushels of corn will take off 105 pounds of nitrogen, 42 pounds of phosphoric acid and 100 pounds of potash. These figures are considered in making up commercial fertilizers. All complete fertilizers are based upon the crops they are intended for, and the combinations are the result of studies by men who devote their lives to the business.

For instance, a little booklet issued by the Empire Carbon Works, 421 Locust street, St. Louis, Mo., contains a list of forty-seven separate and distinct formulas, each for a different purpose, and stating what crops the compound is intended for, and stating also what each bag is guaranteed to contain. It is a handy little booklet, free to our readers, and they are invited to write for a copy.

In future articles in this paper much will be published concerning available fertilizers.

Samples of City Life.

For a number of years a bitter feud existed between the Browns and the Perkinses, next-door neighbors. The trouble had originated through the depredations of Brown's cat, and had grown so fixed an affair that neither party ever dreamed of "making up." One day, however, Brown sent by his servant a peace-making note for Mr. Perkins, which read:

"Mr. Brown sends his compliments to Mr. Perkins and begs to say his old cat died this morning."

Mr. Perkins' written reply was bitter:

"Mr. Perkins is sorry to hear of Mr. Brown's trouble, but he had not heard that Mrs. Brown was ill."—Post-Dispatch.

Rye is quoted at 66 cents a bushel and straw at $7.50 to $8.50 per ton on the St. Louis market.

SELF-RAISING GATES

Protect your stock as no other gates will. No chance to break through and get tangled up.

Those big, massive frames and the all No. 9 wire filling stand all shocks.

HEAVILY GALVANIZED THROUGHOUT—a rust proof coat. No paint on the Peerless.

Fully described in our 72 page free Fence and Gate catalog. Send for it.

Peerless Wire Fence Co.,

SILAGE FERMENTATION.

Necessity to Mix the Fodders in Order to Balance the Ration and Prevent Decay.

It has been found that the legumes make poor silage. Clover, alfalfa, cow peas, etc., when put into the silo unmixed with other crops, produce a black, ill-smelling silage which seems to be rotten. This fact led Drs. W. M. Esten and Christie J. Mason, chemists of the Storrs, Conn., Station, to make exhaustive studies of the fementation of silage of different kinds, and Bulletin No. 70 of that Station tells in some forty pages of the discoveries made and how they made them.

They ascertained that the fermentation of corn silage changes the sugar into acids by the operation of bacteria. Lactic acid bacteria convert part of the sugar into lactic acid, and yeast bacteria convert the remaining sugar into alcohol, and then the lactic acid bacteria convert the alcohol into lactic acid. Under the operation of these bacteria silage undergoes a ripening process not unlike the ripening of cheese, which softens the fibre, gives it an agreeable flavor and renders it more easily digested.

It was also ascertained that one of the chief functions of the lactic acid bacteria is to ferment the protein content of silage, and since the legumes contain very little sugar they do not produce enough lactic acid bacteria to ferment their high protein content. The result is that decay sets in, rotting down the legume silage.

Now, while corn and sorghum each makes a fine quality of silage, both are deficient in protein, and such silage should have cotton-seed meal mixed with it at the time of feeding it. But cotton-seed meal is expensive. Cow peas or soy beans are rich in protein and may be grown upon any American farm with decided benefit to the land, and either will supply the protein which the corn and sorghum so much lack.

Therefore, the authors of this bulletin recommend the mixing of corn or sorghum with cow peas or soy beans as they are cut and stored in the silo. They find that a mixture of one-third legume with two-thirds corn makes a good quality of silage, the corn supplying enough sugar for the proper fermentation of the entire mass. Since sorghum contains a large percentage of sugar, it may be mixed with the peas or soy beans in equal proportions.

In the same way and for the same reason wheat or rye may be mixed with the June crop of clover, and the second cutting of clover and third cutting of alfalfa may be mixed with corn in September in the Northern States.

The authors state that since writing the foregoing portions of this bulletin they ascertained that some progressive farmers of Connecticut had by actual trial, and without knowing the reason, successfully ensiloed mixtures of oats and peas and of clover and timothy; also corn and soy beans. And all of these experimenters agree that mixing a legume into the silage greatly improves its value, especially for the increase of milk production.

Cash Grain Prices.

These prices are the official figures at three markets on the last day of October, 1912:

CHICAGO.—Wheat—No. 2 red, $1.05 to $1.08; No. 3 red, 96c. to $1.05; No. 2 hard, 91¾ to 93½c.; No. 3 hard, 90¾ to 92c.; No. 1 Northern, 92 to 92½c.; No. 2 Northern, 90½ to 91c.; No. 3 Northern, 86 to 88c.; No. 2 spring, 90 to 91c.; No. 3 spring, 86 to 88c.; No. 4 spring, 80 to 85c.; velvet chaff, 85 to 91c.; durum, 85 to 92c.

CHICAGO.—Corn—No. 2, 59 to 59¾c.; No. 2 white, 60 to 60½c.; No. 2 yellow, 59½ to 60¼c.; No. 3, 58¾ to 59c.; No. 3 white, 58¾ to 60c.; No. 3 yellow, 59 to 60c.; No. 4, 58 to 58½c.; No. 4 white, 57¾ to 58½c.; No. 4 yellow, new, 51½ to 52½c.; old, 58 to 59¼c.

CHICAGO.—Oats—No. 2 white, 33½ to 34c.; No. 3 white, 31¾ to 32¾c.; No. 4 white, 31½ to 32¼c.; standard, 32¾ to 33c.

ST. LOUIS.—Wheat—No. 2 red wheat, $1.04 to $1.07; No. 3 red, 98½c. to $1.03; No. 4 red, 86 to 97c.; No. 2 hard, 90 to 94c.; No. 3 hard, 87½ to 88c.; No. 4 hard, 85½ to 86c.

ST. LOUIS.—Corn—No. 2 corn. 63½ to 64½c.; No. 3 corn, 56c., new; 62c. old; No. 4 corn, 60½c.; no grade, 45c.; No. 2 yellow, 64 to 65c.; No. 3 yellow, 63 to 63½c.; No. 4 yellow, 61c.; No. 2 white, 63c.; No. 3 white, new, 54c.; old, 61½c.; No. 4 white, 57¾c.

ST. LOUIS.—Oats—No. 2 oats, 32½ to 33c.; No. 3 oats, 32½c.; No. new; 62c. old; No. 4 corn, 60½c.; standard, 33 to 33½c.; No. 3 white, 32¾ to 33¼c.; No. 4 white, 31¾ to 32c.; No. 2 rye, 86½c.

KANSAS CITY.—Wheat—No. 2 hard, 87½ to 89c.; No. 3, 85 to 87½c.; No. 2 red, $1.00 to $1.01½; No. 3, 96c. to $1.00.

KANSAS CITY.—Corn—Unchanged to 1c. higher; No. 2 mixed, old, 57c.; new, 53 to 54c.; No. 3, old, 56c.; new, 54c.; No. 2 white, old, 59c.; new, 55 to 56c.; No. 3, old, 56c.; new, 52c.

KANSAS CITY.—Oats — Steady; No. 2 white, 34 to 34½c.; No. 2 mixed, 33 to 33½c.

UNCLE SAM'S CORN CROP.

Review of the Market, Based on the Close of October Trading.

We have an idea that the corn crop comes near finding a free and open market. The crop is immense, placed by the Agricultural Department at 3,000,000,000 bushels, and yet the expectation is that the whole crop can be sold without the quotation being lower than 50 cents a bushel.

On October 31st, cash corn was selling at 63½ to 64½ cents at St. Louis, Mo., and that was a good 12 cents a bushel better than futures were quoted at Chicago.

The 69-cent quotation, at which the September option went out, was practically a cash quotation, because September was a delivery month, but the nearest future delivery date is December 31st. And on October 31st the December quotation was 52⅛ cents, against 49⅝ cents quoted for the same option thirty days previous. The May quotation for next year was quoted on September 30th at 50⅝ cents, and by October 31st the quotation had advanced to 52 cents; furthermore, a July quotation for next year was made in the trading at 52¼ cents. The outlook then for corn is not so bad, and it is expected that from December to next July the present figures will not go far astray.

"A plat of thrifty, well-established alfalfa, suitably fenced and used for pasturing swine of whatever age can scarcely fall short of being among the most profitable parts of any farm upon which swine husbandry is given attention." — From Coburn's "The Book of Alfalfa."

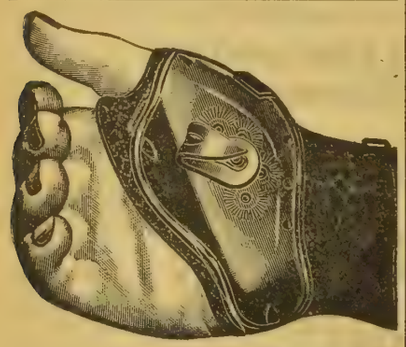
Favorite Corn Husker.

Clark's Corn King with its new self-shedding hook. The spear point enters the husks easily. The slant bend turns the husks for shredding, and the rounded, curved and beveled edges throw out the husks and prevent clogging. As this is the most approved hand husker on the market, we have selected it as a seasonable subscription premium. The hook sets at any angle; two positions for a thumb hook and five positions as a palm hook. Opening and closing the small end of the plate makes the adjustment perfect for any width of hand and prevents chafing. The



strap passes through the leather tongue and the first ring and over the hand to the opposite ring and back through the first ring. Be sure and have the strap enter the ring from the outer side. It brings the pulling strap underneath, forms the sinch draw and gives you the full benefit of the sinch-lock, which is the same as a half-hitch. The strap then passes to the last ring and then to the buckle; the half-hitch forms one fastening and the buckle holds the end of the strap. We will send The National Farmer and Stock Grower for one year and Clark's Corn King Husker for 50 cents. The Husker is a free premium. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Misfit Efforts in Agriculture.

Much of the loss in farming comes from misfits. The worst misfit is trying to produce anything on a farm not suited to it, or in a locality not adapted to it.

Every farmer nearly has had expensive experience in trying to grow things that persistently refused to do well on his ground. The man that abandons such an attempt is wise, unless experimentally on a small scale.

With an annual crop the mistake is not so bad, for it means the loss of the work of one season only; but when things are grown that require years to bring to the point of bearing, the case is different.

The writer has in mind a small orchard of plum trees that has been growing on one piece of land for the past ten years and has never produced a bushel of plums. It is safe to say it never will, for the land for some reason is not suited to plums. The man has wasted his years of efforts.

In another locality, not suited to grapes, some people have been trying to grow grapes for a dozen years. The vines have never produced enough to pay for a tenth part of the care that has been given them. Most of the vines kill back every winter, just enough remaining to keep up the fight for existence. Every year the vines spend their time trying to make growth on which to bear grapes. In this same locality are many who are engaged in the same hopeless task. What is the use? The land will produce other things that are suited to the climate and soil.

In the same locality in which these grapes fail certain varieties of pears produce heavily and garden products generally thrive. Why waste time on trying to grow grapes when there are other localities so well adapted to the growing of grapes that they are produced without special effort?

We find misfits in agriculture also in the attempt to fatten cattle in localities where feed is scarce and high. The growing and fattening of any kind of stock must be done at the point where feed is comparatively cheap. There are some farmers who are actually putting feed into cattle under conditions where each $1.00 worth of feed will produce less than $1.00 in flesh. Such a process means loss.

The writer once lived in a locality where fogs are common and are frequent throughout the summer, often being of long duration. Such a locality is unfitted for the raising of bees, because the bees cannot work under such conditions as heavy fogs induce. Yet every once in a while the farmers in that locality get into the notion of raising bees. The result is that the bees, during some of the summers make only enough honey for themselves and none for the owner. Without doubt this error will be repeated over and over till the farmers of the locality wake up to the fruitlessness of their efforts.

Every misfit effort means effort taken away from something that will certainly produce profitable results.

Premium Fruit For Farmers' Week.

One day at the State Fair this year would have warmed the heart of any discouraged Missouri fruit grower. The display demonstrated beyond doubt that Missouri can grow apples and pears equal to the best the West produces. Winners at the Fair this year carried off two dollars where they got one last year.

The State Board of Horticulture got behind the horticultural display this year and made it possible to double the premiums. Although the average fruit grower of Missouri does not exhibit solely for the money, it makes him feel good to carry home cash as well as ribbons.

All of the premium plates of apples and pears, both first and second, were turned over to Secretary Boles, of the State Board of Horticulture. Each specimen of fruit was double wrapped in paper and marked with the grower's name. This fruit will be held in cold storage at Columbia until the 13th of January, when it will be unpacked and put on exhibition during Farmers' Week at the University. There are no premiums offered, but the fruit will be exhibited under the grower's name. There are over forty different varieties of the well-known types of apples and five specimens each of about one hundred other less widely grown varieties. This will make a splendid display of Missouri's best fruit and will be well worth going across the state to see.

AGAINST FREE MEAT.

That is, Against the Admission of Foreign Meat Without Paying the Present Rate of Duty.

A movement against the admission of foreign meats into the United States free of duty has been inaugurated by the Texas Cattle Raisers' Association. The duty on dressed beef is now 1½ cents a pound, being reduced a half cent by the last Congress. The customs duties amounting to 1½ cents a pound go directly to the support of the United States government, and if that amount is returned to the South American shipper on each pound of beef, it will be favoring the foreign meat grower at the expense of our own people. The people who raise and sell beef in this country have to pay all kinds of taxes, and there is no reason why the beef growers of Argentine, who expect to market their beef in the United States, should not contribute a little tax-money also.

After paying the duty, there is no good reason why foreign meats should not be admitted. The trifling duty is but a small protection to the cattle growers of the United States, and its removal will cause a decided decrease in home beef production.

We have always opposed the admission of foreign meats duty free and will continue to do so to the end.

Announcement has been made by the management of the Burlington Railroad that John B. Lamson has been appointed Agriculturist for the system. Mr. Lamson is a graduate of the Iowa College. The position of Agriculturist on the Burlington was created recently.

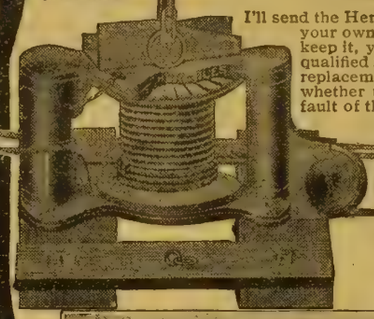
Get My Low Price On The Hercules Stump Puller

SEND me your name if you have stumpy land, or even a few stumps in your fields. I want to make you a price that will save you at least 50% on the regular price of the famous Hercules! This is the best chance that you have ever had, to get rid of the stumps in the quickest, cheapest and best way.

Pull Out The Stumps!

All Steel Triple Power 3-Year Guarantee

Stump land is *loafer* land, *robber* land, *failure* land. You can't afford to keep stumps. They cost too much money. They take away half the realty value of your land—and they rob you of *big crops that you don't get!* Let me quote you my price on the world's best machine for clearing land.



You Take No Risk

I'll send the Hercules on 30 days free trial—you to try it in your own way, on the stumps in your fields. If you keep it, you are still further protected by any unqualified 3-year guarantee which insures the free replacement of all broken castings for 3 full years, whether the broken castings are *your* fault or the fault of the machine!

Write Quick For Big Free Book

You will be glad you wrote. You'll be pleased with the photographs, letters and facts about the Hercules construction. My price will make it easy for you to own a Hercules. Nothing to be gained by waiting—much to be lost. Write me now while my special price offer holds good. Address me personally,

B. A. FULLER, President.

No Limit to Better Farming.

Poor farming has always been the general practice and good farming the exception. The earth has been so responsive to man in the past that it has been partly true that "any fool can farm." Intelligence is not drawn on very heavily in those localities where the soil is good, the rainfall good and the climate suitable.

This condition has been good in the days when the population of the earth was sparse; but with the rapid increase in population has come a necessity for improving methods of farming. Everywhere the farming population is waking up to this necessity.

The Experiment Stations have spread through the world, till we find reports of them from every part of the world where agriculture is a business. The number of such stations must be in excess of a thousand, if we include the substations. These stations are dealing with numerous phases of agriculture, and in every line are finding that old methods have fallen short of giving maximum yields of anything.

There seems to be no limit to improvement in farming; at least, no limit is in sight. No crop has yet been grown on an acre of land that could not have been increased if conditions had been just a little different. At one station the yield of oats on a small plat would have been 170 bushels if the area comprised had been an acre. But the grower declared that yield could have been increased if the water supply could have been controlled. So the limit was not reached.

In some competitive tests of potato growers, in which a large prize was offered for the largest yield of potatoes on one acre, more than a thousand bushels of potatoes were grown on an acre in Maine, Montana and North Carolina. Yet in no case was the grower able to absolutely control the supply of water to the crop. So, though 1,000 bushels of potatoes per acre is a very large yield, it is certain that it does not represent the limit.

There is vast encouragement to the human race in this fact. With growing intelligence in matters agricultural there is no good reason why the supply of food for the race should not increase indefinitely. It is difficult to think of the world so thickly populated that food could not be produced for all the people.

There is not a farm anywhere that cannot be made to produce more than it is now producing. The human mind has in it too great resources to fail in the working out of such a problem. Someone has said that the best fertilizer for any kind of ground is brains. Brains constitute the principal requisite in successful farming.

Brainless farming belongs to the past, for which it was only partly sufficient. Better farming in the past would have prevented most, if not all, of the great famines which were such terrible visitants to many countries in the days that are gone.

The study of agriculture is doing more than anything else to increase the yields from our farms, and this study is being pursued with increasing interest. Little by little it is being carried onto the farms. The time is coming when every farmer will be an agricultural student and every farm an Agricultural Experiment Station.

Farm Ownership and Farm Tenantry.

The American nation has been up to the present time a nation of agriculturists principally. Now, however, it is becoming in large part a nation of traders and manufacturers. Its national health was obtained when it was devoted principally to agriculture and when most of its farmers were owners of the land they farmed.

Special neighborhoods were built up in the days when the men owned the farms they tilled. Every family was settled permanently and assumed the attitude of permanency. It felt itself independent and recognized a duty toward all the other families. A delightful country life was the result. The country church and the country school sprang into existence from the home conditions and prospered. That was the time when the country school had in it numerous pupils that had almost reached the state of manhood and womanhood.

In those days the family reunions were common occurrences. The "bees" for performing various kinds of work were common. There was the husking bee, where the neighbors came together to husk the corn and make merry at the same; the house-raising or barn-raising bee, where the men of the neighborhood congregated to raise into position the great timbers that constituted the framework of house or barn in those days; the paring bee, when the families came together to pare apples for drying and at the same time enjoyed a social evening; and other kinds of "bees" too numerous to mention here. These have vanished with the change in conditions.

One of the conditions for this kind of life was farm ownership. The coming of a system of tenantry has changed many things and has largely destroyed the intimacy that existed between resident families. The tenant on a farm does not feel that he is a fixture in the neighborhood and he does not act like one.

He does not take the interest in the schools the owner used to take, and he is not enough of a permanency to shoulder much responsibility in the building up of the country church. The writer was traveling through a part of Illinois where most of the farms are occupied by tenants. The question was asked: "How are the schools here?" The reply was: "Very poor; you see, most of the farmers are tenants and do not take much interest in the schools."

One cause of this is that the tenant, to make a living, must accomplish more than the owner of the farm used to have to accomplish, for the tenant really has to make a living for two families. He pays a rent that is supposed to be equal to a living, if the farm be a quarter of a section or more. This makes him too much of a drudge to be able to get much out of life except hard work.

With the incoming of tenantry has come a mixing up of the nationalities that militates very much against social conditions, such as were common in the past. In some neighborhoods the effect is far-reaching. The old friendships have been sundered by the removal to the city of some of the old families, and the newcomers are foreigners, having foreign notions of everything as well as a foreign language.

One of the things that must be brought about in the future, if we are to have ideal conditions in the country, is a greater percentage of farms owned by the families living on them. It is doubtful if the tide ever sets strongly again in favor of ownership by workers on farms unless some great system of encouraging such ownership is established.

Are you ready for Holiday Company

The Pacifier.

The harmless-appearing little rubber nipple which some mothers find such a comfort because it quiets the baby when stuck into his mouth is not so harmless as it appears. Physicians declare that growth of adenoids and the enlarging of tonsils are often due to the use of this pacifier. The sucking of the thumb has like evil results. If the pacifier is never given the child he will not form the habit of using it and so will not cry for it. The thumb-sucking habit seems to be born in some children, but it can be broken. Perhaps the best way is either to bandage the hand, making it too clumsy to put into the mouth, or to rub upon the thumb some harmless, bitter stuff, such as wormwood.—Janet Thomas Van Osdel.

Live Stock Exchange Meeting.

At the annual election of officers and directors of the St. Louis Live Stock Exchange at the National Stock Yards, East St. Louis, on October 26th, John W. Sanders, of Blakely-Sanders-Mann Company, was elected President; W. H. Keys, of the C. M. Keys Commission Company, was elected Vice-President; A. J. Milton, H. B. Carson, W. S. McBride and C. M. Rafferty were elected members of the Board of Directors. Mr. W. S. McBride was the retiring President.

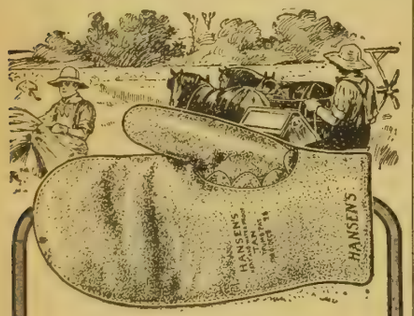
AFTER THE ELECTION.

The morning after the election it was known that Hon. Woodrow Wilson was elected President of the United States with plenty of electoral votes to spare. A day or two later they began to estimate the popular vote, with the following result: The vote of the United States was approximately 15,471,785, of which Woodrow Wilson received 6,422,398; Theodore Roosevelt, 4,290,374; William H. Taft, 3,668,109; Eugene V. Debs, 788,583; and E. W. Chafin, 302,321. Gov. Wilson's apparent plurality is 2,132,024.



WHO would do your work if *you* suffered accident? Write for the book that explains the splendid *hand insurance* in Hansen's —the mittens and gloves made of softest, strongest leather.

Hansen's
Gloves and Mittens

Suit every job—every man. For harvest work or lighter chores—for driving or motorcycling Hansen's give you the grip that *holds*, with "give" and softness. Price $1.00 up. At your dealers' or sent on approval. Write for the book *now*. It tells why Hansen's outlast the cheaper kinds; cost less in the end. Cannot stiffen or harden and easily cleaned to gasoline.

WHAT WE HAVE DONE.

A Few Incidents in the History of The National Farmer and Stock Grower.

This is an age when all the good things of the past are overlooked and a younger generation is trying to do the same things over again. Directly the young generation begins to work assertion is made, claiming credit for the wonderful improvements that came to pass before they were born. THE NATIONAL FARMER AND STOCK GROWER instituted several beneficial movements which have borne fruit, and now, as usual, claims are advanced by other people for the fruit.

When alfalfa was a new forage plant and not one farm in a hundred had any positive knowledge on the subject and a car-load of alfalfa hay had not yet been seen upon the St. Louis market, the editor of THE NATIONAL FARMER AND STOCK GROWER undertook a line of missionary work to introduce alfalfa. He bought seed by the ton and distributed seed by the pound for experimental purposes, and he also furnished a copy of Coburn's Book on Alfalfa absolutely free to every paid subscriber of THE NATIONAL FARMER AND STOCK GROWER. Thus was alfalfa introduced on 20,000 farms in the United States in the nick of time, and it was not done with a government appropriation, but with subscription money picked up 50 cents at a time.

THE NATIONAL FARMER AND STOCK GROWER took the lead in corn improvement. At the First National Corn Show he met two distinguished corn growers; one was D. L. Pascal, of Iowa, who had won the Allee Trophy at the Iowa Agricultural College and had bred a strain of Yellow Dent Corn that he had obtained from the originator. The editor also met Mr. L. B. Clore, then winner of the grand championship and winner of championship honors wherever he showed his Johnson County White Corn. The editor bought corn from them by the bushel and distributed it by the pound and half pound. He secured corn from other champion corn growers and he distributed it to farmers who paid up their subscriptions. He did the same with oats that were a superior strain, and doing this year after year has given thirty to forty thousand farmers the start whereby they are able to raise seed corn and oats for their own planting, and some of them have developed into seed-corn growers, for sale to other farmers.

The editor did not stop with sending out a practical but small amount of seed corn; he also offered prizes at State, National and International Fairs and Expositions and duplicated the state prizes won by corn that was grown from the seed that he furnished. There were many prizes won, and he paid prizes from $5.00 to $75.00, until he found that the prizes were amounting to more money than the fifty-cent subscriptions amounted to. In the meantime the corn crop was increasing and THE NATIONAL FARMER AND STOCK GROWER was one of the principal factors in bringing it about.

Eight years ago THE NATIONAL FARMER AND STOCK GROWER ventilated the subject of the high rate of interest on farm loans and got up a petition to the Secretary of Agriculture to formulate a plan whereby banks could be established to take up the high-rate loans. The whole subject of co-operative credits and land banks in Europe was ventilated at that time. That work is well in hand now and some day in the near future the loans will be made with postal savings bank money and the end will be gained. It was THE NATIONAL FARMER AND STOCK GROWER that originated the idea and passed it along until now it is big enough to be aided and assisted by the Secretary of Agriculture and the President of the United States.

Quite a number of other movements were started by THE NATIONAL FARMER AND STOCK GROWER, the list being too long for publication in this issue.

MILITARY HORSES.

A Considerable Number Sold and Delivered to the Government at the St. Louis National Stock Yards.

Considerable interest is manifested by horse raisers and dealers in regard to the subject of military horses, especially when contracts are being filled.

At the National Stock Yards, Ill., quite recently a contract for 245 head was filled in sixteen days from the time it was awarded and including eighteen head of exceptionally good horses purchased for officers' use and forwarded to the headquarters of the United States Army at Washington. These horses in particular were a splendid lot, all trotting-bred and over 15-2 to 16-1 hands, and good for any kind of service.

Mr. T. H. Holland, of the firm of Holland, Nugent & Maxwell Bros., commission salesmen for horses and mules, was the contractor, and, notwithstanding he sustained a loss when the contract was held up because Congress held out the appropriation, he said that although the average price of $160 per head for cavalry horses was comparatively low, yet he was satisfied with the result.

Mr. Holland said the prevailing opinion that thoroughbred blood was necessary in the make-up of the cavalry horse was not justified by his experience. He said that army inspectors were fair in their examinations and received every horse that in his opinion they ought to have taken, and they showed a decided preference for horses that were related to the standard-bred trotter. Those with the trace of the blood of the thoroughbred were usually without substance, besides having defects in form and gait. The horses of the saddle-horse type were equally unfortunate in passing inspection, as the inspectors objected to the fancy gaits.

Mr. Holland appeared to be of the opinion that whenever any actual necessity arose and large numbers of military horses were wanted, that the general market would have to be the place to find them. In order to assemble horses that were suitable for the purpose it was necessary to have more than twice the number to select from, and it was necessary to find an outlet for rejected horses, and in the market it often happened that a sound horse not coming up to the military standard would find a better outlet for some other purpose. If no good outlet could be found for the rejects the government contracts would be more difficult to fill and prices would of necessity be correspondingly higher.

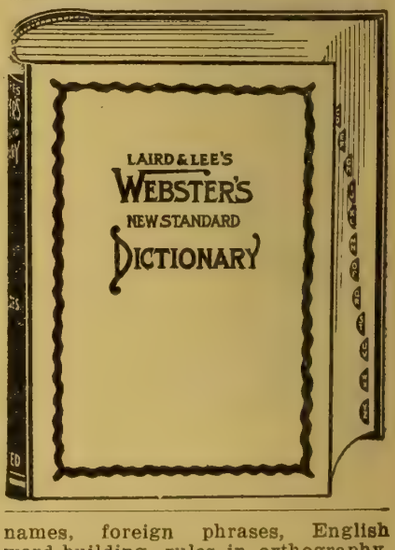
Mr. Holland also said that until some distinct and positive line of breeding could be depended upon to produce a cavalry horse without fail the only way that is economical in the purchase of them is to buy the horses at maturity and select those that fill the bill. To buy colts at three years old for $150 and pay $70 a year for two years to bring them in barrack depots to maturity and then as likely have a horse that would not come up to specifications is certainly not a favorable outlook. The market can sell the government cavalry horses under almost any circumstances from $175 to $225, and that looks a long way better than buying the colt and bringing it to maturity at a cost of $290 per head.

Mr. Holland handed the writer the specifications for military horses, which are too long to publish at this time. Mature cavalry horses should be five to eight years old, weigh from 950 to 1,100 pounds, and 15 to 15¾ hands. Light artillery horses are required to be from 15½ to 16 hands, and weigh from 1,150 to 1,250 pounds. The illustration with this article is a picture of a pair of artillery horses that were delivered under contract. It may be stated here that since his first bid went in Mr. Holland has filled all the contracts for cavalry horses.

WEBSTER'S DICTIONARY.

One of the Greatest Books Ever Issued—A Premium Offered by the Subscription Department of This Paper.

This is Laird & Lee's Webster's New Standard Dictionary of the English Language, a wonderful book, 750 pages in all, 840 illustrations, substantially bound, gilt title, red edges, patent thumb index. Special edition for office and general use on farms, estates, ranches, etc.; massive but handy; contains ten encyclopedic features, supplement of new words, dictionaries of biography, geography, musical terms, Biblical, classical, historical and mythological



names, foreign phrases, English word-building, rules in orthography, current abbreviations, metric system with conversion tables; weighs twenty-eight ounces.

Our offer to you: Send us one dollar and we will send you The National Farmer and Stock Grower for two years, and we will also send you, postpaid, safe delivery guaranteed, one copy of this great Webster's Dictionary. We also agree to refund money and pay return postage to anyone who is not satisfied with the bargain. Address, HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

THE LAND CREDIT SYSTEM.

A Subject That Originated in the Columns of The National Farmer and Stock Grower.

The land credit system, now widely advertised and advocated in order to place money within the reach of farmers, is an opportune subject, for the reason that there is a better prospect than ever of bringing it to a practical and successful conclusion.

The land credit system should be inaugurated by the government loaning the amount of deposits in postal savings banks to farmers who are in need of money for improvements upon the security of the improved farm lands at a rate as low as possible and not to exceed an interest charge of four (4) per cent. per annum.

The credit for originating this subject as an active issue does not belong to the President of the United States, or to the Southern Commercial Congress. They are entitled to the credit for the interest they have taken in it, but the whole thing was ventilated in the columns of The National Farmer and Stock Grower in 1904, and the subject was brought forward again and again. The National Farmer and Stock Grower printed and sent out petition blanks to be signed by farmers, requesting the Agricultural Department at Washington to find some way to furnish relief from the high rate of interest of farm loans. The petitions were collected, they were forwarded to the Honorable James Wilson, Secretary of Agriculture, Washington, D. C., and by him acknowledged.

It is not material to us who gets the credit, so long as the end is finally attained, and, if possible, without creating five or six thousand political officials to draw unnecessary salaries and feed at the public crib.

It is the common practice now under the name of some new and useless institution to claim credit for all the good that has been accomplished by farm papers these many years, and such claims are often used for the purpose of obtaining government appropriations and individual donations to create bureaus to do the work that has been always done and well done by the farm press.

The subject of co-operative credit is as simple as A, B, C. The postal savings banks receive ever-increasing deposits, which can be loaned out again to farmers, and the farmers ought to be able to borrow the money on good security at a low rate of interest. If necessary, it can be handled by the United States Depositaries. There is no reason why the people should be taxed to pay interest on postal bank deposits And no better use can it be put to than to loan it out to farmers who need capital very much more than they need instruction.

MUST RAISE ENOUGH CATTLE.

An Obligation That Stockmen Will Have to Assume or the Whole World Will be Called Upon to Do It.

That it is the duty of the live stock interests of the United States to keep the production of cattle to its maximum, thereby insuring ample meat food for the people, may not appear to be very important to the general farmer who is accustomed to think that it is nobody's business but his own what he may raise and what he may do with his land, but the extent of beef raising and meat raising in general is a matter of national importance, and the stock raisers and farmers cannot avoid the responsibility, neither can they avoid the consequences of a shortage in the meat supply.

So far as hogs are concerned, there is not much danger of farmers of the United States falling far from the maximum production, because wherever grass grows and corn is raised pork production follows, and if there is a shortage here no other country will be able to make up the deficiency. So far as mutton is concerned, people have to learn to eat mutton in larger quantities before there will be any acute question in regard to the supply; furthermore, in case of emergency, more mutton can be raised quickly. But with cattle it is different. The cry is now going up: "The high cost of living is due to the shortage in beef." That the high cost of living may be due to large margins in slaughtering, wholesaling and retailing, transporting, etc., cuts no figure. The shout still goes up that more beef is wanted, and the customs duties on meats should be taken off and there should be more taxes on our own people in order to let in meats free of duty; therefore it becomes necessary for farmers to raise enough beef to feed the people, and when associations go before Congress to insist on the retention of the small duties now imposed they should be prepared to say that the obligation to raise sufficient beef to feed the American people is recognized and assumed by the stock dealers' associations.

Furthermore, it is absolutely necessary to keep open the avenues of trade. Shortage in beef will lead to substitutes in getting the beef money. When the surplus comes again the demand has lessened. There will always be avenues of trade for beef sales, but there is an immense difference in the trade that is regular and ever-increasing and the trade that is irregular and ever-contracting. We do not wish to see the small duty on meat taken off and all meats put upon the list of articles admitted to this country tax free, and at the next meeting of Congress the only way to prevent a change will be for the influential men of the stock-raising associations to take upon themselves the obligation to increase the beef supply by means which are in their power to recommend to their fellow-men and to practice themselves. If the farmers of the United States do not look after their future interests they cannot expect a hundred millions of people to go hungry if there is relief to be had by the admission of beef duty free from anywhere in this world.

THE INTERNATIONAL.

The Greatest Live Stock Event of the Year in the United States.

We are always glad when the International Live Stock Exposition comes around, for then we know the holiday season is approaching, and we know also that we are going to see all the prize cattle, hogs, horses and sheep that are considered good enough to try for prizes at the International. All below third-prize winners at State and Interstate Expositions are left at home, because they have no show for fifth and sixth prizes at the Chicago International. It is a clearing-house of champions, and nothing but champions. In the Book of Live Stock Champions, advertised on page 11, there are pictures of 250 International champions, and they constitute a show of themselves.

We hope the attendance this year will be the largest ever known. The show will be worthy of it. The entries are the largest and very best. Breeders are using all their talents in order to improve the conformation of the various market breeds of cattle, hogs, sheep and horses, and sometimes in the arena there are a hundred thousand dollars' worth of stock in a single ring.

The International Live Stock Exposition will show champions at Iowa, Minnesota, Indiana, Ohio, Nebraska, Illinois, Missouri, and at the American Royal and at other great shows, all competing for a first prize at the highest court of live stock resort, the International at Chicago.

Farmers who wish to take a short course of stock judging can do no better than to spend the first week of December at Chicago with a daily journey to the Union Stock Yards, where the Fair is held.

There are auction sales held each day at the Fair. The consignments are from the best herds and flocks in the country. Thirty National Live Stock Conventions will be held during the Exposition week, and no one will be lonesome. It is well worth what it costs in time and money to attend the Chicago International, if it is only to see one beef steer, the grand champion beef animal of the American continent.

The American Poultry Association at its annual session at Nashville gave its endorsement to the Panama-Pacific International Exposition, and the interest being displayed in this department is intense. There will be international competition in every branch of the Poultry Division.

GOOD BOOKS AND PAPERS.

Lord & Thomas, advertising agents, corner Wabash and Madison, Chicago, Ill., have compiled their **1912 CROP REPORT,** obtaining their information from official sources, assisted by the editors of leading agricultural papers. The result as published is, that crops of 1912 are stupendous, and that agricultural conditions are the most wonderful in our history. The report in full can be had by application to Lord & Thomas, Wabash and Madison, Chicago, Ill.

JAMES MANUFACTUKING COMPANY of Fort Atkinson, Wis., have sent us several artistic, comprehensive and practical booklets relating to dairy construction, which have been added to our office exhibits. The firm manufacture sanitary barn equipment.

IMPORTANCE OF RAISING CALVES.—A small, handy pocket book, written by S. E. Barnes, formerly of the Dairy Division of the United States Department of Agriculture. The booklet tells how to raise skim-milk calves to be profitable cows. By mentioning The National Farmer and Stock Grower a copy can be had free by addressing De Laval Cream Separator Co., 165 Broadway, New York, N. Y.

TRAPPERS' GUIDE, SUPPLY CATALOGUE AND GAME LAWS.—THREE BOOKS IN ONE.—Issued by Funsten Bros. & Co. for free distribution. Contains list of all traps, baits and appliances for hunting and trapping; describes methods of preparing all skins and pelts for market and contains game laws in every state. Don't fail to write to Funsten Bros. & Co., 323 Funsten Building, St. Louis, Mo., and ask for free copy of Supply Catalogue.

THE MISSISSIPPI VALLEY.—A pamphlet so entitled is a work of art, a statement of fact and maps of the country illustrating the possibilities of Northeastern Arkansas and Southeastern Missouri. The enterprising Frisco Route is doing the work of investigation for those who are looking for homes and showing by photographs from life the grand possibilities of the new country. A copy can be had by writing to A. Hilton, G. P. A., Frisco Lines, 1418 Frisco Building, St. Louis, Mo.

THE SOUTHERN FIELD is a bi-monthly publication, issued in the interest of the development of the Southern States. It contains a list of low-priced farms that are worth looking into. Those farms will not be cheap five years from now. By writing to M. V. Richards, Land and Industrial Agent, Southern Railway, Room 71, Southern Railway, Washington, D. C., and mentioning this paper you can obtain a free subscription to the **SOUTHERN FIELD.** There are intensely interesting facts brought out in each number of the paper.

FARM POULTRY is a book by Prof. Geo. C. Watson, published by The Macmillan Company, 66 Fifth Avenue, New York City; at $1.50 per copy. It is a book of 355 pages, sixteen chapters and full of superior, practical, attractive illustrations. It is one of the Rural Science Series of books, edited by Prof. L. H. Bailey and a staff of the best writers and experts in agricultural specialties.

FARM AND RANCH LANDS.

ALABAMA.—2,240 acres fertile farm land. Thirty-three tenant houses. 900 acres fenced. Fine land for alfalfa, cotton or cane. One-fourth mile from station. Buy from owner and save commissions. **D. Vaughan,** Catherine, Ala.

ARKANSAS.—Cotton Belt Route. Free descriptive books of productive lands. See page 14.

ARKANSAS.—FREE HOMESTEADS IN ARKANSAS under new three-year law. 500,000 acres good land vacant near railroads and markets. Our Homesteader's Guidebook tells just how to locate, acquire title, number of acres open in each county, and full text of new law. Price, 25c. **Farm Pub. Co.,** Little Rock, Ark.

FLORIDA.—I own a large tract of the very best land in Sunny Florida, just west of Jacksonville, and will sell you 160 acres or a section at bargain prces. Write me. **J. T. George,** 3725 Wyoming street, St. Louis, Mo.

KANSAS, MISSOURI, OKLAHOMA, TEXAS, NEW MEXICO, ARKANSAS AND LOUISIANA. Lands for sale on the Rock Island Route. See page 23.

MISSOURI.—8,080-ACRE STOCK RANCH far half its value for quick sale. Address owner for further information. **A. J. Johnson,** Merchants' National Bank Building, Springfield, Mo.

MISSOURI.—Farm Lands in Western Missouri, by far the richest section of the state, are for sale at prices that are more than reasonable, considering the income that can be made. Will be pleased to show a few tracts that are worth the money. **J. H. Lipscomb,** 306 Fidelity Trust Building, Kansas City, Mo.

OKLAHOMA.—Indian land sales; titles guaranteed by the United States Government. See page 11.

TEXAS.—Lands on the Cotton Belt Route. Free books descriptive of the country. See page 14.

FARM WANTED.—I am looking for a good Farm at a reasonable price. Give full description in first letter. Address, **CASH FARM BUYER, Box 7910, Cherry Valley, Ill.**

FARMS WANTED.—We have direct buyers. Don't pay commissions. Write describing property, naming lowest price. We help buyers locate desirable property **FREE. American Investment Association, 55 Palace Bldg., Minneapolis, Minn.**

CASH FOR YOUR FARM OR BUSINESS. I bring buyers and sellers together. If you want to buy, sell or trade any kind of property anywhere, write me. Established 1881. **FRANK P. CLEVELAND, 7910 Adams Express Building, Chicago.**

Southern Farm Facts

Land at $10 an acre up

Alfalfa makes 4 to 6 tons per acre; Corn 60 to 100 bu. All hay crops yield heavily. Beef and Pork produced at 3 to 4 cents per lb.—Apples pay $100 to $500 an acre; Truck crops $100 to $400; other yields in proportion.

THE SOUTHERN RAILWAY

Mobile & Ohio R R or Ga. So. & Fla. Ry. will help you find a home in this land of opportunity. Booklets and other facts—free.

M. V. RICHARDS, Land and Industrial Agent Room 71, Washington, D. C.

YOUR OPPORTUNITY

is NOW In the Province of

SASKATCHEWAN Western Canada

Do you desire to get a Free Homestead of 160 Acres of that well known Wheat Land? The area is becoming more limited but no less valuable.

New Districts have recently been opened up for settlement, and into these railroads are now being built. The day will soon come when there will be no Free Homesteading land left.

A Swift Current, Saskatchewan farmer writes:—"I came here on my homestead, March, 1906, with about $1000 worth of horses and machinery, and just $35 in cash. Today I have 900 acres of wh at, 300 acres of oats, and 50 acres of flax." Not bad for six years, but only an instance of what may be done in Western Canada, in Manitoba, Saskatchewan or Alberta.

Send at once for Literature, Maps, Railway Rates, etc., to

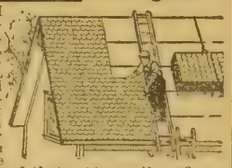
He Was Amazed

at LOW COST of Edwards STEEL Shingles



"In all my life I was never so surprised" writes Mr. D. Elzroth, of Fosters, Ohio, "as I am at my new *Edwards* STEEL Shingle barn roof. I wouldn't have believed it if I hadn't seen it with my own eyes. Your steel shingles cost *lots* less than wood and they sure beat wood shingles and that rubber roll roofing *forty miles*. The stuff got here in *good shape*, right *on time* and I done the work myself. I've got the best roof in the township. What a fool I was not to get your catalog 4 years ago when I roofed my *house*."

Factory Prices—All Freight Paid!

Fire-proof, rot-proof, rust-proof. Guaranteed against *lightning* by $10,000 Bond.

Never need repairs. Out-last *three* wood-shingle and *five* composition roofs. Lowest factory prices—all freight paid. Put them on yourself. Made of Open Hearth Steel, *finest quality*. Made absolutely rust-proof by our world-famous "Tight-cote" Process. Come in sheets, 24 inches wide, 5 to 12 feet long.

Nothing to do but nail sheets on old roof or sheathing. Edwards Patented Interlocking Device covers all nails, makes permanent water-tight joints.

Makes handsomest, most lasting roof in existence. Write us. If possible give size of roof and we will quote price, delivered to your station.

Postal brings catalog 1157 and factory prices by next mail.

THE EDWARDS MANUFACTURING CO.

The World's Largest Manufacturers of Steel Roofing (87)

FEEDING FOR THE MARKET.

Observations of a Cattle Feeder in Southern Illinois.

In feeding cattle for either winter or spring market there are several things to be closely observed which should not be disregarded any more than the laws of health. In the first place, if we take the cattle off the grass in the fall to be fed we are likely to cut off the green feed without substituting something in its place, and the cattle will hunger for something they cannot get. This will cause them to grow restless and thus lose flesh and cause a considerable amount of feed to be wasted in trying to hold them up.

Another cause of loss in weight of flesh is taking them away from other cattle they have been accustomed to run with in pasture. This causes a loneliness that causes them to run and bawl in their pens and thus they lose flesh. In fact, in many cases they will refuse to eat until forced to do so by hunger, and, of course, they run down during their period of discontent.

In feeding and handling cattle, water is a very important factor to be looked after; any change of water, unless it is for the better, may cause loss by their refusing to drink at all. There are many other things to be observed in this matter of feeding, but these mentioned are the most common. I find it is well to take what cattle I intend to feed from the rest of the herd, placing them in a good-sized lot or even in a field with some good pasturage in it—clover, red top, orchard grass or something equivalent. At convenient places in this lot or field I put feed troughs, being particular to cut each animal off to himself while feeding in a temporary stall erected for the purpose. I exercise care at first to give only a small allowance of dry feed to each animal and thus avoid overfeeding, which many of them will suffer from if fed in one common trough or even in one lot. After they have eaten, they are given the run of the field again. Especial care is taken that they have a plentiful supply of good water provided in troughs or in natural brooks, and they are never allowed to drink from ponds or other standing water in which they can wade or stand in the warm part of the day.

Large lumps of rock salt are put at several places in the field, so the cattle may lick when they so desire without all crowding to one place and worrying and pushing each other around. After all these things have been attended to I begin to increase the feed just a little each day until nearly a good feed is given. Of course, I use different kinds of feeds as I think best from day to day. At this time some shoats are usually allowed to follow the cattle, but I never allow hogs in the pen that are to be slaughtered soon.

When the cold rains and rough winds begin, the cattle are moved to the barn, where suitable stalls are provided for them. There are two rows of stalls with a narrow passageway between. The head of each stall is turned toward this passageway, and in each stall is a water basin and a trough placed near the walkway, and it is from here that the animals are fed and watered. The stalls are cleaned each day and new bedding provided for the animals. While this is being done the cattle are driven into a back lot, where they have plenty of warm water provided in large troughs. At the same time all their troughs and mangers are thoroughly cleaned, the clover hay and other roughage are thrown to some cattle that are not being fed for the market, while the grain and all other feed that have been left by the cattle are thrown into the swill barrel, to be fed to sows and young pigs.

Several different kinds of feed are used, such as corn, ground oats, oil cake, silage, as well as clover, pea hay and timothy hay cut together and moistened, then covered with wheat bran and middlings.

Each animal is thoroughly cleaned and rubbed off each morning with a brush and soft woolen cloth, and all voidings and other matter which will not rub off easily are removed by warm water and a cloth or sponge, and afterwards the animal is rubbed until he is thoroughly dry. By pursuing the above course I have been troubled little with scours or cattle getting off their feed for a few days. —William Hardy, R. F. D. 1, Tunnel Hill, Ill.

PROFITABLE DAIRYING.

A very elegant, illustrated, cloth-bound book of 200 pages is called **Profitable Dairying.** It is all good, satisfactory reading matter relating to the successful management of the dairy business under all circumstances, including the management of the cows and construction of the barn. We have discovered this book lately and we find that there is a better demand for it than for all other dairy books combined. For one dollar we will send

The National Farmer and Stock Grower for two years and we will send the book, **Profitable Dairying,** as a premium. Address,

Apple Market Overstocked.

On October 16th it was reported that the St. Louis apple market was overstocked. The official report then said:

"St. Louis is overstocked with apples, and heavy shipments arriving on the St. Louis levee from Calhoun, Ill., and elsewhere, are finding slow sales, and the prices are weak. Heavy shipments have been made for the last several weeks, already having filled speculative as well as legitimate wants. Most of the apples offered for the local market in the last week are of the inferior or only fair Ben Davis variety that will not keep in storage.

"Scarcity of teams and laborers has been another factor in making the movement of the apples from the boats and away from the levee slow. Two boats arrived on the 15th with 3,500 barrels, which were added to several thousand barrels then unsold. Some of the choice varieties sold for $2.50 and even $2.75 per barrel, but most of the sales were of Ben Davis apples bringing $1.00 and $1.25, with an occasional price of $1.50 and $1.65 for choice lots."

Quality—or Price?

In buying tools, as in buying anything else, the temptation is strong to save something on the price at the expense of quality. Yet the *extra cost* of high-grade tools over inferior tools is *small.* And the difference in *results* is *great.*

Tool requirements on the farm particularly, call for the greater efficiency, ease in working and lasting qualities of

DISSTON

SAWS TOOLS FILES

Sold by all Progressive Hardware Dealers

This is such an important subject that we have published a valuable and handsome book—"Disston Saws and Tools for the Farm". Every farmer should read it for helpful and valuable Tool information and suggestions, directions for the care of Tools and other data.

Simply write for the "Disston Farm Tool Book", and it will be sent free by return mail.

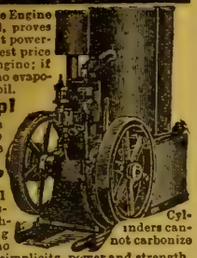
Japanese Stock Raising.

Dr. Issa Tanimura, Live Stock Commissioner of the Japanese government, has just returned to his home from a visit to this country, and prior to sailing he advised the Chief of the Live Stock Department of the Panama-Pacific International Exposition that it would be his purpose to induce his government not only to make a live stock display at San Francisco in 1915, but to purchase many of the best specimens of the various breeds of cattle, sheep, horses and swine. It is Dr. Tanimura's belief that Korea and Manchuria are especially adapted for the production of cattle, horses, sheep and swine on a large scale. He says that alfalfa grows naturally in those countries and that there are vast plains which are covered with good grass. He expects the live stock industry to play a prominent part in the food development of Japan.

Cattle to the Square Mile.

The United States has 23 cattle to the square mile; Argentina, 26; Great Britain, 97; Germany, 99; Denmark, 144; and Belgium, 164. There is room in the United States to raise 300,000,000 cattle.

Use KEROSENE Engine Free!



Amazing "DETROIT" Kerosene Engine shipped on 15 days' FREE Trial, proves kerosene cheapest, safest, most powerful fuel. If satisfied, pay lowest price ever given on reliable farm engine; if not, pay nothing. No waste, no evaporation, no explosion from coal oil.

Gasoline Going Up!

Gasoline is 9c to 15c higher than coal oil. Still going up. Two pints of coal oil do work of three pints gasoline.

Amazing "DETROIT"

—only engine running on coal oil successfully, uses alcohol, gasoline and benzine, too. Starts without cranking. Only three moving parts—no cams—no sprockets—no gears—no valves—the utmost in simplicity, power and strength. Cylinders cannot carbonize. Mounted on skids. All sizes, 2 to 20 h. p., in stock ready to ship. Engine tested before crating. Comes all ready to run. Pumps, saws, threshes, churns, separates milk, grinds feed, shells corn, runs home electric lighting plant. Prices (stripped), $29.50 up. Sent any place on 15 days' Free Trial. Don't buy an engine till you investigate the money-saving, power-saving "DETROIT." Thousands in use. Costs only postal to find out. If you are first in your neighborhood to write, you get Special Extra-Low Introductory price. Write! (138)

Detroit Engine Works, 383 Bellevue Ave., Detroit, Mich.

BUTTER AND CHEESE WANTED.

Population Increasing Faster Than the Supply is Increased.

No overproduction of butter and cheese in the United States need be feared, says Prof. G. H. Benkendorf, of the College of Agriculture of the University of Wisconsin. The population of the United States increased 46.8 per cent. from 1890 to 1910, yet the total production of farm and factory butter increased only 34.4 per cent.

Figuring the exports and imports, the butter actually consumed in the United States has increased 37.4 per cent. Since the population increased 46.8 per cent., the amount of butter eaten by each person is only 93.6 per cent. of the amount in 1890. The total cheese maufactured increased 24.9 per cent., or only about half as fast as the population. Greater increase in population than in the supply of butter and cheese accounts in part for the increased prices, while the higher prices probably account for the reduction in amount eaten per person.

BENEFIT OF CONTESTS

Results in a Gradual Improvement in Workmanship in Making Butter.

Buttermakers are not always responsible for the flavor of the butter that they send to the market or to the Scoring Exhibitions conducted by the Dairy Department of the College of Agriculture, University of Wisconsin. They are, however, directly to blame if the latter is not perfect in color or if the salt is too high or too low or gritty. There has been a marked improvement during the past three years in the workmanship of the butter.

At the State Fair, 30.3 per cent. of the butter made by men who have never sent butter to the Scoring Exhibitions was cut in score for imperfect body, color, or salt. Another 18.3 per cent. of the butter made by these men was criticised by the judges as being defective in workmanship, but not enough to warrant a cut.

Only 16.4 per cent. of the butter made by the men who have sent butter to Madison since May this year was defective in workmanship. It pays to exhibit butter and have it judged.

Tests to Detect Oleo.

Guy S. Ellis, of the Iowa State College, concludes an article upon oleomargarine by saying:

"Inasmuch as there are so many people unable to tell oleomargarine from butter, perhaps in closing this article it might be worth while to give a few means of detection of this product. These two tests can be performed by the housewife and are very simple but accurate tests. Oleomargarine and renovated butter boil noisily, sputtering like a mixture of grease and water when boiled, and they produce but little or no foam. Renovated butter produces usually a very small amount of foam, while pure butter boils with less noise and produces an abundance of foam.

"Another method is to put half a cup of sweet skim milk or distilled water in a dish and heat close to boiling, then add a piece of butter or oleomargarine about the size of a good hazel nut. Stir with a match until the butter or oleomargarine is melted, then cool as quickly as possible and stir until the temperature falls sufficiently for the fat to congeal. If oleomargarine, the fat can be collected into one lump by means of the small stick, while if pure butter or renovated butter, the fat will granulate and it cannot collect."

A Quality Butter Brand.

It appears that in Denmark certain creameries of established reputation have the right to apply what is called the "Lur-Brand" to their productions as a guarantee of quality, and the butter is sold with the support of that recommendation. A compulsory examination at stated times is necessary to insure the right to use the brand.

Recent regulations by the Danish Commissioner of Agriculture provide that if any butter does not reach a certain number of points as to quality, the dairy will be warned that it is in danger of losing the right to carry the brand and will be advised to call an expert to investigate the conditions in the dairy and help to improve the quality of the butter, when, after a time, the laboratory will again call a cask for examination. If quality is still below the fixed standard, the dairy will be deprived of the right to use the "Lur" until it has managed to improve the quality of the produce. Under certain conditions the dairies can be deprived of the right to carry the brand without any warning beforehand.

Be quick!—find out now about

Indian Land Sale in Oklahoma

Nov. 12th to Dec. 23rd

November 12th begins your opportunity to secure some of that rich land so long held for the Indians—*now* to be sold at *Public Auction* by the U. S. Government. Eight hundred and twenty thousand acres! —over 11,000 separate tracts. Never again will you have *so many* chances to secure, at *your own price,* a tract of land that in size, character and location will just suit you.

Title guaranteed by Government
25% down—balance in 2 years

and residence is *not* required. Its only a few days until the first sale begins. You must act *quickly.* You'll be *glad* that you got on the ground in time to bid.

Low fares via Frisco Lines

from Chicago, St. Louis, Kansas City and other points. The Frisco Lines have 1,500 miles of track in Oklahoma, reaching most every point of sale. Your ticket via Frisco Lines gives you the privilege to go one way and return another, so that—at no extra cost—you can attend *many more sales* than would be possible on a trip going and returning the same way. Don't fail to attend this sale; next year there may not *be any Indian lands left.*

Get our free book-mail this today!

Tells character of lands, dates of sales, terms, acreage at each point, cost of reduced fares & gives a colored big county map of Oklahoma, showing just how to arrange your trip via Frisco. *Mail coupon today.*

THE BOOK OF LIVE STOCK CHAMPIONS.

Edition of 1912—Now Ready For Delivery.

True to Life Pictures Reproduced From Photographs Taken in the Principal Show Rings of the American Continent by the Greatest Animal Artists.

This is a new edition of the most valuable book ever published in the interest of high-class stock raising. The pictures in the Book of Live Stock Champions are of famous animals. There are sweepstakes and championship winners at State, National and International Fairs and Expositions. These include individual awards in breeders' competitions, also herds with prize-ring honors; the beef cattle include grand champion steers and car-loads; the dairy cattle include record makers and large producers of milk and butter; the horses include thoroughbred, trotting, coach, draft, hunters, ponies, jack stock, etc. Hogs, sheep and goats are represented by the best in every breed. The book is elegantly bound in blue cloth, 352 pages, with nearly 750 separate and distinct illustrations, one, two, five or more champions to the page.

There is not a second-class animal or inferior picture in the book. Every animal is a record-maker, record-breaker, mother of champions, or winner in the prize ring.

For example, at the St. Louis Horse Show just closed, in the great saddle horse ring, on the last day, Missouri King won the blue, Kentucky's Choice won the red, and Gingerbread Man the third prize. Well—Missouri King is on page 123; Kentucky's Choice is on page 328; and Gingerbread Man is on page 346 of the Book of Live Stock Champions. Uhlan, recently reducing the trotting record, is on page 334; and Astral King is on page 330. It is an up-to-date book for first-class stockmen.

Issued as a Souvenir Supplement.

The Book of Live Stock Champions is published as a Souvenir Supplement to The National Farmer and Stock Grower, issued monthly at St. Louis, Mo., a splendid, clean, general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. There are thirty-two pages, four columns to the page.

Special inducements to paid-in-advance subscribers, to old friends and patrons. We offer the first ten thousand copies of this edition at One Dollar per copy, including a two-year subscription to The National Farmer and Stock Grower. The first ten thousand copies are handsomely printed on coated paper and elegantly bound in blue cloth, with gilt title. This is an extraordinary offer.

HERE IS A SUBSCRIPTION BLANK.

Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen:—Herewith please find One Dollar to pay for two-years' subscription to The National Farmer and Stock Grower, for which please give me credit. You will please send me as a Souvenir Supplement, post free, safe delivery guaranteed, one copy of the Book of Live Stock Champions, cloth-bound edition of 1912.

Seed Testing For Missouri Farmers.

A seed-testing laboratory for the benefit of Missouri farmers and seedsmen is being operated at the Agricultural College at Columbia, in co-operation with the United States Department of Agriculture. The tests of seeds are made free of charge, and it is to the advantage of both farmers and seedsmen to make use of this opportunity of having seeds tested.

There is a considerable number of pernicious weeds being distributed over the state in various kinds of grasses and clovers and some of these are very troublesome pests. The increase of dodder in clover seed samples in Missouri during the last few years is alarming. Great numbers of clover fields are infested with this plant, and it is one of the most dangerous pests with which farmers have to deal. The danger from dodder alone should be sufficient to warrant men having all clover seeds tested which they use upon their farms.

Seed for tests should be sent in care of the Seed Testing Laboratory, Columbia, Mo. For small seeds, like grasses and clovers, a tablespoonful is sufficient; for large seeds, such as wheat, oats, etc., three or four tablespoonfuls should be submitted. These samples should bear the name and address of the sender and a letter should accompany them, stating whether a purity test is wanted, or whether the seed is to be tested for both purity and germination. Where a purity test is desired, a report can usually be returned within a week. Where a germination test is desired, it takes a few days longer. Certain of the grass seeds, like blue grass, require approximately a month for a germination test.

It is to the interest of farmers to know exactly the character of the seed they are sowing. This information is at the disposal of the farmers of Missouri, through this laboratory, with no cost to them. The idea in maintaining this laboratory is to give both seedsmen and farmers an opportunity of knowing the character of the seeds they are handling and to educate all to the importance of using high-grade seeds.—M. F. Miller, College of Agriculture and Experiment Station, Columbia, Mo.

SILOS AND SILAGE.

Instructive Article Based Upon Experimental Results.

Several Agricultural Experiment Station bulletins have just come to hand from different stations on these two subjects, and it will be well to consider them all in one article.

While the silo in the United States dates from 1875, and the first book on the subject was published in France in 1877, giving the author's experience for twenty-five years, many people think of the silo as something quite new, and thousands of American farmers have never seen a silo; hence it will not be amiss to state a few fundamental facts and principles.

Everybody is more or less familiar with canned goods—how the exclusion of the air and its germs of decay from fresh fruits and vegetables preserves them in their natural state for future use. Now, a silo may be regarded as a huge can, and silage as canned forage.

The Greeks and Romans preserved green forage in pits dug in the earth, and the first silos in Northern and Western Europe were of this type. Next, silos were constructed partly above the ground. But there is greater convenience in handling silage when the silo is built entirely above the ground.

In order to exclude the air, silage must be cut into short lengths so that it will pack close, and it must either contain enough juice to fill all the little spaces between these pieces, or enough water must be added to serve the same purpose. Machines of many kinds are on the market for cutting silage and elevating it to the top of the tallest silo with great rapidity—fast enough to keep six or more teams busy hauling the forage from the field to the cutter. For the purpose of excluding the air, the silo should be round, as air will get in at the corners of a square silo. The inner surface of the wall must be perfectly smooth, in order to facilitate the setting of the silage, and one or two men should be kept in the silo to distribute the silage evenly over the surface as the machine dumps it in, and to tramp it firm next to the wall.

Since the greater the depth of the mass of silage the firmer will its own weight pack it by settling, the silo should not be less than thirty feet high, and if more than forty feet high the expense of filling is too great. About thirty-six to forty feet is advisable.

Among the many advantages of storing feed in a silo rather than drying it and then stacking it or storing it under shelter are the following:

First, and most important, the silo offers the only means of preserving and utilizing the entire feeding value of the forage. For instance, it has been ascertained that when the corn plant reaches the state of maturity, when the grain passes from the milk state to the dough state, there is stored in the plant—stalk, blades, husk and ear—a greater quantity of digestible nutrients than at any other stage, and if it be cut and stored in the silo then, there is no loss; but when left to be handled in the ordinary way there is a loss of 25 to 40 per cent—equal to a loss of twenty-five to forty bushels out of every 100. When the points of the husk turn brown and the grains dent is the proper stage to cut corn for the silo. Sorghum should be cut when the seed are in the dough.

Second, a crop of corn or sorghum when ensiloed is harvested and stored away much more rapidly and economically, is stored in much less space, and is more convenient to feed out than when handled in the ordinary way.

Third, in the form of silage, the feed is much more palatable, more easily digested, keeps stock in better health and keeps up the flow of milk and the June grass color of the butter all winter, and even through a summer drouth.

Bulletin No. 70 of the Missouri Station, by C. H. Eckles, states that a crop of corn yielding thirty bushels to the acre will make six tons or silage to the acre, and that if the number of bushels per acre be divided by five the result will be the number of tons of silage per acre. Thus, forty bushels make eight tons, fifty bushels ten tons, sixty bushels twelve tons, and so on.

Mr. Eckles thinks that forty pounds of silage a day is as much as any animal should require, and at this rate ten cows would require thirty-six tons for six months, or 180 days; twelve cows forty-three tons, fifteen cows fifty-four tons, twenty cows seventy-two tons, twenty-five cows ninety tons, thirty cows 108 tons, and so on.

A round silo thirty-six feet high will hold the following number of tons according to inside diameter: Diameter of ten feet, fifty-seven tons; twelve feet, eighty-two tons; fourteen feet, 114 tons; sixteen feet, 158 tons; eighteeen feet, 194 tons.

While the silo may be constructed of wood, brick, stone, sheet iron or concrete, probably nine-tenths of the silos built within the last two years have been made either of wooden staves or reinforced concrete. If well constructed, one of these preserves the silage as well as the other. The concrete silo has the advantage of being fire-proof, less likely to be blown down, does not shrink apart when empty and dried out, and it is practically everlasting. The same remarks apply to silos of fire clay.

The stave silo lasts eight to ten years if made of untreated pine staves and fifteen years if made of cypress. If the staves be creosoted, they last longer and shrink less. The firms that advertise stave silos will send literature telling how to erect them, anchor them and care for them.

The concrete silo should be made with wall fifteen inches thick, using curved cores to make flues six by eighteen inches extending from the ground to the top and separated by four-inch walls, tying the outer and inner wall together. The outer wall should be five inches thick and the inner wall four inches thick; the outer and inner forms should be three to five feet high, so that a three to five-foot section of the entire silo can be constructed each day. These forms can be hoisted by block and tackle for the next section, and the cores can be hoisted by hand. Barb wire can be used for re-enforcing, imbedding several strands of it in the outer surface of that wall, every foot in height. Wire from an abandoned fence will do if not too much weakened by rust. Though a round wall fifteen inches thick is not likely to be blown over, upright steel rods may be used in the cross partitions between flues. When completed, both the outer and inner surfaces should be given a good waterproofing of cement and water about as thick as good cream applied with a wide stiff brush. The foundation and cement floor should be three feet under ground, and the floor at least six inches thick.

A silo thus constructed will be damp-proof and also frost-proof in the coldest climate, if on the south side of the barn. If the concrete mixture consist of one part good cement, two parts clean, sharp sand and four parts clean gravel or crushed stone, this sort of silo sixteen feet in diameter and thirty-six feet high should not cost more than $350—$200 for the material, $50 for the forms and $100 for the work—and it is good for all time and will hold 158 tons, which is enough to feed fifty cows for six months.

Minute directions, with illustrations for constructing the forms and for laying the foundation and erecting several types of silo will be found in Bulletin No. 214 of the Wisconsin Station, Madison, Wis., and Circular No. 15 of the Oklahoma Station, Stillwater, Okla.

EGG-LAYING CONTEST.

Splendid Results of Pens of five Hens —Record For Single Hen, 281 Eggs in the Year.

The Missouri National Egg-laying Contest at Mountain Grove, Mo., was concluded on October 31st, 1912. A White Plymouth Rock, Lady Showyou, lay 281 eggs in twelve months. The second record by a Rose Comb R. I. Red was 255 eggs; and the third record was by a Barred Plymouth Rock with 245 eggs. There were 656 hens in the contest and the average was 134 eggs per hen and a fraction over.

The best pen record, five hens to pen, was by R. C. Rhode Island Reds, 1,042 eggs; second, White Wyandottes, 1,015 eggs; third, S. C. W. Leghorns, 991 eggs; fourth, B. P. Rocks, 967 eggs. In egg laying, four months—March, April, May and June—were equal to all the balance of the year. Strange to say, the 991 eggs from the Leghorn pen, winning third prize, the eggs weighing 131 pounds 2 ounces, outweighed the 1,042 eggs of the winning pen. Fifty-nine hens lay 200 eggs or more and eighteen lay 220 eggs or more in the year. The pen containing the hen laying 281 eggs was thirteenth in the list of pens. The hen laying the most eggs was owned by J. A. Bickerdike, of Millersville, Ill., and the owner of the winning pen was D. E. Hall, of California, Mo. More of this in our December number. The next egg-laying contest, starting November 15th, is full of entries. Mr. T. E. Quisenberry is Manager.

Commercial furs sold on the St. Louis market include raccoon, mink, otter, beaver, gray fox, red fox, opossum, skunk, muskrat, bear, wolf, wild cat, house cat, civit cat, badger, fisher, marten, lynx, cayote, etc.

A MARKET FOR FURS.

St. Louis the Concentration Center For North American Trappers.

The civilized population of the world is increasing and the wild countries are being settled, or, as we might say, domesticated. The same influences that bring about the high cost of living, so far as food is concerned, also account for the high price of furs. And yet, astonishing to relate, the fur business is increasing, or at least is concentrating. Formerly small lots of furs and pelts collected by traders drifted eastward without any particular stopping place until reaching the Eastern coast. What became of them, how they were graded, where they all went to, did not appear on the surface, and what furs and pelts were really worth at the final market was not known outside of the select in the trade.

St. Louis was always a good fur market; in fact, was the center of the fur trade a hundred years ago. It was one of the few cities where quotations were published, where furs were concentrated. It was always a market to do business with the trader and trapper, and the Mississippi river was in olden days a considerable factor in concentrating consignments at St. Louis.

It is even stated that St. Louis handles to-day 60 per cent. of all the furs trapped in North America. It is certain that consignments are received from Alaska, Canada, and every state in the Union and from Mexico.

In recent years St. Louis has added to business facilities by establishing a Fur Exchange, and one influence of the movement is to bring to St. Louis the buyers representing the people who dress the hides and furs, thereby bringing the original fur trapper a step nearer to the gentleman who is called the "ultimate consumer," and one reason why St.Louis has been able to net more money for first-hand shippers is the step forward in selling to consuming buyers or to exporters, who now come to St. Louis and make sure of the grades and qualities desired, instead of as formerly, waiting at the seacoast for the furs to be sold over and over again before reaching them.

St. Louis is a quick cash market and indulges in no sleepy tactics. Public sales are held and sealed bids received. The furs are sold to the amount of ten to twelve million dollars a year. St. Louis is the leading fur market in the country and has reached the prominent position on good business methods and activity in pushing them. This article does not presume to say that St. Louis is the only fur market. The fur trade is larger than any one city can handle.

PELTS, FURS, WOOL, HIDES, ETC.

Every house engaged in the fur trade will send a list of prices they pay at the time. These lists make three territorial distinctions: Southern, Central and Northern, and nearly all furs are figured as large, medium and small.

Recent wool prices on the St.Louis market: Near-by growth at 25c. for low to 26½c. for choice; fine at 17c. for heavy to 22c. for light; lambs' at 20 to 22c.; burry at 16c. for hard to 22c. for slight; Southwestern at from 13c. for hard burry up to 25½c. for clear; fall clip or loose, 18 to 22c., and fine, 13c. for sandy to 20c. for light; Northern or Western at 22c. for dark to 25½c. for bright medium, 14 to 20c. for fine, and 14c. for hard burry, to 21c. for slightly burry; tub-washed at 25c. for burry to 36c. for clear; Angora goat at 15c. for burry to 30c. for choice.

Recent prices at St. Louis for hides: Wet salted—Round, 14¼c.; No. 1, 14½c.; No. 2, 13½c.; bull, 10½c.; glue stock, 8c. Dry stock—Flint, round, 25c.; salted, 22c.; flint, bull, 18c.; culls, 16c. Uncured, 1c. per pound less; part cured, ½c. per pound less. No. 1 horse hides, $3.25 each; No. 2 horse hides, $2.25; glue and pony, $1.50 to $2.00; hog hides, 30c. for average—glue and pigs half price. Sheep pelts—Green or dry late kill at 60 to 90c.; late kill or small, 10 to 60c. Goat skins at 20 to 35c. each; kids, 5 to 15c.

The wholesale market for feathers at St. Louis was quoted as follows on November 1st: Prime white live goose, 63c.; prime gray, 44c.; old white, 36 to 38c.; x, 27 to 31c.; xx, 15 to 18c.; xxx, 7 to 10c.; xxxx, 3c.; tare, 10 per cent. on small sacks and 3 per cent. on large. Duck—White, 41c.; dark, 30c. Chicken—Prime dry-picked body, 3c.; wet, damp and quill-mixed, 2c.

KANSAS CITY HAY PRESS CO., 425 Mill St., Kansas City, Mo.

FRUIT-GROWING BOOK.

The Strawberry Crop Surpasses in Yield and Value All Other Small Fruits Combined.

The Strawberry Culturist is a handy little jewel of a book. It is

by Andrew S. Fuller, one of the greatest horticulturists. It contains all the necessary information to enable everybody to raise their own strawberries. It is fully illustrated; bound in flexible cloth; is 5x7 inches. The strawberry crop is equal to all the other small fruit crops combined. This little book contains that which a beginner should have to start on and an expert needs to rely on. We will send a copy of the Strawberry Culturist post free by mail and The National Farmer and Stock Grower for one year for fifty (50) cents. This is a splendid opportunity to get a good farm paper and a valuable book as a premium. An average crop of strawberries is 1,701 quarts to the acre. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

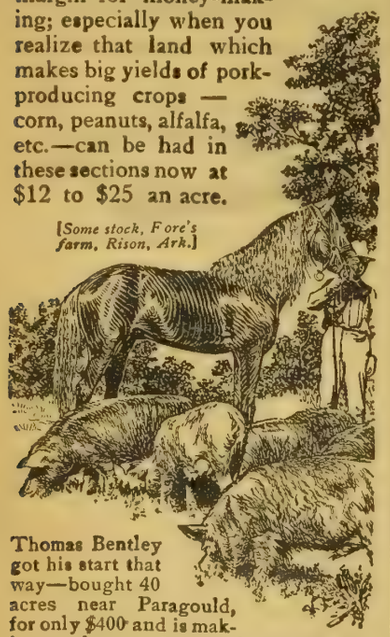
Funsten Bros. & Co., 323 Funsten Building, St. Louis, Mo.

You can produce pork at 1½c per lb.

in Arkansas and Texas; and with pork bringing 8¢ to 9¢, there's a big margin for money-making; especially when you realize that land which makes big yields of pork-producing crops — corn, peanuts, alfalfa, etc.—can be had in these sections now at $12 to $25 an acre.



[Some stock, Fore's farm, Rison, Ark.]

Thomas Bentley got his start that way—bought 40 acres near Paragould, for only $400 and is making good money from his hogs and cows. His place is worth more than $3000 today. T. B. Fore of Rison, Ark., has lifted a mortgage off a fine 157-acre farm through his profits from hogs, cattle and horses. Mr. Fore raises *all his own feedstuffs*. All along the

Cotton Belt Route in Arkansas and Texas

you'll find many a man who is getting more profit *every year* than his land cost him. Gus Palmer, who lives just below the Arkansas line, near Shreveport, La., sold $2100 of alfalfa from 30 acres—a profit of $70 per acre. J. E. Gandy paid $3000 for an improved farm near Mt. Vernon, Texas; and the local people thought he'd paid too much. Since then he's refused offers of $7500 for his place.

These lands won't stay cheap always. They have already doubled in value since 1905; but even this year you can buy at $12 to $25 per acre, as good land there as you are farming now. And you'd have *every* advantage of schools, churches, close neighbors, good local markets, phones, rural free delivery, etc. This proposition deserves serious thought.

On the 1st and 3rd Tuesdays of each month there are low round trip excursions to Arkansas and Texas via Cotton Belt Route, allowing 25 days' time and free stopovers. Go on the *next* one.

Get our free books!

Written by a farm man who knows farming from A to Z. He traveled over thousands of miles in these sections to learn where the *real* farm opportunities were—the kind he knew *you* would grasp if you saw them. He tells you, in plain words, all about them. 100 pages and farm pictures. Send a postal today for your *free* copies.

COTTON BELT ROUTE

Fortunes in Pigs.

Fortunes have been made in pigs in the past, and more fortunes will be made in pigs in the years to come.

The population of the world is growing, and with that growth there is an increasing appetite for pig flesh. We might say with truth that the appetite for pig flesh is growing faster than the population. Every part of the world is now a market for pig flesh, for there is no meat in the world that can be kept fresh so perfectly as can smoked pork.

The demand for pork is so world-wide that the price will always be good. With an assured market, one-half of the problem is solved.

The shortness of the time in which pork may be produced is another factor in making fortunes from pork, increasingly numerous. While it takes years to produce beef, it takes but months to produce pork. The rapidity with which a deficiency in the supply may be made up is all in favor of the pigs. When the beef supply runs low, it requires years to re-establish the natural relationship between supply and demand, but not so with the pig.

The great fecundity of the pig is the principal basis for the fortunes that have been made in producing pig flesh. From six to ten at a litter, and that twice a year, means a production of vast numbers in a short time. Then, too, the pig begins to produce very early in life.

The pig is, in large part, a grazing animal, and is willing to eat almost anything. His support becomes a question of producing green feed, which the pig will harvest himself.

The man that can grow clover and alfalfa and corn is equipped for the making of pig pork at a cost that will yield a profit at any price likely to be paid for pork; that is, the price is not likely to ever again go low enough so that a man that can grow both his protein feeds and his starchy feeds cannot make money.

Next to the feed question comes that of protecting the pigs from disease. Up to the present time the surest method of keeping disease away from pigs is to keep them clean and protect them from the introduction of disease germs. Keeping them clean includes keeping away lice, which are means of inoculating pigs with disease germs.

The pig, like the chicken, can be raised almost everywhere, on the fifty-foot lot in the city (where the ordinances do not permit it) and on the great farm. It is observed that the solitary pig of the householder in the village seldom or never falls a prey to hog cholera or swine plague, probably because he is kept from contamination.

The larger the herd of swine the greater is the chance for a disease to get a foothold. Therefore many swine raisers are now dividing their swine into small groups placed in different parts of the farm.

The study of the raising and feeding of pigs is one of the most profitable branches of agricultural education that can be introduced on the farm.

A MEAT-MARKET RIOT.

Resisting Retail Butcher Monopoly in Berlin.

On October 3d, at Berlin, the capital city of Prussia, the retail butchers were given a touch of high life when hundreds of housewives joined in a wild riot at the municipal market because the retail butchers refused to handle imported and cheaper meats than the native German productions.

So far as we understand the situation, in addition to the tariff duties collected upon all meat imports, the German government has always imposed many restrictions, some of them proper regulations and some for the purpose of blockading the trade. In short, the government has protected German meat productions against importations by reasonable and unreasonable means until it is apparent that German farmers cannot feed the German people and now some foreign meats are admitted. It appears, however, that the butchers at the municipal markets had some ideas of their own, and they decided to boycott the foreign beef, thinking that without their consent it could not be sold.

But they made a mistake. The wives of the working people went by hundreds to the municipal market, hoping to profit by reduced prices for the cheaper quality meats, and found that the butchers had agreed not to deal in meats imported by the municipality. They stormed the butchers' stalls, seized all the native-raised meat, trampled it on the ground and fought with the butchers. The police were forced to close the market to stop the riot.

It appears as though the municipal authorities have taken a hand in the beef trade by importing meats and requiring the butchers in the public markets to handle it under certain conditions; but that has resulted in the butchers resisting the orders.

As the butchers cannot sell meats at public markets without a license, the controversy will end by their accepting the situation.

E. Myers, President, E. Myers Lye Company

How and Why Merry War Powdered Lye Makes Bigger Hog Profits

A well known authority on the subject of Hog Raising says; "Many hog raisers find it unprofitable to feed hogs after they weigh 200 pounds; the next 100 pounds costs too much. The secret of cheap production is first to grow strong frames on diversified grain and forage crops, *always keeping the hogs keen in appetite*, then giving them a high finishing feed to which they will respond."

How To Keep Hogs Always Keen In Appetite

The surest and cheapest way of keeping hogs so is by feeding *Merry War POWDERED Lye daily* with their rations. *Then* when ready for their topping off they will *quickly* put on *FAT* with the change of food—there is *no waste* of feed—every pound of corn is changed into *profit making pork*, because every bit of feed is fully digested—and instead of taking the usual 5 to 6 weeks to put on an extra 50 pounds of live weight, your *Merry War POWDERED Lye* hog will add that extra 50 lbs. in 3 or 4 weeks—a clear *saving* in time and feed.

Prevents Hog Cholera

Merry War POWDERED Lye not only keeps hogs *keen in appetite* from weaning till market time—healthy, strong and in prime condition for quickest and cheapest fattening—but it also *prevents hog cholera* and *protects* hogs from that dreaded disease. You need it as part of the *daily* rations of your hogs. *Costs only 5c per month*, per hog for complete *protection*. (*2 FEEDS PER DAY.*) *There are no substitutes. Merry War POWDERED Lye* is a *specially prepared, Powdered* Lye that *will prevent hog cholera*. The use of ordinary, old fashioned lye for hogs would be but a doubtful experiment—perhaps a most *dangerous* one. You can't afford to take chances. The actual *experience* of thousands of hog raisers has *proved* the real merits of *time-tried Merry War POWDERED Lye*—the greatest hog remedy the world has ever known.

"Merry War" Gave These Hogs Keen Appetites

"Our seventy head of hogs have fattened fine since feeding *Merry War POWDERED Lye*. They like the slop better with *Merry War POWDERED Lye*. My husband said: "It does our hogs good and helps digest the corn they eat."

MRS. EMMA WUTTKE, Richmond. Mo.

CURE THE HORSE'S COUGH.

At this season of the year every horse owner notes with solicitude any appearance of trouble with his horse. A cough is a usual beginning of more serious troubles, a trifling cause is often the beginning of a slight cold, and this with other slight exposures from time to time increase the severity of the ailment. Ninety per cent. of the horse owners have had experience with Frazier's Distemper Cure. It is the great germ destroyer which gives tone to the system of the horse, so that it will the better resist the approach of the irritation which occasions the cough. A dollar bottle holds three 50-cent size bottles. All druggists sell it on a strict guarantee to give satisfaction or return the money. Write for thirty-two-page horse booklet to the Binkley Medical Co., Dept. H, Nappanee, Ind.

At Springfield, Ill., October 16th, the State Anti-horse Thief Association decided to ask the State Legislature to pass a law which will make it an offense to trespass on property owned by farmers.

AN ABSOLUTE NECESSITY ON A FARM.

Every Farm Ought to Have an Extra Wrench or Two, Especially When That Wrench is the Crocodile Wrench Premium—Actually Six Handy Farm Tools in One—A Pipe Wrench, a Nut Wrench, Three Dies For Cleaning or Cutting Threads and a Screwdriver.

$985 Overland 1913 $985

Completely Equipped

The Fastest Selling Car in America

BEFORE we announced this car we had signed contracts for over 39,000. Yet we had planned to limit our 1913 production to 40,000 cars. We are now shipping 150 cars a day. Yet we could ship 500 a day if we could make them. Right now we are over 3,000 cars behind our immediate shipping orders. We have been in this condition for the last 30 days. It is beginning to look as if we never could catch up.

Practically every important 1913 announcement has been made. A careful examination of these announcements will prove precisely what we have been claiming —that there is not a $1,200 car built that has any more practical value to offer than this one for $985.

And here are the comparative facts which support this seemingly bold statement.

Automobile values must be looked at from several different angles. You must consider not only the price, but what that price buys you. You must take into consideration the power, the strength, the beauty, the construction, the size, the appearance and the equipment of the car. You must judge a car by the material in it; the workmanship on it; the methods employed to produce it. and last but not least, the facilities behind the production methods.

Examine each one of these fundamentals in this Overland at $985 and you will find a car that is identical with any $1,200 car in the world. Go further and you find high-grade construction and painstaking care in finish that equal the production methods employed in the making of any $5,000 car you know of.

This car has the power of a $1,200 car; it has the strength of a $1,200 car; it has the size of a $1,200 car; it has the seating capacity of a $1,200 car. it has the wheel base of a $1,200 car; it has the chassis construction of a $1,200 car. it has the comfort of a $1,200 car; it has the beauty and finish of a $1,200 car.

Take the equipment item alone. It has a Warner speedometer—the best made; it has a fine mohair top and boot; it has a clear vision wind shield; it has a self-starter and Prestolite tank—every practical accessory made for an automobile. And all for the one price—$985. There are no "extras."

Then there are those important construction features which are only found on the very high-priced cars. This model has a drop-forged I beam section front axle, fitted with the famous Timken bearings; a three-quarter floating rear axle fitted with Hyatt bearings. a selective transmission, with three speeds forward and reverse, fitted with annular bearings, and a cold rolled pressed steel frame. It has the center control. The brakes are unnsually large for a a car of this size and power, and are ample for cars of much greater weight. There are two powerful sets of the drum type, internal expanding and external contracting. The great braking surface of these is indicated by their dimensions, 13 inches by 2¼ inches each. These are the brake dimensions you find on $1,500 cars. Pick up the catalogue of any $1,500 car and see for yourself. The springs are semi-elliptic front, three-quarter elliptic rear. Each spring has six leaves. Tires are 32x3½. Q. D.

This model is superbly finished. The striking body is in dark Overland blue. Battleship Gray wheels harmonize perfectly with the rich, dark body which is trimmed in black and nickel plate.

How can we market this car at this price? By making 40,000 cars a year. Increased production brings decreased selling prices. There is the answer in six small words.

If we could bring you fully to realize the size of our huge organization, you would more fully appreciate and understand the value of this car and why we can do what others cannot.

The demand for this car has already swamped the entire visible supply for the 1913 season. It has actually simmered down to a mere allotment proposition. So if you want an Overland "69" get your order in quick.

Any man who pays over $985 for a completely equipped 30 horsepower, five passenger touring car of this type and size is just wasting money.

See this model "69" at the Overland salesroom in your city at once. Order early if you want it early. Handsome catalogue on request. Write today, addressing Department 89.

W. F. YOUNG, P.D.F., 106 Temple St., Springfield, Mass.

Rock Sand Gone Home.

Rock Sand, the famous thoroughbred stallion, winner in England of the Triple Crown, and a sire of renown in the United States, returned to England on the Minnewaska on October 29th. August Belmont, the breeder of thoroughbreds, sold him to an English Syndicate for $150,000. Rock Sand is one of the many thoroughbred horses in the Book of Live Stock Champions advertised on page 11, and will be found on page 333 in the book.

MILITARY HORSES FOR THE ARTILLERY BRANCH OF THE SERVICE—Delivered by T. H. Holland, Contractor, at the National Stock Yards, Ill., to the Depot Quartermaster at St. Louis.

Canadian Cattle Cause Sensation in Chicago.

That Canada offers limitless opportunities for the cattle raiser was again proved recently by the arrival at the Chicago yards of a shipment of grass-fed Herefords from Alberta that caused a real sensation by bringing as high as $10.50 per 100 pounds, fully 75 cents higher than grass-fed Westerns ever brought before. These cattle were grazed in the High River country, south of Calgary, and at other points along the lines of the Canadian Northern Railway. Old-time traders at the yards proclaimed this as the finest lot of grass-feds that ever reached Chicago.

The early settlers in the Alberta region, as well as the newcomers, are more and more turning their attention to cattle raising, which is proving more profitable each year, especially in this region, where there is still so much land available for grazing purposes.

The Demand For Draft Horses.

Nothing shows the demand for draft horses better than the sales of pure-bred stock of the leading importers. Trumans' Pioneer Stud Farm, Bushnell, Ill., wrote as follows on the last day of October: "Dear Sir:—During October we have made the following sales: To our old customer, Hugh McCormick, of Sangamon county, Illinois, the imported three-year-old Shire mare, Pattie, winner of first at the Iowa, Minnesota, Wisconsin and Illinois State Fairs this year. He also purchased the two-year-old prize-winning filly, Crocus, and the dapple-gray aged Shire mare, Diamond, weighing over 2,300 pounds. We understand that these mares were very successful in winning prizes at the Sangamon County Institute. J. A. Burnhart, of McDonough county, Illinois, purchased an imported Belgian and an imported Percheron stallion. J. L. Gibson, of Johnson county, Iowa, purchased an imported Shire stallion. To Messrs. Munce & Son, of Logan county, Illinois, the champion American-bred stallion at the Illinois State Fair this year. To Frank Hurrle, of St. Cloud, Minn., an imported Percheron stallion. This gentleman had visited no less than ten importing barns before making his decision. He was looking for one of the extremely heavy-boned kind, which he had no trouble in finding here. To the Sandwich and Millington Horse Co., of Sandwich, Ill., an imported Percheron stallion. Messrs. Summy & Company, of Linden, Iowa, purchased the imported Shire stallion, Dunsmore Willington Boy, winner of first prize in the aged class at the Iowa State Fair. To Weaver & Rice, of Wibaux, Mont., three Shire stallions and one Shire mare.

"A telegram from New York today advises the safe arrival of our last importation. Shall be pleased to hear from any of your readers wanting a strictly high-class Shire, Percheron, Belgian and Hackney stallion. (Signed) J. G. Truman, Manager."

Horseradish at $3.50 to $3.75 per barrel was the latest quotation on the St. Louis market.

WESTERN RANGE HORSE SALES.

Horse raisers, feeders, dealers and stock farmers in general are advised that the sales of the very best Range Horses in the country will soon be over for the season of 1912. These sales are conducted twice each month in season by

Campbell & Reid and Western Sale Stables Co.,

NATIONAL STOCK YARDS, ILL.

There is only one sale yet to be held during the present season, and that is on

Thursday, November 14th.

Without question Messrs. Campbell & Reid and Western Sale Stables Company have made the National Stock Yards the greatest market in the United States for Range Horses and Mules. The equipment for handling the business is the best and the methods and guarantees protect the buyer in his purchases. Consignments are received from every Western State and consequently all classes of Horses are to be had at these sales.

At the final sale of the season there will be the best Horses to be had from the Western ranges, Mares, Fillies and Geldings, Colts, Yearlings, Twos, Threes and matured Horses. There are no other Range Horses to be had. The bulk are sired by fine Draft Stallions.

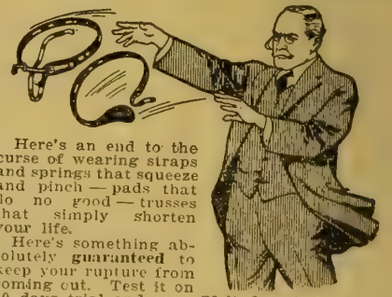
Please address,
J. J. SEARCY, Sale Manager,
NATIONAL STOCK YARDS, ILL.

Hog Book Free.

Book of facts on care and diseases of hogs. Tells how to prevent and cure disease, and destroy worms. Greatest discovery known. Sent free. Write Dr. D. C. Snoddy Co., Dept. H, Nashville, Tenn.

KELLOGG'S CURE
For All Non-Breeding and Aborting Stock
A guaranteed remedy for cows, horses, hogs and sheep. Endorsed by thousands of breeders and dairymen as the only satisfactory treatment. On the market for 24 years. Write for descriptive 48-page book.
H. W. Kellogg Co., 970 Carroll Ave., St. Paul, Minn.

Trusses Like These Are a Crime



Here's an end to the curse of wearing straps and springs that squeeze and pinch — pads that do no good — trusses that simply shorten your life.

Here's something absolutely **guaranteed** to keep your rupture from coming out. Test it on 60 days trial and see. If it doesn't hold at all times, then it won't cost you a single cent.

Has overcome some of the worst cases on record. Doctors and surgeons who know of it recommend it instead of operation. No belt, no leg-straps, no springs. Is waterproof—will hold in bath.

Write for Free Book and find out all about it. Book is full of facts never before put in print. Cloth-bound, 96 pages. Explains why elastic and spring trusses cannot help you. Shows dangers of operation. Exposes the humbug "appliances," "methods," "plasters," etc. Will save you from wasting money. Shows why 60 days trial is the only safe way to test anything for rupture and how we offer you the only thing good enough to stand such a long test.

Book gives over 5,00 voluntary endorsements. Write for it to-day—it tells you things you could never find out by going to doctors or drugstores. Address:
Box 776—CLUTHE CO., 125 E. 23d St., New York City.

DR. LEGEAR'S ANTISEPTIC HEALING POWDER

Will Cure That Sore

The healing power of this splendid medicine has stood the test of 20 years. It soothes and cures old sores or fresh wounds permanently, prevents proud flesh, and keeps away flies. Sore shoulders, saddle and collar galls are instantly relieved and quickly healed.

Thousands of cures and not one known failure.

All sores on stock of any kind should be treated with this inexpensive remedy. It is easy to apply—you sift it onto the wound from the can here shown.

Sold by druggists and dealers everywhere in large size cans with sifting tops; price, 25c and 50c.

Dr. LeGear's Stock Book of 112 pages, containing a scientific treatise on the ailments of horses, cattle, sheep, hogs and poultry, will be sent free if you'll write for it.

HORSE AND MULE NOTES.

From Topeka, Kas., October 15th, was reported that the plague that used the death of more than 000 horses in Kansas during gust and September had disappeared as mysteriously as it came. J. C. Mercer, State Live Stock Commissioner, did not have a single new case of this disease reported to him after the 10th ult.

The Anti-horse Thief Association of Illinois selected Springfield as the next meeting place. At the recent meeting the following officers were elected: President, C. L. Degen, Jacksonville; Vice-President, James Derry, Springfield; Secretary, John W. Cleary, Jacksonville; Treasurer, John F. Addlesberger, Dupo; Marshal, Henry F. Beckler, Arenzville. H. R. Terry, Virden; J. Pence, Morrisonville; William J. Cordier, Springfield; and J. G. Hill, Taylorville, were chosen delegates to the national convention at Keokuk, Iowa, in October, 1913.

The St. Louis Horse Trade.

On October 30th, Holland, Nugent & Maxwell Bros. issued a circular, saying: "We had a good run of horses this week and plenty of buyers. The class of horses were fairly good; quite a good many extra good draft horses that sold at strong prices. Medium chunks sold fairly well. Plain Southerners are off at least $25 a head to what they were sixty days ago; in fact, all Southern horses are selling cheaper. We had plenty of Southern buyers, but they would not pay the price that they have heretofore. Good, fat, smooth Southern horses, 15-2 to 15-3, that we were selling earlier in the season at $150 to $175 are selling from $125 to $135, and they have to have a lot of quality to bring $150. The plainer kinds are selling around $100, if they are young and sound. Good, young, sound Southerners, that are a little rough in the hair, 15 hands high, are selling from $75 to $90; smooth-mouth ones that are fat are bringing from $40 to $60. Plugs are any price, from $2.50 to $30."

The Last Range Horse Sale.

We are requested by Messrs. Campbell & Reid and Western Sale Stables Company, of the St. Louis National Stock Yards, to announce that their last Western range horse sale of the most successful season of 1912 will be closed by a grand round-up to take place on Thursday, 14th inst. These sales always bring together in large numbers the perfection of Western range horses, fresh from the healthy prairies where they have been raised from gentle stock mares bred to pure-bred stallions. Farmers with an inclination to handling these horses have made large money by preparing them for the domestic sale ring. This is the last sale of the season, and the only thing to do is to attend it and get some young stock or matured horses to take back to the farm.

THE NEW TROTTING RECORD.

The Gelding Uhlan Reduces the Trotting Mark to 1:58 and Becomes the World's Champion.

On October 8th, at Lexington, Ky., that most remarkable trotter, the gelding Uhlan, reduced the world's trotting record from 1:58½, held by Lou Dillon since 1903, to the even figure 1:58. Uhlan's previous record was 1:58¾.

Accompanied by only a runner as a pacemaker, he trotted the most remarkable mile the world has ever known, going to the quarter in 30 seconds, the half in 59 seconds, three-quarter in 1:28, and completing the mile in 1:58.

It was not only the greatest trotting mile on account of the record, but a cleaner transaction was never negotiated. Having started cleverly, he continued strong and finished with plenty of reserve speed.

Uhlan, 1:58, is son of the great trotting sire Bingen, 2:06¼, dam Blonde by Sir Walter, Jr. He is a black gelding and one of the most beautiful and exquisitely finished horses living. He is owned by C. K. G. Billings, of Chicago, and was driven to the championship record by Charles Tanner, of Cleveland.

In this connection we may state that magnificent pictures of Lou Dillon, Bingen, Uhlan, The Harvester, Dan Patch, and a hundred and fifty more trotting and pacing celebrities are to be found in the Book of Live Stock Champions, advertised on page 11.

Now that the election is over, we hope our patrons and friends will celebrate Thanksgiving by sending to The National Farmer and Stock Grower a new or renewal subscription. This is a good, serviceable paper and has done much good for the agricultural interests.

Fall Notes in the Poultry Yard.

More yard space should be devoted to poultry. Enough ground should be included in each poultry yard to give continuous pasturage without destroying the roots of the grass. It is as profitable to give pasturage space to fowls as to larger farm animals. Land is still so cheap that on the farms there is no good reason for restricting the range. Yet it seems always to have been the custom in this country to make the poultry yard small, no matter how much waste land might be lying around it. This custom grew up in the days when feed was cheap and fencing material quite expensive and hard to put in position. But with cheap wire netting and cheap posts, with no top board required, a large space may be inclosed at little cost.

Winter is coming, and the comfort of the fowls in the long winter nights should be considered. The sleeping cabinet for fowls has proved a great help in keeping the fowls from discomfort during cold nights. The principle of the sleeping cabinet is, that common white muslin will permit enough air to pass through to give the fowls all the air they need, but will interfere with the passing off of heat waves and keep the air around the fowls many degrees higher in temperature than is the air in the poultry house. A cloth curtain, as long as the roosts, is fixed on a roller working automatically. After the fowls have gone to roost at night this curtain is pulled down till it touches the floor and entirely incloses the small space in which the fowls are roosting. To have the arrangement effective, the part of the poultry house forming part of this sleeping chamber must have no cracks through which cold air can enter. It is the lack of motion in the air that keeps the heat from escaping, but at the same time the carbonic gas being thrown off from the lungs of the fowls is escaping and oxygen is passing in through the cloth to take the place of the oxygen being consumed in the breathing of the birds. Especially in the colder states these sleeping cabinets are of great utility.

Make the foundation of the new poultry house secure against all kinds of prowling animals. A good foundation may be made by the use of cement and the loose stones to be found on many of the farms. Dig a trench deep enough so that the frost will not heave the wall. Have the trench as wide as the foundation wall is to be thick. Fill the trench with the stones and the cement. Place parallel boards above the wall and fill in, keeping the boards close enough together so that the wall will be of the desired thickness. As fast as the cement hardens the boards may be raised and the process continued to the completion of the wall Where the wall is to be carried high up and be quite thin, iron or steel rods placed in the cement and stones will bind the whole into one compact mass. This is called reinforcing the cement work. Such walls are very serviceable where a poultry house cellar is desired. Such cellars are useful for keeping green feed for the poultry as well as other kinds of food. They provide also a place in which to keep the incubators and brooders when they are being used in the cold months.

Difference in Egg Grades.

The New York Produce Review and American Creamery, published in New York City, in a recent issue made mention of the egg grading in the establishemnt of C H. Brownell & Sons at Washington Court House, Ohio. That firm receives eggs from farmers and dealers and ships immense numbers of them for sale on the Eastern markets.

They pay according to quality, and the actual difference in value is good information for farmers.

Each lot of eggs received is sent separately to the candling room for assortment and grading. Four grades are made, called A, B, C and D. The first includes only fresh eggs of good size, clean, full, strong-bodied and practically new laid. The second grade includes good, useful eggs; these may be more or less shrunken but not seriously defective; the third includes seriously defective stock, dirties, stains, etc.; and the fourth comprises worthless stock.

When the article was written on October 4th, Messrs. Brownell were paying 31 cents a dozen for A grade; 26 cents for B grade; 20 cents for C grade; and nothing for grade D. These differences and grades are worth considering and show that after throwing out all worthless eggs there is a difference of one-third in value of high and low grades of the eggs that are merchantable.

PARCEL-POST PACKAGES.

How Butter and Eggs Are Shipped Through the Mail in Germany.

The United States Consul-General at Hamburg, Germany, reports that the parcel-post service of Germany is used to a very large extent by farmers in their dealings with city customers, and especially for delivery of butter and eggs.

Butter thus shipped is wrapped first in parchment paper and then packed in a cardboard box. As a rule, shipments under ten pounds are not made, each pound being separately weighed, the total shipment including nine pounds of butter, net. These pasteboard butter boxes come with an upper and lower part and are folded together and fastened with metal clamps to make the finished box. In knock-down condition these boxes can be had in Germany for $23.20 per thousand for the best quality and $21.42 for the second quality. The boxes can be saved and used over again. The clamps cost 33 cents per thousand.

Eggs are shipped either in strong cardboard or wooden boxes, the inside of which contains corrugated cardboard partitions forming squares large enough to receive one egg. Between each layer of cardboard partitions a sheet or cardboard is placed. The wooden boxes are rather attractively finished and cost at retail 95 cents each. They are provided with a padlock and neat cover, and can be used for an indefinite period. Pasteboard egg boxes containing partitions for ten eggs can be had for $45.22 per thousand, and boxes to contain twenty-four eggs for $71.40 per thousand.

St. Louis Poultry Show.

The show of the St. Louis Poultry Association in the Coliseum, Thanksgiving week, will include an exhibit of Single-comb White Leghorns, a breed of chickens attracting much attention because of their wonderful egg-laying proclivities. Dan W. Young, of Monroe, N. Y., President of the National Single-comb White Leghorn Club, will be the judge of this breed. E. W. Grove, Jr., of Hampton Park, has donated a $500 silver cup for the prize winner. There will be $250 in cash prizes. Grove won his cup in the St. Louis Show last year.

The entrance fee has been raised to $2.00 a bird. The number of entries is limited to 2,500. There were more than 3,000 entries last year. Applications for entries should be sent to Secretary T. W. Orcutt, 821 Security Building, St. Louis, Mo.

The American Silver Wyandotte Club, the Buckeye Red Club and the American Ancona Club will be represented at the show. Two silver cups and $250 cash prizes are offered in the Silver Wyandotte class.

POULTRY NEWS AND ITEMS.

Circular No. 27, by W. A. Lippincott, Poultryman in charge, Kansas State Experiment Station, is upon the subject of capons and caponizing and contains a splendid line of practical illustrations.

Farmers in the vicinity of Euston, W. Va., have organized an "Egg Circle" in order to market their eggs together.

BIG FOUR PROPOSITION.

Four of the Greatest and Best Monthly Farm and Stock Publications One Year For One Dollar.

We have been requested by our readers to make a subscription club that will practically include every branch of agriculture at a fair price, and we have gone "one better" in that direction. We will furnish four sterling, practical, up-to-date farm papers at half price.

This is the season of the year when subscriptions are renewed, and it is the best time of the year to look up special offers. This offer has never been surpassed because either paper is worth considerably more than the full price. The papers are as follows:

The National Farmer and Stock Grower—issued monthly—a magnificent guide and counsellor in all branches of farming, grain growing, fruit growing, dairying, stock raising and feeding, markets, etc.

The American Swineherd — issued monthly — a leader in its class. The hog paper, the pig paper, the brood-sow paper and strictly first-class in teaching how to top the market by producing top hogs.

The Shepherds' Journal is devoted to sheep husbandry on the farm and on the range. It is equally valuable for the breeder as for the herdsman. It is issued monthly, printed on elegant paper, splendidly illustrated and edited by practical men.

The Reliable Poultry Journal—the best and most elegantly poultry journal issued in the United States. Great on breeding points and splendid articles on raising, feeding and shipping poultry. **The Reliable Poultry Journal** is distinctly practical in all articles. The writers are thoroughly expert in their particular branches of poultry husbandry and retain the peculiar quality of being good instructors. You gain something every time you read **The Reliable Poultry Journal.**

The four papers above mentioned ought to be on every farm and ranch. Taken singly they cost $2.00 a year. By our co-operative clubbing arrangement we are enabled to offer all four papers one year for One Dollar. Address us at once without fail.

A SUBSCRIPTION BLANK.

The Hale Publishing Co., 3550 Vista Ave, St. Louis, Mo.:

Gentlemen: — For One Dollar ($1.00) enclosed herewith please send us the Big Four Subscription Combination one year, consisting of **The National Farmer and Stock Grower, The American Swineherd, The Shepherds' Journal** and **The Reliable Poultry Journal.**

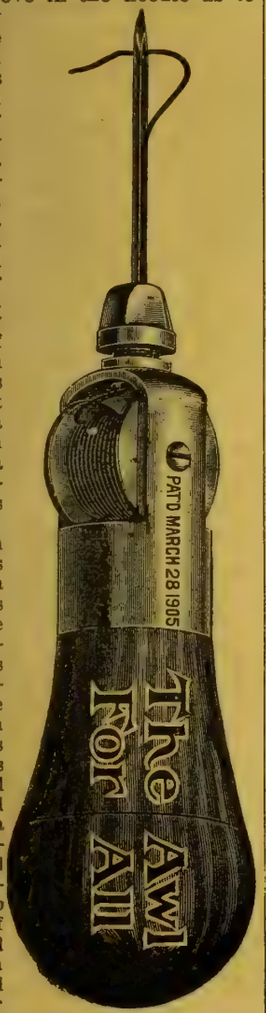
THE SEWING AWL.

A Most Useful Premium For Subscribers to The National Farmer and Stock Grower.

It is surprising how useful this little implement is. It is the Myers Famous Lock Stitch Sewing Awl. It is the only sewing awl made with a groove running the full length of the needle and has what is known as a diamond point. In order to sew leather or any heavy, thick material without breaking or cutting the thread it requires an awl with the groove running the full length of the needle. You might just as well have no groove in the needle as to have it only part of the way. With the Myers Awl you can sew old or new harness, saddles, carpets, canvas, tents, rugs, quilts, shoes, grain bags, and many other things. You can use any kind of thread in the Myers Awl and it makes a lock stitch same as a sewing machine. It is very simple; a woman can use it as well as a man. It is one of the most practical devices ever invented. They are put up with two needles—one is straight and one curved—with a small screwdriver and wrench combined; also a reel of waxed thread with each awl ready for use. Every teamster and farmer should own a Myers Lock Stitch Sewing Awl, as there is use for one in almost every household. The Myers Awl is nicely finished, the metal parts are nickel-plated, the needles and wrench are kept in the hollow handle, which has a screw top. Anyone who will send one dollar cash to pay in advance for two-years' subscription to The National Farmer and Stock Grower can select one of Myers' Lock Stitch Sewing Awls, which we will send by mail, postage paid, as a free premium. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St Louis, Mo.**



The Most Useful College.

Our readers are reminded of the card of Highland Park College on page 26. This is no ordinary college. It turns out capable men who can earn large pay and fits them to be heads of manufacturing enterprises. Willing youths with an aptitude for mechanics are soon put through the necessary course that in older countries require a four-year apprenticeship.

The Perfection of the Automobile.

"Never will the automobile be better made than it is to-day," says President John N. Willys, of the Willys-Overland Company. "Motor cars are as near perfect as mechanical genius, human brains and automatic machinery can make them. They will never be made any better because new wood will not be grown, because the earth will never yield up better ores, because cattle will not produce better hides for upholstering, and because human brains and energy will never be at a higher development than now.

"When I say cars will never be better, I naturally am referring to those standard makes which have been thoroughly tested by the public and which have stood the acid test. Of course, there are many makes on the market that could be greatly improved, but the honest cars at honest prices are as near perfect as is possible to produce them.

"Future buyers of motor cars who are waiting for standard makes to be cheaper in price will never be motorists, as there is much more likelihood of prices going upward rather than down.

"In the 1913 thirty-horse-power fully equipped Overland touring car for $985 I honestly believe that even with our huge plant, high standard of efficiency and distributing system, we have reached the limit in motor car value."

Mr. John W. Willys is President of the Willys-Overland Company, makers of the car advertised on page 15.

PROMOTERS OF FARMING.

Railroads Recognized as Doing Good Work.

For a generation or more the railroads of this country have been making efforts to increase the number of farmers in certain regions, thus trying to promote agriculture and through greater agricultural prosperity to increase their revenues derived from hauling farm products. Within the past decade these efforts to encourage agriculture have been extended to include instructions in methods of farming, investigation of the farming possibilities of a region, assistance in organizing agricultural associations, co-operation with State and County Fairs, employment of farm labor, aid in finding markets, and other helpful lines of work. These projects are not confined to railroad companies; they are, however, the most prominent of the several classes of business concerns engaged in similar work.

Therefore the summary of recent developments in the agricultural promotion work of railroads issued by Secretary Wilson in a recent bulletin of the Bureau of Statistics of the Department of Agriculture, entitled "Railroads and Farming," is of timely interest. This publication reviews briefly some historical features of the subject, giving instances of efforts made for the settlement of farm lands in Kansas, Texas and Louisiana during the two decades from 1870 to 1890. The principal features of present-day promotion work are described and an analytical outline shows these features in detail.

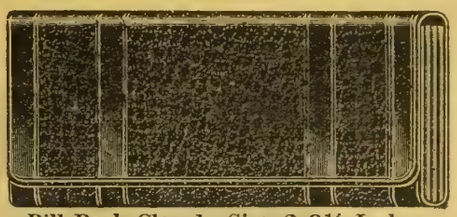
More than three-fourths of the railroad mileage of the United States is operated by companies which engage in special efforts to promote agriculture. A list of these companies is given at the end of the bulletin. These railroads enter counties whose total area is almost nine-tenths of the total land area of the United States and whose farms compose more than nine-tenths of the farm area in the entire country.

This promotion work on the part of the railroads is a business proposition. Improvement in agriculture means more traffic, and for this reason large sums of money are being expended systematically by numerous companies.

A Pocket Book Circulation Premium.

THE NATIONAL FARMER Folding Bill Book.

Illustration Showing Bill Book Open.



Bill Book Closed—Size, 3x8½ Inches.

Convenient to carry Currency, Bills, Notes, Receipts, Railroad Tickets, Lodge Identification Cards, Stamps, Etc.

BEST VALUE AND MOST SERVICEABLE PREMIUM EVER OFFERED.

Every Prospective Subscriber Wants One and Needs One.

National Farmer Folding Pocket Bill Book, Genuine Seal Grain Leather Cover, Very Fine Finish, Fancy Embossed, Good Quality Throughout.

Our Subscription Offer.

WE have adopted THE NATIONAL FARMER FOLDING BILL BOOK as a subscription premium with the best monthly farm paper in the United States.

The National Farmer and Stock Grower

is a nice, clean, ably-edited general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, to dairymen, to vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, to horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. The best live stock illustrations appear in The National Farmer and Stock Grower. There are thirty-two pages, four columns to the page. It is published monthly.

What To Send Us.

Send us a postoffice money order for sixty (60) cents, or 60 cents in clean, new one-cent stamps, and we will send you the good publication, The National Farmer and Stock Grower, for one full year, and we will mail you one NATIONAL FARMER FOLDING BILL BOOK, postpaid, safe delivery and satisfaction guaranteed. Address,

THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

Cement Workers' Handbook.

This book is designed to teach anybody how to work with cement; how to mix mortars of all kinds for all concrete purposes; how to make building blocks; how to build walls, floors, ceilings, walks, joists, cisterns, troughs, tanks, etc. It gives estimates of the cost of all kinds of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers. The price of the book alone is fifty (50) cents.

For sixty (60) cents we will credit one-year's subscription to The National Farmer and Stock Grower and send a copy of the Cement Workers' Handbook. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Cattle of British India.

According to recent statistics, the cattle in British India amount to 108,000,000, or 24 per cent. of the total in the world; but they are mostly water buffalo and kept as work animals.

LIVE STOCK BREEDERS' CARDS.

POLAND-CHINA HEADQUARTERS.

We have bred and established a herd of the greatest producing Brood Sows in the world. Write for information and prices. Satisfaction guaranteed.

KIRBY STOCK FARM, Marmaduke, Ark.

DICKINSON MERINO RAMS AND EWES.

For sale: Dickinson Merino Rams that have the constitution and size for wool and mutton. Write for further particulars.

ALEX. TAYLOR, Moundsville, West Virginia.

CHAMPION SEED CORN PREMIUMS.

Offered to Our Readers Who Send Us a Special Subscription—Yellow Dent Corn Pure Bred Since 1847.

The subject of seed corn is of the utmost importance, especially at this time. Pretty good seed corn is easy to get, but superior seed corn is scarce. Even the best seed corn growers have good and bad seasons, and there is great variation, one year with another, in vitality and quality of their seeds.

Only one thing can be guaranteed, and that is the strain or breed. Pure-bred seeds, like pure-bred animals, produce true to type, and sometimes there is worked out an almost imperceptible improvement. The road to improvement is rough and rocky, and upon it there are many obstacles; but ultimate success is possible, and only possible by using seeds of the right breeeding and quality. The backward road is easy to travel by using seeds of no strain and only containing the qualities that even negligence cannot destroy. Promiscuous seeding of unknown corn results in smaller crops of low-grade corn. Nature may save the crop by an excellent season, but the general result is bad.

As a step towards general improvement, every corn grower should have one or more experimental plots each year, using small quantities of different seeds. The National Farmer and Stock Grower has furnished opportunities for farmers to obtain such seeds for the past five years.

The very best ear of corn at one of the greatest show contests was pure-bred Yellow Dent, anly 10¼ inches long, 7⅞ inches in circumference at a line three inches from the butt, and was 6⅞ inches in circumference at a point two inches from the tip. It weighed 19 ounces when thoroughly dry, and it carried twenty rows of kernels. The picture presented herewith will show that it had a good butt; that it had a good tip; that the lines between kernels were straight; the ear was splendidly proportioned, and it was bright with life and vitality. When you go out to the field or to the crib to select corn for seed, carry with you a stick 10¼ inches long and a piece of tape to measure around the ears of corn that at first glance look good to you. When you find fat ears of corn, be sure that the fatness is not an undue proportion of cob. Judge your own corn by a comparison with this ear of corn.

The picture presented herewith represents the ear of corn referred to as in all probability the best ear of Yellow Dent corn ever exhibited, grown by Mr. D. L. Pascal, of Iowa, who with it won a trophy worth $1,500.00, and it was the best ear grown that year in Iowa, and it is the single ear of corn that was shown in a glass case at the first National Corn Show. Mr. Pascal has a strain of Yellow Dent corn, bought from the originator and kept pure for sixty-six years.

For several years The National Farmer and Stock Grower has purchased of Mr. Pascal a quantity of seed corn related to this grand champion ear, and we have distributed it in pound lots to our subscribers, who have started growing their own seed corn from the Pascal seed furnished by this paper. Furthermore, many of our subscribers have won prizes at their own State Fair with ears of corn grown from the Pascal seed we furnished them. Some of them were first prizes and one of them was the championship prize for an exhibit of ten ears at the State Fair of Louisiana.

We have again purchased Yellow Dent Seed Corn from Mr. Pascal and we intend to send it out as subscription premiums as near free as we can arrange to do so. The corn is conditionally free and our subscriber is simply paying the postage on it. The amount of corn is plenty for the purpose of experiment.

Our Subscription Proposition.

The postage on twenty ounces of seed is ten cents; therefore we make this proposition: Anyone who will send us the amount of sixty (60) cents we will send The National Farmer and Stock Grower for one year, and we will send as a premium a package containing twenty ounces of Yellow Dent Seed Corn grown by Mr. Pascal from his breeeding corn that grew the grand champion ear. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

BLOODED STOCK NOTES.

Mr. A. F. Siefker, whose address is R. F. D. No. 1, Defiance, Mo., has ordered his advertisement continued in our November number. He is a good breeder of Poland-China hogs and Barred Plymouth Rock chickens, but he sells stock at farm prices. His card will be found on the breeders' page.

The Breeders' Sale Company will hold their annual sale in the Coliseum at Bloomington, Ill., on January 28th, 29th, 30th and 31st, 1913, and will sell about 750 head of imported and native-bred Percherons, Belgians, French Draft, Shire and Clydesdale stallions and mares. The last day, as usual, will be devoted to trotting and pacing horses and Shetland ponies. Breeders who have horses to sell may find it to their advantage to communicate with Mr. C. W. Hurt, Manager, at Arrowsmith, Illinois.

Mr. J. P. Vissering, of Alton, Ill., desires us to mention his large-type Poland-Chinas, that at maturity will weigh a thousand pounds, and have the bone to carry it. They have easy feeding qualities, and he says will make sixteen pounds gain on a bushel of corn as easily as some hogs will make eight pounds. Mr. Vissering will send those who inquire a copy of a history of Poland-China swine.

Mr. Wilder Carpenter, of Marmaduke, Ark., has a lot of other interests to look after and appears to be dispersing his pure-bred Poland-Chinas, his Duroc-Jersey swine and his horses and jacks. Mr. Carpenter has some very fine show stock, and he can be depended on to describe his stock exactly as it is. We advise our readers to obtain the sale catalogue and see if they need anything on the list.

Mr. J. H. Truman left London, England, on October 19th with an importation of horses on the Minnewaska. Included in this shipment are sixteen two-year-old stallions and fillies from the noted Wrydelands Stud and a large number of mares that will be included in the annual Shire mare sale on December 12th. Remember to write for catalogue of this Shire mare sale, addressing Trumans' Pioneer Stud Farm, Bushnell, Ill.

Book of Live Stock Champions on page 11.

SOUTHERN CATTLE AT ST. LOUIS.

Prices Very Good and a Splendid Prospect For All Handy, Fat Butcher Cattle.

Mr. L. H. Milton, who sells quarantine cattle received at the St. Louis National Stock Yards that are consigned to his firm, Messrs. Clay, Robinson & Co., is enthusiastic in regard to the prospects for cattle raising in the states of Alabama, Louisiana and Mississippi. Those states have been furnishing more cattle than ever before, and St. Louis is out-and-out the best market for them. From Mississippi alone in nine months of the present year the St. Louis market received 31,000 cattle, an increase of 8,000 over the receipts during the same period last year. Said Mr. Milton: "Our firm is doing a very nice business with the Southern States that are tributary to the St. Louis market, and in all our literature sent out to buyers we ask them to come and look at these Southern cattle, and the buyers are unanimous in saying that with a little more quality to be obtained by using good bulls of the beef breeds and a little more weight to be obtained by more corn and cottonseed feeding, those particular states will turn out cattle that will cause buyers to lay in wait for them, just as they do for Kentucky spring lambs. A few buyers are still looking for heavy cattle to suit the Eastern trade, and all the heavy cattle will be in demand; but the mission of the Southern States is to quickly raise young, handy, fat, light cattle, that will range from 800 to 1,100 pounds, and in reasonable time a competition will spring up for them that will include every packing-house buyer, every buyer on Eastern account, and every butcher now slaughtering cattle."

Speaking of these cattle, the Clay, Robinson & Co. circular, dated October 31st, said:

"All classes of Southern cattle have been in strong demand, and the week is closing with a 10 to 15-cent advance on everything. Yearlings, with a top to-day of $3.75 per 100 pounds, are selling higher than they have sold this year. We obtained this price to-day for twenty-five head, averaging 344 pounds, belonging to J. W. Carr, of New Decatur, Ala. Canners are selling up to $3.50; cutters, $4.00, with Arkansas cows topping the week at $5.00 per 100 pounds, averaging 980 pounds. We sold some Mississippi vealers at $7.00, top for the week. One of our Mississippi customers had an ox in his shipment this week, averaging 1,480 pounds, which we sold for $6.50 per 100 pounds, the highest price ever paid for this class here."

Sales of Southern cattle on the St. Louis market during the last week in October included: From Coldwater, Miss., twenty cows, 635 pounds, at $3.90; seven calves, 200 pounds, at $5.00; seven yearlings, 337 pounds, at $3.75; five bulls, 580 pounds, at $3.75; eight cows, 571 pounds, at $3.40; five calves, 214 pounds, at $5.00; fifteen calves, 365 pounds at $3.55; eight cows, 531 pounds, at $3.35; seven bulls, 564 pounds, at $3.60.

From Inverness, Miss., six cows, 671 pounds, at $4.00; nineteen mixed, 593 pounds, at $3.50; thirteen yearlings, 369 pounds, at $3.65; nine calves, 204 pounds, at $5.00.

From Goodman, Miss., twenty-nine mixed, 575 pounds, at $3.60.

From Winona, Miss., twelve mixed, 528 pounds, at $3.40; seven mixed, 598 pounds, at $3.75; seventeen calves, 307 pounds, at $3.55.

From Durant, Miss., twenty-eight yearlings, 378 pounds, at $3.60; five calves, 210 pounds, at $5.10; twenty-six steers, 638 pounds, at $3.95; fifty-nine yearlings, 295 pounds, at $2.70; thirty-five cows, 534 pounds, at $3.50; thirteen cows and heifers, 570 pounds, at $4.00; thirteen calves, 127 pounds, at $4.50; six bulls, 741 pounds, at $4.05.

From Brookville, Miss., eight heifers, 525 pounds, at $3.65; five calves, 220 pounds, at $5.00; ten yearlings, 374 pounds, at $3.60; six heifers, 631 pounds, at $4.10.

From Lexington, Miss., ten bulls, 864 pounds, at $4.25; sixteen cows, 612 pounds, at $3.60.

From Jackson, Miss., twenty cows, 607 pounds, at $3.85; fifteen yearlings, 368 pounds, at $3.80; thirty-five steers, 554 pounds, at $3.85.

From Crenshaw, Miss., thirteen cows and heifers, 638 pounds, at $4.20; six steers, 688 pounds, at $4.50.

From Morton, Miss., forty-one yearlings, 344 pounds, at $3.75; and fifteen cows and heifers, 570 pounds, at $3.60.

The yearlings from Jackson at $3.80 was the top price for that class for the year. All quotations are at the price stated per 100 pounds.

In a later report by Messrs. Clay, Robinson & Co. they said: "We sold nine car-loads of Mississippi cattle to-day, shipped from Oxford, Winona, Terry, Morton, Russum and Inverness, Miss. Mr. B. L. Hanna, of Inverness, Miss., had in his consignment fifteen steers, averaging 833 pounds, which we sold at $5.15 per 100 pounds, the top of the market. Other steers from Terry and Russum brought $5.00 per 100 pounds, averaging 717 and 812 pounds. Some 717-pound cows belonging to G. H. Jones, of Terry, brought $4.15, the top for that class. Following are other sales: From Oxford, Miss., nine cows, 634 pounds, at $3.85; five bulls, 564 pounds, at $3.75; twenty-three yearlings, 385 pounds, at $3.75. From Winona, Miss., twenty-three canners, 378 pounds, at $3.55; fourteen yearlings, 319 pounds, at $3.75. From Inverness., Miss., eight calves, 171 pounds, at $5.00, and twenty-six yearlings at $3.75." The last sales mentioned in Clay, Robinson & Co.'s report included steers averaging 821 pounds that put another top on the market at $5.30 per 100 pounds. Mr. M. K. Harrington, of Goodman, Miss., was the shipper. R. F. Beck, of Vaiden, Miss., and Cunningham, Tate & Co. were also shippers to the St. Louis market.

St. Louis Apple Market.

Early November prices at the St. Louis market: River receipts of Ben Davis range from $1.00 to $1.25 for overripe, worm-stung, specked, rough, small, of poor color, etc., to $1.35 to $1.70 for good, and $1.65 to $1.75 for No. 1; Willowtwig at $1.25 to $1.50 for poor to $2.50 for choice; Winesap or Roman Beauty from $1.50 to $2.75; Geniting at $1.50 to $2.40; other varieties from $1.25 up to $2.75, as in quality. Bulk apples dull; Ben Davis quotable at 60 to 65 cents per 100 pounds, and No. 2 at 70 to 75 cents per barrel measure, delivered. New York Greening at $1.75 to $2.10 per barrel measure, delivered. Sales on levee: Ben Davis—Twenty barrels at $1.50; forty No. 2 at $1.20; six at $1.35; forty-one at $1.40; forty-eight at $1.42½; thirty-seven at $1.75; twenty-four barrels, including Ben Davis and Gano, at $1.40; and Blacktwig at $1.75; 117 barrels, including Willowtwig, at $2.25; and small Geniting at $1.75.

St. Louis Market For Pears.

Recent quotations for pears on the St. Louis market: Bulk Missouri Keifer at $1.00 to $1.25 per barrel measure, delivered; bushel boxes and baskets Keifer at 40 to 50 cents and barrels at $1.25 to $1.75. Home-grown Keifer pears at 30 to 60 cents per bushel box, as in quality.

We are informed upon very good authority that the Chilian nitrate deposits are not likely to be exhausted in the life of anyone now living. The supply is abundant for all purposes.

S. R. FEIL, Pres.
Registered Pharmacist

I want to show you how quickly Sal-Vet will rid your stock of deadly worms, which are the cause of 90% of the sickness and death among farm animals. I want to show you how it will improve your stock—how it will make them thrive faster, look better, and make you more money. I'll prove it before you pay me a single penny.

SAL-VET
TRADE MARK
REG. U.S. PAT. OFF.

The Great Worm Destroyer and Stock Conditioner

The change in my hogs is simply wonderful. I will never allow any of my stock to be without Sal-Vet in the future. CHAS. DUNLAP. Hudson, Ind.

Sal-Vet does all you claim for it. I know of nothing as good, as reliable or as cheap. E. C. STONE, Peoria, Ill. Sec. Am. Hamp. Swine Record.

Sal-Vet is all right. My hogs are doing finely, although there are a lot of hogs dying throughout this neighborhood. H. C. HANCOCK. Narka, Kas.

Sal-Vet is a great remedy. Farmers all around me have been losing hogs since last fall, while I did not lose any, nor did I have one that showed any signs of sickness. Box 12, Newport, Ia. (Signed) G. R. PONTZIUS.

I sold one lot of hogs before I got the shipment of Sal-Vet, but kept an equal number. I fed Sal-Vet to the latter for two weeks and, while they were not as old as the first lot, I sold them and they weighed 250 pounds more than the oldest, which had not had Sal-Vet. Savannah, N.Y. JOHN E. SEVERENCE.

I am greatly pleased with your Sal-Vet. My hogs are doing just fine, but my neighbors all around me, who have not used Sal-Vet, have had heavy losses. (Signed) JERRY C. SMELTZER. Box 33, Canalou, Mo.

Send No Money—Just the Coupon

Tell me how many head of stock you have. I'll ship you enough Sal-Vet to last them 60 days. You simply pay the small freight charge when it arrives and, when the 60 days are up, report results. If it does not prove satisfactory, I'll cancel the charge—you won't owe me a cent. Fill out and mail the coupon today.

PRICES: 40 lbs., $2.25; 100 lbs., $5.00; 200 lbs., $9.00; 300 lbs., $13.00; 500 lbs., $21.12. No orders filled for less than 40 lbs. Never sold in bulk; only in Trade-Marked Sal-Vet Packages.

Housing the Plants.

As the days grow chill and there are frosts outside, gather the plants into the porches and sheltered positions, but avoid, if possible, the sudden change from outdoors to the window of the living room. If safety demands that they be taken indoors at once, strive to place them in a room with no fire, and thus gradually accustom them to the winter home.

Salvia, cosmos and the chrysanthemums may be potted if they are first thoroughly watered and allowed to stand a few hours and become thoroughly saturated with the moisture. Then, if carefully potted, they will scarcely wither and will continue to bloom for some weeks.

Choose a sunny day, if possible, for taking up gladiolus and dahlia bulbs, and dry them so that most of the dirt can be shaken off. Then pack away for winter, either in sand or dry in paper sacks. If the cellar is inclined to be damp, a frost-proof closet will be preferable, and by packing several thicknesses of paper around them there will be little danger from cold, even though the temperature does at times run low.

Agave and some of the cereus types of cacti may be kept in a warm, dry cellar; but if there is much dampness it is better to give them space in the living room or they will incline to rot. They need very little water until the spring growth commences, when they should be given the same amount accorded to the geranium.

Most of the fuchsias will not bloom through the winter and may just as well be consigned to the cellar. Fuchsia speciosa is about the only exception to this rule. Geraniums not expected to bloom through the winter may also be kept in the cellar, the roots coming out in good condition for bedding, even if the tops do not look promising.

Strive not to overcrowd your windows. A few well-grown plants are very much more satisfactory than double this number of half-stunted or diseased specimens. And if they do not receive a moderate amount of light they are sure to tell it in their faces.—Bessie L. Putnam.

A Plea For Pure English.

A mother, on being complimented for the excellent language used by her little one, explained that he had never heard any other. There were no child playmates and the language in the home was always good. No studied effort had been made to teach him; the good had been assimilated, with the absence of the objectionable.

Not all mothers are situated as was this one, nor is it desirable that they should be. Child companions are an advantage in many ways, if they are suitable associates, and we cannot expect all children to speak grammatically at all times. However, a child who grossly violates the principles of our language or whose words are objectionable in other ways, is not a fit playmate for the little one.

But if the words heard in the home are well chosen they will be sure to be reflected in the child's speech, even though others do sometimes blend unpleasantly with them. Strive when talking to or in the presence of the little one to make your speech the best possible. The simple words are always best. Keep within the child's range of understanding, at the same time striving to widen his vocabulary through pure words. If your English is defective, strive to improve upon it by reading from standard authors; or, if you have no time for this, at least watch your speech, remembering that though it may not be a critic, baby is the best of imitators.—Bessie L. Putnam.

Hard Work.

"I'd just like to take time to tell you a little story," said a busy man. "Sometimes I think my work is hard, but yesterday I saw something that was hard work. A woman came to our house to do the washing, and with her she brought a babe in arms and a two-year-old boy. In order to take care of them she had to take them down to the laundry in the basement and there she did the washing and cared for the children. The basement at best is not a fit place for a baby, but on washday it is especially damp and unwholesome. Yet the woman went cheerfully to her task, managing in some way to keep the two babies quiet and fairly contented. And as I watched her I thought of all the women in this country who complain if they must do their own work and some who must have a dozen servants at their beck and call."

But, after all, just another instance of the brave ones who shoulder the burden of life and go steadily on, always hoping for some turn in the road which may show them relief. The heroes and heroines are not all bound up in volumes of history or tomes of history.—Janet Thomas Van Osdel.

What Will 5 Years Do?

By R. E. Olds, Designer

Any car will run well when you buy it. But the question is: What will five years do?

I've watched automobiles for 25 years, and I know what the years will do.

And, because I know, I build Reo the Fifth to meet that test of time.

$200 Extra

I could easily save at least $200 by skimping on this car. And, for a year, you might not even know it.

But you would probably lose, in upkeep cost, three times that saving, in the course of time.

Let me tell you some of my careful ways which cost me this $200.

Things That Cost

On Reo the Fifth the tires I use are 34 x 4. On my new model, out Oct. 1, I added 22 per cent to the tire size. I did that because this extra cost will add 65 per cent to the average tire mileage.

I use in this car 190 drop forgings, which average twice the cost of steel castings.

I use 15 roller bearings—11 of them Timken. They cost five times as much as the common ball bearings, but they stand the strain.

I use chrome nickel steel for the axles, vanadium steel for connections, manganese steel for the crankshaft.

Every driving part, for big margin of safety, is made sufficient for a 45-horsepower car.

The centrifugal pump, to give positive water circulation, costs nearly $10 extra.

I use 14-inch brake drums for safety. I use wide, long, seven-leaf Sheldon springs.

Costly Care

I test my springs to stand 100,000 vibrations.

My gears are tested in a crushing machine, to prove that each tooth will stand 75,000 pounds.

My steel is twice analyzed, before and after treating.

Each engine is tested 20 hours on blocks, and 28 hours in the chassis.

My carburetor is doubly heated, and I use a $75 magneto. Thus I save engine troubles.

There are fully a thousand tests and inspections applied to every car, so no errors can creep in.

Center Control

I use on this car a new center control. All the gear shifting is done by moving a handle only three inches in each of four directions.

I use the left-side drive.

The body finish is 17 coats. The deep upholstering is of genuine leather, filled with the best curled hair.

Thus I give you a car which is roomy, exquisite, safe, comfortable and strong.

Men who know best look for cars of this class. I had contracts from dealers for over 10,000 before we shipped the first car of the 1913 series.

Write for our fall catalog, and the name of our nearest dealer.

R. M. OWEN & CO. General Sales Agents for **REO MOTOR CAR CO., Lansing, Mich.**

Big Profits in Stock Feeding

A tremendous crop this year in the Southwest but not enough hogs or cattle to feed it to, with a high market begging for beef and pork—that is the condition at present. Raising hogs at less than 2c per pound, cheap pastures, cheap fattening grain, millions of acres of forage for the silos, dry winter feed lots—such conditions prevail in the Southwest and stock feeders are growing wealthy. Along

Rock Island Lines

in Kansas, Missouri, Oklahoma, the Panhandle Country, Texas, New Mexico, Arkansas and Louisiana land can be bought for $10, $15 and $25 per acre, as good land as you are now farming.

Prof. H. M. Cottrell, Agricultural Commissioner, has made an exhaustive study of agricultural conditions and knows in just what sections the stock feeder will find conditions best for making money.

Your Own Recipe Book.

In these days, when every paper and magazine contains recipes good, bad and indifferent, we are apt to depend upon some of them when the call comes for a new one. Or perhaps one which has been tested and found true is preserved in the drawer on the small sheet upon which it was originally written. Of course, you are choice of that slip of paper, and yet how easy it is for this to get mislaid and lost. Then there will soon be gathered quite an accumulation of these favored recipes, and to look them through every time a certain one is wanted means the loss of many valuable minutes.

When clippings are saved, a convenient method is to take a certain number of large envelopes, as many as the subjects you care to cover; label one "Meats and Soups," another "Bread," and so on. These are fastened together by making a small perforation in one corner and tying with cord or ribbon; when a new recipe is found which sounds good, test it and if worthy to be preserved, it may be slipped into its proper envelope.

But there are often magazines which we do not care to mutilate, or the clipping may contain valuable information on the reverse side, which would place it in an entirely different envelope. To obviate this, a convenient way is to purchase a blank book for the purpose of recording all favorite recipes. This may be as simple or as elaborate as you wish; large enough to last a lifetime, or one which can be procured from the five-cent counter. If the latter is chosen, our own preference is the form known as a composition book, with ruled lines for writing with ink and opening like a book. The records should be made permanent, and while the lead-pencil writing, especially if the pencil is an "indelible" one, may prove adequate for a time, it soon becomes indistinct, for the book will be subjected to some wear if you use it, no matter how careful you may be.

Write distinctly with ink, and it is well to give the source of the recipe, for as the months pass you may forget certain ones and the exact result from them. But "Aunt Hannah's Catsup," or the brown bread made like Mrs. B.'s, will recall the exact nature of the combination; page the book and make an index at the beginning, being sure to make provisions for all the sub-heads necessary, not omitting a "Miscellaneous Department." What if you only have one of two choice recipes to put into certain divisions at the time; others will be added later, if you have left sufficient room.

When you find a recipe in the current paper which sounds as if it would suit your taste, test it, and, if found successful, copy it into your blank book. It may be that you will find some changes which can be easily made, adapting it more perfectly to your supplies or taste. Make note of all such variations. If you trust them to memory the chances are that it will fail you just at the critical moment. It is easy now to bear in mind the fact that you can use three or four eggs in a certain recipe and gain good results, but if the rule is not followed for some time you may lose sight of it or wonder in which kind of cake it was proved true. Make a note at the time and trust to no guesswork.

When a tempting dish is presented by a friend, find out how it is made. Any peculiar manner of preparation should be especially noted. In this may be found the secret of excellence. Keep a sharp look-out for common-sense directions along the line of your own tastes and means. The majority of the fancy dishes described in some of the leading class publications are about as practical for the farm home as the evening gowns depicted on other pages of the same magazine. Make your collection a choice one for your own individual needs. And when ready to go to work, no time will be lost in hunting through various sheets for some desired directions.—Bessie L. Putnam.

CONCRETE HIGHWAYS.

Good Roads and How to Make Them —An Instructive Booklet Free.

Every person interested in the good-roads movement is aware of the latest development in this important work through the use of concrete. This new type of road is now the subject of extended experiments by the United States government. It has met with such pronounced success in Wayne county, Michigan, as to give that locality national celebrity. In brief, a concrete road is akin to our cement sidewalks, a water-shedding, indestructible and monolithic mass that defies disruption.

The Association of American Portland Cement Manufacturers has published for free distribution a comprehensive book entitled "Concrete Highways," which will interest road supervisors, contractors and taxpayers in every section of the country. The book, which is handsomely and profusely illustrated, contains nearly a hundred pages. It was prepared by expert road engineers and goes into every detail of construction, concluding with a tabular digest of concrete pavements in all sections of the country. The various chapters include discussion of bituminous compound wearing surfaces, grouted pavements, reinforced concrete pavements and specifications for the one and two-course types. In fact, the book covers the entire subject in the most reliable and authentic way. Road supervisors, especially, will find it of inestimable value and the tax-payer will be extremely interested in the economical results obtained by the introduction of these durable concrete highways. Free copies of the book may be had upon application to the Association of American Portland Cement Manufacturers, Land Title Building, Philadelphia, Pa.

Reliable Seed House.

We take pleasure in recommending the A. W. Schisler Grain Company, of St. Louis, as a buyer of seeds direct from seed-growing farmers. The firm also sells direct to farmers all seeds they need. The way to get acquainted with this firm in the first place is to write for their Golden Arrow Seed Catalogue. Address, A. W. Schisler Grain Company, 708 North Fourth street St. Louis, Mo.

On the St. Louis market, on October 25th, the best native cattle, 1,237 pounds average, sold at $11 per 100 pounds; the best selling hogs, averaging 272 pounds, sold at $8.65 per 100 pounds, and the best sheep, averaging 94 pounds, sold at $4.10 per 100 pounds. The best calves sold at $9.50 per 100 pounds, and the best lambs at $6.85 per 100 pounds.

GRAND INVENTION!

NO MORE WASH DAY!

EASY METHOD Of Cleaning Clothes

Cleans Family Wash in 30 to 50 Minutes—Woman's Hardest Work Made Easy—No Motors! No Chemicals!

NOT A WASHING MACHINE

DOES THE WORK IN ONE OPERATION.

SEE HOW SIMPLE—DIFFERENT. EASY. Put on any stove—add water, then soap, then clothes—**move knob occasionally.** In 5 to 8 minutes first batch washed—next batch same way, same water—in 30 to 50 minutes family wash clean. **No labor, no injury to clothes.**

Cleans woolens, flannels, blankets, or colored clothes, as well as white goods, finest laces, curtains, bed clothes. **Saves time, fuel, labor.**

EASY WAY in 30 to 50 minutes cleans washing which before took entire day. All metal, strong, durable, sanitary, light in weight. Easily used, cleaned, handled—always ready. Child or weakly woman can use it. Saves washday drudgery.

Users Praise the "Easy Way."

J. McGee, Tenn., writes:—"One young lady **cleaned day's washing in one hour** with Easy Way—another in **45 minutes.**" Mrs. T. Bullen, Canada, writes.—"I washed **bedding, heavy quilts, curtains, etc., without rubbing.**" Lauretta Mitchell, O., writes:—"Done a **big washing in 45 minutes—sold 3 already.**" A. D. Poppleton, N.Y.:—"Gives perfect satisfaction. Washed bed quilts, **greasy overalls** and **fine clothes.** Greatest thing on earth. F. E. Post., Pa., writes:—

TWO WEEKS WASHING IN 45 MINUTES.

Clothes cleaned **without rubbing."** J. H. Barrett, Ark., after ordering 38 Easy Ways, says:—"You have the grandest invention I ever heard of." J. W. Myers, Ga., says:—"Find check for 12 Easy Ways. Greatest invention to womanhood, forever abolishing miserable wash day. **Sells itself."**

AGENTS GETTING RICH

R. O. Cowan, N. Y., placed 13 in 6 hours—(profit $39.00.) Mrs. J. Brown sold 10 in 3 days—(profit $30.00.) K. J. Blevins, O., writes: "Made 7 calls, sold 5 one day." (profit $15.00.) R. H. Latimore, Pa., writes: "Sold 4 this morning. **Never yet turned down."** A. G. Witt, Pa.: "Received Easy Way yesterday; sold 4 today—not out for orders." Mrs. Gerrish, Mont., ordered sample, then 1 dozen—then 100—**(profit over $300.00.) Just made one shipment 1000 Easy Ways** to Russian agent. N. Boucher, Mass., orders 75 more, says: "Everybody wants one, **best business I ever had."** A. S. Verrett, La., sold 8 in one day—(profit $24.00.)

We want managers, agents, men or women, home or traveling, all or part time, to show, take orders and appoint agents. **Easy Way new article,** not worked to death. Best seller out. Every family wants one. People glad to see it demonstrated; buy without being asked, and throw away costly washing machines to use it. **Only 2 sales a day means $36.60 a week profit.**

Price only $6.00 ready for use. Sent anywhere. Not sold in stores. ☞ **Order one for your own use.**

Send for Free Sample offer, special agents' proposition, etc. Costs nothing to investigate. Send name and address anyway for full description. Write today. **Harrison Mfg. Co.,** 2183 Harrison Building, **Cincinnati, O.**

Cleaning Furs and Woolens.

A good way to freshen up furs that are not quite soiled enough to be cleaend is to dampen the fur thoroughly with a wet brush, then comb out carefully with a clean, coarse comb, working always in the direction that the fur naturally takes, then shake well and hang up and allow to remain until the fur is perfectly dry.

To clean light-colored furs, use white corn meal, and use hot bran for cleaning dark furs. Lay the garment upon a table and sprinkle plenty of meal into the fur and with the hand rub it well through the fur and make a thorough piece of work by rubbing briskly every square inch of fur, then shake and brush until all the meal is removed.

White furs are cleaned by first rubbing with plaster of Paris and then shaking this out and rubbing with corn starch put on in the same way and shaking and brushing out.

To clean white Angora hoods and furs, put the article to be cleaned in a small sack and use about half a pint of flour for one hood, then fold the sack and squeeze with the hands until the article is clean, then remove from the sack and shake and brush.

Wrinkled woolen goods can be effectively freshened by holding over a steaming tea kettle; and velvet collars and trimming respond quickly to steam, which raises the nap to look like new. A plentiful application of powdered French chalk will clean any woolen article, such as light cloth jackets or coats and light-colored dress skirts. Spread the garment on a table and sprinkle the chalk over as much of the garment as can be cleaned at one time, then brush the powder well into the goods with a fine brush, and when the whole garment has been cleaned in this way, shake and brush it well, then give it a good pressing and it will look fresh and new.

The best way to keep the flannels soft and clean is to wash them repeatedly and not hurry them through the weekly washing, and they can be kept soft and of good color as long as they last by washing them through suds made with borax soap chips, as this suds is very soft, and a good squeezing and pressing between the hands in the suds gets them perfectly clean and leaves them as soft as when new.

There is nothing better than the Twenty Mule Team Soap Chips for washing all kinds of woolen articles, such as sweaters, and caps, and fine baby blankets, and flannels, and the best way to use the chips is to dissolve them in hot water and then stir enough of this soap solution in the warm, soft water to make a good suds before the garments are put in.

To keep flannels from shrinking, they must be kept pulled into perfect shape while washing, drying and pressing. All the changes of waters must be of the same temperature, and they must be dried in a warm atmosphere and ironed on the wrong side before they are quite dry with moderately hot irons.—M. H.

Neverslip Horse Shoe Calks.

At this time of the year the subject of shoeing of horses is in order. The Neverslip Red Tip Horse Shoe Calks have gained such a reputation for value, usefulness and humane conditions it is hardly necessary for the manufacturer to advertise them. Yet there is an advantage in reading about them, as will be seen on page 17. The Booklet L which describes them should be in the hands of all who work horses in winter. A copy can be had by writing to Neverslip Manufacturing Company, New Brunswick, N. J.

The latest Elgin butter quotation was 31 cents a pound.

DOLLY DIMPLE DRESSING DOLLS.

A Subscription Premium With the Universal Magazine, Published at St. Louis, Mo.

The Dolly Dimple Dressing Dolls are furnished in a cardboard box, and each box contains a cut-out doll with easel back, four dresses and four hats. The dolls are nine inches high. The names of the dolls are "Affectionate Alice," "Baby Betty," "Chubby Caroline" and "Dainty Dorothy." Nothing more satisfactory has ever been offered as a subscription premium with a publication. We have adopted the Dolly Dimple Dressing Dolls as a subscription premium. The UNIVERSAL MAGAZINE is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, patterns, fashions and poetry—a splendid publication for the money.

In offering such a premium we are actuated by a desire to place in rural homes these delightful Dolls, which gratify the children, besides having a good influence upon them.

Anyone who will send us 25 cents to pay for one-year's subscription to the UNIVERSAL MAGAZINE can select the Dolly Dimple Series of Dressing Dolls as a subscription premium, and we will send the box postage prepaid, safe delivery guaranteed.

If you don't care to obtain the set of Dolly Dimple Dressing Dolls by subscribing for the UNIVERSAL MAGAZINE, you can obtain a set by sending in 25 cents for six-months' subscription to THE NATIONAL FARMER AND STOCK GROWER, which will serve the purpose equally as well. Address,

THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

RURAL HOME COOK BOOK.

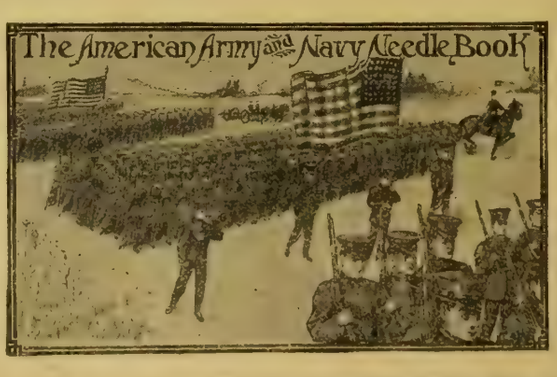
A Most Useful and Practical Premium For Use in Suburban and Country Homes.

At last we have discovered a satisfactory cook book for farmers' wives and daughters, one that is within our power to present to them as a subscription premium without any payment except the subscription price of The National Farmer and Stock Grower, which is only 50 cents a year. The Rural Home Cook Book, 328 pages, is bound with a stiff card cover, thoroughly indexed, so that each recipe can be found immediately. It was edited by Mrs. Ellen Watts McVey, Mrs. Helen M. Laughlin and Mrs. A. H. Wing, with three hundred contributions from practical housekeepers in country homes. The book is equal to all demands upon it, and we guarantee perfect satisfaction to all who receive it from us.

Anyone who will send 50 cents to pay for The National Farmer and Stock Grower for one year can select the Rural Home Cook Book as a free premium, and it will be sent to any address, postpaid, safe delivery and satisfaction guaranteed. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

The Army and Navy Needle Book.

A TEN-CENT PROPOSITION WORTH TEN TIMES AS MUCH. The Army and Navy Needle Book contains five packages of Peerless Steel Needles, warranted; sizes, 3 to 9, 5 to 10, 6 to 7. There is no needle in the market better. There is also an assortment of fifteen other cloth-stuck needles, such as darners, mending needles, stitching needles, crewel needles, glove needles, straw-working needles, worsted needles, etc. The book as a whole cannot be beat. We have adopted the Army and Navy Needle Book as a subscription premium with the **Universal Magazine,** our own publication. It is a thirty-two-page, three-column illustrated monthly magazine. It contains interesting reading, stories, poetry, history, and useful information, fashions, patterns, etc. It is a magazine that recommends itself. Send us 10 cents in silver and we will send you the **Universal Magazine** on a trial subscription for three months, and we will send you one Army and Navy Needle Book. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.** **TO CLUB RAISERS:**—Anyone who will get up a club of four subscriptions to the **Universal Magazine** in accordance with this advertisement will be credited with an extra three-months' subscription to the **Universal Magazine** and an extra package of needles will be sent for getting up the club. Don't wait. Remember, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**



Escaped the Horse Plague.

When the horse plague in Kansas disappeared the veterinarians, as a rule, were as wise at the end as they were at the beginning; but even in the stricken country many farms escaped from loss altogether by taking precautions to have on their farms the conditioner necessary to keep horses and other stock healthy.

H. H. Avery, Clay Center, Kas., writes: "We have a lot of sick horses in this county. Our horses are being fed Sal-Vet, and up to this writing have not contracted the disease."

J. G. Melchert, Lorraine, Kas., writes: "The several thousand pounds of Sal-Vet ordered by telegram last week has been sold to horse owners. Lots of horses dying, but none of those that have been fed Sal-Vet."

Geo. H. Clark, Kensington, Kas., writes: "I am using Sal-Vet to prevent the horse plague, and believe it is the remedy for it."

While the manufacturers do not claim it is a cure for the horse plague, the above actual evidences indicate it acts as a splendid preventive, and we urge our readers to give it a trial, knowing as we do the success Sal-Vet has attained as a worm exterminator and conditioner. In ordering, please mention this paper. See page 21.

BLOODED STOCK NOTES.

The sale of Hereford cattle by O. Harris & Son, of Harris, Mo., on October 22d, was an event in Hereford cattle history. Thirty-eight females averaged $311.60 per head; twenty-six bulls averaged $464 per head, and the general average for sixty-four head was $314. Included in the sale were four bulls, sold at $1,000 and upward, the top being Gay Lad, 2d, a calf of 1911, sold to W. M. Braddock, of Chadron, Neb., for $1,500. The females sold from $160 to $330, and most of the offerings were heifers.

Messrs. Gudgell & Simpson, of Independence, Mo., held a sale of their pure-bred Hereford cattle at Kansas City on October 24th. Fourteen bulls averaged $254.30, and thirty-six females averaged $147.80. The top-priced bull was Bright Lord, a calf, sold to J. A. Shade, of Kingsley, Iowa. The top-price heifer was Lovely, 6th, calved in 1910, and sold to Eggleston & Hill, of Denver, Colo. There was nothing older in the sale than calves of the year 1910.

Mr. C. S. Smith, of Fayette, Mo., held an auction sale of Hereford cattle at the home farm on October 25th. Fifty head were sold for $6,375, which is an average of $127.50. J. S. & J. A. Davis, of Atwater, Ill., bought the top-priced bull, March On, 7th, for $225; and J. J. Early, of Baring, Mo., bought the highest-priced cow for $200.

At Woodlawn Farm, Sterling, Ill., October 24th, a very good sale of Holstein cattle took place. Sixty-eight females brought an average of $183, and eight bull calves and yearlings averaged $113. The top price for a bull was $315, paid by Western College, Oxford, Ill. Mr. A. L. Goodenough, of Morrison, Ill., paid $500 for Woodlawn Orpha, calved in March, 1910. Woodlawn Farm is in Whiteside county, in the northwest portion of the state.

At the sale of Percheron horses held by T. H. Weil, of Blairstown, Iowa, on October 25th, there were forty-nine head sold at an average of $445 per head, and twelve of them were weanlings, sold for an average of $292. The mare average for thirty-five head was $471, and fourteen stallions averaged $380. The mare Imprudente, a first-prize winner and champion at several State Fairs, sold to W. V. R. Powis, of Wayne, Ill., for $1,400. Her picture occupies a half page in the Book of Live Stock Champions, advertised on page 11 of this paper.

There will be a combination sale of Shorthorns, Herefords and Aberdeen-Angus cattle held at the St. Louis National Stock Yards, East St. Louis, Ill., on November 19th, 20th and 21st. It will be held under the management of Mr. Sidney B. Smith, whose postoffice address is Springfield, Ill. Mr. Smith will get together a nice lot of cattle, and the catalogue will be sent to stockmen in advance of the sale if they will write for it.

A Bottle Social.

A unique and profitable affair for a church in need of money to give is a bottle social. Empty bottles have a money value, a fact of which some housekeepers are unaware. They can be disposed of to bottle dealers for a fair price and the number which might be collected from all over the countryside would bring in a neat sum. In advertising the social, announce that a certain number of bottles will be the admission fee, perhaps ten for adults and five for children, or five for adults and three for children.

Arrange several booths at which to sell bottled goods. Stock one with perfumes, cold creams, toilet waters, bay rum, vaseline and other bottled toilet preparations; another with home-made grape juice, catsup, Chili sauce, pickled onions and similar home-bottled goods; a third with an assortment of corks, corkscrews, bottles of ink, mucilage and similar supplies; a candy booth may be arranged by using bottles of the tiny opera stick candy, bottles of mints, limes, chocolate buds, nuts and other confections.

By way of fun have a guessing contest of the number of bottles in the room and also of the number of beans in a bottle set out on display; award some small prize for the closest guesser. Pass around paper and pencil and allow five minutes for the writing of a telegram, the letters in the word bottle to form the beginning of each word in the telegram Here are several examples:

Be on time, Tom; lively evening.
Battle on; the Turks lose; escape.
Both of the turtles lost entirely.
Betty out to theater; let's elope.
—Janet Thomas Van Osdel.

Kaffir corn was selling at $1.00 to $1.06 per 100 pounds when this paper went to press.

OWN A BUSINESS

WE WILL HELP YOU

"I made $88.16 first three days," writes Mr. Reed, of Ohio. Mr. Woodward earns $170 a month. Mr. M. L. Smith turned out $301 in two weeks. Rev. Crawford made $7.00 first day. See what others have done.

LET US START YOU

in Gold, Silver, Nickel and metal plating. Prof. Gray's new electro machine plates on watches, jewelry, tableware and metal goods. Prof. Gray's New Royal Immersion Process latest method. GRAY & CO. PLATING WORKS,
1348 Gray Building, Cincinnati, Ohio

New Invention SELF-HEATING IRON

The "Standard" Makes and Contains Its Own Heat

Works while it is heating, heats while it is working. Saves miles of walking.

Saves Its Cost Every Month

Economical, perfectly safe, convenient. The **"Standard"** is stove, fuel, heat—all in one. **Fire is Inside.** Carry it about, go where you please. Don't stay in hot kitchen; iron any place, any room. Go right along, one thing after another. All kinds of clothes

IRONED BETTER IN HALF THE TIME

No waiting. No stopping to change irons. Right heat. Easily regulated. No time wasted. Iron on table all the time, one hand on the iron, the other to turn and fold the clothes. The **"Standard"** is neat, durable and compact; all parts within radius of iron and handle. No tanks nor fittings standing out at sides or ends to hinder or be in the way. No wires or hose attached to bother. **Right size, right shape, right weight.** Cheapest fuel, one to two cents does ordinary family ironing.

WHAT USERS SAY.

Alex Stalker of N. Y. writes: "The Self-Heating Iron received sometime ago and will say right here it **is the most useful time and money-saving device that was ever made.** My wife has just finished a large ironing in two hours that usually took her half a day with the old stove heating irons, and the house is cool. **It is certainly just the only iron made.** We want the agency." W. P. Farnum: "After receiving your iron and giving it a thorough trial it **will be a perfect success. My wife is enthusiastic** over the work it does and the economy in its use." Mrs. J. E. King, Ill.: "Received iron yesterday in good shape. **Well pleased with it.** I want the agency." I. N. Newby, Ill.: **"Find it to be all you claim for it."** Mrs. Josephine Route, N. Y.: "Received the iron O. K. and did my ironing with it yesterday. **I like it very much."** A. E. Covert, N. Y.: "Have lighted it several times already and find **I can do ironing so much quicker and cleaner than in the old way.** Think it is the **best thing I have ever had in my house."** Miss Roxie Sheets, of N. C.: "The two irons received and am delighted. **Have turned off our regular ironer and will do the ironing ourselves now.** Sold the extra iron to the first lady I showed it to." Mrs. Watson C. McNall, N. Y.: **"I am more than pleased with it** and its work. **It is not a bit clumsy. It is a delight to use it."** Mrs. Cora Wright, Ill.: "I received the iron Saturday and **like it fine."** Mrs. C. M. Winstead, Ky.: "I received my iron about three weeks ago. **Like it better than anything I ever saw in the way of irons.**

"Standard."

So they go—hundreds and thousands of delighted customers—the work of ironing cut in half—the expense of fuel almost eliminated—a God send to every home. The poor can afford it—the rich can buy nothing better. Every iron tested before shipping—fully guaranteed—ready for use when received. Price low—$4.50. Sent anywhere.

AGENTS MAKE MONEY. Men or women. Quick, easy, sure. **All year business.** Experience not necessary. Sells on merit—sells itself. They buy on sight. Every home a prospect. **Every woman needs it.** Price low—all can afford it. **HOW THEY DO SELL!** Even 2 or 3 a day gives $27 to $40 a week profit; 6 sales a day is fair for an agent; some will sell a dozen in one day. Show 10 families—sell 8. Not sold in stores. Send no money. Write postal today for description, agents selling plan. How to get **FREE SAMPLE.**

THE CLOVER FIELDS OF RECTOR, ARKANSAS.—Clover is one of the most prolific crops grown on the rich valley and ridge lands in the eastern portion of Arkansas. At Rector are to be seen some of the finest clover fields in the state. The clover acreage exceeds that of all other grasses and the success in growing it has fostered the stock-raising industry. In this section there is to be found some of the finest cattle and hogs, mules and horses in Arkansas. Wherever clover thrives the beef steer is in his element. Alfalfa and timothy are also important crops of the section about Rector, Arkansas. See page 14 for excursions on the Cotton Belt Route.

A Rousing Appetite Is a Keen Delight

And What Is of Greater Interest, Stuart's Dyspepsia Tablets Enable the Stomach to Digest Whatever Is Eaten.

We all like to see the way healthy children devour their meals. Would we could all do the same! Eating ought to be a delight. It is one of life's chief enjoyments. People who cannot relish a good meal are apt to fall into those ill-tempered moods from which they view the world as a sorry place to live in. So let us learn to employ the best means of harmonizing our existence and thus extract from our daily grind all the pleasure there is to be had. This we can do by keeping our stomachs in prime, active working order.

A majority of people have come to know the blessings which an occasional use of Stuart's Dyspepsia Tablets confer upon the stomach. They are unquestionably the most popular remedy known, for the reason that dyspepsia is the national disease, and these wonderful little tablets have long since acquired a national reputation as a thoroughly reliable and efficient cure for all forms of dyspepsia and indigestion.

No matter how great the excess of food taken into the stomach, one or two of these tablets will digest every particle of it. A package of Stuart's Dyspepsia Tablets should always be in the house. Many a person has saved himself from a serious attack of acute indigestion by using them after heavy meals, such as are eaten Christmas, New Year's, Thanksgiving and other holidays and festal seasons.

After attending banquets, late suppers, heavy fancy dinners, after-theatre parties, etc., where one has dined sumptuously and luxuriantly, Stuart's Dyspepsia Tablets should invariably be used, as they digest the food perfectly and prevent all possibility of dyspepsia, which, without their use, is more than likely to ensue.

Americans are exceedingly fond of the good things of life, and there is apt to be great excess of eating, and the only way to overcome its bad effects on the stomach is to employ a powerful and efficient digestive, such as Stuart's Dyspepsia Tablets, which always insure a good digestion.

Made-overs and Left-overs.

The girl who is just stepping over the line from little girl to miss will find her last-year's dresses unwearable in their present form. And yet from one of these a skillful maid evolved a handsome dress. It was originally made with the full pleated skirt and a wide hem. This was found to be wide enough to cut one of the narrow skirts which now prevail and still leave enough cloth for a peasant waist. The ripping out of the hem and putting on a facing made the necessary length to be added, a wide belt of black helping this a bit from the top. The red cashmere dress with the black trimmings was really handsome, especially when worn over a pretty white guimpe, and even those familiar with it in the original form found it necessary to look twice before recognizing it.

An antique princess dress made another girl happy with very little alteration. Strips of bias were stitched over the shoulder and down both back and front, leaving a space for the insertion of a belt. They may be of the material or of black patent leather, but in either case it must be loose. Since the Norfolk waist thus made is long, the skirt may be pieced down from the top, even with other material, and no one will be the wiser. The Norfolk is especially convenient for a school dress, since it is so quickly adjusted and so impossible to slip seriously out of place, no matter how strenuous the game.

Now is the time, if you have a dress of good material which needs remaking, for the scant skirt is more easily gained from it than any other style likely to come within a reasonable time. Combinations of colors, too, are allowed, and thus the silk which formed a part of the dress will harmonize nicely as the trimming of another. Shirt waist, dress yoke, peplum, all of these are possibilities to the one who is watching and ready to take advantage in every way.

One often has a yard or so of print or percale after making a dress, in addition to the pieces which will be certain to come useful in making repairs. This makes a very neat little apron for afternoon wear. Simply round off the corners, and either pleat into a belt or make the necessary gores to insure a neat fit. A bias ruffle around the bottom gives the necessary finish.

Those who must make everything do double duty so far as possible will find it profitable to take the best parts of the worn skirt for kitchen aprons. It may be that they are not worth a complete remaking, and yet with a hem at the bottom and a belt made new, a presentable one is evolved for doing rough work.

The dye tub suggests great possibilities for those who have more time than pennies. Study carefully the directions of the firm whose dyes you are about to use, and do not attempt impossibilities. If you have your heart set upon a certain color, better waive the wish than attempt it against the recommendation of the firm. They will tell you just what colors certain dyes will color over and yield good results, and their advice should overrule your own personal desires.

It has been remarked that the main reason that the Parisian woman is so much better gowned than the American one is that she never sacrifices personal traits to fashion. If a certain style of hat is becoming, she sticks to it, even though the vogue may for the time be along a different line. In short, the moral is to study your own peculiar needs and adapt the present styles to them. Though stripes are all the rage, the woman who has a rail-like figure may still adhere to the plain goods.

If you have spare time, punch work, Irish crochet and many other bits of fancy work will give the rich touch which it takes considerable money to replace. A ten-cent pattern, if well chosen, will fit into a dozen uses, and by working part in white and others with colors, the variety thus afforded is quite sufficient.—Bessie L. Putnam.

BANISHING "BLUE MONDAY."

Some Victories in "The Revolt of the Farmer's Wife."

Showing the changes that modern ideas have brought about on the farm, Mr. and Mrs. Bruere, writing in the new November number of Harper's Bazar, declare that: "You can even ask for hot biscuits Monday night and get them! Laundry machinery is to the farmer's wife what the self-binder and the thresher are to her husband, with the important difference that it saves her time and muscle and the spine of her back fifty-two weeks in the year instead of a few days at harvesting season."

The Bazar article is entitled "The Revolt of the Farmer's Wife." This is a picture of things where the "revolt" has not reached: "Wash Monday in the country is like nothing else in the living world anywhere. It scorns to consider the twenty-four-hour limit that sets bounds to the other days of the week. It begins before the darkness of the first day and ends when it gets ready. And it is far from obsolete; it flourishes and waxeth fat wherever the water system is still the human hand applied to the back-yard pump. The accepted practice is to put the clothes to soak on Sunday night in the kitchen. Next morning, the farmer's wife and her daughters and the help—when there is any—leap from bed before daybreak, and—so changed from the placid Sabbath people of the countryside procession that filled the roads with buckboard and surrey and platform wagon and buggy and democrat and phaeton from half-past nine to eleven, and again from half-past twelve to two—begin such a rubbing on boards and stirring with sticks, such a boiling and bluing and starching, such a rinsing and carrying-out in baskets and hanging on lines and taking in again, and ironing and folding and sorting and putting-away in drawers as never was! The better part of two days it takes—often three—during which the farmer, like the furtive cat, enters the house only on sufferance. If the farmer's wife had real gumption, she wouldn't let him enter at all until he had given her running water and power-driven laundry machinery. Once the geared washing-machine and its twin brother, the mangle, enter the house, Wash Day—that prehistoric monster—becomes as meek as a lamb."

Regular Winter Quarter commences November 26. No vacation during holidays except Christmas and New Year's Days. Special Winter Term for Short Course Students begins January 6, 1913.

Trade School Engineering Courses

Highland Park College

THE industrial world is calling for engineers of all kinds. Opportunities for good positions and good salaries for the young man fully equipped are greater to-day than ever before. Take your first job as a trained man—not as an apprentice. Start at a good salary. Our graduates are found in paying positions everywhere. Three-year courses of 48 weeks each are equal to the four years at other colleges.

Machinist, Automobile Machinist, Chauffeur and Manual Training Courses

The Machinist Course is completed in 48 weeks, equivalent to 5 years' apprenticeship. Actual work on lathe, drill, shaper, chuck, milling machine, planes, grinder and vise. Special attention to accuracy and speed.

Automobile Machinist Course is of 48 weeks' duration, and is the most complete ever offered. Qualifies you to take a position in factory or as foreman in large repair shop.

Chauffeur Course is complete in 12 weeks. In that time we teach you how to repair any car, and you are qualified to work as a repairman in a garage. There is also a special six weeks' driving course.

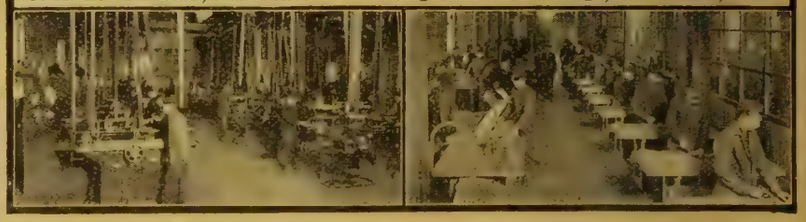
Manual Training Course may be completed in 48 weeks. In the cities and larger towns there is a great demand for *trained* manual training teachers, and the salaries paid are good, averaging at the start about $100 a month.

Also Civil, Electrical, Mechanical, Steam and Traction Engine Courses, co-ordinate with others in the Engineering Department. Complete one year course in Mechanical Drawing.

FULLY EQUIPPED REPAIR AND MACHINE SHOPS

We have the largest and most complete school machine shops in the United States, containing all the necessary apparatus, tools and machinery. School all the year. Enter any time. Small tuition fees. Minimum living expenses. Magnificent buildings, fully equipped. Equal to best Eastern schools. Send for catalogue.

O. H. LONGWELL, President — **Highland Park College, Des Moines, Iowa**



SANTA'S GIFT TO YOU

Nearly everyone nowadays wraps attractively their Xmas gifts before sending, using fancy seals, name cards, and address labels for decorations. It is a pretty custom and adds greatly to the Xmas sentiment, but if purchased in a store these decorations are expensive. Here is an exceptional opportunity, however, to secure

An 88-Piece Assortment Without Cost, consisting of 8 Small Cards, 8 Small Tags, 3 Large Cards, 3 Large Tags, 25 Small Seals, 25 Large Seals, 3 Xmas Address Labels, 5 "Do Not Open Until Xmas" Stickers and 8 Xmas Stamps; all embossed in gold and beautiful colors, and inclosed in a Fancy Package.

With Farm & Home, 3 Months, 10c

FARM AND HOME is the recognized leader in the farming world; its contributers are recognized authorities, and its editors practical men who "know." Each issue is read by more than 2,500,000 readers and a year's numbers (24 issues) make a volume of over 600 pages; regular price is 50 CENTS A YEAR.

Just to Introduce Farm and Home to new readers, we will send it on trial for three months (6 issues) for ONLY 10 CENTS (Coin or Stamps). Further, if you will send us (at the same time) the name of one other person to whom we can send a free sample of Farm and Home, *we will send you this complete 88-piece Xmas assortment,* **free and postpaid**

88 PIECE XMAS Package FREE

DRESSMAKING PREMIUM.

A Complete Course of Instruction at Home in Ten Weeks.

For several years we have been seeking something in the form of a book or chart that was able to impart instruction in dressmaking that could be understood. We have seen charts and diagrams and had all kinds of methods explained which all led back to personal instruction.

We have obtained a book at last that we can plainly see is a guide and a helper to the beginner, and with it an intelligent girl or woman may learn to be independent, to make her own clothes, to make clothes for others, to earn a living

MRS. EDITH M. CARENS,
Author of the book entitled "Dressmaking in Ten Weeks."

and to be able to enter one of the best-paid professions open to women.

The book we have selected as the best known to us is by Mrs. Edith M. Carens, who is Principal of a College of Dressmaking. It is entitled "Dressmaking in Ten Weeks" and is a condensed course of twenty complete lessons, and especially arranged for home study work. Each line is the result of careful preparation and years of study by an expert. There is information found here that can be obtained nowhere else.

There is an entire lesson on hand sewing, which alone is a book within itself, dealing with all kinds of fancy stitches, different kinds of hems and seams, proper method of buttonholes, also the making of hand-made trimming.

There are lessons on the drafting of garments to measure, also directions on the proper handling of patterns.

The book instructs you on the buying of materials, the preparing of the cloth before it is cut, the designing, cutting, fitting and finishing of every kind of clothing in a woman's wardrobe.

The size of the book is 5x8 inches, contains 127 pages, and has fifty illustrations.

Our Subscription Proposition.

What we wish to do is to please every girl and woman on the farm. We wish them to say to husband to father or brother and to uncle: "I would like you to subscribe for The National Farmer and Stock Grower. It pleases me and will please you. The price is 50 cents a year. It is full of good articles on general farming and stock and poultry raising in all branches. And besides all that, if you do subscribe, I will receive as a commission or premium a copy of the book 'Dressmaking in Ten Weeks,' postage free and safe delivery guaranteed. I need that book, and the best way to get it is to send 50 cents for one-year's subscription to The National Farmer and Stock Grower. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Becoming Dress For the Stout Woman.

While it is perhaps more difficult for a stout woman to dress becomingly than it is for a woman of the slender type, yet it is by no means impossible. There are a few general principles to follow, the observance of which makes a surprising difference in the appearance of a fleshy woman.

A good corset must be worn. This cannot be bought under three dollars. In the corsets selling at that price and above every make carries a special for stout figures. The corset is cut with a view to reducing the apparent size of the figure; it is comfortable, and a good, strong material is used in the making. It is better to sacrifice one new gown a year and put that amount of money into a corset than it is to have a variety of gowns to wear over a cheap, ill-fitting corset. After all, a woman can wear only one dress at a time.

Two mistakes in dressing which very fleshy people often make is that of going either to the extreme of wearing exceedingly tight clothes made in a severely plain style, or adopting the exact opposite style of dressing and wearing very fussy clothes. Those who adopt the former method do so with a view to making the figure look no larger than can be helped, while those who choose the latter believe that the fussy garments hide the uncouth outlines of their bulky figures and thus do not emphasize their largeness. The most satisfactory style is a medium between these two extremes, where no gown or outer garment which fits very closely to the outlines of the figure is worn, nor any garment that is fussed up so as to make its wearer look very bulky. This makes it necessary for a fleshy woman to adopt and adhere to a style of her own, which may vary somewhat, but very little, to conform to the changing styles. She must decide to wear what is becoming to her, regardless of the dictates of fashion. Whether the prevailing mode in sleeves is the skin-tight sleeve or the balloon affair, the fleshy woman must maintain the always becoming style of a medium full sleeve, for either of the two extremes is equally unbecoming to a very large woman.

An easy fit at the waist line makes the figure less pronounced. A dress drawn in tightly at the waist line emphasizes the large hips and the full bust. A tight-fitting basque should not be thought of. Instead the fleshy woman should wear a brasiere or a tight-fitting, boned corset cover. This confines the superabundant flesh and gives a good outline to the figure as well as does the lined and boned basque that some fleshy women still adhere to in the belief that it is impossible for them to wear anything else. The waist should be fitted easily with a plait over the shoulders, so arranged as to give extra fullness over the largest portion of the bust. If the waist is rightly made there is no need of the unsightly drawing at the armholes and across the bust. Scatter the fullness at the waist line to both the front and back of the waist, so as not to make unsightly v's of the gathers.

And Gas Stoves Too

A one-piece dress is more becoming than a waist and skirt of different materials, but where it is necessary to have the separate skirt and waist, harmonizing materials should be chosen so as to avoid a cut-off effect. Any trimming that is used (and a fleshy figure will stand but little) should be applied in up-and-down lines, never across. Tucks and pleats should likewise be up and down.

Whether the skirts are very full or very narrow, plaited or gathered, the fleshy woman who desires to have good lines must still conform to a medium style which gives just enough fullness, but never too much. If a jacket suit is worn, the style that cuts off at the waist or the hips must be avoided. It must cover well the curve of the hip, or the woman will look tubby.

Almost all, if not all, of the paper pattern companies to-day cut patterns with a special view to fitting extremely fleshy figures, and the woman who does her own sewing must order these. If she has a competent dressmaker, the seamstress will take care of the matter and will probably be able to offer many suggestions well worth heeding, provided she finds her customer desirous of listening to her.

The kind of material worn is another important factor, as is also the color. Smooth materials, closely woven and quiet in tone must be chosen.

Very fleshy women seem addicted to wearing extremely large, heavily-trimmed hats. This is probably due to the mistaken notion that, owing to a fleshy face, nothing but a very large hat can be worn. Here again extremes must be avoided, but a hat inclining to the narrow rather than the wide brim, and with a high crown, is the most becoming style that can be chosen. The wide hat with its load of plumes or flowers gives a squatness to the figure which is exactly what the fleshy woman desires to avoid.—Janet Thomas Van Osdel.

How to Make Peanut Butter.

Circular 98 of the Bureau of Plant Industry, Department of Agriculture, says:

The growing popularity of peanut butter as a food has led to many inquiries regarding the methods employed in its manufacture. Peanut butter is in reality a very simple preparation, consisting merely of fresh-roasted peanuts ground finely and salted to suit the taste. Several large factories and a large number of smaller ones are now devoted to the manufacture of this product with which to supply the rapidly-increasing demand. Some of the large factories are almost models in their construction, equipment and management, while many of the smaller establishments, which have no elaborate equipment, are turning out an excellent product.

Peanut butter was first manufactured and offered for sale as a food for invalids, but the article was soon adopted by many persons who for one reason or another, such as preference for vegetable foods only, objected to the use of ordinary dairy butter. It soon outgrew this condition of limited use, and its development on a commercial scale has been a general product. It was never intended that this product should be used as a substitute for or a competitor of butter, but as a luncheon delicacy and to add variety to the diet. Peanut butter is a wholesome and nutritious food product and has become a popular article upon our markets. Last year one manufacturer used over 130 cars of shelled peanuts in the production of 6,000,000 small jars of this food. Other manufacturers used large quantities, the total consumption of peanuts for the manufacture of peanut butter alone amounting during the year of 1911 to approximtely 1,000 cars of shelled goods, or 1,000,000 bushels.

In order to produce high-class peanut butter the manufacturer must employ the best materials. On the other hand, the use of the best stock obtainable will be of little avail unless the work of converting into a salable product is conducted in a sanitary manner.

It is said that the wild duck yields a serum which gives immunity from hay fever, asthma and similar troubles.

The Universal Magazine Bracelet.

This is all the rage. And Adjustable Bracelet. The most elegant design and perfectly finished. It is not solid gold, but it is washed and plated and will stand the acid test. Its match cannot be purchased in country jewelry stores for any price. You Should Have Seen the Pimples

But Now Her Face Is the Fairest of the Fair, Due to Stuart's Calcium Wafers.

Those dimples are like pearls in a ruby cluster when Stuart's Calcium Wafers clear the face of every pimple, spot and blemish. And even if you haven't dimples, the clear, transparent skin of a healthy, Calcium Wafer complexion is more radiant than the deft touch of an artist to the most exquisite water color.

Stuart's Calcium Wafers act directly upon the sweat glands of the skin, since their mission is to stimulate the excretory ducts. They do not create perspiration, but cause the skin to breathe out vigorously, thus transforming perspiration into a gaseous vapor. The calcium sulphide of which these wafers are composed, consumes the germ poisons in the sweat glands and pores, hence the blood makes a new, smooth skin in a surprisingly short time.

You will never be ashamed to look at yourself in a mirror, once you use Stuart's Calcium Wafers. Nor will your friends give you that hinting look, as much as to say—for goodness sake, get rid of those pimples.

There is no longer any excuse for anyone to have a face disfigured with skin eruptions, when it is so easy to get rid of them. Simply get a box of Stuart's Calcium Wafers at any drug store and take them according to directions. After a few days you will hardly recognize yourself in the mirror. The change will delight you immensely. All blemishes will disappear.

All druggists sell Stuart's Calcium Wafers at 50 cents a box.

MAY MANTON EMBROIDERY.

These paper patterns require only a hot iron to insure a perfect transfer on cloth. The way to do it is to lay the material to be stamped on a padded ironing board or table, place the pattern over it with the printed side down and press over the entire surface of the paper with a hot iron, when a perfect transfer will result. Please order by embroidery number.

Each embroidery pattern is 10 cents, and is well worth the money.

Please send all orders for these embroidery patterns by number to the **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

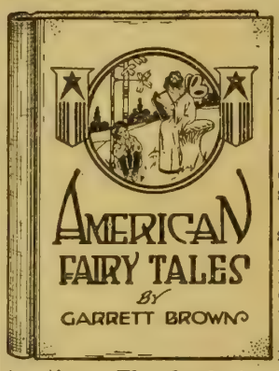
Kingman Implement Catalogue.

The Kingman Plow Company, Peoria, Ill., will send a complete catalogue of farm implements to any of our readers who will write for it mentioning this paper. This firm makes every implement in general farm use, and, what is most important, makes them well. Don't hesitate to write; a study of farm implements is in order on all farms.

A BOOK OF FAIRY TALES.

A Splendid Premium For Subscribers to the Universal Magazine.

AMERICAN FAIRY TALES by Garrett Brown is a collection of charming stories, full of marvels and enchantment, with just enough of human nature to bring them down to every-day comprehension. They are told simply in an original style and in a way that renders them entertaining to grown-ups as well as to children. But the best of all is that they are genuinely American. The scenes of all of them are in America, and North America at that, and many of them account for some marvel that science has not yet explained. For children the book is wonderfully attractive. The book is 6x9 inches, fully illustrated, having thirty-three full pages in color; printed on fine quality of paper; large type; handsomely bound in cloth.



We have adopted the book entitled AMERICAN FAIRY TALES as a premium in connection with the Subscription Department of the UNIVERSAL MAGAZINE. Our readetrs ought to know that the UNIVERSAL MAGAZINE is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, patterns, fashions and poetry—a splendid publication for the money, and this is our first proposition: Send us fifty (50) cents and we will credit you with two-years 'subscription to the UNIVERSAL MAGAZINE and we will also mail you a copy of the book AMERICAN FAIRY TALES, postage paid, safe delivery and satisfaction guaranteed. Address without delay **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

The Old, Old Story.

During the cotton-picking season in Texas a colored brother, who had gone into the country to work, returned very much disgusted, says the Cleveland Plain Dealer.

"Didn' yo' get no offahs ter pick no cotton?" asked a friend.

"Sech er dey was. White man done offered me one-third o' wat Ah could pick. Ah done tuk a look at de field an' saw dat when it wah all picked it wouldn't amount ter one-third. So Ah done lit out fer home!"

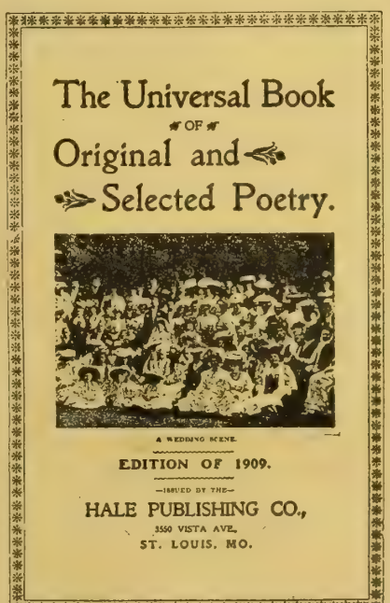
Please address all pattern orders to the **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

A TEN-CENT PROPOSITION.

In the Interest of a Publication That is rapidly Coming to the Front.

The UNIVERSAL MAGAZINE is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, patterns, fashions and poetry—a splendid publication. One thing about the UNIVERSAL MAGAZINE is, that it is not loaded down with advertisements. Notwithstanding it is a cheap magazine, the subscription price being 25 cents a year, it was supported by subscriptions alone for five years.



The UNIVERSAL BOOK OF ORIGINAL AND SELECTED POETRY consists of one hundred pages, containing three hundred and ninety beautiful, interesting, pathetic, descriptive, humorous and delightful poems. These poems have been selected from the very best of the ancient and modern authors and the occasional pieces which have attracted favorable attention. It is a book to be kept by the bedside to compose one to sleep, a book to carry in the satchel or to read on the train and street car. It is a book for all people at all times. We issued the UNIVERSAL POETRY BOOK for the purpose of using it as a subscription premium in connection with our own new successful paper, the UNIVERSAL MAGAZINE.

Universal
Magazine.
Vol. V. DECEMBER, 1909. No. 6.

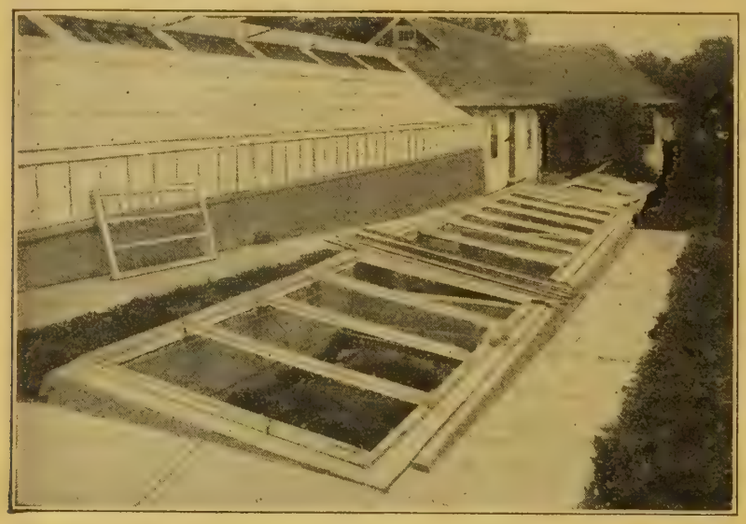
CONCRETE HOT-BEDS AND COLD-FRAMES.

Means For Growing Winter Vegetables and Early Spring Plants.

There is nothing which pleases the appetite so much as delicacies out of season. As for vegetables, such



Well Located Concrete Hot-bed.

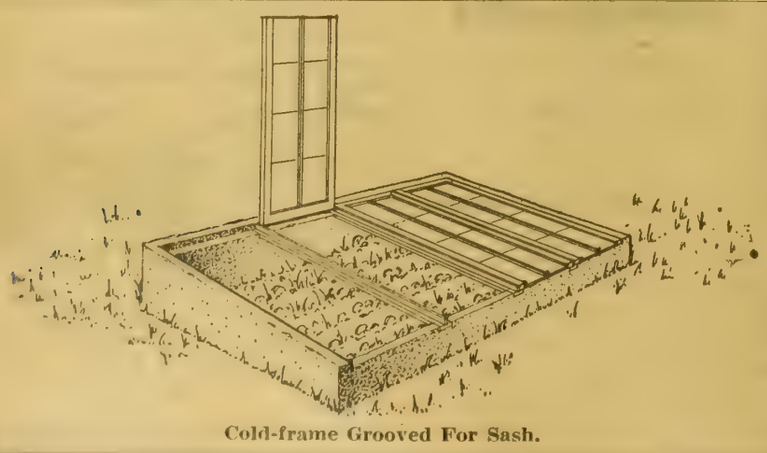
delicacies are not costly luxuries and are within the means of anyone who will take the time to build and run a hot-bed or a cold-frame. Such a bed will make possible home-grown lettuce and radishes (and even violets) for the Thanksgiving and Christmas dinners. Moreover, by this means one can depend on having good, hardy plants for spring planting in the garden.

Proper Time to Build Hot-bed.

September and October are the months to prepare the hot-bed. To avoid annual repairs and to secure the best results build it of concrete. Locate the bed on the sunny, wind-protected side of a building. A four-sash bed is usually large enough except for commercial purposes. A standard hot-bed sash is three feet by six feet. Lay out the bed six feet eight inches wide by twelve feet ten inches long. The concrete walls are six inches thick. Dig the foundation trenches two feet six inches deep within the lines given above. Make forms of one-inch lumber to carry the south (front) wall six inches and the north (back) wall fourteen inches above ground. Forms are not required below ground level. The tops of the end wall slope to the others. Before filling the forms with concrete, test the dimensions of the bed by means of the sash. See that the sash lap the forms two inches on all sides.

Mixing and Placing the Concrete.

Mix the concrete mushy wet in the proportion of one bag of Portland cement to two and one-half cubic feet of sand to five cubic feet of crushed rock, or one bag of cement to five cubic feet of bank-run gravel. Fill the forms without stopping for anything. Tie the walls together at the corners by laying in them old iron rods bent to right angles. While placing the concrete, set half-inch bolts about two feet apart to hold the wooden top-framing of the bed to the concrete, or make grooves in the top of the concrete for countersinking the sash to the level of the walls with an allowance of one-quarter inch for clearance. This can be done by temporarily imbedding in the concrete wooden strips of the necessary dimensions. During this operation, by means of blocks nailed to the strips, make provision for the center-bars described below. Remove the strips as soon as the concrete stiffens. Take down the forms after five days. The extra two and five-eighths inches in length of the bed is allowance for the three center-bars between the sash. These sash-supports are of dressed one-inch stuff, shaped like a capital "T" turned upside down. The length of the stem of the "T" is equal to the thickness of the sash and the top is three inches wide. Sufficient materials for the concrete will be supplied by fourteen bags of Portland cement, one and one-fourth cubic yards of sand and two and one-half cubic yards of crushed rock, or fourteen bags of cement and two and one-half yards of pit gravel at a cost of $10.00.



Cold-frame Grooved For Sash.

Preparation and Care of the Hot-bed.

If the bed is to be used as a cold-frame, it is finished when covered with glass. For a hot-bed, dig out the dirt to the depth of two feet, tramp in eighteen inches of fresh horse manure well mixed with leaves or bedding and cover it with four to eight inches of rich soil. Bank the excavated earth around the outside of the bed. Put the sash in place, hang a thermometer on the inside and allow the bed to heat up. After a couple of days, when the temperature has dropped to 85 or 90 degrees planting may be safely done. Seed catalogues contain valuable information as to the length of time necessary to produce the different kinds of plants.

During the midday in bright weather, the bed will become too hot and must be ventilated for a short period by raising the sash on the side away from the wind. Water the plants in the morning only and ventilate later to remove the moisture from the foliage. On winter nights it will often be necessary to cover the bed with old carpets and boards.

It is a genuine pleasure to grow winter vegetables and flowers for home use. If the supply exceeds the needs, there is always a profitable market for such products.

Poultry and Farm Paper Club.

We are often asked which is the best poultry paper in the United States, and the answer is **The Reliable Poultry Journal.** There are

other excellent poultry papers, but the one we take home to read and one the family is determined to read is **The Reliable Poultry Journal.** We have made arrangements whereby we can send The National Farmer and Stock Grower and **The Reliable Poultry Journal,** both papers, one year, for fifty cents. This is a bargain that should be accepted at once. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Hears Church Bells After Long Deafness.

For the first time in years this good lady, who has been deaf, hears the church bells. She is in ecstasy. Only this morning has she been able to hear the prattle of her grandchildren and the voice of her daughter. Twenty-three years ago she first found herself becoming deaf, and, despite numerous remedies, medical advice, hearing devices and specialists' treatments, she found it more and more difficult to hear. Of late years she was harassed by peculiar noises in the head, which added to her misery. At last she was told of a book which explains how to regain perfect hearing without costly apparatus or drugs. She got this book and learned how to quickly become freed from deafness and head noises. Observe her delight in this hypothetical illustration! Any reader of The National Farmer and Stock Grower who desires to obtain one of these books can do so free of cost by merely writing to the author, Dr. George E. Coutant, 228 D, Station E, New York, N. Y. He will be pleased to mail it promptly, postpaid, to anyone whose hearing is not good. This offer will bring joy to many homes.

SELECTED POETRY.

WHAR' THE HAND O' GOD IS SEEN.

o I like the city? Stranger, 'tisn't likely that I would.
'isn't likely that a ranger from the border ever could
it accustomed to the flurry an' the loud, unearthly noise—
verybody in a hurry, men an' wimmin, gals an' boys,
ll a-runnin' like the nation 'mid the rumble an' the jar,
s' as if their souls' salvation hung upon their gittin' thar.

Like it! No. I love to wander
'Mid the vales an' mountain green,
In the border land out yonder,
Whar' the hand o' God is seen.

'othin' har' but bricks an' mortar, towerin' overhead so high
hat you never see a quarter o' the over-hangin' sky;
ot a tree or grassy medder, not a runnin' brook in sight,
'othin' but the buildin's shadder makin' gloom of Heaven's light;
v'n the birds are all imported from away across the sea—
Faces meet me all distorted with the hand o' misery.

Like it! No. I love to wander
'Mid the vales an' mountain green,
In the border land out yonder,
Whar' the hand o' God is seen.

oarin' railroad trains above you, streets by workmen all defaced,
verybody tryin' to shove you in the gutter in their haste,
ars an' carts an' wagons rumblin' through the streets with deafenin' roar,
rivers yellin', swearin', grumblin', jest like imps from Sheol's shore;
actories i'inin' in the chorus, helpin' o' the din to swell,
uctioneers in tones sonorous, lyin' 'bout the goods they sell.

Like it! No. I love to wander
'Mid the vales an' mountain green,
In the border land out yonder,
Whar' the hand o' God is seen.

es, I love the Western border; pine trees wavin' in the air;
ocks piled up in rough disorder, birds a-singin' everywhere;
eer a-playin' in their gladness, elk a-feedin' in the glen;
ot a trace o' pain or sadness campin' on the trail o' men.
rooks o' crystal clearness flowin' o'er the rocks, an' lovely flowers
n their tinted beauty growin' in the mountain dells an' bowers.

Fairer picture the Creator
Never threw on earthly screen
Than ths lovely home o' Natur'
Whar' the hand o' God is seen.
—Captain Jack Crawford, the Poet Scout.

HIS BACK TO THE FARM.

The real estate dealer with ball-bearing jaws
aid: "Get on an acre and dodge city laws."
He said and repeated: "GET BACK TO THE FARM,
Where there's little to do with no hard-times alarm;
lo raise some prize pumpkins and onions and spuds,
nd save many dollars by wearing cheap duds."

With columns of figures as long as a string
He showed us how money was sown in the spring,
And how in the fall, when the picking was prime,
The money came back like a smooth-punctured dime.
He showed me how fellows with ninety-eight cents
Now loll on the cushions and grab in the rents
On houses and mansions from Stratford to Strand
Which they had made from an acre of self-acting land.

He'd letters to show me how John W. Doe
Had raked in the coin with the aid of a hoe;
How one Richard Roe from an acre of hay
Had sixty-two barrels of cash stored away.

Well, I purchased the land, and along with the deed
The salesman included a package of seed,
And I planted the acre with turnips and beans,
And onions and carrots and lettuce and greens,
Cucumbers and melons and pumpkins and peas—
Then I waited results and I lived at my ease.
The vegetables grew, put despair on the shelf,
And I strutted around and shook hands with myself.

t last when the crop was all ready to pick
hired a fat yokel with shovel and pick,
nd I told him to pluck it and bring it to town,
nd then I got ready to salt lucre down.

re a month had gone forward the digger came in
ith a sack o'er his head and his face all a-grin,
nd he said: "There was twenty-nine 'taters, I think.
ut I et 'em last Tuesday, so they're on the blink;
The rest of the stuff is all here in the sack;
And you owe me ten dollars." He set down his pack.
Three turnips were there, and two onions, a bean,
Two bunches of lettuce that should have been green,
A dwarfed, sun-dried pumpkin, a dry, scrawny beet—
But I paid the fat yokel and took a receipt.
Then a peddler came by and I sold him the crop
For ninety-eight cents, with the sack at the top.

Now the acre's for sale. I have letters to show
That coin can be dug from the ground with a hoe;
I can prove that a man with but ninety-eight cents
Will shortly be busy collecting the rents.
If he'll buy just an acre of self-acting land
He'll own high-priced houses from Stratford to Strand;
If he'll plant anything that belongs to the soil,
And will flee from the city and cut out the toil.

There's naught can compare with the green country's charm,
But I'm here in the town with my BACK TO THE FARM!
—Miles Overholt.

THE PLANTING OF THE APPLE TREE.

Come, let us plant the apple tree,
Cleave the tough greensward with the spade;
Wide let its hollow bed be made;
There gently lay the roots, and there
Sift the dark mould with kindly care,
And press it o'er them tenderly,
As round the sleeping infant's feet
We softly fold the cradle sheet,
So plant we the apple tree.

What plant we in this apple tree?
Buds, which the breath of summer days
Shall lengthen into leafy sprays;
Boughs, where the thrush, with crimson breast,
Shall haunt and sing and hide her nest;
We plant, upon the sunny lea,
A shadow for the noontide hour,
A shelter from the summer shower,
When we plant the apple tree.

What plant we in this apple tree?
Sweets for a hundred flowery springs,
To load the May wind's restless wings,
When, from the orchard row, he pours
Its fragrance through our open doors;
A world of blossoms for the bee,
Flowers for the sick girl's silent room,
For the glad infant sprigs of bloom,
We plant with the apple tree.

What plant we in this apple tree?
Fruits that shall swell in sunny June
And redden in the August noon,
And drop when gentle airs come by,
That fan the blue September sky;
While children come with cries of glee,
And seek them where the fragrant grass
Betrays their bed to those who pass
At the foot of the apple tree.

And when above this apple tree
The winter stars are quivering bright,
And winds go howling through the night,
Girls, whose young eyes o'erflow with mirth,
Shall feel its fruit by cottage hearth,
And guests in prouder homes shall see,
Heaped with the grape of Cintra's vine,
And golden orange of the line,
The fruit of the apple tree.

The fruitage of this apple tree
Winds and our flag of stripe and star
Shall bear to coasts that lie afar,
Where men shalt wonder at the view
And ask in what fair groves they grew;
And sojourners beyond the sea
Shall think of childhood's careless days,
And long, long hours of summer play
In the shade of the apple tree.

Each year shall give this apple tree
A broader flush of roseate bloom,
A deeper maze of verdurous gloom,
And loosen, when the frost clouds lower,
The crisp brown leaves in thicker shower;
The years shall come and pass, but we
Shall hear no longer where we lie,
The summer's song, the autumn's sigh,
In the boughs of the apple tree.

And time shall waste this apple tree.
Oh, when its aged branches throw
Thin shadows on the ground below
Shall fraud, and force, and iron will,
Oppress the weak and helpless still?
What shall the tasks of mercy be
Amid the toils, the strife, the tears
Of those who live when length of years
Is wasting this little apple tree?

"Who planted this old apple tree?"
The children of that distant day
Thus to some aged man shall say,
And, gazing on its mossy stem,
The gray-haired man shall answer them:
"A poet of the land was he,
Born in the rude but good old times;
'Tis said he made some quaint old rhymes
On planting the apple tree."

BILLIE GRIMES, THE DROVER.

To-morrow morn I'm sweet sixteen and
Billie Grimes, the drover,
Has popped the question, ma, to me, and
wants to be my lover.
He says to-morrow morn, mamma, he's
coming here quite early
To take a pleasure walk with me across the
fields of barley.

You shall not go, my daughter dear, there's
no use now of talking;
You shall not go with Billie Grimes across
the fields a-walking.
To think of his presumption, too, the dirty, ugly drover,
I wonder where your pride has gone to think of such a lover.

Old Grimes is dead, you know, mamma, and Billie is so lonely,
Besides they say to Grimes' estate that Billie is the only
Surviving heir to all that's left, and that they say is nearly
About ten thousand dollars, ma, a cool six hundred yearly.

I did not hear, my daughter dear, your last remark quite cearly,
But Billie is a clever lad, and no doubt loves you dearly.
Remember, then, to-morrow morn, to be up bright and early,
To take a pleasure walk with him across the fields of barley.

And when we're married then, mamma, we both shall dress so natty,
I'll buy a thousand-dollar shawl, 'twill make me look so sweetly.
This common one is getting old, and silks will be in fashion:
I'll turn his pockets inside out, and thus return his passion.

Not quite so fast, my pretty miss, don't try to win the drover,
Who's traveled all this wide world o'er in search of a true lover.
My money ne'er shall buy your shawls, nor build your castles higher;
Pray, madame, take your daughter home, I did it but to try her.
—Unknown Author.

Ways of Economizing.

If your hallway is not provided with that useful article, an umbrella holder or stand, one can easily be made by taking a five-gallon jar, giving it a coat of asphaltum and afterward painting or applying a bunch of flowers and leaves, or the jar may be simply bronzed and a gilt band added at top and bottom.

If you want a nice and a very cheap table cloth, get six yards of cotton toweling and cut into two-yard lengths; then overcast the edges with white cotton and catstitch them together; then hem the edges of the cloth. A cloth was made in this way at a cost of twenty-five cents, and it was very nice-looking and very easily washed and ironed.

You can make a can of corn go as far as two cans by cooking in the following way: Add a can of boiling water to one can of corn and place upon the stove; then mix one heaping tablespoonful of corn starch with six tablespoonfuls of cold water; add to the corn and stir; let boil two minutes, then season with salt, butter and pepper.

When eggs are scarce, even starch may be substituted for part of the eggs in custards or other dishes where milk and eggs are called for, and a teaspoonful of corn starch is equal to one egg.

You can make a delicious breakfast food by washing some wheat and then drying and browning in the oven until it becomes crisp, then grind in a coffee mill. When cooked it makes an excellent dish, eaten either warm or cold with sugar and cream.

When making your cake, take only half as much butter as the recipe calls for and finish with lard, and you will not only save butter but your cake will be softer, lighter and of finer grain.

A coal bucket that had become worn enough to sift coal dust over the floor was repaired by fitting in a new bottom of heavy cloth and then the whole was given a coat of new paint.

A nice, large and warm comfort was made at a cost of only a few cents. The best part of some old gingham, percale and calico dresses were colored a dark shade of blue with Diamond dye for cotton, then enough of these pieces were sewed together to make both sides of the comfort, and instead of cotton batting the interlining was made entirely of old and new soft scraps of goods, and these were put in the comfort, then tied with odds and ends of san-silk and silk twist. Another good comfort was made without any expense by piecing together the best parts of some old-cloth coats and pants for the top covers, and the underlining was made of old cotton pieces colored a dark brown, and a very light lining of the old soft pieces made this comfort heavy enough, as the woolen cover was so much heavier than a cotton one.—Martha.

A POPULAR PREMIUM.

A Pair of Aluminum Salt and Pepper Shakers.

The Universal Magazine ought to be known to all our readers, for the reason that it is a nice publication that is very good company on a farm.

The Universal Magazine is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, patterns, fashions and poetry—a splendid publication. One thing about the Universal Magazine is that it is not loaded down with advertisements.

When we send out the Universal Magazine we also like to send out a useful and meritorious subscription premium with it.

To this end we have adopted a pair of Aluminum Salt and Pepper

Universal Salt and Pepper Shakers—Reduced Size.

Shakers, regulation size, 2¾ inches, mailing weight six ounces. They are artistic and elegant, and aluminum ware is always light, always bright, and will last a lifetime.

To anyone who will send us twenty-five (25) cents we will send the Universal Magazine for ten months, and we will send the pair of Universal Aluminum Salt and Pepper Shakers as a premium, postage paid, safe delivery and satisfaction guaranteed.

SUBSCRIPTION BLANK.

Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

HUNTER WATCH CO., DEPT. 1223, CHICAGO, ILL.

NEW BOOK OF KNOWLEDGE

FOR HOME, FARM, RANCH, FACTORY AND OFFICE.

A Book For Boys and Men, Women and Children, Old and Young.

Now is the Accepted Time to Get This Book.

THE HANDY ALMANAC, ENCYCLOPEDIA AND ATLAS FOR THE YEAR 1913.

What is It? The answer is Diamonds.

"We are the people and our voices must and shall be heard." What we need is Knowledge, so that our voices shall speak wisdom and we shall not stand back for fear of exposing our ignorance. The wisest men read the most books. They know many things, but their greatest ability is shown when they prove what they know by the evidence as accumulated in books.

Wise men also compile books. When ten men who are specialists in certain lines of knowledge are employed for over a year in collecting the evidence in order to publish a single book the result is diamonds of fact and information.

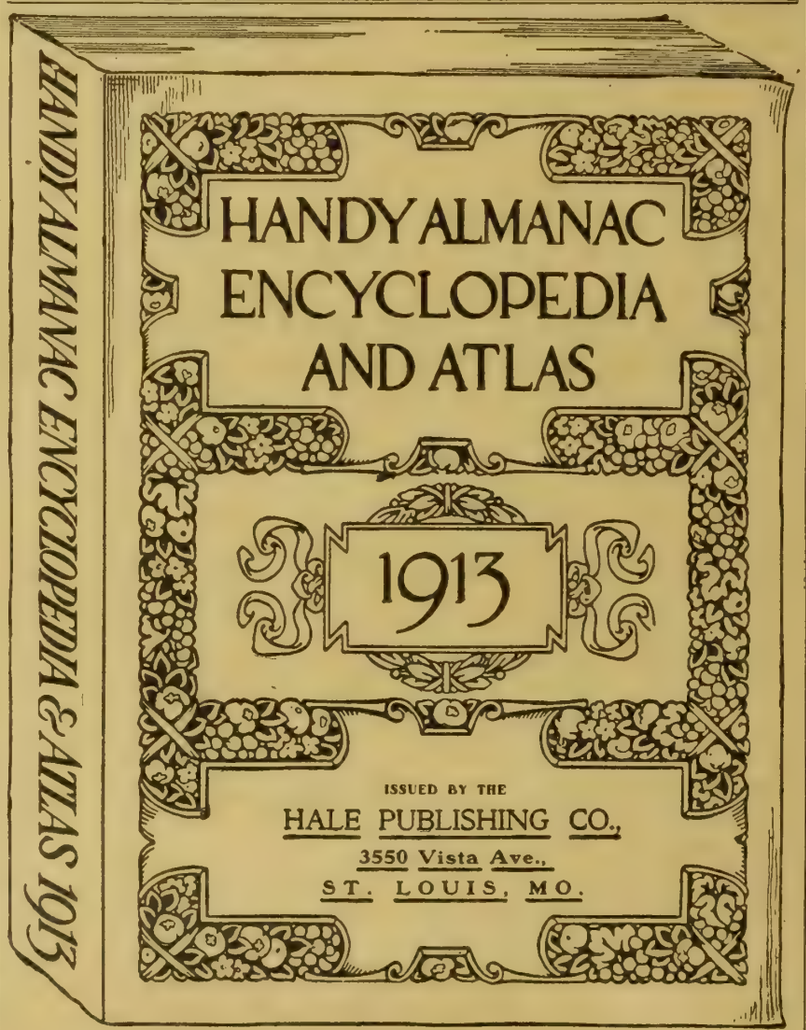
THE HANDY ALMANAC, ENCYCLOPEDIA AND ATLAS is the product of many capable men, and yet so large is the edition that the cost has been reduced to a minimum, and although the first copy may have cost ten thousand dollars, yet a million edition will reduce the cost of a single copy so low that we are able to present it to our readers who pay only fifty (50) cents for one-year's subscription to THE NATIONAL FARMER AND STOCK GROWER, and we can also afford to pay the postage without raising the price. The book and package will weigh sixteen ounces, and the postage on each copy will be eight cents.

WHAT ARE THE CONTENTS?

There are 150 to 175 subjects in the index. Some occupy a half page, others a full page, and others several pages. Some of the contents are:

Astronomical Calculations For 1913—Eclipses in 1913—How to Foretell the Weather—Average Weather in Various States—Domestic and Foreign Postage—Weights and Measures—Interest Laws—Statute of Limitations—Tariff Law—Sherman Anti-trust Law—Length of Railways and Telegraph Lines—Length of Ocean Cables—World's Longest Bridges—Highest Mountains in the World—Governments of the World—Sports—World's Records—Important Dates in American History—Rules For Spelling and Punctuation—Household Hints—Cooking Time Table—First Aid to the Injured—Postal Banks—Parcels Post Mail—New Pension Law—New Eight-hour Law—Highest Structures in the World—World's Crops—Olympic Records—Aeroplane Records—United States Flag Regulations—Arbitration Treaties—Explanation of Initiative, Referendum and Recall—Migration of Weeds and Vegetables—Methods of Control of Moisture—Methods of Improving Seed—Diseases in Plants—Renovation of Worn-out Soils—How to Know a Good Horse—Suggestions For Farm Buildings—The Panama Canal—The Panama Exposition—Maps of the World.

Last in the list our space will permit us to mention will be the election returns for the Presidency and other important offices. The book will not be delivered until the returns are all in, which will be most likely early in December and in ample time to start with the Almanac of the new year.



HANDY ALMANAC AND ENCYCLOPEDIA—HALF SIZE OF BOOK.

HOW ABOUT THE PAPER?

Except that this edition contains a pretty large advertisement of THE HANDY ALMANAC, ENCYCLOPEDIA AND ATLAS FOR 1913, it is a fair example of THE NATIONAL FARMER AND STOCK GROWER.

THE NATIONAL FARMER AND STOCK GROWER is not the only farm paper in the United States, but it is certainly one of the best, and has been continually engaged in advocating farmers' interests. THE NATIONAL FARMER AND STOCK GROWER was the only paper to buy and distribute seed corn and oats grown by champion corn growers, among general farmers, enabling many thousands of farmers to grow seed corn for their own use.

THE NATIONAL FARMER AND STOCK GROWER for several years offered prizes for corn and oats at every State, National and International Fair in the United States.

It was THE NATIONAL FARMER AND STOCK GROWER that first called attention to the high rates of interest on farm loans and brought about the agitation which will soon result in the improvement of farm credits.

The entire life of THE NATIONAL FARMER AND STOCK GROWER has been passed in doing good in a practical, tangible way without assistance from anyone but its own patrons.

Briefly stated, THE NATIONAL FARMER AND STOCK GROWER, issued monthly at St. Louis, Mo., is a splendid, clean, general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general grain-growing farmers, vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, horse and mule raisers and dealers, and it contains good poultry facts and market information. There are thirty-two pages, four columns to the page.

A SUBSCRIPTION PROPOSITION.

Anyone who pays fifty (50) cents for one-year's subscription to THE NATIONAL FARMER AND STOCK GROWER can select the HANDY ALMANAC, ENCYCLOPEDIA AND ATLAS as a free premium. We will send the book postage paid, safe delivery guaranteed. Money refunded if not satisfied. The book is a conditional supplement to the paper and must be sent separately at a different rate of postage. The proposition, therefore, is, that the book will be sent to those who select it as a premium.

ANOTHER PROPOSITION.

In clubs of three we will charge a dollar ($1.00) for three subscriptions and three books, thus allowing one to do the work of solicitation and the other two to put up the money. This is a liberal club offer, but we need the money and the subscriptions. We append the subscription blanks for one or three subscribers, as the case may be.

SUBSCRIPTION BLANK.

ENGLISH SHIRE HORSES—Photograph taken by R. F. Hildebrand, Union Stock Yards, Chicago, Ill. These Shire horses were exhibited by Trumans' Pioneer Stud Farm at the Illinois State Fair of 1912 and won the prize for the best five Shire stallions. Messrs. Truman hold their annual Shire mare sale at Trumans' Pioneer Stud Farm, Bushnell, Ill., December 12th, 1912, and will be glad to mail catalogues to those interested.

FIRST-PRIZE JACK AND FOUR JENNETS AT THE MISSOURI STATE FAIR OF 1912. Exhibited by L. M. Monsees & Sons, of Smithton, Pettis county, Mo. Photographed by Robert F. Hildebrand, Union Stock Yards, Chicago. During a visit to Mr. Monsees, he remarked: "There is no longer any question about the appearance of jacks and jennets on this farm; they are all very much alike." At the Missouri State Fair, where the photograph was taken, Messrs. Monsees & Sons won both championships and both group prizes.

THE SEWAGE MENACE.

A Talk on Farm Sanitation and the Necessary Investigation of the Water Supply.

In the cities and in the country alike the problem of how to dispose of the sewage is becoming a serious one. In the old days, people simply accepted contagious diseases as a matter of course, and if the sewage connections were bad, they saw no connection between those bad conditions and the presence of diseases.

We know better now. Modern sanitation has lessened disease ravages by preventing the spread of disease germs. Several of our big cities had to go through terrible experiences before they could be brought to take measures to keep the sewage out of their drinking water. Chicago paid little attention to the matter till the cholera came and terrorized the community into constructing a water supply system that should give the people water uncontaminated with sewage.

Most of our cities are now awake on the subject, but our country homes are not. The ravages of typhoid in the country are now said to be more serious than in the cities. But the country homes are so far apart that what occurs in one is not taken to heart by the dwellers in other homes.

The contamination of the well water is the first cause of the spread of diseases, for more and more the wells are being contaminated by the privies and cesspools. This is due to the increase of population and the increasing number of transient guests entertained at farm houses. A single traveler who is about coming down with a disease or who is recovering from it may carry a disease into many localities.

An investigation of farm wells will show that a very large proportion of them are dangerously near barn yards and water closets. The writer has frequently observed the location of farm wells to determine whether or not they were likely to be contaminated. Some of them have been found within thirty feet of barn yards or of water closets, and in some cases both sources of contamination were present. Some farm wells are so badly contaminated that few people outside of the people accustomed to drink water from them can drink the water with any pleasure.

Much farm sewage of different kinds, from the houses and from the barns, flows into streams. This is a serious menace when ice is cut from such streams in the winter, or when fish are caught from such waters at any time of year. It has been found that in the case of oysters sewage contamination is a serious matter, and numerous epidemics of typhoid have doubtless been spread by means of the oysters produced at the mouths of rivers carrying sewage. It is also believed that fish in such waters become dangerous food. If that is so in salt water, it certainly is true in fresh water.

But on the farm the open sewage drain is perhaps the most serious menace, because in warm weather the flies feed on the sewage and become contaminated with the disease germs, which they subsequently carry on their legs to the dinner table of the farmer's family. The fly is bad enough when taken by himself, but when he is allied with bad sewage he is indeed a menace.

The Wheat Crop of 1912.

Total production for 1912 is estimated at 720,333,000 bushels, compared with 621,338,000 bushels last year, and the record crop of 748,460,000 bushels in 1901. Yield per acre, 16.0 bushels, compared with 12.5 bushels last year, and 14.0 bushels, the ten-year average. Average farm price, 83.8 cents per bushel, compared with 91.5 cents last year. Weight per measured bushel, 58.3 pounds, compared with 57.8 pounds last year, and 57.7 pounds, the ten-year average.

RURAL SURVEYS.

To Determine Real Conditions in Farming Communities.

A new kind of survey has now come into existence, and that is the rural survey. This is at least as important as soil surveys, mineral surveys, geological surveys and the other kinds of surveys with which people are quite familiar. Rural surveys are for the purpose of determining what are the real conditions of the people living in rural communities. In other words, to systematically do the work that is in line with the Farm Life Commission.

So far as we know, rural surveys have not yet been undertaken by the government. They are, up to the present time, private enterprises, undertaken with philanthropic objects in view. They help to diagnose economic conditions.

Among some of the things investigated are schools, churches, social opportunities, farm ownership and tenantry, and the conditions surrounding the hired hands. About every related problem is touched at some point.

Such surveys are sure to be of immense value to the communities in which they occur and will prove of some benefit to other localities in which they do not occur. Certain it is that we must come to deal with the economic questions of farm life as well as with the purely commercial questions.

It has been charged that farm life is responsible for many of the insane women in asylums. An investigation conducted along rural survey lines might show the truth or falsity of this assertion, and, if it be found to be true, might lead to the discovery of some remedial measure.

We cannot solve the problem of the farm by merely solving the problems connected with the growing of crops and the raising of farm animals. The greater problems lie above these, for the best culturist and the best husbandryman may offset his successes in these lines by failures in other lines.

The rural survey should include a moral survey, for without good morals no kind of farming can be a success. A while ago the writer was told of a young farmer who had inherited two farms and dissipated both of them by drink. What would have been the use of that farmer succeeding as a farmer if he must lose all the fruits of his labor through drink? So we see that the moral survey is a thing of very great importance.

All problems of rural life are, after all, one great problem having many manifestations. All the problems are so connected with each other that they are knit together into one articulate whole. There are as yet many problems that have not been touched on at all, but which will ultimately come into sight.

Rural surveys are an index of progress. They show the great unrest of the people, which unrest is always a sign of health and vigor. The troubled ocean purifies itself, but the stagnant pool remains polluted. American rural life is undergoing a process of purification to which there can be no check till the final goal is reached, if there be a final goal.

There can be no doubt that ultimately the government will take up this very important work. Most such movements have been started by private persons and have afterward been taken over by the government after the usefulness of such enterprises have been demonstrated.

SEE HIM FIRST!
Before the fertilizer salesman arrives, go to your dealer and explain to him that you will not buy 2 per cent. goods that contain only 40 pounds of Potash per ton. Show him that modern, profitable fertilizers contain from 5 to 10 per cent. Potash, and that the composition of crops and the effect of crops on soils require that the per cent. of Potash should be increased until it is as great as, or greater than, the per cent. of Phosphoric Acid in the fertilizer. It is this grade of goods that pays you and your dealer best. The quantity and quality of the crops are better and the actual plant food costs less per pound.

Buckwheat Facts For 1912.

Buckwheat is of fine quality, but the crop of 1912 was not large. The United States Department of Agriculture estimates the crop at 19,124,000 bushels, compared with 17,549,000 bushels last year, and the record crop of 22,792,000 bushels in 1866. Yield per acre, 22.9 bushels, compared with 21.1 bushels last year, and 19.3 bushels, the ten-year average yield. Average farm price, 65.5 cents per bushel, compared with 73 cents last year. Quality, 100.9 per cent. of the ten-year average.

The Apple Crop of 1912.

The United States Department of Agriculture places the apple crop of 1912 at 69.9 per cent. of a full crop, compared with 62.4 per cent. of a full crop last year, and 51.3 per cent. the ten-year average. Quality, 83 per cent., compared with 78.2 per cent. last year and 72.1 per cent. in 1910.

THE BOOK OF LIVE STOCK CHAMPIONS.

Testimonial From an Old Friend.

Office of Kansas Farmer, the oldest farm paper west of the Missouri river—Live Stock Department, I. D. Graham, Editor—Topeka, Kas., September 3, 1912.

Mr. Philip H. Hale, St. Louis, Mo.: Dear Sir:—Will you please accept my thanks for the beautiful copy of Live Stock Champions which you sent me, and my congratulations on the excellence of the work by which you have brought it forth. This work is valuable to me and should be in the hands of every farmer and breeder who takes an interest in the improvement of domestic animals. It is impossible that breeders and farmers should see very large numbers of prize-winning animals, and this book serves to bring the best in the world before them for inspection and emulation. No man can attain results of quality without some object to be aimed at and with an ideal before him such as is shown in these photographs he has something to work for. It will afford me pleasure to mention this book in Kansas Farmer. Yours Truly,

(Signed) I. D. GRAHAM.

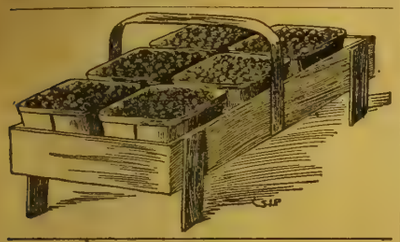
FRUIT-GROWING BOOK.

The Strawberry Crop Surpasses in Yield and Value All Other Small Fruits Combined.

The Strawberry Culturist is a handy little jewel of a book. It is by Andrew S. Fuller, one of the greatest horticulturists. It contains all the necessary information to



enable everybody to raise their own strawberries. It is fully illustrated; bound in flexible cloth; is 5x7 inches. The strawberry crop is equal to all the other small fruit crops combined. This little book contains that which a beginner should have to start on and an expert needs to rely on. We will send a copy of the Strawberry Culturist post free by mail and The National Farmer and Stock Grower for one year for fifty (50) cents. This is a splendid opportunity to get a good farm paper and a valuable book as a premium. An average crop of strawberries is 1,701 quarts to the acre. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

OUR INDUSTRIAL POLICY.

We Are in Favor of All Foreign Farm Productions Paying a Duty For the Support of the United States Government, and to Pay It at the Front Door.

THE NATIONAL FARMER AND STOCK GROWER is in favor of the United States custom house collecting a reasonable range of customs duties upon all foreign farm products and all manufactured goods admitted into the United States from foreign countries, said duties to be applied to the support of the national government.

By the tariff policy we advocate fully one-half the money required for the support of the national government should be collected at the custom houses, besides furnishing the farmer and manufacturer the very moderate amount of protection to which they are entitled. We are opposed to the admission of foreign farm products free of duty because admission of such products duty free always leads to the advantage of the foreign merchant and speculator and causing increased burdens to be imposed upon our own people.

Taking the duty off hides has been entirely in the interest of foreign countries and to the detriment of our own people; admitting coffee duty free enabled the formation of a South American combination that has raised the price three for one, and every time foreign goods are placed on the free list there is the same result. With moderate import duties received by the United States on various products as now collected the total that is covered into the United States treasury is over three hundreds of millions of dollars a year, and if not collected that way will have to be collected by direct taxes upon our own productions. The admission of foreign goods free of duty results in higher prices to the American consumer and higher taxation also upon our own products to make up the necessary revenues.

Every farmer in the United States is taxed by his county and by the state; he also pays a share of the taxes collected in various ways for the support of the federal government. We believe that in return for his support in tax money and in time of necessity for his personal services the American citizen is entitled to preference in his home market for his own productions from the laws of the government he supports. We believe that the advantages of our own markets belong to the citizens of the United States, and that all foreign farm productions should pay a duty at the front door as the goods are admitted. In times of scarcity, caused by drouth or other unavoidable influences, the foreign farm productions can come in under light duties on a fair basis, and in times of abundance the country thrives better without them.

We believe the farmer as a producer outranks all other people; the manufacturer is next; but without the farmer's products the manufacturer would have to shut his doors.

Legislation against the farming interest is the height of folly, and special discrimination against the farmer is a political crime. Legislation against the farmer will cause more poverty in the cities than most people imagine. The non-producing, so-called consumers in cities will be the first to find it out and be the greatest sufferers.

More Wheat Exported.

It appears that the farmers of the United States are feeding the American population and that there is wheat to spare.

Wheat exports from the United States in 1912 will materially exceed those of recent years. The record of the ten months now available in the Statistical Division of the Bureau of Foreign and Domestic Commerce indicates that the wheat exports of the full year will exceed 100,000,000 bushels, against 83,000,000 bushels in 1911, and 62,000,000 bushels in 1910. The total for the ten months ended with October is 76,225,000 bushels, against 67,750,000 bushels in the corresponding months of last year. This increase occurred chiefly in the new crop, the September exports having been 17,000,000 bushels, against 10,750,000 bushels in September last year, and those of October, 20,000,000 bushels, against 8,750,000 bushels in October of last year, the total for the two months of September and October thus being 37,000,000 bushels, against 19,500,000 bushels in the same months of 1911. In noting these figures farmers should remember that increased exports are a consequence of lower prices. If the crop is abundant and prices are low, the foreign demand is a valuable item towards using up the surplus.

The Book of Champions.

"Philip H. Hale, editor of The National Farmer and Stock Grower, in St. Louis, has just published a picture book of 'Live Stock Champions,' which is full of interest to horsemen. It contains 720 indexed portraits of noted animals, among which are scores of thoroughbreds, trotters, Hackneys and draught horses. Schreiber's photographs of Rysdick's Hambletonian, Ethan Allen, George Wilkes and other old-time trotters make thee book of lasting value to votaries of harness racing."—New York Herald. See page 15.

Ham For Each Visitor.

Each visitor who attends Missouri Farmers' Week at Columbia, January 13-17 will be presented with a ham. Just what kind of a ham this is it doesn't matter. If you get one of the badges you will say that it is about the neatest souvenir you ever saw. The object of this badge is to further exploit Missouri hams and bacon, on which $100 in premiums will be awarded during Farmers' Week.

Missouri Cattle at Chicago.

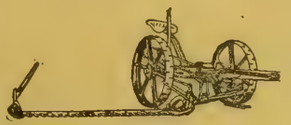
On November 14th, at Chicago, Col. J. T. Johnson, a prominent auctioneer and experienced cattle feeder of Mexico, Mo., was on the market with five loads of Shorthorn cattle, seventeen head, good enough to sell for $11 per 100 pounds, averaging 1,578 pounds, with sixty-one head, 1,434 pounds, at $10.75 per 100 pounds.

Pork raising in the Ozarks. See page 11.

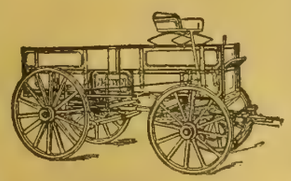
You Know these facts about Emerson Service

BIG FOUR "30" Tractor

EMERSON Low Down Spreader



EMERSON Standard Mower



NEWTON Wagon

YOU who have used EMERSON Plows, EMERSON Hay Tools, EMERSON Implements of any kind—you *know* when you see the word EMERSON on a machine, that it will do its work with the greatest efficiency, least expenditure of time and labor and greatest convenience to the operator.

You *know* that it has valuable time and labor saving features found only in EMERSON machines—a perfection of design and construction, of detail—a finish found in no other goods.

EMERSON on an implement or vehicle means what NEWTON means on a wagon—what REEVES and GEISER mean on a threshing machine—what THE BIG FOUR "30" means in the tractor world—*efficiency!*

That is why all these great companies, now united in the Emerson-Brantingham Company, have been makers of Agricultural History. They have been as much interested in their goods *after* they were sold as they were *before*—they have realized that their goods must not only be *sold*, but that they must give perfect satisfaction to the buyer. That's *EMERSON Service!*

We can illustrate here only a few of the many EMERSON lines. Write today for free catalogs and information on any article that interests you:

Plows, Harrows, Pulverizers, Listers, Spreaders, Planters, Drills, Cultivators, Mowers, Hay Tools, Baling Presses, Corn Shellers, Gas Engines, Farm Tractors, Steam Traction Engines, Threshing Machines, Road Rollers, Wagons, Vehicles.

VALUE OF GOOD ROADS.

Difference Between Hauling on Good and Poor Road Surfaces.

A busy growing nation such as ours certainly requires internal improvements to keep pace with our prosperity. Our prosperity is measured by industrial activities, and such activities are scattered in all parts of our great commonwealth.

There are several essentials to promote this growth, and one of the chief ones is that of good roads or highways.

Investigations have shown that the average horse can exert at a walking pace a traction pull of about one-eighth to one-tenth his weight. Assuming this to be about the correct value, what effect will the kind of road have upon the load the horse is able to pull?

On an asphalt pavement it requires thirty to seventy pounds' pull to move one ton; on a sand road, 100 to 200 pounds' pull to move the same load. We might conclude that the limits are 30 to 250 pounds for the best to the poorest surface. This one horse, say of 1,500 pounds weight, could draw a load of five tons on the smooth asphalt pavement and only 1,200 pounds on the soft sand road. These figures are only approximately correct, since they are average values, but sufficiently close to give us some idea of the relative value of good and poor road surfaces.

Before any district or state can fully realize the value of good roads, special action on its part must be necessary. This action must embrace three things: A non-political organization, whose purpose is to provide good roads; a practical and economical construction; and maintenance.

There should be one or more good business men on the Board of Control; a lawyer of some years' experience should be a member, and there should be represented on the Board of Control an engineer who knows his business. The engineer should also be chief engineer of the construction, with as many assistants as necessary to carry on the work of road building. Some states of our commonwealth have made the state engineer the chief engineer of a Road Commission, whose personnel is composed of business men, lawyers and engineers, who receive no salary and are appointed by the Governor of the state for a definite period of time.

There are several methods of organization and only experience will eliminate the undesirable elements, leaving the good. What might be successful in one part of the country may be unsuccessful in another.—Ralph Parshall, Colorado Agricultural College, Fort Collins, Colo.

WHEAT MARKET SITUATION.

Casual Remarks on the Wheat Trade at the Close of November Trading.

Any man who devotes his life to keeping track of the conditions which affect the grain markets from day to day, from week to week, from year to year, has plenty to do, and he has very little time for anything else. For any farmer to attempt to do so is undertaking too much. He can make a short cut to acquiring information by taking, as we do, the principal facts and items once a month, and by making a table of them from the figures published, and he can build up a goodly store of facts that will become historical data that nobody can deny, because he becomes the witness as to their correctness and the best judge of their value.

We have learned by experience to derive much good and valuable information from the reports emanating from the different Boards of Trade. Many people have something in the nature of a fit directly anyone speaks of the Chicago Board of Trade; but we have got over that. When we wish to know the present price of wheat, the past history of wheat and the future prospects for wheat, we do not turn aside from the only source of information.

Furthermore, there is always a seller as well as a buyer in every transaction, and the farmer has just as many friends on the Board of Trade as the miller or the exporter. There is just as much work done on the Board of Trade to sustain prices as there is to depress them. Every man having grain to sell is trying to sustain and advance the market, and every man wishing to buy grain is interested in depressing ad lowering the market. Each section is absolutely essential to good business methods, and the transactions called futures are just as necessary for international trade as a butcher knife is necessary to cut meat on the block. Grain is bought for immediate delivery, and that is called cash grain. Grain is bought and sold under contract for future delivery, and that is called "futures," and provides in the safest way possible for supplies in the future to fill foreign contracts or domestic requirements.

We left wheat selling very moderately in price. At St. Louis cash wheat was selling at $1.04 to $1.07 a bushel. That was on October 31st. Then the quotation at Chicago for the December option was 91¼ cents a bushel. The quotation for May, 1913, delivery was 96½ cents, and the July wheat option was quoted at 92⅝ cents a bushel.

Although prices were very reasonable from a farmer's standpoint, the prices have not been sustained, except in one instance. On November 30th, at St. Louis, No. 2 red wheat, cash grain, sold at $1.05 to $1.07½. That is because soft red wheat is scarce and sellers keep it well in hand. The hard winter cash wheat at St. Louis at the same time was selling at 86½ to 90 cents a bushel.

But turning to the general trade as represented by Chicago trading, the December option, which was quoted on October 31st at 91¼ cents, was reduced by November 30th down to 84¼ cents.

The May, 1913, option, which was quoted at 96½ cents on October 31st, was reduced to 90¼ cents by November 30th.

The July, 1913, option, which was quoted at 92⅝ cents on October 31st, was reduced by November 30th to 88¼ cents per bushel.

Farmers who review these figures may imagine that their interests are not looked after; but, as I said before, there are just as many people working to keep prices up as there are people to force prices down, and the only influence that could possibly make a difference would be for farmers to hold the grain on hand until prices advanced to a higher basis.

Wheat is difficult to hold. It is raised to be sold in reasonable time and not raised to be fed on the farm to any great extent.

North Carolina Prison Cotton.

The state prison of North Carolina has a farm and made nearly a bale of cotton to the acre. Recently 838 bales were sold by the trustees at 12½ cents a pound.

The Way TO GATE SATISFACTION

Before you buy a single gate you should see a sample and get prices on the PEERLESS SELF-RAISING GATE. It lifts itself and swings over ice, snow or rubbish. Saves time and trouble.

THE OATS MARKET SITUATION.

Remarks by the Editor on His Favorite Cereal.

Notwithstanding the oats crop of the year 1912 surpasses all previous records, the oats market was sustained better than the market for wheat or corn during the month of November. It seems natural to say that oats were low enough already, but that cuts but little figure, for markets are governed by influences that are uncontrollable. While in the end markets may be controlled by the law of supply and demand, there is no proof that the market is ever under the influence of common sense.

On October 31st the cash oats at St. Louis were selling at 32½ to 33 cents a bushel, and on November 30th we find the quotation to be 33 cents. That is not so bad, considering the tumble other grains have had in market.

On October 31st, the December option, Chicago basis, was quoted at 32 cents, just exactly one cent a pound for oats. The May quotation of 1913 was 33⅞ cenas, and the July, 1913, quotation was 33⅝ cents.

On November 30th, on the Chicago market, the December quotation closed at 30⅞ cents a bushel; the May, 1913, quotation at 32⅝ cents; and the July, 1913, quotation at 32¾ cents.

Oats do not move so rapidly as they might do, but farmers can hold prices where they are, at least, and advance them by being in no hurry to dispose of their oats. Keep them away from the greater markets, feed oats, sell to neighbor all the oats he can use legitimately, sell to livery stables, to all forms of consuming agencies, but hold oats back from the Chicago market, and that is the way to obtain an advance in price, for, sooner or later, oats will sell higher.

CORN MARKET SITUATION.

Basis of Trade on the Closing Day of the Month of November.

The farmer who is a cattle feeder is probably the greatest buyer of corn, and when he thinks corn is cheap enough to feed cattle with, then corn is at the lower level. We cannot have an immense corn crop and high prices for corn at the same time, and the farmer who cannot feed his crop to his own stock has always found that out. The price of corn has taken a tumble, and is lower now than it has been for several years.

On October 31st, cash corn at St. Louis was selling at 63½ to 64¼ cents a bushel, and now, on November 30th, we find that cash corn sold to-day at 46½ cents a bushel, the difference being a loss of 18 cents a bushel in the month of thirty days.

On October 31st the December option at Chicago was quoted at 52⅛ cents; the May, 1913, option was quoted at 52 cents; and the July 31st, 1913, option was quoted at 52¼ cents.

Here we are at the close of business on November 30th, with the December option closing at 47⅞ cents a bushel. The May, 1913, option is quoted at 43⅜ cents a bushel, and the July, 1913, option is quoted at 49¼ cents a bushel.

There is very little more to be said about corn prices and prospects than the record shows. There is a record crop and it will require time to absorb it. It is not a hopeless case, by any means. "What is one man's meat is another's poison," and the low-priced corn is good for the cattle feeder, the hog feeder and the sheep feeder and more especially the horse feeder. There is still room for the farmer to market his crop of corn on foot.

Homesteads in Egypt.

It would appear that Egypt is not badly governed under British rule.

Lord Kitchener laid the foundation stone of an agricultural school in the Egyptian Delta on November 6 and initiated a scheme for the distribution of land which has become available for cultivation through drainage. As an experiment 610 feddans (or acres) were distributed in five-feddan lots to the landless fellaheen (peasants), the idea being to help the poor fellaheens and at the same time to increase the number of small landholders and to create family homesteads. During the first three years, when they must do work of reclamation, the fellaheen will receive the land practically free, and in the following ten years they will pay a moderate rental, after which the holdings become theirs for life. Afterwards the land descends in the families if the government approves. Alienation is forbidden, except with the consent of the state.

Are Fertilizers Stimulants?

Phosphate or superphosphate was the first artificial manure produced. It was originated by the great chemist Liebig more than fifty years ago, and it was produced by dissolving bone, which is principally phosphate of lime, in sulphuric acid; hence it took the name superphosphate, and from that time phosphate or superphosphate has been a general name or term for all commercial manures, and even to this day, with some people all fertilizers are phosphates. It should be borne in mind, however, that phosphates are chiefly phosphoric acid with some ammonia added, and latterly with some potash, and are chiefly useful as "starters" and as supplements to stable manure.

It is sometimes said that phosphates are stimulants, but there is no stimulant known to plants in the same sense that whiskey is a stimulant for man. Complete fertilizers, whether special, general or phosphatic, produce an early, vigorous growth, because if properly made they are soluble and easily assimilated and quickly absorbed by growing plants. Milk is not a stimulant, but is the food of all young animals, easily and quickly assimilated. For the same reason properly-prepared fertilizers, and especially well-digested phosphates, are the food of young growing plants, because they are ready to nourish while the plant is young and before the soil is warmed up to its greatest energy.

Cash Grain at St. Louis.

Basis of trade market of November 30th, 1912: No. 2 red wheat, $1.05 to $1.07½; No. 3 red, 99c. to $1.03; No. 4 red, 85 to 96c.; No. 2 hard, 86½ to 90c.; No. 3 hard, 86 to 88c.; No. 4 hard, 84c.

As to Cattle Supply.

Towards the end of the month of November the Daily Live Stock World, published at the Union Stock Yards, said:

"So far this year cattle receipts at the six principal Western markets are about 675,000 less than during the period of 1911. When weight is reckoned with the shrinkage in supply volume is even greater.

In reckoning with statistics this year considerable double counting must not be ignored. Forwarding is always an incident to speculation, and that has been rife.

All through the season ubiquitous gatherers have been running a drag-net through the country. Trash has sold relatively high and prices have exerted a magnetic influence in drawing it to market. The cattle run of 1912 has been short of age, weight and quality. It has carried the bovine dregs of the country.

The figures are as encouraging to the grower as they are calculated to dampen the spirits of the manufacturer and consumer."

At St. Louis, during the last week in Novemebr, potatoes were selling as follows: Wisconsin Rural at 50 to 52c.; Minnesota white stock at 50 to 53c.; Red River Early Ohio at 45 to 50c.; Iowa Rural at 37 to 41c.

CONCRETE CORNER AND GATE-POSTS.

Method of Making One-piece Post With Braces.

Nothing gives more trouble and injures the appearance of property so greatly as sagging gates and fences caused by rotten gate and corner-posts. Property owners are rapidly getting rid of this nuisance by making such posts of concrete.

The concrete post shown below is a home-made article according to the owner's plan. It has been in service five years and is easily good for ninety-five more. The post and braces were molded in position and as one piece. The post proper is 10 inches square and the braces 6 inches. They extend 3½ feet into the ground and end in a bulb of concrete.

Forms For Post and Braces.

For the post mold proper, two-inch lumber makes a stiff form. Cut two boards 2x10-inch and two 2x14-inch, all 7 feet 6 inches long. (For the 2x10, a 2x4 and a 2x6-inch piece may be substituted; likewise for the 2x14-inch, a 2x6 and a 2x8-inch piece may be used.) The 2x10-inch pieces are nailed to the three sets of 2x4-inch cleats as shown in the drawing. Holes are bored in the cleats so that the ⅝-inch bolts 18 inches long, running across the forms from cleat to cleat, will rest against the 2x14-inch boards and hold the box-like form in shape. One-inch triangular-shaped strips tacked in the corners of the form will bevel the sharp edges and produce a neater-appearing post.

Each form for the braces consists of two side pieces 1x6 inches, and one bottom piece, 1x8 inches, all 10 feet long. Nail the pieces together in the form of a trough six inches deep. To make the bevel joint with the post form, lay off 3½ inches on the lower edge of the side pieces at one end and saw off the trough to the bevel. In the side pieces of the post mold, eight inches from the top, cut an opening extending downward seven inches deep and eight inches wide to receive the molds for the braces.

Mixing the Concrete and Molding the Post.

With the forms ready and all of the material on hand, dig the hole 3½ feet deep for the post proper. At distances of 9 feet 6 inches from the center of the finished post dig another hole 3½ feet deep for the concrete bulb in which the brace will end. One foot above the bottom of this hole, open a trench eight inches wide, sloping upward towards the corner post, to a point within seven feet of the center of it.

Mix the concrete, one bag of Portland cement to two cubic feet of sand to four cubic feet of crushed rock, or one bag of cement to four cubic feet of good pit gravel. Make the concrete mushy wet and fill the holes to the depth of one foot. Set the mold for the post in position and slide the troughs for the braces into the openings, with the upper ends even with the inside of the post form. Fasten them securely and chink the cracks with old rags. Brace all forms firmly. Down the post form, two inches from each corner, set a ⅜-inch rod 10 feet long with the upper end bent backward. Fill the post form with concrete to the openings of the braces. Place one inch of concrete in the troughs for the braces and lay upon it, one inch from each side, two ⅜-inch rods with their upper ends extending into the post mold. Put in four inches more of concrete, place two more rods in a similar manner and then another inch of concrete. Work rapidly and without delay finish filling the post form with concrete. After the concrete has stiffened, level the top edges of the post and the upper edges of the brace with a trowel.

For each post with two braces, there will be required four bags of Portland cement, eight cubic feet of sand, sixteen cubic feet of crushed rock (or four bags of cement and sixteen cubic feet of bank-run gravel), and twelve pieces of ⅜-inch rods ten feet long. These materials will cost about $2.50.

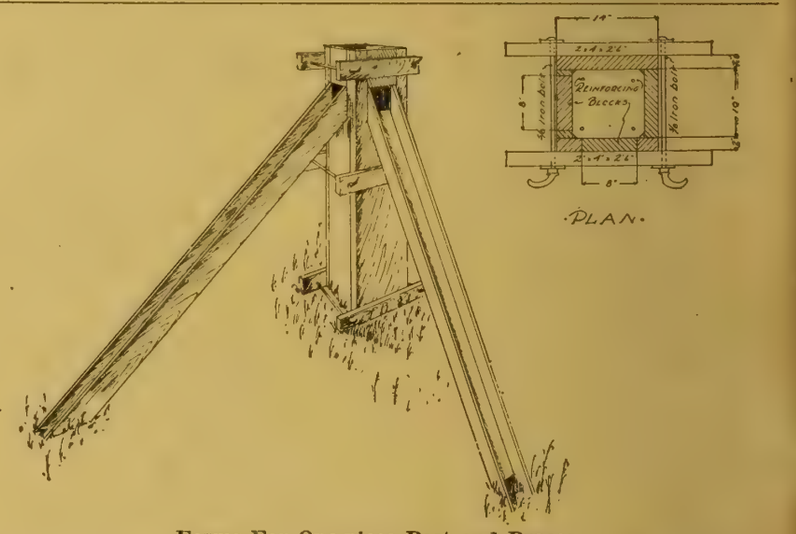
Curing the Post and Stringing the Fencing.

See that the post is fenced off so that animals cannot disturb it before the concrete has acquired its strength. After seven days the forms may be carefully removed. Do not use the post until it is thirty days old. Many persons make corner-posts in the fall, before freezing weather, and do not place the fencing on them until the next spring. The wire fencing may be pulled around the post, as shown, or ratchet fasteners may be attached by making holes through the post by means of small gaspipe set through holes in the form or by means of greased rods turned frequently while the cement is setting.

The same form is adaptable to brace-posts in the fence line or to gate-posts. Hinges and fasteners for gates can be secured in the manner described above for ratchet wire-tighteners. For entrance ways, very attractive ornamental posts can be made in the same general method.



Forms For One-piece Post and Braces.

Home-made Concrete Corner Post.

THE BOOK OF LIVE STOCK CHAMPIONS.

Edition of 1912—True to Life Pictures Reproduced From Photographs Taken in the Principal Show Rings of the American Continent by the Greatest Animal Artists.

This is a new edition of the most valuable book ever published in the interest of high-class stock raising. The pictures in the Book of Live Stock Champions are of famous animals. There are sweepstakes and championship winners at State, National and International Fairs and Expositions. These include individual awards in breeders' competitions, also herds with prize-ring honors; the beef cattle include grand champion steers and car-loads; the dairy cattle include record makers and large producers of milk and butter; the horses include thoroughbred, trotting, coach, draft, hunters, ponies, jack stock, etc. Hogs, sheep and goats are represented by the best in every breed. The book is elegantly bound in blue cloth, 352 pages, with nearly 750 separate and distinct illustrations, one, two, five or more champions to the page.

There is not a second-class animal or inferior picture in the book. Every animal is a record-maker, record-breaker, mother of champions, or winner in the prize ring.

The Book of Live Stock Champions is receiving the highest praise from the live stock breeders' associations and from officials of the Department of Agriculture. It is being adopted as a text book at high schools and colleges. Active, up-to-date stockmen having an interest in their business and a desire to do their share towards live stock improvement are subscribing for the Book of Champions themselves and recommending others to do so.

Issued as a Souvenir Supplement.

The Book of Live Stock Champions is published as a Souvenir Supplement to The National Farmer and Stock Grower, issued monthly at St. Louis, Mo., a splendid, clean, general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. There are thirty-two pages, four columns to the page.

Special inducements to paid-in-advance subscribers, to old friends and patrons. We offer the first ten thousand copies of this edition at One Dollar per copy, including a two-year subscription to The National Farmer and Stock Grower. The first ten thousand copies are handsomely printed on coated paper and elegantly bound in blue cloth, with gilt title. This is an extraordinary offer.

HERE IS A SUBSCRIPTION BLANK.

Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Time Savers.

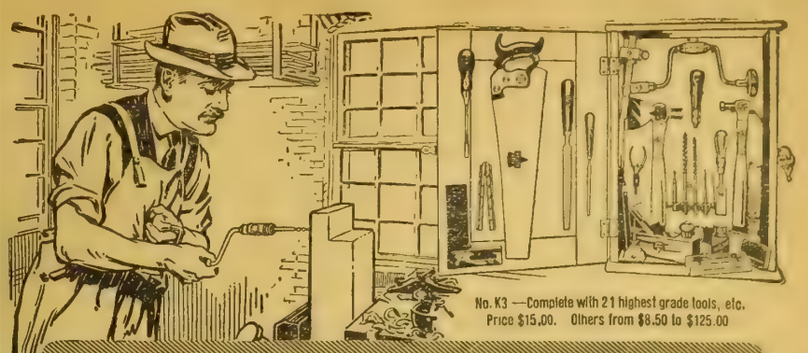
Man has learned that time is money, even on the farm. But in many instances, while the mowing machine, reaper and manure spreader have come to be necessities, the little helps in the kitchen are postponed until money is more plenty. The one whose work does not end with the setting of the sun or with the eventide meal, who patches and contrives while her "better half" is lost in dreams, dares not think of the little helps which would save time enough to her that she, too, might get the normal amount of sleep, or have a bit of leisure of her very own.

There is the food chopper. There are numerous calls for it when it is readily available. Instead of chopping her potatoes and the meat leftovers for the morning meal with an improvised tool made from an old baking-powder can, she runs them through the chopper and the work is done in very much less time. If she has a few crusts of dry bread, these are passed through the same mill, and added with improvement. The horseradish roots over which she nearly cried her eyes out in grating are done with the chopper, and there are no uneven pieces. If she cannot have peanut butter for variety in the school sandwich, she can have hickory-nut butter by the same process, or, but using a coarser cutting plate, she can have chopped nuts and raisins for cake in a minute's time. The bits of cheese which once were only waste, dry and hard, are the basis of a most delicious sandwich filling when passed through the chopper. The steak which was so tough that no one could eat it is ground in the same machine and becomes a most delicious Hamburg. Every one suggests another, and the woman who thinks soon finds that the price of the chopper is saved in the material which it works over, to say nothing of the time that should go to its credit.

The roaster is another utensil which costs comparatively little and yet for which many strive to use a makeshift substitute just because it is not used every day. Accidentally burn one good-sized roast by trying to cook it in the oven with only a shallow spider, and you have wasted the price of a small-sized roaster. The juices of the meat are much more fully retained through the tight-fitting cover, and the cooking is effected more thoroughly and with much less danger of burning.

But there are variations in its use. When you have a small piece of round steak, make a good stuffing of bread crumbs, with chestnuts added if you have them; season well with salt, pepper, butter or suet and parsley; roll in the slice of steak and fasten with skewers or stitches and place in the roaster with a little water. When half done, fill around the edges with pared potatoes. Bake until both meat and vegetables are done. When removing the potatoes, wrap each in a clean cloth and squeeze to burst the skin. This will let the steam escape and prevent sogginess. Remove the meat and add water for gravy, thickening with a little flour and water. Green corn and potatoes are excellent boiled in the roaster, and when the top of the stove happens to be crowded, as on wash day, this a convenient way to dispose of them.

Go through a five and ten-cent store and you will find an abundance of little things which are great conveniences. The kettle drainer may save burnt fingers. The granite stewpan is light, heats quickly and is easily cleaned. The toy washboard is fine for keeping dish towels in order. The potato ricer and fruit press quickly turn out choice products. The glass lemon squeezer and porcelain rolling-pin have sanitary advantages which are patent. A dollar judiciously invested will make your kitchen a new place, and the work of preparing a meal greatly lessened, while in some instances the results will be much more satisfactory than it is possible to do in the old way.—Bessie L. Putnam.



No. K3 —Complete with 21 highest grade tools, etc. Price $15.00. Others from $8.50 to $125.00

Make Your Own Equipment

You can save lots of money by making your own hay racks, cattle racks, stanchions and tobacco racks. Farmers' boys will find it profitable to make chairs, tables and other furniture in spare time. We have a free booklet showing many designs. You will be surprised at your skill with a set of good tools. Ask your dealer to show you some

KEEN KUTTER Tool Cabinets

Every Keen Kutter tool bears our trade mark. It represents our guarantee to you. If the tools prove unsatisfactory, your money will be refunded without argument. You can't make a mistake in buying Keen Kutter goods.

Prices of Keen Kutter cabinets vary from $8.50 to $125.00, depending on the number and kind of tools you select. Sandpaper, glue, oilstones and nails go with every cabinet. If not at your dealer's, write us. Send for tool cabinet book No. 895. Also ask for home furniture design booklet No. 976.

E.C. SIMMONS KEEN KUTTER CUTLERY TOOLS

No Scarcity of Flour.

All records for flour production were broken by the Minneapolis mills during the week ending November 4, according to the Northwestern Miller. The output totaled 457,065 barrels, which was a gain of 26,445 barrels over that of the preceding week and compared with 340,385 barrels for the corresponding week last year.

Louisiana to Oklahoma.

Several years ago, when for a time beef cattle appeared to be selling high, the Southern States did not have a large number of cattle on feed; but there were many calves, yearlings and two-year-old cattle that were just tolerable stockers. The same situation now exists, and the cattle graziers of Oklahoma, who are long on pasturage and feed and short of cattle, are ranging through the country buying all the stock cattle they can get at prices that do not look to be ruinous. The Miller Bros., of the 101 Ranch in Oklahoma, are buying in Louisiana and obtained 5,000 cattle in ninety days. It seems strange that the state of Louisiana should be shipping stock cattle to Oklahoma to be fed, and the more natural movement would be the other way.

To Reduce the Duties.

Immediately after the new administration is installed an extra session of Congress will be called. The principal purpose will be to reduce the customs duties on manufactured goods and take off the duties that are now imposed upon foreign farm products. The farmers who object to the programme had best get a move on themselves. Farmers in each congressional district will have to get after their Congressmen. That is the only way to prevent the farmers from getting another touch of free trade.

Cotton in the East Indies.

India's area in cotton on October 1, according to the second general memorandum of the Commercial Intelligence Office, was 18,464,000 acres, as against 17,362,000 acres at the same date last year, an increase of six per cent.

A NEW SECRETARY OF AGRICULTURE.

Endorsement by The National Farmer and Stock Grower of Prof. Henry J. Waters.

The change in the administration of the federal government calls for the retirement of all cabinet officials, including the Secretary of Agriculture, and within the next few months a new Secretary will be appointed.

We have noticed the name of Prof. Henry Jackson Waters as being mentioned for the position, and we hope that all the friends and patrons of The National Farmer and Stock Grower will give him their endorsement as freely and as positively as we endorse him for the position.

We do not know if he desires to obtain the office, neither do we know how far he will be acceptable to the political party in power; but we know the man, his power, strength of character, his energy and his ability, and his superior qualifications for such a position, and we hope he will be tendered the appointment.

Prof. H. J. Waters is now President of the Kansas Agricultural College. He graduated at the Missouri University in 1886; he was appointed Assistant Secretary to the State Board of Agriculture. He resigned that office after two years to accept the Agricultural Professorship of Pennsylvania State College. He returned to Missouri in 1903 as Director of the state's agricultural exhibit at the St. Louis Fair. Missouri University then made him Dean of the College of Agriculture. The Presidency of the Kansas institution was accepted by him in 1909.

Prof. Waters is fitted for the post by experience and qualification. He is successful in all his works. He is a practical teacher, looking at farmers' problems from their standpoint, entering into the spirit of their necessities and limitations. He is in the prime of life, of mental and physical activities. The office needs such a man; the farmers need such a man, and we hope for the benefit of the farming industry that Prof. Waters will be our next Secretary of Agriculture.

A Christmas Present.

One of the subscribers to THE NATIONAL FARMER AND STOCK GROWER who paid his subscription also sent a second dollar to obtain a subscription for a friend to make him a CHRISTMAS PRESENT of the BOOK OF LIVE STOCK CHAMPIONS. No better or cheaper present can be imagined. The friend obtains a beautiful, cloth-bound book true blue in color of binding and containing seven hundred and fifty half-tone pictures, each picture an original engraving true to life and representing the most famous champions in live stock history. It will make an acceptable present on any farm that is inhabited by progressive people. See advertisement on page 7.

CONCERNING FARM LOANS.

No Complicated System of Finance Necessary to Insure Farmers Getting Loans at a Fair Rate of Interest.

Farm lands are in all probability the best security in the world, and there is no reason why farmers should not be able to borrow all the money the security will stand and at a low rate of interest.

The National Farmer and Stock Grower ventilated this subject thoroughly several years ago and brought the matter to the attention of the Secretary of Agriculture by a petition addressed to him, and through him to the President of the United States.

Since that time Postal Savings Banks have been instituted and in time large amounts of money will be deposited therein and bear but a small rate of interest. Many people having ready money for emergencies prefer to loan it to the government at low rates of interest rather than run the risk of depositing money in local banks.

At the time the Postal Savings Banks were instituted it was understood that it would be the policy of the government to loan the money out again through safe banks for the purpose of encouraging industries. It appears to us that if the deposits in Postal Savings Banks are to be loaned out again for the encouragement of industries, that there is no industry better entitled to the use of the money than the farming industry.

The government can loan the amount of Postal Savings Bank deposits to country banks that will in turn loan the money out to farmers at a fair rate of interest. The difference between the rate of interest paid by the government and rate charged to farmers could be a a subject of agreement. The banker would have to assume the responsibility for the transaction to make sure that the security was good and sufficient to insure the safety of the loan, and all the government would have to do would be to loan the money to banks with the understanding that it was going out in the shape of well-secured farm loans.

There is absolutely no occasion for the institution of any new system of banking in order to enable farmers to borrow money, providing they put up the same value in securities that is expected of other business people. The farmers themselves can furnish the money for the purpose. Many farmers are depositing money in the Postal Savings Banks, and they also would very much rather be safe depositing with the government than receive a high rate of interest from a State or National Bank. Other farmers wish to borrow money, provided they can get it at a fair rate of interest, and they ought to be able to obtain from a State or the National Bank the Postal Bank deposit money, thereby finding a lucrative outlet for it.

The Parcels Post.

Regulations for operation of the parcels post system by the Postoffice Department have been made public. The lowest rate is five cents a pound and the highest rate is twelve cents a pound.

Under the regulations as drawn, farm products will be admitted to the parcels post under the general limitations as to size and weight, excepting seeds, cuttings, bulbs, roots, scions and plants. These will be permitted in the parcels post mails under regulations as to size and weight applicable to other parcels post packages, but at the rate of postage of one cent for two ounces or fraction thereof, regardless of distance.

Books, circulars and all printed matter classified as third class will not be permitted in the parcels post mails but will have to pay a higher rate—one cent for two ounces or fraction thereof.

A parcel not more than three feet six inches in length may measure as much as two feet six inches in girth, or around the thickest part. A shorter parcel may be thicker. Thus, if it measures no more than three feet in length, it may measure as much as three feet in girth, or around the thickest part. Measurements will be made by means of a six-foot tape-line furnished the Postmasters by the Department.

The Boys' Magazine.

It is not to be expected that the boy will say that the Boys' Magazine is the most valuable publication in the world for practical and instructive departments until he gets it. He will not be able to say that he derived pleasure and profit from reading it more than he expected until he has a chance to do so. There is an offer in behalf of the Boys' Magazine on page 31, and it worth looking over.

GOOD BOOKS AND PAPERS.

HOLLAND'S MAGAZINE, issued monthly at Dallas, Texas, is a first-class publication, and the price is $1.00 per year, payable in advance. There is splendid reading in **HOLLAND'S MAGAZINE,** specially prepared and edited, with elegant illustrations. In many homes, where several magazines are subscribed for, **HOLLAND'S MAGAZINE** is first looked for as the best of them all. The articles and stories have the true ring to them, and part of the satisfaction the readers derive is in the feeling that they become better men and women from having read the magazine. We commend the publication to our readers.

EMERSON-BRANTINGHAM IMPLEMENT CO. CATALOGUE.—Write for free copy to Emerson-Brantingham Co, 85 Iron street, Rockford, Ill. This is an instructive catalogue, including the largest line of farm machinery in the world, all shown to the minutest details by illustrations. It includes plows, harrows, pulverizers, listers, spreaders, planters, drills, cultivators, mowers, hay tools, baling presses, corn shellers, gas engines, farm tractors, steam traction engines, threshing machines, road rollers, wagons and vehicles.

THE UNIVERSAL MAGAZINE.—This is a monthly publication, issued at the small price of 25 cents a year, or 50 cents for three years. The **UNIVERSAL MAGAZINE** is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, fashions, patterns and poetry—a splendid publication for the money. Will be glad to send a free sample copy. Address, The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.

FARMERS OF FORTY CENTURIES.—This is a book for students of agriculture, whether they are at the college or on their own farms. Professor King has written of the farming in China, Corea and Japan, after making a thorough study of conditions and methods. The book is intensely interesting, because of the splendid illustrations, and because of our future necessity to use and husband our resources at the same time. It is a handsomely bound book of 440 pages. The price of the book is $2.50, postpaid, and it can be had of Prof. F. H. King, 1540 University Ave., Madison, Wis.

CROPS AND METHODS FOR SOIL IMPROVEMENT.—Published by the Macmillan Company, 66 Fifth Avenue, New York City, at $1.50 per copy, net. This book is by Prof. Alva Agee, head of the Department of Agricultural Extension and Dean and Director of the Pennsylvania Agricultural College. It is divided into thirty-three chapters, each being divided into subjects to support the main title. The entire field of agriculture is covered by the book, and it is a splendid work for advanced farmers to read carefully. There are 250 pages and twenty-five illustrations.

PROFITABLE FORMULAS FOR HOME MIXING OF FERTILIZER.—This is an educational pamphlet indicating contents of fertilizers for different crops. Write to German Kali Works, 42 Broadway, New York City, N. Y., and ask for copy. Such booklets, written by expert fertilizer authorities, do considerable towards making clear the road to crop improvement.

We also agree to refund money and pay return postage to anyone who is not satisfied with the bargain. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

FEEDING BEEF STEERS.

Comparison of Results—Feeding in the Barn and Feeding in an Open Shed.

As a result of seven-years' experiments at the Pennsylvania Station the conclusion has been reached that an open shed, boarded up closely on three sides and kept well bedded at all times, is more efficient for fattening steers than the basement of a barn.

During the winter of 1909-10 the cattle fed in on open shed made more rapid gains, attained a higher finish, sold for 15 cents per hundred more, and returned 11.6 cents more for each bushel of corn consumed than similar steers fed in the barn. They also required less labor in feeding and more straw was used in bedding. Results of previous work show that cattle which are fed in groups of ten or twelve each, with ample room at mangers and troughs, make more satisfactory gains than similar cattle tied in stanchions. This indicates that the methods which require the least amount of labor are the most satisfactory in the feed lots.

A point to be especially emphasied in this connection is that in climates as severe as those under which the above experiments were made the roof and three sides of the open shed should be as nearly absolultely closed as it is practicable to make them, not permitting drafts through the shed or admitting air except from the open side, which should preferably face to the south.

BARGENOCK GAY CAVALIER—AYRSHIRE BULL. Winner of many prizes, the last being grand championship at the National Dairy Show, 1912. Exhibited by Adam Seitz, Waukesha, Wis. BARGENOCK GAY CAVALIER is one of 750 pictures in the Book of Live Stock Champions, advertised on page 7.

Saddle Horse Brings $2,875.

From the New York Herald, December 1st, 1912: "Thomas W. Murphy, acting for Mr. A. H. Cosden, was the contending bidder when the big black saddle horse The Leader was struck off to Louis M. Newgass for $2,875 at the Harbison sale, in Durland's Riding Academy, on Tuesday evening. Mr. Cosden is best known in the horse world as the owner of Queen Worthy, 2:07¼, winner of the $10,000 Merchants and Manufacturers' Purse at Detroit last summer. Dealers say that only once in the history of horse auctions has a saddle horse been sold for more than $2,375. By a singular coincidence Mr. Newgass was the seller on that occasion. The record price was $3,500, and was paid by J. H. Moore, of Chicago, for a chestnut mare that afterward won second prize at the National Horse Show. Mr. Harbison called The Leader the best heavyweight horse he ever owned."

Argentine Agriculture.

Farmers who consider their interests from the standpoint of the wide world will be interested in reading about the opening of new farm areas in the Argentine Republic. According to the United States Department of Commerce and Labor, in the arable zone of Bahia Blanca a vast extent has been fitted for agriculture this year, and there are now some 3,325,510 hectares (hectare is equal to 2.47 acres) of land under cultivation. Last year the figures were 2,951,195 hectares, and four years ago 2,251,020 hectares. This, being interpreted, means that in one South American province nearly a million acres of new land were brought into use in one year.

FAY JEWEL BEAUTY—DISTINGUISHED HOLSTEIN COW. Was grand champion cow of the breed at National Dairy Show, 1911, and won many other premiums. Photo by Hildebrand at the Third Iowa Dairy Show, 1912, where she was also senior and grand champion cow. Exhibited by Wm. Galloway, Waterloo, Iowa. Another picture of FAY JEWEL BEAUTY is on page 270 of the Book of Live Stock Champions, advertised on page 7.

Death of a New York Horseman.

The New York Herald announces the death of J. D. Carroll, practical head of the great horse firm of Fiss, Doerr & Carroll, of New York City, and the election of Arthur J. Baldwin, of the firm of Griggs, Baldwin & Baldwin, to succeeed him as treasurer and general manager. The remains of Mr. J. D. Carroll were followed to the grave by friends in one hundred and twenty-seven carriages, and twelve landaus in addition were filled with floral offerings.

Top Lambs at St. Louis.

Early in December, at the St.Louis National Stock Yards, R. S. Harriman, a prominent farmer and stockman of Cooper county, Missouri, had in a load of Western lambs, 120 head, that weighed 74 pounds and brought $7.75 per 100 pounds, the top of the market. These lambs were fed at United States Demonstration Farm No. 4 under the direction of the Missouri Farm Management Association, and the price they brought is a testimonial to the superior way they have of caring for stock.

Texas Cattle at St. Louis.

Early December sales of Texas cattle on the St. Louis market included for Farley & Skinner, of Vineta, Tex., 120 head, averaging 1,100 pounds, at $7.00; 190 head, averaging 1,064 pounds, and forty-six head, averaging 1,062 pounds, at $6.80 per 100 pounds; forty-five head, averaging 1,052 pounds, at $6.75 per 100 pounds; and thirty-four head, averaging 922 pounds, at $5.65 per 100 pounds.

HOLSTEIN COW RECORDS.

Average For 262 Head, All Ages, and Production by Age Classes.

A recent statement by the Superintendent of Advanced Register of Holstein Cattle says that 262 animals, of which one-half were heifers, averaged in seven days 389.9 pounds of milk, containing 13.733 pounds of butter-fat, equivalent to 55.7 pounds or over 26.52 quarts of milk per day, and 16.02 pounds of commercial butter per week.

The production of the cows by ages from two years, two months upward, is worth studying:

Seventy-two full aged cows averaged: Age, six years, eight months; milk, 468.3 pounds; per cent. fat, 3.50; fat, 16.41 pounds.

Thirteen senior four-year-olds averaged: Age, four years, seven months; milk, 431.5 pounds; per cent. fat, 3.62; fat, 15.608 pounds.

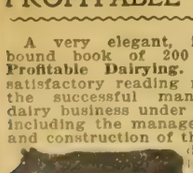
Twenty-nine junior four-year-olds averaged: Age, four years, three months; milk, 424.5 pounds; per cent. fat, 3.49; fat, 14.835 pounds.

Fifteeen senior three-year-olds averaged: Age, three years, nine months; milk, 396.8 pounds; per cent. fat. 3.62; fat, 14.346 pounds.

Twenty-seven junior three-year-olds averaged: Age, three years, three months; milk, 404.5 pounds; per cent. fat, 3.56; fat, 14.419 pounds.

PROFITABLE DAIRYING.

A very elegant, illustrated, cloth-bound book of 200 pages is called **Profitable Dairying.** It is all good, satisfactory reading matter relating to the successful management of the dairy business under all circumstances, including the management of the cows and construction of the barn. We have discovered this book lately and we find that there is a better demand for it than for all other dairy books combined. For one dollar we will send The National Farmer and Stock Grower for two years and we will send the book, Profitable Dairying, as a premium. Address,



HALE PUBLISHING CO.,
3550 Vista avenue, - St. Louis, Mo.

Twenty-five senior two-year-olds averaged: Age, two years, eight months; milk, 344.4 pounds; per cent. fat, 3.43; fat, 11.827 pounds.

Eighty-one junior two-year-olds averaged: Age, two years, two months; milk, 309.2 pounds; per cent. fat, 3.53; fat, 10.905 pounds.

Shrinkage in Print Butter.

An investigation of the rate of shrinkage of prints of Idaho butter under temperature and humidity conditions similar to those the butter would encounter in grocery channels of distribution is reported in a recent bulletin issued by the Idaho Experiment Station. It was found that the pound prints lost about one-quater of an ounce in the first seven days, on an average, the variation beng from .19 to .37 of an ounce, while the two-pound prints showed a proportionately lighter shrinkage, the loss in weight being on an average only a little greater than a quarter of an ounce. The shrinkages mentioned are probably a little full for actual practice, for in the experiments the prints were placed two inches apart to allow a circulation of air around them, thus exposing a larger surface to evaporation than would be the case were the prints carried packed in a box, as is usually the case. The experiments show that an honest pound of butter in the beginning will not be far from an honest pound if sold on a reasonably quick market.

DAIRY AND CREAMERY NOTES.

Watertown, N. Y., is a cheese-producing center, and the Produce Exchange of that city reports 15.7 cents a pound as the average price of the season and the highest on record. The highest quotation reached was 17½ cents.

The Missouri Department of Food and Drug Inspection under Dr. Cutler has been actively endeavoring to stamp out the manufacture of an impure butter in Southeast Missouri. This article is made from renovated stock and a mixture of other ingredients, and contains at least 50 per cent. moisture, unfair competition to the regular buttermakers, who are not permitted under the law to have more than 16 per cent. moisture in their butter. The parties who have been manufacturing this stuff have been arrested by the state and are under investigation by the government. It is believed that this fake butter competition will be stamped out.

At Thief River Falls, in November, in a butter contest, Mr. C. J. Holte, of Fertile, Minn., won the first prize with a score of 95, and Mr. M. Sorenson, of Pelican Rapids, second with a score of 94¾. Thief River Falls is on the Northern Pacific Railroad, near the Canadian line.

A large number of cheese factories are being purchased and placed under one management in New York state.

KEEPING UP THE MILK YIELD.

By P. M. Brandt, of the Missouri Agricultural College.

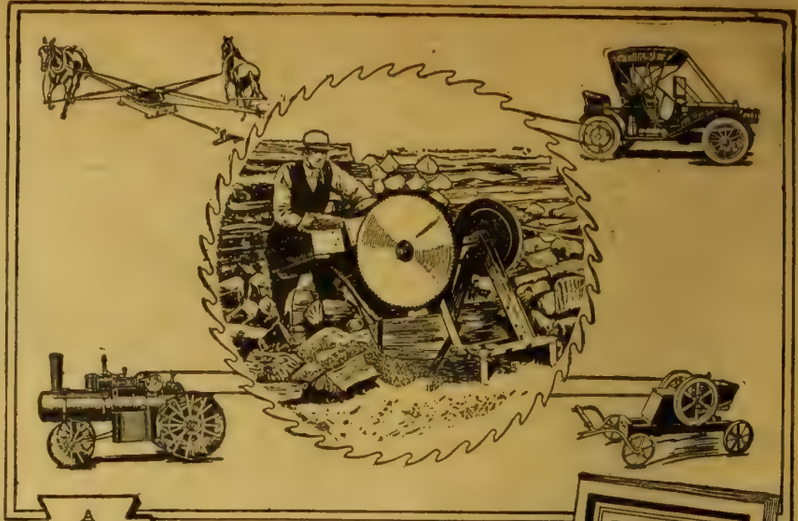
Now is the time when it is necessary to feed the milch cows. It is true that some grass is still green, but it has not much feeding value. A cattle feeder does not think for a moment of finishing off a bunch of steers on this fall grass. Why should a dairyman expect the cows to maintain their milk yield on it?

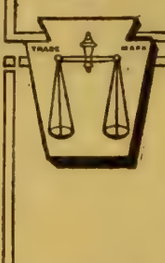
Butter-fat is scarce. The price is high and is going higher. It will pay to produce more butter-fat, but it cannot be done by feeding the cows fall grass, corn stalks and timothy hay. It is also a mistake to neglect the cows for a few weeks, intending to make amends by liberal feeding when winter comes. It is important that the milk yield never be allowed to decline. It is almost impossible to bring a cow back to her normal flow after it has been permitted to decline.

It is important that fall feeding be commenced now before the milk flow is cut down by short grass and scant feed. Those who are fortunate enough to own a silo should give each cow about twenty-five pounds of silage a day. Every cow should have all the clover, alfalfa or cowpea hay she will clean up. This will amount to about ten pounds a day if the silage is fed. If silage is not fed, more hay should be given. It is well to remember that cowpea hay is one of the cheapest of dairy feeds.

Cows giving over a gallon of milk a day should be fed grain. A good grain mixture is corn chop mixed with bran or cotton-seed meal. Corn and cob meal may be substituted for the chop. A pound of this mixture should be given each day for every three pounds of milk produced.

The best of cows will not produce milk unless fed liberally on the right kind of feed.





Are You Cutting Your Firewood by Hand?

THEN you know the hard labor and long time required to cut your winter's supply. With a power-driven circular saw you can cut more cords of wood in one day than you did in several by the old hand method —and with much less exertion.

This is one of the suggestions in our book on

DISSTON

SAWS TOOLS FILES

Sold by all Progressive Hardware Dealers

and the cost of a saw, mandrel and belt is but nominal compared with the results obtained.

Disston Mandrel

The book contains complete information on Disston Saws and Tools especially adapted for farm use, as well as instructions for their proper care. It is needed on every farm. Simply write for the **"Disston Farm Tool Book"** and it will be sent free by return mail.

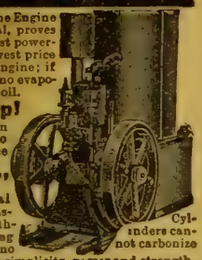
Book of Live Stock Champions.

W. E. Alexander, of Tuckahoe, West Virginia, said: "I received the Book of Live Stock Champions and am well pleased with it. I will do all I can to turn subscribers your way." The Book of Live Stock Champions is advertised on page 15.

The Horseradish Market.

In the vicinity of St. Louis horseradish is a staple crop. Many thousands of barrels are brought in and delivered loose from farmers' wagons. During Thanksgiving week sales were at $3.25 to $3.60 per barrel.

Use KEROSENE Engine Free!



Amazing "DETROIT" Kerosene Engine shipped on 15 days' FREE Trial, proves kerosene cheapest, safest, most powerful fuel. If satisfied, pay lowest price ever given on reliable farm engine; if not, pay nothing. No waste, no evaporation, no explosion from coal oil.

Gasoline Going Up!

Gasoline is 9c to 15c higher than coal oil. Still going up. Two pints of coal oil do work of three pints gasoline.

Amazing "DETROIT"

—only engine running on coal oil successfully, uses alcohol, gasoline and benzine too. Parts without cost cranking. Only three moving parts—no cams—no sprockets—no gears—no valves—the utmost in simplicity, power and strength. Cylinders cannot carbonize. Mounted on skids. All sizes, 2 to 20 h. p., in stock ready to ship. Engine tested before crating. Comes all ready to run. Pumps, saws, threshes, churns, separates milk, grinds feed, shells corn, runs home electric lighting plant. Prices (stripped), $29.50 up. Sent any place on 15 days' Free Trial. Don't buy an engine till you investigate the money-saving, power-saving "DETROIT." Thousands in use. Costs only postal to find out. If you are first in your neighborhood to write, you get Special Extra-Low Introductory price. Write! (138)

Detroit Engine Works, 383 Bellevue Ave., Detroit, Mich.

MILK BOUGHT ON QUALITY.

The New York Exchange Will Quote Three Grades But Only Expect to Receive Two.

According to the New York Produce Review, for some time past there has been a feeling in the wholesale milk trade of New York City that because of the classification of milk by the Board of Health there should be separate quotations for the different grades. Action was taken by the Consolidated Milk Exchange in reference to this matter, and it was decided to make the change, so on November 11 the new prices went into effect. The Exchange rate is now four cents a quart for C grade and four and one-fourth cents for B grade; both prices are net to shippers in the twenty-six-cent freight zone. Grade A does not appear in the general distribution, therefore is not quoted. The cost delivered in New York is $1.91 and $2.01 a forty-quart can respectively.

The special bulletin recently issued by Health Commissioner E. J. Lederle says:

"The rules and regulations of the Department of Health require that all milk, whether in bottles or cans, shall be labeled with the grade for which a permit has been issued. The Department should be informed whenever the regulation is not complied with.

"Grade A—Suitable for infants and children. This grade of milk is sold only in bottles, the caps of which must be marked 'Grade A.' This grade comprises certified milk, guaranteed milk, inspected milk raw and selected milk pasteurized.

"Grade B—Suitable for adults. This grade may be sold in bottles or cans, caps and tags of which must be marked 'Grade B' in large green letters on a white ground. This grade comprises pasteurized milk and selected milk raw.

"Grade C—Suitable for cooking purposes only. Must be plainly marked in red letters 'Grade C, for cooking.' From the sanitary standpoint this is the poorest grade of milk that is permitted to be sold and should never be used for babies or children."

SCIENTIFIC DAIRYING.

A Few Remarks on Bookkeeping and the Advantage of Good Milk Supply in Winter.

Bookkeeping and scientific dairying must go together. Whether a man have few cows or many, his books should show just what each cow is doing. The lack of this has been the cause of many a failure. Because books were not kept, many a worthless cow has been maintained from year to year, her owner not knowing that she was not producing enough to pay the cost of her feed. Yet bookkeeping is the most difficult thing to induce some of our farmers to undertake. But it must continue to be one of the essentials of successful dairy operations.

Winter dairying is still one of the very important measures to increase dairy profits. In those states where the winters are mild more attention should be paid to that phase of dairying. Experiments carried on in different parts of the country have shown how valuable this kind of dairying may be made. It has several distinct advantages. The dry time of the cows comes in the middle of the summer, when pastures are short generally. The cold months are the months in which it is easiest to get competent help. Dairy products keep better in the winter than in the summer. Where the snow lies on the ground germs are few, and it is more possible to produce germ-proof milk in the winter than in the summer. Prices for butter and cream are better in the winter than in the summer. There is less competition in winter dairying than in summer dairying. This condition is likely to continue, as few farmers can be induced to undertake winter dairying, which requires more thoughtful preparation than dairying as ordinarily conducted.

Recent investigations into the inheritance of milk-producing qualities show that careful selection is needed, even in the progeny of big-milking cows. The daughters of such cows are, some of them, very poor milkers, and such should not be bred from. Because a cow is a big milker is not a proof that her daughter will be, but her power to produce milk is likely to reappear in a granddaughter, if not in a daughter. Also, the sire should come from a big milking strain, as well as the mother. Ruthless elimination is necessary in any case, if a herd of good milkers is to be established.

Milk-borne epidemics of typhoid fever are reported from time to time. It is asserted by some of our physicians that if the spread of typhoid fever through milk could be prevented, the disease could be stamped out. They may be sanguine to too great a degree, but there is no doubt that the carelessness in regard to contaminating milk is one of the things that we need to look after most. Where there are large dairies rigid inspection is possible and advisable, both for scarlet fever and typhoid fever.

Milk inspection must come to be a still greater factor than it is at present if we are to have a greatly improved milk product, as to its sanitary condition. Fortunately, the cities and milk-buying companies have the matter entirely in their own hands, as they can prevent the use of milk that is produced under unsanitary conditions. Some cities now send out their inspectors far beyond their borders and refuse to allow milk sold inside their limits except that coming from dairies that have complied with the milk inspectors' requirements.

Wonderful Crop of Oats.

The great crop of oats produced in the year 1912 is finally estimated by the United States Department of Agriculture at 1,417,172,000 bushels, compared with 922,298,000 bushels last year, and the record crop of 1,186,341,000 bushels in 1910. Yield per acre, 37.4 bushels, compared with 24.4 bushels last year, and 29.5 bushels, the ten-year average. Average farm price, 33.6 cents per bushel, compared with 43.8 cents last year. Weight per measured bushel, 33.0 pounds, compared with 31.1 pounds last year and 31.3 pounds, the ten-year average.

Hay Crop of 1912.

The hay production of the present year is the largest so far in the history of the country. The total production is estimated by the United States Department of Agriculture at 72,425,000 tons, compared with 54,916,000 tons last year and the record crop of 70,798,000 tons in 1908. Yield per acre, 1.47 tons, compared with 1.14 tons last year, and 1.43 tons, the ten-year average. Average farm value, $11.80, compared with $14.62 last year.

The Crop of Potatoes.

The total potato crop of 1912, as estimated by the United States Department of Agriculture, is placed at 414,289 000 bushels, compared with 292,737,000 bushels last year and the record crop of 389,195,000 bushels in 1909. Yield per acre, 112 3 bushels, compared with 80.9 bushels last year, and 94.3 bushels, the ten-year average yield. Average farm price, 45.5 cents per bushel, compared with 76.3 cents last year. Quality, 102.4 per cent., compared with the ten-year average.

Book of Champions on page 7.

The Ozark farmer is making 5c a lb. profit from pork—are you?

THERE are five reasons why Ozark farmers get 5 cents a pound profit from pork—and they are the same reasons why stock raising of any kind in the Ozarks is so much more profitable than in other sections.

No. 1:—The Ozark farmer has good grazing from April 1st to January 1st—nine full months. Only 3 months of winter (mild at that)—no long expensive winter feeding and very little shelter needed.

No. 2:—The Ozark farmer can produce pork at 2 to 2½ cents per pound on cowpeas, alfalfa, peanuts, etc., which grow so well on these Ozark soils—only a little corn needed a few weeks before marketing, to make the flesh firm.

No. 3:—The Ozark farmer's city markets are so close by, that the net price offered him at his local market is greater than would be offered where the hogs would have to be shipped a greater distance.

No. 4:—The Ozark farmer is offered the highest prices prevailing anywhere—by the dealers in Kansas City, St. Louis and Memphis (price now around 8 cents).

No. 5:—The Ozark farmer enjoys an ideal climate for stock, free from malaria; where sickness is reduced to the minimum; where the purest of running water, fine drainage, mild winters, cool summers and the altitude, keep stock unusually free from the scourges which so often visit other sections.

James F. Crone, near Mountain Grove, spent $32 for hogs a little more than a year ago, and from that investment has sold pork to the value of more than $600; besides having meat for his family and 42 head on hand.

And think of the advantage in the Ozarks for dairying! Results speak louder than anything: E. T. Shelpman of Greene County, sold $1232 worth of cream and butter in a year from 12 cows; T. P. Emmons of Oregon County, sold $2,054 worth of milk from 20 cows; G. F. Holloway, who makes $10 per month per cow (and gets 65 bushels of corn per acre), says: "I find this country the best for farming and dairying, and I have been in nearly every State in the Union."

Even if you had to pay the same price for land in the Ozarks that is asked elsewhere, you could make greater returns from your investment there; but realize that right now you can get good land at $12 to $25 per acre. All in all, it's a proposition that ought to make any man want to *know more* about it now.

A free book for you!

It's not the kind you can pick up anywhere. Double sized pages, 75 actual photo pictures of farms—some in full color. Written by a man who knows farming. Takes up the Ozark sections, county by county, and describes the farming conditions there. Also tells actual experiences of Ozark farmers. I haven't many copies of this book on hand; please drop me a postal to-day for your free copy.

FERTILIZING EXPERIMENTS.

Effect of Lime and Cow Peas on Wheat Soils—Comparison of Turning Under Cow-pea Stubble Only and Turning Under the Catch Crop.

The Agricultural College Bulletin No. 96, issued by the Tennessee Station, tells of a series of experiments on three East Tennessee farms having different types of soil, to test the virtue of liming soils and turning under a catch crop of cow-peas grown on wheat stubble between the harvesting of one crop in the early summer and the drilling in of the next crop in the fall.

These experiments extended over a period of three years on one farm, four years on another and five years on the third.

It was found that two tons of ground limestone per acre was equal to one ton of slacked lime. The application of lime to a soil that was capable of producing a good crop of clover was unprofitable because unnecessary. However, for immediate results in hastening the breaking down of coarse stable manure or of a crop turned under, the application of lime may be justified on even good clover soils. On soils that will not produce a healthy growth of clover, and on poor soils that are to be heavily fertilized with stable manure or the turning under of a green crop, the application of lime is always advisable.

The plots where the catch crop of cow-peas was turned under each year produced very little more wheat—not so much in some cases—than the plots where the peas were cut and cured for hay. This confirms the general experience of farmers, that the roots and stubble of cow-peas supply the soil with so much humus and nitrogen that it pays better to make hay of the tops than to plow them under unless the soil has had its supply of humus exhausted by continuous clean culture for a number of successive years.

In these experiments it was found that land which had previously been in sod for a number of years and was therefore rich in humus and nitrogen at the beginning, actually lost both humus and nitrogen each year. In other words, even the turning under of the catch crop of cow-peas each fall did not restore as much nitrogen and humus to the soil as were removed in the previous crop of wheat and straw. On the other hand, the plots that were poor in humus and nitrogen at the beginning gained in both by the yearly additions of the catch crop of peas, whether only the roots and stubble were added to the soil or the tops also were turned under.

Because wheat extracts from the soil large quantities of both nitrogen and phosphoric acid, the most heavy annual exportations of wheat have served to transfer much of the soil fertility of this country to Europe. And the same is true in a larger sense of the exportation of cotton-seed meal, which is so rich in plant food drawn from the soil that millions of tons of it are applied to the fields direct as a fertilizer, both in this country and abroad.

Thanksgiving on the Road.

There was something of the spirit of the Pilgrim Fathers about the unostentatious Thanksgiving dinner of J. F. Collins, a workingman, and his family of eight at the Union Depot, Kansas City, on Thanksgiving. He was on his way to Lodi, Calif., from Lincoln, Ark. He is a farmer and will make his new home on a ranch.

The family was ranged along a bench in a remote corner. A red table cloth was removed from a huge basket containing the Collins' family Thanksgiving dinner. There was no turkey or any fancy "fixings" made to tempt the wayward palate, but just plain food.

The last plate had been distributed, and Mrs. Collins, recovering the baby from her husband, had taken a seat. "Let us give thanks," said the father. Every head bowed and the hands of the children folded on their laps. When everything was quiet, Mr. Collins prayed in a low tone:

"Bless us, O Lord, for these, thy gifts, which we daily receive from thy bounty. Amen."

Missouri State Corn Show.

The State Corn Show to be held at the College of Agriculture in Columbia, Mo., January 13-17, 1913, gives promise of being by far the best exhibition of its kind ever held in Missouri. Last year we had an excellent show, even though a backward season cut the crop in some sections. This year, taken as a whole, Missouri is credited with an extra heavy corn crop, and the Missouri Corn Growers' Association has provided a list of premiums that will surely bring out the best they have.

Approximately $3,000 in cash and premiums will be given away this year. The best ten ears in the show will win the $200 State Board of Agriculture Trophy, with a $75 premium additional. The best single ear in the state will receive a $45 premium.

Eight hundred dollars in cash and premiums will be awarded to the boys and young men of Missouri. The Junior League of the Missouri Corn Growers' Association was organized only this year, yet it has a membership of over 2,500 boys and young men, all trying for the prizes awarded here at the State Corn Show. Remember, boys, the trophies offer in the junior division of the show are to be awarded permanently this year. If you are enrolled in the contest, now is the time to select your corn for the show in January.

In addition to the classes for corn we also have classes for small grains with cash prizes offered. The National Corn Exposition is to be held again this year and the leading winners in the State Show will be taken to the National Show. If you have some good corn, write me today for premium list for the show, which contains the score card, and for full directions for selection of corn for show. Plan to send in a sample of corn, and, better still, come yourself and meet the corn breeders from the various sections of the state.

Remember the date—January 13-17, 1913. For all information address T. B. Douglass, Assistant Secretary, Columbia, Mo.

CHAMPION SEED CORN PREMIUMS.

Offered to Our Readers Who Send Us a Special Subscription—Yellow Dent Corn Pure Bred Since 1847.

The subject of seed corn is of the utmost importance, especially at this time. Pretty good seed corn is easy to get, but superior seed corn is scarce. Even the best seed corn growers have good and bad seasons, and there is great variation, one year with another, in vitality and quality of their seeds.

Only one thing can be guaranteed, and that is, pure-bred seeds, like pure-bred animals, produce true to type, and sometimes there is worked out an almost imperceptible improvement. The road to improvement is rough and rocky, and upon it there are many obstacles; but ultimate success is possible, and only possible by using seeds of the right breeding and quality. The backward road is easy to travel by using seeds of no breeding and only containing the qualities that even negligence cannot destroy. Promiscuous seeding of unknown corn results in smaller crops of low-grade corn. Nature may save the crop by an excellent season, but the general result is bad.

As a step towards general improvement, every corn grower should have one or more experimental plots each year, using small quantities of different seeds. The National Farmer and Stock Grower has furnished opportunities for farmers to obtain such seeds for the past five years.

The very best ear of corn at one of the greatest show contests was pure-bred Yellow Dent, only 10¼ inches long, 7⅞ inches in circumference at a line three inches from the butt, and was 6⅞ inches in circumference at a point two inches from the tip. It weighed 19 ounces when thoroughly dry, and it carried twenty rows of kernels. The picture presented herewith will show that it had a good butt; that it had a good tip; that the lines between kernels were straight; the ear was splendidly proportioned, and it was bright with life and vitality. When you go out to the field or to the crib to select corn for seed, carry with you a stick 10¼ inches long and a piece of tape to measure around the ears of corn that at first glance look good to you. When you find fat ears of corn, be sure that the fatness is not an undue proportion of cob. Judge your own corn by a comparison with this ear of corn.

The picture presented herewith represents the ear of corn referred to as in all probability the best ear of Yellow Dent corn ever exhibited, grown by Mr. D. L. Pascal, of Iowa, who with it won a trophy worth $1,500.00, and it was the best ear grown that year in Iowa, and it is the single ear of corn that was shown in a glass case at the first National Corn Show. Mr. Pascal has a strain of Yellow Dent corn, bought from the originator and kept pure for sixty-six years.

For several years The National Farmer and Stock Grower has purchased of Mr. Pascal a quantity of seed corn related to this grand champion ear, and we have distributed it in pound lots to our subscribers, who have started growing their own seed corn from the Pascal seed furnished by this paper. Furthermore, many of our subscribers have won prizes at their own State Fair with ears of corn grown from the Pascal seed we furnished them. Some of them were first prizes and one of them was the championship prize for an exhibit of ten ears at the State Fair of Louisiana.

We have again purchased Yellow Dent Seed Corn from Mr. Pascal and we intend to send it out as subscription premiums as near free as we can arrange to do so. The corn is conditionally free and our subscriber is simply paying the postage on it. The amount of corn is plenty for the purpose of experiment.

Our Subscription Proposition.

The postage on twenty ounces of seed is ten cents; therefore we make this proposition: Anyone who will send us the amount of sixty (60) cents we will send The National Farmer and Stock Grower for one year, and we will send as a premium a package containing twenty ounces of Yellow Dent Seed Corn grown by Mr. Pascal from his breeding corn that grew the grand champion ear. Address, THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis Mo.

EARLY SHIPMENTS OF FURS AND HIDES MAKE BIGGER PROFITS FOR TRAPPERS.

Big fur and hide dealers who buy direct from trappers and hunters are now asking for early deliveries of pelts. This is the season of the year when buyers begin paying good prices. Funsten Brothers & Co., of St. Louis, U. S. A., the largest firm in the world which deals direct with trappers, is paying good spot cash prices to hunters and trappers who make early shipments of furs, hides and pelts.

The men who make trapping pay big money invariably are the first to make shipments in the fall. To make the year most profitable to the trapper, shipments should be gotten off as fast as skins are taken. Many hunters fail to realize the largest returns from their pelts because they do not know the importance of frequent shipments.

Most successful trappers—men who make trapping a profitable business—now use a prepared animal bait. Hundreds of trappers have doubled their fur catch and their profits by using Funsten animal baits. This is what makes the sport of trapping lively and profitable.

A special service is now offered without cost to men who wish to learn the inside secrets of profitable trapping. Pamphlets have been prepared which give accurate and complete data on fur prices, game laws, trappers' supplies and the best methods of trapping. Men who wish these pamphlets can get them free by writing to Funsten Brothers & Co., 633 Funsten Bldg., St. Louis, U. S. A. These booklets tell how trappers buy supplies at factory prices.

20 Reasons Why You Should
Investigate the SANDOW
Kerosene Stationary ENGINE
It runs on kerosene (coal oil), gasoline, alcohol or distillate without change of equipment—starts without cranking—runs in either direction—throttle governed—hopper cooled—speed controlled while running—no cams—no valves—no gears—no sprockets—only three moving parts—portable—light weight—great power—starts easily at 40 degrees below zero—complete, ready to run—children operate them—5-year ironclad guarantee—15-day money-back trial. Sizes 2 to 20 H. P. Send a postal today for free catalog, which shows how Sandow will be useful to you. Our special advertising proposition saves you one-half cost of first engine sold in your county. (16t)

THE MARKET FOR FURS.

FUNSTEN WANTS $10,000,000 WORTH OF FURS

Biggest Prices! Best Grading! Cash Quick

Those are the advantages you have in sending your furs to Funsten. We are the largest in the world in our line. The biggest American, Canadian and European buyers are represented at our regular sales. Competition for Funsten Furs is greatest. As we sell furs in larger quantities and get more spot cash, we can pay you more cash for yours than you can get anywhere. We count on large volume of business and small margin of profit. No traveling buyers—do all our business direct with you. We want ten million dollars' worth of furs. We want your shipments—anything—from one skin up.

Big Money in Trapping!

Do trapping during spare time. It's good sport and PAYS BIG. Mink, coon, skunk, muskrat, fox, wolf, lynx, white weasel and all kinds of furs are valuable. We buy any quantity.

TRAPS To accommodate trappers and shippers we furnish traps—including the famous VICTOR—at factory cost. Largest stock in United States.

Funsten Animal Bait Guaranteed to increase your catch or money back. Beware of imitations. Funsten Animal Baits won Grand Prize at World's Fair in 1904. U. S. Government uses Funsten Baits. One can of Funsten Animal Bait brought one man in St. Michaels, Alaska, $1,199 clear profit. Costs only $1 a can. Different kinds for different animals. Whether you are an experienced trapper or just a beginner, we can help you catch more furs—make more money. Write today for free Trapper's Guide, Game Laws and Trapper's Supply Catalog—three books in one—Fur Market Reports, Funsten Safety Fur Shipping Tags, etc. ALL FREE. (31)

NATIONAL FUR AND WOOL CO.,
368 N. Main St., St. Louis, Mo.

U. S. TO TEST FUR FARMING.

Experiment Station to be Established, Probably in Idaho.

Quite recently from Washington, D. C., it was announced that fur farming for profit is one of the experiments the Department of Agriculture is about to try. The Treasury Department has just rendered a decision allowing the department to spend what is needed for the industrial plant, which will be located in Idaho, probably in the mountain region, where the fur animal has to wear a thick coat for self-protection. This industry has never been tried on a scientific scale, anywhere, although there have been some very successful private experiments.

The department plans to start on mink and marten. Mink are found around this region, although they are not at all common. The department intends to start modestly in the fur-raising work, because breeding stock for good animals is expensive. There will have to be a good deal learned about the food and habits of the animals in captivity. It was considered almost impossible to rear foxes in captivity till it was found by one breeder that the mother fox had to have a small inclosure by herself. Now there are several valuable fox farms. With the mink and martens it will not be so hard to obtain animals to start the work.

THE PEACH-TREE BORER.

Four-year Experiment of Asphaltum Treatment With Badly-Infested Trees.

In a recent bulletin of the California Station, E. L. Morris calls attention to the use of hard asphaltum, grades "C" and "D," for the control of the peach-tree borer. This material was applied early in the spring to badly-infested trees from which the borers had been dug.

It was found that a thick, heavy coating prevented both the issuance and the entrance of about 95 per cent. to 98 per cent. of the insects, the degree of efficiency depending upon the thoroughness of the application. Asphaltum does not penetrate, crack, deteriorate or bind the tree, since it yields to the slightest pressure. Four years of experimenting have not shown the least injury.

The material is applied warm with a brush from five inches below to five inches above the ground. It is easier to apply two or more coatings than to try to put on more at one time than will adhere firmly. The first coating will harden very quickly and the second can be applied without loss of time. Two coatings are generally sufficient unless the bark is very rough. But in any case a thick, uniform coating is absolutely necessary for the best results.

Borers are seldom uniformly distributed over an orchard. Small blocks of trees here and there may be badly infested and the most of the orchard comparatively free from the pest. In such cases it is not necessary to treat all of the trees with asphaltum, but it is necessary to examine them carefully, for in no other way can the true conditions be known.

A convenient way to handle the asphaltum is to mount an iron kettle on the running gear of an orchard truck and suspend beneath it a sheet-iron apron as a fire-box. Keep hard asphaltum in the kettle all the time, so that the melted asphaltum will not get too hot to carry in small containers, and apply directly to the trees.

A Powerful Stump Puller.

The Hercules Stump Puller advertised on the last page of this paper is no stranger to our readers. Not less than thirty of our patrons have bought these stump pullers and they are all enthusiastic in regard to the work the Hercules can be made to perform. Don't fail to read the testimonials on the last page of this paper. Send in the coupon and receive the free book about stump pulling.

FREE—FARM ACCOUNT BOOK

Know How Much You Make Next Year

No one shall pay a cent for ***Bickmore's Farm Account Book.*** It will be sent free to any farmer who will be good enough to tell who and where he is. The cost of a crop never demanded closer attention. Business farming puts money in the bank. This book is arranged to keep all accounts in simple form—more simple, and certainly more practical, than trying to remember them; shows what to charge against crop production; has a laborer's time record; and section for personal accounts. ***64 pages; for ink or pencil.*** Not a cheap affair. It is meant for business. Its quality is in keeping with

BICKMORE'S GALL CURE

a remedy that ***cures,*** and the horse works all the time. Users keep it in their stables the year round—they believe in it. It is always ready for Harness or Saddle Galls, Chafe, Rope Burns, Cuts, Scratches, Grease Heel, etc. In cows use it for Sore Teats. Don't buy a substitute. Insist on getting Bickmore's Gall Cure—for the sake of your horse's health. But write now for Bickmore's Farm Account Book—it is ready for ***you.*** No cost. No obligation. Send your name and address—that's all.

Bickmore Gall Cure Co.

THE SOUTHERN FIELD

FACTS ABOUT THE SOUTHEAST

FREE ON REQUEST

Farm Lands Average Less Than $17 Per Acre.

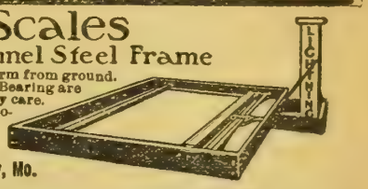
Undeveloped tracts sell from $6 up. Beef, pork, dairying, poultry, sheep and horses make big profits. Large returns from alfalfa, corn, truck, cotton, apples, fruits and nuts. Growers command good local and Northern Markets.

The Southern Railway Mobile & Ohio Railroad or Georgia So. & Florida Ry. territory offers the finest conditions for farms and homes. Plenty of rain, mild winters, enjoyable summers. Promising *industrial openings* everywhere. The Southern Railway has nothing to sell; we want YOU in the Southeast. The "Southern Field," state booklets and all facts free.

M. V. RICHARDS, Land & Industrial Agent, Room 71 Washington, D. C.

Lightning Pitless Scales

New Pattern. Solid Channel Steel Frame



Channels are seven inches which is the height of platform from ground. Levers are octagon in shape giving greater strength. Bearing are Toolsteel. This scale will last a life time with ordinary care. Equipped with compound Beam Free. Furnished absolutely complete except platform planks. Guaranteed accurate and tested to more than its capacity. Write for our prices and description before buying.

KANSAS CITY HAY PRESS CO., 425 Mill St., Kansas City, Mo.

Blood Purifier

FRAZIER'S DISTEMPER CURE

FRAZIER'S DISTEMPER CURE has no equal for any disease or bad condition caused by impure blood. Every horse owner knows that thousands of horses are sick or in bad condition simply because their blood is impure. One bottle of "Frazier's" will put your horse in good condition, or your money refunded by your druggist. $1 bottle holds three 50-cent size bottles. Send for our free 32-page horse booklet.

BINKLEY MEDICAL CO., Dept. H, NAPPANEE, IND.

GLENCOE'S BOPEEP—ILLUSTRIOUS GUERNSEY COW. Grand champion of the breed at National Dairy Shows of 1911 and 1912. Exhibited by W. W. Marsh, Waterloo, Iowa. This famous cow is represented in the Book of Live Stock Champions advertised on page 7, being one of 750 pictures of animals of equal prominence in said book.

A farmer wrote these books!

—a man who knows farming from A to Z. He traveled through thousands of square miles of the *best* sections in Arkansas and Texas, along the Cotton Belt Route; and found out where the *real* farm opportunities were—the kind that *he*, knew *you* would like to hear about.

He doesn't generalize. He comes right down to brass tacks and tells you what Farmer Tull is raising—shows you actual pictures of Farmer Tull's crops, etc.; and tells you what the same kind of land, near Tull's place, would cost you *now*. He got the personal experiences of scores of farmers in this way; and took actual photos of their places. He points out the best sections for wheat growing, for corn, fruit, truck, etc.—in plain words he sifts the whole situation down to a point where you can say to yourself: "*There* is the most likely locality for *my* line of farming—I'll go and investigate." (And with low round trip fares via Cotton Belt Route twice each month your trip will cost mighty little.) Send a postal *today* for

Your free copies

of these books—115 farm pictures and 100 pages of farm facts! I know you'll be glad to get them. Write *now*.

1466 Pierce Bldg., St. Louis, Mo.

OVERWORK ON THE FARM.

The Human Machine Can Have Too Much of a Good Thing.

One of the great faults of Americans is working too much. It is not so bad as laziness, but is as certainly disastrous, if carried to the possible limit, as it is with many farmers. The pressure of life is largely the cause of this excess of labor, but yielding to this temptation should be resisted just as other temptations are resisted. This is a case where there is such a thing as "having too much of a good thing."

The farmer that gives himself up entirely to work is killing not only himself but his family. Usually he is starving his soul. It is common to find farmers who work seven days every week, and from the time of rising in the morning till the time of going to bed at night. In such cases it will be found that the farmer's wife is working equally hard.

What a pity it is that the soul of a human being should be kept dwarfed by a round of labor that can result in feeding the body only! Every soul has lofty aspirations, but the continuous laborer must say to those aspirations: "Wait a while till all my tasks are finished," which means forever. No person ever finishes all the tasks he desires to complete; the world is too full of labor for that.

The writer remembers a farm on which he worked when a boy. The rising hour in the summer time was four o'clock in the morning. The long day began then with the feeding of the cattle, the horses, the hogs and the poultry. Then came milking time, and after that breakfast. After breakfast the real labor of the day began in the plowed field, the haying field, the garden or the orchard. If it rained, the cooper's shop was opened, and all went to work making barrels to be sold on the market. After sundown the cows were milked again, and there was other work after that. In haying time work went on in the hay field till darkness stopped it, and on some moonlight nights labor continued in the hay field till ten o'clock at night. Fortunately haying did not last through the summer. One factor connected with this overwork at haying time was the extra hired man employed for two weeks at a wage of $2.00 per day. The farmer secretly acknowledged to his family that the reason he was having all work so many hours was to cut short the haying period, so he could let the extra man go. In other words, he was getting out of that man about fifteen hours of work per day.

Every human being should have several different interests, none of which should be neglected. There should be time given to the development of his social nature and his religious nature, without which a human being is but a clod of the earth, of no real use to himself or anybody else.

One rest day in seven should be insisted on by all, whether from a religious motive or not. The human machine needs rest periods, and if these are not provided the machine must ultimately suffer.

Our beautiful farm life should not be poisoned by establishing a system of slavery in place of reasonable labor. Better management will result in larger production and less labor on many a farm.

Great Difference in Hogs.

The reason why the slaughterer pays a higher price for one load of hogs than he can be made to pay for another, is because there is considerable difference in the quality of the meats and in the shrinkage in slaughtering results. Hanging on the hooks ready for the retail trade, the slaughterer often knows that the highest-priced hogs on foot are sometimes the cheapest on the block. Common hogs, shrinking heavily in slaughter and without attraction as meat, are sometimes dearer in the end than the hogs that brought the top price in the market.

Thanksgiving Poultry Market.

During Thanksgiving, which was the last week in November, the market for live poultry at St. Louis was quoted as follows: Turkeys, choice dressing, 16½c.; do. poor and culls, 8 to 10c.; chickens, 12c.; broilers, 14c.; fowls, 10c.; cocks, 8c.; ducks, 13c.; geese, 11c.; guinea chickens, old, per dozen, $2.00; do. young, 1¾ pounds and over, $4.00; do. young under 1¾ pounds, $3.00; geese and ducks plucked, 2c. per pound less than quotations.

Keep Brood Sows Well Conditioned With Merry War POWDERED Lye

E. Myers,
President.
E. Myers Lye
Company

Every hog raiser knows the importance of giving special care and attention to the health of his brood sows; for these animals are the pork producing plant of his farm. He knows he cannot expect strong, healthy litters from sickly, scrawny, poorly nourished brood sows. By feeding a small quantity of *Merry War POWDERED Lye* with the rations, the bowels are kept in normal condition, the blood at an even temperature, and at farrowing time fever will be allayed. The chances for a fine litter of healthy pigs will be greatly increased.

From weaning until marketing hogs should be kept on a *Merry War POWDERED Lye* diet—just a small quantity mixed with the feed. It *protects* hogs against cholera, destroys hog worms, keeps the hogs keen in appetite, adds weight—in short—*increases pork profits.* Don't experiment with ordinary lye. *It might prove dangerous. Merry War POWDERED Lye* is *specially* prepared and is a *safe* hog remedy and conditioner. The *experiences* of thousands of hog raisers *prove* my claims about *Merry War POWDERED Lye.* Here is a fair sample:

It Saved The Life of This Brood Sow

"I want you to know what Merry War Powdered Lye did for a valuable red Duroc Jersey sow of mine. When our sow took sick we did not know what was the matter with her. She looked just like the picture of the skinny hog in your ad., so we used a can of Merry War Powdered Lye and she was able to stand up in three days. When we began using Merry War Powdered Lye we expected to find her dead at any moment. She is now in good condition and I expect her to farrow at least 10 pigs the first of August."

MRS. A. P. SORENSEN, Otter Pond, Ky.

Prove this for yourself. Merry War POWDERED Lye is for sale at most dealers, 10c per can (*120 feeds*). It is convenient to buy in case lots—4 doz. cans, $4.80. *Costs only 5c per hog, per month* to feed regularly—by far the best and much the cheapest hog insurance you can buy. If your dealers can't supply you, write us, stating their names; we will see that you are supplied, also send you, free, a valuable booklet, "*How To Get The Biggest Profits From Hog Raising.*" *Order direct from us in case lots (4 dozen cans $4.80) if your dealers won't supply you.*

E. MYERS LYE COMPANY,
Dept. 22 St. Louis, Mo.

Which Kind Do You Want?

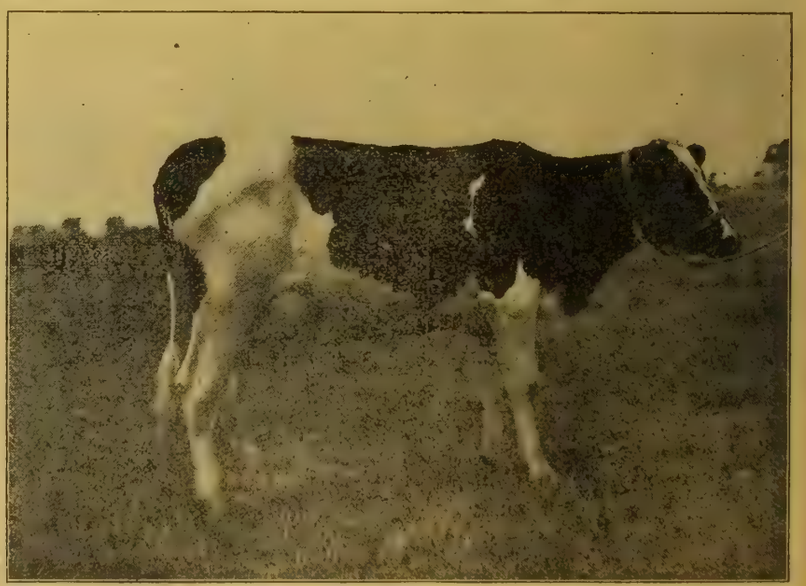
A Top Price For Hogs.

On November 19th, with 9,500 hogs in the St. Louis market, the top price, $7.90 per 100 pounds, was paid for a load of 218-pound hogs shipped in by I. N. Fredericks, of Shelby county, Missouri. The hogs were sold by Clay, Robinson & Co.

The Market For Feathers.

During Thanksgiving week, on the wholesale market of St. Louis, prime white live goose feathers were selling at 60 to 63c. a pound; prime gray at 43 to 44c., and old white at 36 to 38c. Inferior grades, 15 to 30c. Duck—White, 41c.; dark, 30c. Chicken—Prime dry-picked body, 3c.; wet, damp and quill-mixed, 2c.

Mr. Fred Ruebusch, of Sciota, Ill., is advertising pure-bred O. I. C. pigs and bred sows of his own breeding, and he has some of the best breeding stock of the white hogs that are world renowned for being mortgage lifters. Mr. Ruebusch is recommended by the banks of his county and his pigs recommend themselves. He is located in Lee county, west of Bushnell and east of La Harpe, and has express facilities to all points in the railroad systems.



FINDERNE PONTIAC NETHERLAND — HOLSTEIN-FRIESIAN HEIFER. A junior two-year-old. Broke two world's records with a production of 567.5 pounds of milk in seven days, 3.96 per cent. fat, equivalent to 28.26 pounds of commercial butter; and in thirty days 2,329.4 pounds of milk, 3.80 per cent. fat, equivalent to 110.72 pounds of butter. This extraordinary heifer is owned by Bernhard Mayer, Finderne, Somerset county, New Jersey.

KINGMAN Model Gang Plow

For Durability and Easy Work

Only the best steel used in the Kingman Model Gang Plow. In its design and construction you get the benefit of our 40 years experience in plow building.

YOU GET LIGHT DRAFT and more uniform furrows with the Kingman Model Gang Plow, because it is built so that the weight is carried on the furrow wheels—there's no dead weight; side draft is practically eliminated.

EASY TO HANDLE. Powerful foot and horse lifts, and lever in easy reach of driver to raise or lower bottoms. Bottoms are flexible; enter and leave ground point first.

Bottoms are soft center steel, in any style to suit your soil. Shipped as nearly set up as possible. Write for FREE Illustrated Catalog.

KINGMAN PLOW CO., Dept G, Peoria, Ill.

GERMINATION TESTS.

The Stronger the Vitality of the Seed Ear the Larger the Yield.

Forty ears of seed corn, apparently exactly alike, were selected from an Iowa farmer's seed by Prof. P. G. Holden. Kernels were taken from each year and germinated. One ear was dead. The kernels from some ears germinated very strong, from others strong, from others weak. The seed from each ear was planted in a separate row. The kernels from the ear which showed the most vigorous germination produced at the rate of ninety-two bushels to the acre. The ear that showed the weakest germination produced at the rate of twenty-four bushels to the acre. The four ears strongest in germination, including that which produced at the rate of ninety-two bushels, yielded at the rate of eighty-eight bushels an acre; the four ears that were weakest in germination, including the twenty-four-bushel ear, averaged at the rate of thirty-two bushels an acre.

Seed corn was collected from ninety farms near Ames, Iowa, by Prof. Holden and planted in adjoining plats. The seed that showed the strongest vitality in germinating yielded eighty and one-half bushels an acre; the seed that showed the least vigor yielded thirty-one and one-half bushels an acre. The yield of the other lots varied between these extremes according to the vitality of the seed.

C. P. Hartley, the government corn expert, divided a lot of freshly-gathered ears of seed corn into two lots. One lot was cured and kept in a seed house under the most favorable conditions for maintaining the highest vitality. The other lot was kept in a crib under conditions that maintained average vitality. In the spring both lots germinated equally well. The crop from the seed kept to maintain the highest vitality was eighteeen bushels an acre more than that from the seed with average vitality.

Mr. Hartley says: "Save the seed only from the most profitable individuals. Care for each living kernel from the time it ripens until it is planted in a manner that will enable it to develop into a thrifty plant and produce one or more large ears."

At the Ohio Experiment Station, in a field of corn of the same variety, some rows were badly broken down in a storm, while other rows stood upright. Seed taken from the rows with broken stalks produced seventy-five bushels an acre; seed from the rows that withstood the storm yielded 114 bushels an acre.—H. M. Cottrell, Agricultural Commissioner, Rock Island Lines.

STORING GRAINS.

A Few Scientific Directions, Also Some Based on Simple Common Sense.

An Agricultural College Bulletin No. 156 of the Illinois Station is on the subject of injurious insects to stored grains.

Of more than fifty species of insects sometimes found in stored grain and their ground products only seventeen are grain eaters, and of these only nine are of much importance, namely, grain moth, flour moth, meal moth, meat snout-moth, yellow meal worm, flour beetle, granary weevil, rice weevil and the saw-tooth grain weevil.

The bulletin gives the description, habits and life history of each of these insects, and recommends the following preventive and destructive measures:

Grain should be threshed and dried out as soon as possible after it ripens. All sacks and storage bins should be cleaned out and fumigated before placing new-crop grain in them. Corn is less liable to insect attack if dried, shelled and sacked. Flour and meal bins should be cleaned out and fumigated occasionally. In buying grain, farmers, seedsmen and millers should make sure that it is not infested by insects before storing it.

If in spite of these precautions a crib, grain bin or storage room becomes infested, make it as nearly air-tight as possible and give it a thorough fumigating with sulphide bicarbon. Hydrocyanic acid gas is sometimes used, but it is more dangerous and less penetrating than the sulphide bicarbon.

HUMAN FARM LABOR.

Increased Productivity by the Inventions in Farm Machinery.

In a recent circular on the subject of farm labor, issued by the United States Department of Agriculture, the increased productivity of human labor by the use of implements and machinery is strikingly stated in the case of corn. From 1855 to 1894 the time of human labor required to produce one bushel of corn on an average declined from four hours and thirty-four minutes to forty-one minutes. This was because inventors had given to the farmers of 1894 the gang plow, the disc harrow, the corn planter drawn by horses, and the four-section harrow for pulverizing the top soil; because they had given to the farmer the self-binder drawn by horses to cut the stalks and bind them; a machine for removing the husks from the ears and in the same operation for cutting the husks, stalks and blades for feeding, the power being supplied by a steam engine; because they had given to the farmer a marvelous corn sheller, operated by steam, and shelling one bushel of corn per minute, instead of the old way of corn shelling, in which the labor of one man was required for 100 minutes to do the same work.

The Great Crop of Corn.

According to the latest figures by the United States Department of Agriculture, the corn crop of 1912 is finally estimated at 3,169,137,000 bushels, compared with 2,531,488,000 bushels last year, and the record crop of 2,927,416,000 bushels in 1906. Yield per acre, 29.3 bushels, compared with 23.9 bushels last year, and 26.7 bushels, the ten-year average. Average farm price, 58.4 cents per bushel, compared with 64.7 cents last year. Quality, 101.1 per cent., compared with the ten-year average. Corn of 1911 crop reported on farms, November 1 was 64,764,000 bushels, compared with 123,824,000 bushels of the 1910 crop remaining on farms November 1 last year.

The 1912 Barley Crop.

According to the United States Department of Agriculture, the total barley production of 1912 is estimated at 224,619,000 bushels, compared with 160,240,000 bushels last year, and the record crop of 178,916,000 bushels in 1906. Yield per acre, 29.7 bushels, compared with 21 bushels last year, and 25.4 bushels, the ten-year average. Average farm value, 53.8 cents per bushel, compared with 84.9 cents last year. Weight per measured bushel, 46.8 pounds, compared with 46 pounds last year, and 46.9 pounds in 1910.

Rye Crop of the United States.

The latest estmate by the United States Department of Agriculture for the crop of the year 1912 places the total rye production at 35,422,000 bushels, compared with 33,119,000 bushels last year, and the record crop of 34,879,000 bushels in 1910. Yield per acre, 16.9 bushels, compared with 15.6 bushels last year, and 16.1 bushels, the ten-year average. Average farm price, 68.8 cents per bushel, compared with 83.1 cents last year.

Yes, crops can wait

But at whose Expense?

Nearly every soil contains enough plant food for many hundred years; it represents the potential fertility of the soil, and is good for about 14 bushels of wheat, 20 bushels of corn, 15 bushels of oats or 40 bushels of potatoes to the acre. But an acre rightly treated with manure or fertilizers is capable of producing three to five times as much. If the acre waits for plant food **who pays the bill?**

AVOID THAT "WAIT" BY USING

EMPIRE FERTILIZERS

These fertilizers supply to growing crops in available form the plant food elements required which in connection with good seed, cultivation and weather, and the plant food supplied by the soil and air, are producing good crops of profitable size and quality. Farmers depend upon them as upon other old friends, and have done so for years.

Agents wanted where we have none. Address early for prices and terms,

No long waits at blacksmith's shop for sharpening, no postponed trips due to bad roads. Your Horse is ready when you are ready. Be sure you get Genuine Neverslip Calks. They are marked with a RED TIP. Without the RED TIP they are Not Neverslips. Send today for Booklet L.

Annual New York Sale.

The Old Glory Horse Sale at Madison Square Garden, New York, was concluded on November 30th. There were 725 horses sold for $268,000, an average of $370 per head. This sale included all types except drafters; principally trotters and pacers.

THE FAMILY HORSE.

"What's the Matter With Old Tom?"

William Allen White, whose answer to the question, "What's the matter with Kansas?" made him famous many years ago, has lately answered another question—"What's the matter with Old Tom?"—in a way that will make the Emporia editor's name forever cherished in the horse world:

When Theodore Roosevelt visited Emporia a few weeks ago, Mr. White took the Progressive candidate out buggy riding behind the family horse. Some of the Kansas newspapers, in reporting the incident, referred to Old Tom in terms intended to be sarcastic, whereby his owner paid this tribute to the faithful steed in the columns of the Gazette:

"Old Tom, of course, is no Maud S. nor Joe Patchen—for several reasons. But he has the same number of legs attached, and his heart is true. He makes no claim to speed, but his carburetor always works, and while he has but two cylinders he brings his guests back in one piece and leaves them at home rather than down-town at the undertaker's to be assembled by total strangers into their aliquot parts. What if he isn't speedy? What if his best record is a mile in fifteen minutes? So far as that is concerned, the pyramids have been 4,000 years making a distance that Old Tom can make in a few desultory minutes, and no one sneers at them. There are too many smart Alecks running newspapers who jest at useful things to raise a laugh. Old Tom may not have a windshield or speedometer. But—what would he do with them? He is fully equipped with a few kind words and a whalebone whip. He will go longer—though perhaps not so far—on a forty-cent bale of hay than these new-fangled vessels of wrath fitted into destruction will go with a bucket of gasoline and a cord of rubber. Then, of course, there is this important thing to say of Old Tom: While, of course, it is difficult to get new parts when he breaks, yet, after all, he is paid for, and there's no ninety-day note turning up every season to make the years a melancholy procession on the other side of the street from the bank. That's not much, perhaps, but still it's something. Taken up one side and down the other—Old Tom has his good points."

IMMENSE SHEEP SHIPMENT.

Big Montana Flockmaster Disposes of 121 Double-deck Loads at Chicago in Four Days.

On November 14th the Chicago Live Stock World mentioned an extraordinary sheep shipment from Montana by saying:

"With the marketing of nine double-decks of yearlings here today, Thos. Cruise, millionaire Montana mine owner and large flockmaster, completed one of the most remarkable stunts in sheep marketing recorded in trade annals.

Discovering a few weeks ago that his flock of upwards of 100,000 head was much larger than he deemed best to attempt to carry through the winter, Mr. Cruise promptly ordered four trains of thirty double-deck stock cars, each to be set at his loading pens. The order was filled, with an extra car thrown in for good measure, and the entire 121 double-decks were loaded and billed to Chicago. The stock reached a feeding station near Chicago in good shape, but the consignment was of such a mixture that the better part of three days was consumed in sorting and shaping preparatory to its appearance at the Chicago market, which was called upon to absorb 112 of the 121 doubles, in addition to the regular market supply within a three-day period. Forty-three double-decks were placed on the Monday market; on Tuesday another thirty-seven doubles was shot in, and on Wednesday the market was asked to absorb thirty-two more doubles. The remaining nine doubles were here Thursday.

The memory of the pioneer traders recalls no prior single instance when so large a string of one ownership was offered for sale on one market within so brief a period. It is distinctly to the market's credit, and a record which would be possible on no other market, that the stock was absorbed, not only promptly as offered, but that this was done without straining the demand or causing material weakness in the trade—the last shipments, in fact, outselling the first.

The big string proved a bonanza to stock sheep and feeder buyers who were on hand in droves, making an eleventh-hour stand for supplies, with an apparent realization of the fact that he who this season longer defers the filling of his sheep feed lots is lost. Practically the entire shipment, aggregating 27,886 head, went to feeder buyers, but twenty-four head out of the entire offerings of forty-three double-decks being fat enough for slaughter.

The stock was all thin in flesh and consisted of mixed yearlings and aged stock, not a lamb being found in the 121 doubles. Sales of feeding wethers in the band were largely from $3.85 to $4.15 per 100 pounds. feeding yearling wethers mostly at $5.00; aged feeding ewes mostly at $3.10 to $3.45; and feeding yearling ewes from $4.00 to $4.15 per 100 pounds."

A Great Winning.

Dr. LeGear's White Plymouth Rocks won a complete victory at the Arkansas State Fair, at Hot Springs, Ark., November 11th to 16th, 1912. They captured every prize offered to the White Plymouth Rocks, and there was a large entry and strong competition.

We entered seven cocks, eleven hens, four cockerels and six pullets. There were only three prizes offered in each class and Dr. LeGear's Plymouth Rocks won:

First, second and third cock.
First, second third hen.
First. second and third cockerel.
First, second and third pullet.
First, second and third breeding pen.

One silver loving cup for the best fifteen White Plymouth Rocks in the show, and a $50 special cash sweepstakes prize for the best twenty-five birds in the show, regardless of breed, competition open to the world.

There were birds entered from six different states, which proves the superior qualities of Dr. LeGear's White Plymouth Rocks. Our winnings at the Arkansas State Fair are the greatest on record for any one breeder of one variety at a large poultry show.

Dr. LeGear's White Plymouth Rocks also won thirteen out a possible sixteen prizes at the Great St. Louis Show, 1911.

Bred and owned by Dr. L. D. LeGear, Kirkwood, Mo., or 713 Howard street, St. Louis, Mo.

HORSE AND MULE SALESMEN.

Holland, Nugent & Maxwell Brothers.

NATIONAL STOCK YARDS, EAST ST. LOUIS, ILLINOIS.

Horse Auctions Every Monday and Tuesday.

Horse and Mule consignments are solicited for sale by the most competent firm on the Best Market in the United States. Every consignment given personal attention. Keep in touch with us. Let us sell your Horses and Mules on commission. We have the two best days of the week and the cream of the buyers of the East and South always attend our sales.

Sole manufacturers of Dr. LeGear's Stock and Poultry Remedies, consisting of Stock Powders, Colic Remedy, Antiseptic Healing Oil, Antiseptic Healing Powder, Dip and Disinfectant, Gall Remedy, Spavin Remedy, Liniment, Heave and Cough Remedy, Worm Remedy, Powdered Lice Killer, and a full line of Poultry Remedies.

Combination of Breed and Feed.

"Blood tells." Likewise, "feed tells." The combination of the two enabled the Missouri College of Agriculture to give to the state the world's record cow, Josephine. The same combination has enabled the college to give to Missouri another high-record milk and butter producer, Carlotto Pontiac.

Carlotta is seven years old. She was bred on the College Farm. In twelve months, during which time her milk was officially weighed and tested, she produced 23,593 pounds of milk. This is equivalent to 93½ standard barrels. The milk from this one cow would have supplied the needs of thirty average city homes. Her milk contained 708 pounds of fat, which is equivalent to 827 pounds of butter. This was sold at regular Elgin prices for over $200 The skim milk was worth between $30 and $40. It required between $80 and $90 worth of feed to produce this gross return of more than $230. At six cents a quart, which is less than the usual price to city customers, the milk from this cow would have sold for over $700.

There are a good many so-called dairy herds in Missouri (and more of them in some other states) in which the entire herd does not return as much clear profit for feed consumed in a year as has this one cow, owned by the Missouri College—Carlotta Pontiac.

Trusses Like These Are a Crime

Here's an end to the curse of wearing straps and springs that squeeze and pinch — pads that do no good — trusses that simply shorten your life.

Here's something absolutely **guaranteed** to keep your rupture from coming out. Test it on 60 days trial and see. If it doesn't hold at all times, then it won't cost you a single cent.

Has overcome some of the worst cases on record. Doctors and surgeons who know of it recommend it instead of operation. No belt, no leg-straps, no springs. Is waterproof—will hold in bath.

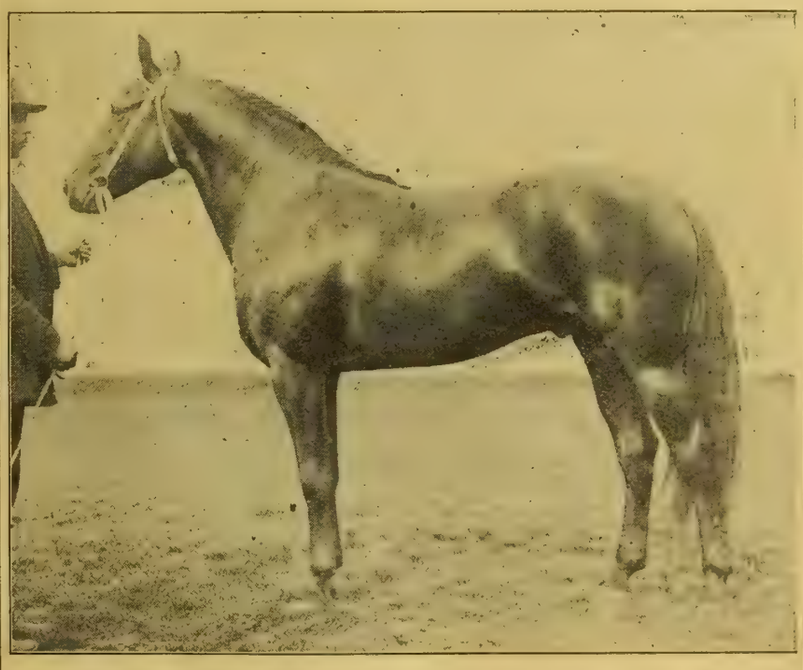
Write for Free Book and find out all about it. Book is full of facts never before put in print. Cloth-bound, 96 pages. Explains why elastic and spring trusses cannot help you. Shows dangers of operation. Exposes the humbug "appliances," "methods," "plasters," etc. Will save you from wasting money. Shows why 60 days trial is the only safe way to test anything for rupture and how we offer you the only thing good enough to stand such a long test.

Book gives over 5,00 voluntary endorsements. Write for it to-day—it tells you things you could never find out by going to doctors or drugstores. Address:
Box 776—CLUTHE CO., 125 E. 23d St., New York City.

ROCK SAND—ENGLISH THOROUGHBRED STALLION. Foaled in 1900. Winner of the English Derby, St. Ledger and Two Thousand Guineas—known as the Triple Crown. ROCK SAND was imported into this country and became closely identified with the American turf, and during the last three years his get won the highest class of events of the turf in four countries—United States, England, France and Canada. Mr. August Belmont, the American owner, recently sold ROCK SAND to an English Syndicate for $150,000.00, and he returnel to his native land on the last day of October, 1912.

Not Cholera, But Worms.

Collie Bowers, a farmer of Otho township, Fort Dodge Iowa, is enthusiastic in regard to using Merry War Lye (see page 14) in cases where supposed cholera is attacking hogs. In his section they have the annual attack of so-called hog cholera, which is really a form of worm trouble that comes with new corn, and after some experience in losing pigs last year he set to work using Merry War Lye, and this year the whole township is saving its pigs by the same process. The experience as set forth by him appeared in the Fort Dodge Messenger of November 7th, 1912.



BORDER KNIGHT—TROTTING STALLION OF THE BEST CLASS. At the Kentucky State Fair, Louisville, 1912, BORDER KNIGHT, 2:12¼, from the Glen Lake Farm of John W. Stout, was awarded first premium in the class for stallions in service. This is a well-deserved compliment for this good son of Bingen from Felista.

THE ELECTION RETURNS.

General Results Known, But Not the Exact Figures.

Of course, no one is now waiting on the result of the election, but the returns are not yet all in. The latest table placed the vote for Hon. Woodrow Wilson in the entire country at 6,156,748; that for the third party and Republican ticket combined at 7,304,568, and the total vote for all parties at 14,295,737. Directly the returns are made official, the last pages of the Handy Almanac, Encyclopedia and Atlas for 1913 will be printed and will be delivered to all who are entitled to a copy of it. We are offering this book to all of our readers who will pay 50 cents for one-year's subscription to The National Farmer and Stock Grower and who do not receive any other premium. The book is advertised on page 25.

St. Louis Horse Market.

Holland, Nugent & Maxwell Bros., of the St. Louis market at the National Stock Yards, Ill., report that trade is active for any number of horses, but the prices are not so high as a month ago. The horses in demand are on the chunk order, 1,100 to 1,400 pounds in weight. All light horses, except the Southern and fancy drivers, are slow. Horses on the plain Southern order, that sold at the high time at $70 to $95, are now well sold at $40 to $50. A letter to Mr. T. H. Holland, National Stock Yards, Ill., from any car-load shipper will receive personal attention.

Last Butter Quotation.

On December 2d, at Elgin, the official butter quotation was 35½ cents. That is for the top grade of creamery butter. A year ago the quotation was 36 cents; two years ago, 29 cents; and three years ago, 33 cents.

SUBSCRIPTION PREMIUM — A POCKET COMPASS.

This is a true 1¾-inch Pocket Compass purchased from a reliable house. It is a fancy, nickel-plated, open-face, watch-shape Compass, with a silvered dial, and it weighs less than one ounce. Every farmer or ranchman should have one in his pocket. Send us One Dollar and we will send you The National Farmer and Stock Grower for one year, and we will also send you this Pocket Compass by mail postpaid. Address, THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

BIG FOUR PROPOSITION.

Four of the Greatest and Best Monthly Farm and Stock Publications One Year For One Dollar.

We have been requested by our readers to make a subscription club that will practically include every branch of agriculture at a fair price, and we have gone "one better" in that direction. We will furnish four sterling, practical, up-to-date farm papers at half price.

This is the season of the year when subscriptions are renewed, and it is the best time of the year to look up special offers. This offer has never been surpassed, because either paper is worth considerably more than the full price. The papers are as follows:

THE NATIONAL FARMER AND STOCK GROWER—issued monthly—a magnificent guide and counsellor in all branches of farming, grain growing, fruit growing, dairying, stock raising and feeding, markets, etc.

TH AMERICAN SWINEHERD—issued monthly—a leader in its class. The hog paper, the pig paper, the brood-sow paper and strictly first-class in teaching how to top the market by producing top hogs.

THE SHEPHERDS' JOURNAL is devoted to sheep husbandry on the farm and on the range. It is equally valuable for the breeder as for the herdsman. It is issued monthly, printed on elegant paper, splendidly illustrated and edited by practical men.

THE RELIABLE POULTRY JOURNAL—the best and most elegant poultry journal issued in the United States. Great on breeding points and splendid articles on raising, feeding and shipping poultry. THE RELIABLE POULTRY JOURNAL is distinctly practical in all articles. The writers are thoroughly expert in their particular branches of poultry husbandry and retain the peculiar quality of being good instructors. You gain something every time you read THE RELIABLE POULTRY JOURNAL.

The four papers above mentioned onght to be on every farm and ranch. Taken singly they cost $2.00 a year. By our co-operative clubbing arrangement we are enabled to offer all four papers one year for One Dollar. Address us at once without fail.

SUBSCRIPTION BLANK.

The Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

Gentlemen: — For One Dollar ($1.00) enclosed herewith please send us the Big Four Subscription Combination one year, consisting of THE NATIONAL FARMER AND STOCK GROWER, THE AMERICAN SWINEHERD, THE SHEPHERDS' JOURNAL and THE RELIABLE POULTRY JOURNAL.

PROFIT IN CAPONS.

A Splendid Contribution to the Meat-production Side of Poultry Raising.

Circular No. 27, by W. A. Lippincott, Department of Poultry Husbandry, Kansas Experiment Station, Manhattan, Kas., treats of caponizing and capons. The circular has twenty-four pages, nine of which are devoted to illustrations of the process of caponizing.

The author states that the operation of emasculating the young roosters not intended for breeding is just as simple and quite as important as that of castrating the young pig or calf intended for future slaughter. The capon, like the barrow and steer, becomes docile, lays on flesh more economically, and the flesh is of much higher quality, remaining as sweet and tender as when the operation was performed on the young broiler.

The loss by reason of the operation of caponizing, properly done, need never exceed five per cent.—five birds in every 100. The instruments consist of a sharp knife, a spreader, a probe and forceps for the removal of the little testicles, and the price of these instruments ranges from $2.00 to $4.00 a set.

A broiler weighing two pounds July 1st will turn out a capon weighing eight to ten pounds in December, worth $1.50 to $1.60. Unless the demand and price for broilers be unusually good, there should be a handsome profit in converting the male broilers into capons.

The proper time to operate is when the bird weighs a pound, if of the small breeds, like Leghorns, and a pound and a half if of the heavier breeds, like Plymouth Rocks.

With this circular, or any standard work on poultry on hand, any intelligent, careful person can soon learn the art of caponizing.

THE EGG-LAYING CONTEST.

Final Results as Reported by the Manager.

The First Missouri National Egg-laying Contest closed at the State Poultry Experiment Station at Mountain Grove, Mo., on October 31st. The results of the contest were not especially startling. The leading pen was R. C. Rhode Island Reds, which made a record of 1,042 eggs for five hens, or an average of over 208 eggs per hen. The best individual record was made by Lady Showyou, White Plymouth Rock hen, which laid 281 eggs in twelve months. This hen lacked one egg of equaling the best record in this country, which was 282 eggs by a Barred Rock hen at Guelph, Canada. Lady Showyou, however, laid a full-sized egg, weighing on an average a little more than two ounces each, and with a good, strong shell on each egg. We are told by Prof. Graham, of Guelph, that his 282-egg hen laid a very small egg with a very poor shell; so Lady Showyou was far the most remarkable performer of the two when these facts are considered.

There were 655 hens in this contest, and they laid a total of 87,843 eggs, or an average of over 134 eggs per hen. Considering the fact that more than a dozen pens lacked two or three months of being mature at the time the contest began, and also considering the fact that more than half of the pens were made up of hens and several of them contained hens three and four years old, we are reasonably well satisfied. When we consider the fact that most of these birds had been carelessly and promiscuously bred with no special idea to increase egg production, and came from all classes of breeders, we do not feel that one hundred and thirty-four eggs per hen is a bad average for such a promiscuous lot of stock.

Yield by Months—655 Hens.

	Eggs.
November	3,118
December	5,082
January	3,203
February	6,442
March	10,828
April	12,458
May	11,478
June	9,798
July	8,873
August	7,015
September	5,716
October	3,832

The Best Pen Records.

		Eggs.
1.	R. C. Rhode Island Reds—D. E. Hall, California, Mo.	1,042
2.	White Wyandottes—P. J. Jansen, Little Rock, Ark.	1,015
3.	S. C. W. Leghorns—Walter Hogan, Petaluma, Calif.	991
4.	B. P. Rocks—Brooks Sanitary Hennery, Morgan Park, Illinois	967

The Best Individual Record.

1.	White Plymouth Rock—J. A. Bickerdike, Millersville, Ill.	281
2.	R. C. R. I. Red—D. E. Hall, California, Mo.	255
3.	B. P. Rock—M. H. Baldwin, Sioux City, Iowa	245

The Heaviest Eggs.

The pen laying the greatest weight in eggs were the five Single Comb White Leghorn hens, which was the third in the contest, owned by Walter Hogan, of Petaluma, Calif. The 991 eggs weigh 131 pounds 2 ounces. This pen of Leghorn hens weighed less than four pounds each, and it will be seen from the above figures that each hen laid more than six times her own weight in eggs.

POULTRY DEPARTMENT NOTES.

. The New York Produce Review says: "Young geese are ready for market when the tip of their wings reaches the tail, which is when they are about ten weeks of age."

The effect of meat rations fed to hens was tested at the West Virginia Station, where one pen of fowls received a ration largely of corn and other starchy grains, while another pen was fed partly on meat and fresh bone. The meat-fed fowls laid 7,555 eggs, while the grain-fed birds laid 3,431, or less than one-half as many as those receiving the nitrogenous ration. The eggs from the meat-fed fowls were larger, much firmer, rather better and produced far more vigorous chickens than those of the others.

A Parade of Turkeys.

On Tuesday morning of Thanksgiving week, 20,000 turkeys trotted through the streets of Cuero, De Witt county, Texas. Seven thousand people turned out to see the parade, which was led by a United States Army Band and attended by the Governor of the state. Cuero is a poultry-packing center besides being a railroad center. During the census year De Witt county had 150,000 head of poultry of all ages. Lavaca, an adjoining county, had 248,000 head.

FAVORITE CORN HUSKER.

Clark's Corn King with its new self-shedding hook. The spear point enters the husks easily. The slant bend turns the husks for shredding, and the rounded, curved and beveled edges throw out the husks and prevent clogging. As this is the most approved hand husker on the market, we have selected it as a seasonable subscription premium. The hook sets at any angle; two positions for a thumb hook and five positions as a palm hook. Opening and closing the small end of the plate makes the adjustment perfect for any width of hand and prevents chafing. The strap passes through the leather tongue and the first ring and over the hand to the opposite ring and back through the first ring. Be sure and have the strap enter the ring

from the outer side. It brings the pulling strap unlerneath, forms the sinch draw and gives you the full benefit of the sinch-lock, which is the same as a half-hitch. The strap then passes to the last ring and then to the buckle; the half-hitch forms one fastening and the buckle holds the end of the strap. We will send The National Farmer and Stock Grower for one year and Clark's Corn King Husker for 50 cents. The Husker is a free premium. Address, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

A Wonderful Invention!
X-Ray Incubator Uses Only One Gallon of Oil to a Hatch

Requires Only One Filling of Lamp

SHIPPED *direct* to you from X-Ray factory. No agents—no dealers. Guaranteed to please. Order filled *same* day received. Freight prepaid *anywhere!* X-Ray incubator has lamp underneath—square in the center—and *not* on the side. Thus it is the *only one* with *perfect* heating system. Egg-chamber is always at proper temperature—there's no cold side. Oil tank holds from 4 to 8 qts. of oil—only 4 qts. are needed for an *entire* hatch. Lamp is filled *just once. Automatic Trip*—exclusive X-Ray patent—cuts down flame *at burner* when egg-chamber gets too hot. No excess heat escapes—so only *one* gallon of oil is needed.

X-Ray Incubator

Built Different From Other Machines—has lid on top, with 2 double-glass panels. Thermometer is *always* in sight. To ventilate or turn eggs simply raise glass top. Eggs are never removed from X-Ray. X-Ray is only one made on *right* principle with lamp where it *should* be.

Send TODAY for Free Book!
Write *now* for our new 1913 book No. 96. Get *all* facts.
We pay the freight.
X-Ray Incubator Co., Wayne, Nebraska.

Freight Prepaid.

POULTRY MONEY!

Poultry and egg prices *very high* for 1913. Cost of production *lower*. Get *your* share of the larger profits!

Cyphers Incubators and Brooders

together with Cyphers Company Service insure success for you. Write today for big new 244-page book "Profitable Poultry and Egg Production"—Free to any address.

Cyphers Incubator Co., Dept. 56 Buffalo, N. Y.

We ship quick from St. Paul, Buffalo, Kansas City or Racine.

$7.55 Still Buys World's Champion 140-Egg Incubator

Double cases all over; best copper tank; nursery, self-regulating. Best 140-chick hot-water brooder. **$4.85.** Ordered together, **$11.50.** Freight Paid (E. of Rockies). No machines at any price are better. Satisfaction guaranteed. Write for book today or send price now and save time. Address

Belle City Incubator Co., Box 74, Racine, Wis.

Eat Anything Without Fear

Tightness of the Stomach Caused by Undigested Food Stopped with a Stuart's Dyspepsia Tablet.

When you feel as if your stomach was being tightly choked—when the pain is intense and you break out in a cold and clammy perspiration and there is a lump in your throat and you are weak and nauseated—all you need is a Stuart's Dyspepsia Tablet to clear away the wreckage of undigested food left in the stomach and intestines and restore you to your normal self again. And this can all be accomplished within a few moments.

You May Have Often Envied the Hearty Eater! Why Not Emulate Him?

Thousands of people have learned so well how sure and dependable Stuart's Dyspepsia Tablets are for all stomach ills that they now eat anything they want without fear of distress. They are never without a package at home and at the office, and upon any indication that the stomach is a little weary, they take a Stuart's Tablet after each meal for a few days until the digestive organs get rested up again.

This is a splendid plan to follow and always results in much good. The appetite is improved, the food is relished more, your sleep is more refreshing, and your disposition will make you friends instead of enemies. For Indigestion, Sour Stomach, Belching, Gas, Coated Tongue, Intestinal Indigestion and all Stomach Disorders and Pains—or for Loss of appetite—Stuart's Dyspepsia Tablets are invaluable.

Use them freely—they are as harmless as sugar would be—and are not to be classed as "medicine." They have no effect whatever on the system except the benefits they bring you through the proper digestion of your food.

All Drug stores sell Stuart's Dyspepsia Tablets. The price is 50 cents per box.

EXPERIMENTAL POULTRY RAISING.

Pleasure and Profit to be Obtained by Careful Record and Investigations.

There is a great pleasure to be found in experimental poultry raising. Often there is also much profit. The doing-away with the old, profitless methods will frequently of itself make the flock of poultry profitable.

Most farmers have the land and the opportunity for experimentation with poultry. Members of the family can be enlisted in the enterprise, which will need much recording and bookkeeping. This work of tabulating results and expenses will give a mass of data that must be figured out, but which will prove a most interesting task.

A man who for five years will carry on experimental poultry raising will never go back to the old, blind way of doing things. He will find the things that give greatest profit and will stick to them.

In experimental poultry raising good quarters have to be provided. Balanced rations must be figured out. The experimentation will show what number of fowls will yield the greatest relative profit for any one farm.

The problem of feeding ground green bone is one that will pay to investigate, for in it the experimenter will find a cheap and valuable feed at a time when all commercial poultry feeds are excessively high.

As it is at the present time, every one engaged in such experiments should make much of provisions for poultry pasturage. This must be one of the important issues of the future in poultry raising. Mixed poultry feeds, refuse grain, and the like, are now costing the poultry raiser $2.00 per 100 pounds, in many localities, even when purchased in considerable quantities. Green feed of various kinds must be worked with to find what will be the most profitable and the easiest produced. The poultry raiser will have to get away from the large purchases of feed.

The experimentation should extend to the marketing of the product. There is no doubt that the profits are often lost through marketing at a great disadvantage and through firms and men that systematically defraud the consignor of the poultry products. The writer has known cases where fowls were receipted for and sold at market prices, when in reality they brought more as fancy breeding stock; but the salesman put the extra price in his pocket and said nothing about it.

Co-operation in the marketing of poultry products ought to be experimented with. It is the only way by which the abuses now common can be done away with. American farmers should be as enterprising as are the Danish farmers, who have covered their country with a network of such associations.

Experimentation with such co-operative associations might open a way for a great saving in feeds purchased, which perhaps ought not to cost the farmer as much as they do. The lack of co-operation in such matters is the most serious phase of poultry raising at this time.

The lack of co-operation among poultry raisers is one of the astonishing things in our rural life. With the example of the Danes, the Irish, the French, the Germans, the Austrians and the Italians in such matters, it might have been thought that co-operation among American poultry raisers would long ago have been established.

It is to be hoped that the spirit of experimentation will engender extensive co-operation.

POULTRY LESSONS.

Conclusions Arrived at by the Manager of the Missouri International Egg-laying Contest.

He says: "We will simply mention a few of the things which we have gathered from the records and from general observation, and these will be elaborated in our later bulletin on this subject. We feel that we can safely say:

1 That there is no variety or breed which far excels other varieties or breeds which are in general use as far as egg production is concerned.

2. That more depends upon the strain or breeding of a variety as to the number of eggs it will produce than upon the variety itself.

3. That some hens have a born tendency to lay and others have a born tendency to put on fat. The latter kind should be culled out in establishing a laying strain.

4. That more depends upon the breeding of the male as to the number of eggs the offspring will produce than upon the female, yet it will pay to breed from your best layers in preference to the poorest.

5. That you should select the variety which suits you best as to color, size and shape and breed them up until they satisfy you as to quality and productiveness. You make a mistake by jumping from one breed to another trying to discover a better layer.

6. That it will pay the average poultryman to trap nest his flock in the fall and winter months and breed from the pullets which lay earliest in life and from the pullets and hens which lay in the winter.

7. That the style of house used in this contest is one of the most satisfactory styles of houses for this climate. We find it cool in summer and comfortable in winter, convenient and properly ventilated.

8. That hens like sprouted oats as much or better than any other green food, and they do well on it. It aids digestion and increases egg production.

9. That a little moistened food is relished and will slightly increase egg production.

10. That many high producers lay thin-shelled eggs, and that the germs are often weak. A few high producers are able to lay large numbers of eggs, fertilize them and put vitality into the chick.

11. That the Mediterranean class can stand more protein and fattening food than the birds of the American, Asiatic or English classes. There is not so much danger of the Mediterraneans becoming too fat, and they require a richer food than the other classes mentioned.

12. That the egg yield from Mediterraneans is affected by extreme cold more than the other classes of fowls, because of the fact that they are closely feathered, larger combs and smaller bodies.

13. That if you give a hen reasonably good shelter, feed and attention she will net you a reasonable profit if she has been properly bred.

14. That the purpose of properly feeding and housing a hen is not to feed eggs into her body, but to so feed and care for her that you may get out of her the eggs which breeding has placed there. Proper feeding, housing and care have a bearing on the number of eggs produced by a flock, but breeding is the most important factor.

15. That hens must be fed, and fed liberally, if you expect eggs in large quantities, especially if you expect winter eggs.

16. That regularity in feeding is very essential.

17. That hens must not be excited or chased, but should be handled in a quiet, gentle manner at all times.

18. That rape will color the yolk of the egg green, and onions or fish scrap will cause the eggs to taste of these if fed quantities.

19. That the ground should be kept fresh, shade provided in the hot summer months and the house kept clean. The hens cannot do well if covered with vermin.

20. That most high layers will lay practically all the color out of their legs and plumage in one year.

21. That hens lay a few more eggs when males are not used in the pens with them.

22. That most good layers moult late in the season. They look tough, dirty and weather-beaten, as a rule, as a result of their hard year's work; but the poor layers spend their time in dressing up and putting on a beautiful coat of feathers, and test them early, as a rule.

23. That the best producers have broad bodies. The back is broad and the ribs are widespread, giving plenty of room for the egg organs and digestive organs. Their bodies are solid and the birds are not loose-jointed but compactly built.

24. That good layers are big eaters. A bird must have capacity to eat and digest a great amount of food if she is to lay a great number of eggs.

25. That a big decrease in the egg yield in the winter months can be brought on more quickly by great variations in temperature, sudden changes in weather conditions, than by continued or prolonged spells of either cold or rainy weather.

26. That it will pay to keep a good hen until she is four years old. We had several hens four years old which laid over 150 eggs each.

27. That most of the high producers have good-sized combs for birds of their variety.

28. That the method of feeding may not be the best, but the hens certainly liked the mash used, ate great quantities of it, and if you are to get the best results from the hen she must have a food which she relishes.

29. That photographs have been taken and measurements made, but we are not able to say at this time that there is a fixed type for high producers. You can judge for yourself when these appear in the bulletin.

30. That there is much room for improvement in all varieties and breeds as far as egg production is concerned, and it is up to the breeders of this country to get busy. There are wonderful possibilities along this line.

Flaxseed Crop of 1912.

According to the United States Department of Agriculture, the total production of flaxseed is placed at 29,755,000 bushels, compared with 19,370,000 bushels last year and the record crop of 29,285,000 bushels in 1902. Yield per acre. 9.9 bushels, compared with 7 bushels last year and 8.8 bushels, the ten-year average. Average farm price, $1.33 per bushel, compared with $2.10 per bushel last year. Quality, 101.2 per cent., compared with the ten-year average.

Poultry and Farm Paper Club.

We are often asked which is the best poultry paper in the United States, and the answer is **The Reliable Poultry Journal.** There are other excellent poultry papers, but the one we take home to read and one the family is determined to read is The Reliable Poultry Journal. We have made arrangements whereby we can send The National Farmer and Stock Grower and **The Reliable Poultry Journal,** both papers, one year, for fifty cents. This is a bargain that should be accepted at once. Address. **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Sunflower seed received from country shippers has been selling at St. Louis at $2.50 to $3.25 per 100 pounds.

LIVE STOCK BREEDERS' CARDS.

POLAND-CHINA HEADQUARTERS.

We have bred and established a herd of the greatest producing Brood Sows in the world. Write for information and prices. Satisfaction guaranteed.

KIRBY STOCK FARM, Marmaduke, Ark.

CARPENTER'S BARGAINS.

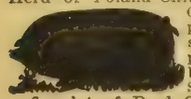
100 HOGS. 2 STALLIONS. 1 JACK. Registered Poland-Chinas and Duroc-Jersey Hogs.

TWO STALLIONS AND ONE JACK. Write for private sale list. It will please you very much.

WILDER CARPENTER,
The Grand View Breeding Farm, Marmaduke, Arkansas.

NINETY DAYS SPECIAL BARGAINS IN POLAND-CHINAS.

Special Bargains, and prices cut to the bottom. We are closing out the Blue Ribbon Herd of Poland-China Hogs, including the Great Missouri Champion, Hutchinson Sensation, 53,000; also a prize-winning son of Royal Meddler, 50,111.



Several matured Sows, a fine lot of Bred Gilts and several choice Pigs from four weeks to five months old, sired by as good Boars as the breed affords. This herd is rich in the blood of the most noted families in the world. Nothing reserved. Everything goes at private sale. Write for circular, description and prices.

JOHN McLAUGHLIN, Marmaduke, Ark.

EXTRA GOOD POLAND-CHINAS.

Pedigreed Poland-China Pigs, the best of breeding, big bone, fancy show stuff, $15 to $25. Write your wants to

D. F. BEAUCHAMP, Meredosia, Ill.

POLAND CHINAS

OUT OF STRETCHY SOWS, sired by 1,000-pound Boars. Buy them and win. **J. P. VISSERING, Box 1, Alton, Ill.**

DUROC-JERSEY PIGS FOR SALE.

One extra good litter of last July farrow, sired by Our Professor. These are first-class in every way; some fine September Pigs of choice breeding. If needing a young Boar, would be pleased to hear from you. from you.

H. H. HOFMANN, R. R. 1, Belleville, Ill.

TRUMANS' PIONEER STUD FARM,
Ameica's Largest and Oldest.

Importers of
SHIRE, PERCEHERON and HACKNEY STALLIONS.

Write for catalogue.

Address,
J.G.TRUMAN, Manager, Bushnell, Ill.

O. I. C. AND CHESTER WHITE BOARS AND GILTS. No kin. Bred Sows, young herds, a specialty; prolific, large kind; all ages. Pedigrees furnished. Prices reasonable.

FRED RUEBUSCH, Sciota, Illinois.

SALE OF HOLSTEIN CATTLE.
Cows, Heifers and Young Bulls.

I will sell the following high-grade Holsteins. They have plenty of quality and breeding and are in good condition:

50 Yearling Heifers and 50 1½-year-old Heifers—just being bred to a son of a 24-pound dam.

100 2 to 2½-year-old Heifers and 100 2½ to 3-year-old Heifers—bred to a high-class registered Bull; to freshen from December 1, 1912, to March 1, 1913.

250 Matured Cows, very heavy producers, springing up ready to freshen soon; most of them in calf from registered Bulls.

A number of high-colored, registered Bulls, ranging in age from six months up, out of heavy producing dams, and selected especially to head choice herds. Can fill any order, from one animal up. Have a small surplus of excellent registered Cows and Heifers I will dispose of. Write me regarding your wants.

JAMES DORSEY, Dept. F & S G,
Gilberts, Kane County, Illinois.

BLUE GRASS FLOCK OF SHROPSHIRES.

Registered Rams and Ewes of best breeding and quality. Dense fleeces of good length. Animals that will improve any flock. Best imported Rams at head of flock. Prices reasonable.

WILLARD MILLER, R.F.D. 2, Anita, Iowa.

PURE-BRED REGISTERED ANGORA GOATS,

Bred from the choicest strains of imported Angora Goats. Sweepstakes and First-prize Winners at the American Royal Show. Satisfaction guaranteed.

R. C. JOHNSTON, Lawrence, Kansas.

CLOVERDALE FARM.

Thirty big-bone, Kentucky, registered, Mammoth Jacks, from yearlings to six-year-olds. We have some nice Percheron Stallions and a choice lot of registered Tamworth and Hampshire Swine. We would be glad to have you write for circular and testimonials or visit our farm.

H. T. BROWN & CO., Lexington, Ky.

PURE-BRED SHROPSHIRE RAMS.

Registered Shropshires. Come, and if you are not more than pleased I will pay your car-fare both ways. Or shipped subject to your approval upon arrival, or money refunded.

HOWARD CHANDLER, Chariton, Iowa.

"THE PINES" HERD OF HOLSTEINS.

Breeder and shipper of high-grade
HOLSTEIN CALVES.
Prices reasonable.

J. W. FARRELL, Prop., R. F. D. Elgin, Ill.

TAMWORTHS FOR SALE. The Bacon Hog, the largest and most prolific breed; early to mature, economical feeders and unsurpassed as range hogs. Boars, Sows and Pigs not akin from best strains. My herd won over 100 ribbons at the State Fairs of the year 1911, including a bunch of championships. Imported stock owned by me were winners at Royal Show, London, England, 1907. Mature Sows will fatten from 600 to over 700 pounds; Boars 1,000 to 1,200 pounds. **CHAS. FORD, Mortonsville, Woodford County, Kentucky.**

---

50 Pedigreed Duroc Red Pigs at $8.00 each. **CHAS. DORR, Osage City, Kansas.**

FERRETS FOR SALE.

10,000 Ferrets for sale. Write for price list and catalogue. It's free.

DeKLEINE BROS., Box 9, Jamestown, Mich.

R. F. D. 7, - NASHVILLE, TENN.
Long Distance Phone, Main 1326.

The "Sal-Vet" International Shropshire Challenge Cup.

This handsome silver trophy will be given by The S. R. Feil Co., Cleveland, Ohio, manufacturers of "Sal-Vet," for the best pen of three yearling American-bred Shropshire ewes exhibited at the International Live Stock Show at Chicago. The cup is twenty-seven inches high with base, appropriately engraved, and its winning will be an honor worth striving for. (To insure ownership of this cup, it must be won three times by the same contestant, but not necessarily three consecutive times.)

The "Sal-Vet" people will also give a similar cup for winners among each of these three other breeds—Hampshire, Southdown and Oxford.

Practically all the big sheep breeders, as well as breeders of hogs, horses and cattle, are constant users of "Sal-Vet." Its merits as a worm eradicator, stock conditioner and tonic is unquestioned. Instances are known where "Sal-Vet" has doubled the weight of hogs in a few months without increasing the amount of feed. In the "Sal-Vet" advertisement, which appears on page 21 of this paper, Mr. Feil agrees to send readers of this paper enough "Sal-Vet" to feed all their stock, horses, cattle, sheep and hogs, sixty days at his risk of satisfaction.

We suggest that all our readers who are not already using "Sal-Vet" turn to the advertisement on page 21, clip the coupon and mail it to Mr. Feil for a sixty-days' supply.

BLOODED STOCK NOTES.

Mr. J. E. Weller, of Faucet, Buchanan county, Mo., on the Chicago, Great Western Railway, not far from St. Joe, is a breeder of Shorthorn cattle and Duroc-Jersey swine. His stock is first-class in every respect.

Attention is invited to the card in the live stock breders' columns on the part of James Dorsey, of Gilberts, Kane county, Ill., who is offering pure-bred and grade Holsteins of the best breeding and character for working dairy purposes and particularly suitable for farmers who are engaged in shipping milk to market. The wonderful capacity of the Holstein breed to give an extraordinary flow of milk that in butter-fat is up to all market standards is shown in this paper, both in the yield of a two-year-old heifer, with illustration, and by the average of hundreds of cows that are officially tested. The card of Mr. Dorsey is worth reading.

Mr. A. F. Siefker, R. F. D. 1, Defiance, Mo., raises pure-bred hogs successfully and his Poland-Chinas have to be cut down in numbers; he will therefore sell some of his own breeding stock, which are described in his catalogue. Speaking of the eight brood sows, he says: "They have raised good litters, and as far as I know not a single one has any bad habit or fault, and they will be bred to my three great herd boars, some to Master Meddler, 2d, 55,000, others to Size and Quality, 47,889, others to Longfellow's Special, 64,200."

Folding Sawing Machine.

One of the inventions of benefit to the farmer and lumberman is the Folding Sawing Machine. It is a big time and money saver. It is important, because of the many valuable advantages it possesses over all other hand-sawing outfits or contrivances.

Its strong points of superiority commend this machine to all who have any amount of sawing to do. And the price is so low that every farmer who cuts any timber at all can easily afford to own one; in fact, can not afford to be without it.

This sawing machine in reality pays for itself every five to ten days of use, for it actually saves one man's time and costs only fifteen dollars.

Folding Sawing Machine.

The writer of this article has seen letters by the hundred from all parts of the world, speaking in the highest and most enthusiastic terms of this machine.

Many of these letters state that the writers have sawed, single-handed, all the way from five to twelve cords of wood per day, and that with the Folding Sawing Machine one man can saw as much wood as two men by the old methods, and do it more comfortably.

This money-saving, labor-saving machine is not an experiment, but has been in successful use for many years. It is made by the Folding Sawing Machine Co., 161 West Harrison street, Chicago, Ill., who will no doubt be glad to furnish Catalogue E 48 upon request.

SOUTHERN CALF GROWING.

Raising and Finishing Calves For Market on the Same Farm.

The raising of cattle and the fitting of them for market have generally been considered two separate and independent operations, conducted, as a rule, by two different men, each operating independently of the other and not interested in the outcome of the other's operations. The professional cattle feeder has always preferred to buy his feeder cattle in preference to raising them, and he has been interested in the cattle raiser only to the extent of having him supply a sufficient number of animals of proper quality and at a low enough price to enable him to fit them for market with profit.

In recent years, however, as the value of land has advanced, the raising of feeder stock as a distinct industry has been less profitable, especially on the higher-priced lands, and consequently there is, in some sections of the country at least, a tendency for the breeder also to fatten his product on his own farm. Of course, no fixed rules can be given as to the profitableness of the one or of the other phase of the beef business. The question as to whether an individual farmer can raise feeder cattle with profit depends in a large measure, other factors being equal, upon the value of his land and the quantity and kind of feed he can produce. In sections where a great percentage of the land is stony, rough, or too steep to cultivate and is adapted to the production of grass, the growing of feeder cattle is profitable. On the other hand, there are many instances where the raising and feeding of the animals on the same farm would bring greater returns in money value, besides adding to the permanent fertility of the land.

Recent co-operative work by D. T. Gray, of the Alabama Station, and W. F. Ward, of the Bureau of Animal Industry, in feeding yearling calves, ahs a direct bearing on the question of raising and finishing animals on the same farm. They state that:

"The farmer who has as many as thirty breeding cows on his farm should make it a rule to fatten their offspring himself; he can seldom afford to sell the calves to the professional feeder. The feeder usually makes money on the process of fattening, and the man who raises calves in sufficient numbers should keep this extra profit at home. Furthermore, the farmer who has from eight to twelve calves or steers ready for the feed lot will usually find it profitable to buy a sufficient number of feeders to complete the load; and he can then fiinish all of them on his own farm.

There are many ways of disposing of beef calves or cattle, and the farmer should be watchful to avoid methods by which money might be lost. It is possible to raise beef cattle properly and by selling them improperly to lose money on the business in just the same way that it is possible to raise good apples, potatoes and peaches and lose money on them when the marketing part of the business is not studied and given proper attention. When beef cattle are bred, fed and marketed in a scientific and businesslike manner satisfactory profits should be realized."

The first experiment undertaken was to determine the cost of finishing high-grade calves for market on different feeds when the animals were less than one year old. Three lots were kept for four months on a basal ration of cotton-seed hulls and alfalfa hay. Lot 1, on a supplementary ration of cotton-seed meal, made an average daily gain of 1.71 pounds at a cost of 6.22 cents per pound; lot 2, with cotton-seed meal and corn-cob meal in the proportion of 2 to 1, made an average daily gain of 1.76 pounds, at a cost of 6.19 cents per pound; lot 3, with cotton-seed meal and corn-cob meal in the proportion of 1 to 2, made a gain of 1.83 pounds, at a cost of 6.83 cents per pound. The third lot gave a larger percentage of dressed weight and sold for a better price, but not for enough more to pay for the extra cost of feed.

To determine whether calves can be fattened profitably for the spring market on a feed of cotton-seed meal, cotton-seed hulls and mixed pea-vine hay, fifty-two varieties were divided into two lots, one lot receiving the shelter of a good barn and the other fed in the open; but as it was found that the young calves would not thrive during the winter months without shelter, the entire lot was placed in sheds. During a period of 112 days the average daily gain for the entire lot was 1.24 pounds, at a cost of 6.97 cents per pound. Each calf netted a profit of $3.50.

A test was made in wintering calves and fattening them the following summer on pasture. Thirty-four calves were wintered on cotton-seed meal and hulls, corn chop and alfalfa hay. The average daily gain was 1.13 pounds, at a cost of 8.63 cents per pound. On March 25 they were turned on good pasture and in eighty-nine days made an average daily gain per head of 1.33 pounds, at a cost of 4.84 cents per pound. The profit for each calf was $1.86.

Among the conclusions drawn from the above experiments are the following:

A farmer may expect to obtain a reasonable profit on beef calves when he raises and fattens them on his farm and sells them when they are twelve to fourteen months old. * * * In the South, at least in Alabama, at the present time, the calves should be born during the early spring months. * * * Young calves can be finished for the market at a profit on cotton-seed meal, cotton-seed hulls and pea-vine hay, but it is more profitable to introduce corn-and-cob meal to take the place of part of cotton-seed meal. * * * The tests seem to indicate that it is more profitable to feed a heavy ration and sell the calves at the end of the winter months, when the prices are normally high, than to hold them until the early summer months.

IMP. YEOMAN—GUERNSEY BULL. Famous as sire of Dolly Dimple and other cows of extraordinary merit. Came West to win championship of the breed at National Dairy Show, 1912. Exhibited by Mr. F. Lothrop Ames, of Langwater Farms, North Easton, Mass. IMP. YEOMAN is one of the 750 pictures of famous animals in the Book of Live Stock Champions, advertised on page 7.

Price of Wholesale Onions.

During the last week in November onions were selling low. At St. Louis, at wholesale, bulk Red Globe sold at 22 to 36c. per bushel on track, and fancy sacked do. at 35 to 42c. per bushel, delivered; sacked white at 50 to 55c. per bushel.

WESTERN CANADA'S PROSPERITY.

Not a Boom, But Due to Natural Development.

One of the largest banks in Holland has been doing a big business in Western Canada, and Mr. W. Westerman, the President, on a recent visit into the Provinces of Manitoba, Saskatchewan and Alberta, expressed himself as being much impressed with present conditions and prospects, and was convinced that the great prosperity of the Dominion was not a boom, but merely the outcome of natural developments.

Not only has money been invested largely in Western Canada by the Holland Banks, but by those of Germany, France, as well as Great Britain. Not only are these countries contributing money, but they are also contributing people, hard-headed, industrious farmers, who are helping to produce the two hundred million bushels of wheat and the three hundred million bushels of the other small grains that the Provinces of the West have harvested this season.

During the past fiscal year there came into Canada from the United States 133,710; from Austria-Hungary, 21,651; from Belgium, 1,601; from Holland, 1,077; from France, 2,094; from Germany, 4,664; from Sweden, 2,394; from Norway, 1,692. And from all countries the immigration to Canada in that year was 354,237. From the United States and foreign countries the figures will be increased during the present year.

Most of the people have gone to the farms, and it is no far look to the time when the prophecy will be fulfilled of half a billion bushel crop of wheat in Western Canada.

Mr. H. H. Hiniker, of the Belgrade Poultry Farm, Mankato, Minn., has just issued a splendid book that really gives considerable information about poultry. It is also a catalogue of fifty-five breeds of poultry. See breeders' card on page 20.

I'll Stop Your Losses from Worms—I'll Prove It 60 Days Before You Pay

Little pigs only a few weeks old are often found loaded with worms. Hogs of all ages suffer from these deadly parasites. Then cholera, swine plague and other contagious diseases get in their destructive work. Stock troubled with worms don't thrive; they cough, have fever, act dull, and don't gain a pound. Your feed is wasted; your profits are stolen. Your animals frequently die, causing total loss of many dollars. I'll stop all this **quick** with Sal-Vet, the great worm destroyer and conditioner. I have done it for thousands of others. I'll do it for you, before you pay me a penny, if you will just send me the coupon.

Prices 40 lbs. $2.25, 100 lbs. $5.00, 200 lbs. $9.00, 300 lbs. $13.00, 500 lbs. $21.12. No order filled less than 40 lbs.

Read This Letter: "Have fed Sal-Vet to my hogs and lost none. Neighbors both sides of me, east and west, have had cholera bad. One west of me, on adjoining farm, lost about forty hogs and pigs with cholera; the one east, on adjoining farm, lost all he he had, excepting four." A. J. HOFFMAN, Leipsic, Ohio.

SAL-VET

Send No Money—Just the Coupon

If you will fill out the coupon—tell me how many head of stock you have—mail it to me, I'll ship enough Sal-Vet to last them 60 days. You simply pay the small freight charge when it arrives, and when the 60 days are up report results. If it does not rid all your stock of the deadly stomach and free intestinal worms, I'll cancel the charge—you won't owe me a cent.

S. R. Feil, Pres. **THE S. R. FEIL CO., Dept NFSG Cleveland, Ohio** [72]

60-day trial shipments are based on 1 lb. of "Sal-Vet" for each dog and sheep, and 4 lbs. for each horse and head of cattle as near as we can come without breaking regular packages

SIDNEY R. FEIL, Pres. THE S. R. FEIL CO., Cleveland, Ohio
Ship me enough SAL-VET to last my stock 60 days. I will pay the freight and report results in 60 days and will then pay for it if does what you claim. It it does not you are to cancel the charge

UNCLE JOE'S FOLKS.

A Little Story in Regard to Modern Farm Life.

"We don't have to accept it, father?" asked Louise Compton, as she handed back to her father the invitation for spending the Christmas on the farm.

"No; I don't believe anybody can compel us to go. The question is, don't we want to go? I haven't been out to Brother Joe's for ten years, Louise, and you were there only once when you were a baby. Your mother never cared for the country. Twice before they've asked us, but you trumped up some kind of an excuse. There's nothing sounds so good to me as getting off there for the holidays with Uncle Joe's folks, and if you don't care to go, I believe I'll try it by myself."

"Oh, very well; if you feel that way about it, I'll go, of course. And it may as well be first as last," answered Louise in an ungracious tone.

"You just wait. You'll like it just as well as I will," said Mr. Compton, as he kissed his daughter good-bye for the day.

"I can't imagine myself ever coming to the pass where I will enjoy being buried alive in the country for several days with not a soul worth while to talk to," answered Louise.

Louise had been longing for an invitation to a Christmas Eve party to be given by Marie Babcock, a girl in whose favor she was most anxious to stand, for Marie was the daughter of wealthy parents and the center of an exclusive little clique of which it was the desire of Louise's heart to become an intimate member. The expectation of this invitation had led Louise to plan a new gown for the occasion.

"But I won't take it out to the country—never!" said Louise to herself as she stopped to take a peep at the dress. "I'll wear some of my old things that can't spoil, and I'll keep my new gown for something worth while. After all, perhaps it's not such a bad idea to go to Aunt Mary's, for it's the same as giving me a new dress to wear to something else that the girls invite me to. It really doesn't look as though Marie intended to invite me, after all. And I know that Mr. Donald Smith is going to be there, or, at any rate, he's invited. Perhaps if he hadn't noticed me a little specially at Eva's party Marie would have invited me. But with everything that Marie Babcock has, she needn't be jealous of poor little Louise Compton. The presents for the whole Uncle Joe family won't cost one-half as much as one little dainty remembrance that I'd have taken to Marie. There'll be five of them—Aunt Mary, Uncle Joe, Lucy, Mary and Dick. I'll be on the watch for something for them. They'll think anything that comes from the city is wonderful."

Being "on the watch" in this case meant haunting the bargain counters and getting as much as possible for a little money. When packing, the day before Christmas, she felt well satisfied as she looked at the outlay, which consisted of a plaid shoulder shawl for Aunt Mary, a trifle bright in coloring, but then that would doubtless add to its attractiveness in the eyes of her aunt; a cheap edition of "Uncle Tom's Cabin" for Uncle Joe; he probably had never read it; a small work-basket for Lucy; a box of cotton handkerchiefs for Mary; and a paper-covered treatise on "The Diseases of Live Stock" for Dick. This last Louise considered a master stroke of thoughtfulness, for it had flashed through her head as she was rummaging about a counter containing odds and ends of books, that Cousin Dick had attended an Agricultural College. But it must be confessed that her satisfaction in the assortment was chiefly due to the fact that from the fifteen dollars which her father had given her to be used for Uncle Joe's family, she still had left eleven dollars, which she intended to use in some choice way of her own.

Louise and her father lunched just before starting for the train, and as Mr. Compton looked across at his daughter he exclaimed: "Whatever have you been doing to yourself, Louise? You look so different, so kind of broad across the shoulders."

"You are a man, father," replied Louise with a laugh. "If I had on a new dress you'd never notice a thing, but when I put on a dress that is several years old you comment on it at once. I don't want to wear my new light broadcloth coat. It's such a beauty and one trip to the country might spoil it for all winter. I intend to wear my old coat, and, as it is not very heavy, I decided to put on this old dress of ladies' cloth and I'll be as warm as toast. Aunt Mary and the cousins will never know the difference. The styles a couple of years back have just come in there, most likely, and so I'll be right up-to-date."

"I don't know," demurred Mr. Compton. "I always thought Aunt Mary and the children looked well, but the girls were only children when I last saw them. Maybe you know best, but if it wasn't time for us to go I believe I'd want you to go up and change yet."

"Well, there isn't time. I put in a second-best silk waist that I can wear at the dinner. "I'll be well supplied and you'll see that these old clothes of mine will just about fit in with the best ones of Aunt Mary and the girls."

The ride to Plainville, the station where Uncle Joe was to meet his relatives, took almost five hours. The thermometer had taken a drop for which the trainmen were unprepared and the passengers shivered in their seats.

"And to think of jolting three miles in a rattling farm wagon over bumpy country roads behind polky old horses in this bitter weather!" wailed Louise.

"Oh, don't make it out too bad. Uncle Joe always kept pretty good horses. Too bad, there isn't more snow, and it would be a sleigh ride," comforted her father, as he strode up and down the nearly empty car.

But when they got off the train there was not even a farm wagon in sight. The only vehicle was an electric car at the far end of the platform. Mr. Compton was about to lead Louise into the station, when the door opened and a tall, fur-coated, fur-capped, fur-mittened man held out a hand to each of them.

"Glad to see you, Dave and Louise. Come right this way. There are heaters in the car, and I'm sure you will warm up faster there than in this ice-box of a station."

Whether it was a gasp of amazement or a sigh of relief that Louise gave as she cuddled down among the fur robes in the heated car, her father did not know. She did not see the look of quiet amusement he sent in her direction, and she spoke scarcely a word on the short run out to the farm, but she stared with round eyes at the straight, fur-coated figure that was speeding the car homeward.

When they turned in at the road leading to a big white farm house with lights sending out welcoming beams from all of the windows, she gave a cry of pleasure.

"Why, Uncle Joe, I never knew farm houses looked like that," she said.

"It's a comfortable enough house," replied Uncle Joe, well pleased at the delight his niece was showing.

But the outside of the house hardly prepared Louise for the inside. The furnishings were comfortable, quiet and spoke the best of taste. Softly shaded lights threw a pretty glow over everything. The frosty bedrooms Louise had anticipated and dreaded were not there. A furnace heated the dwelling and in the living rooms fireplaces heaped high with burning logs gave added cheeriness to the home. It seemed to Louise as she looked about her that she had never seen so ideal a setting for a Christmas holiday. And when Aunt Mary, dressed in a silvery gray poplin and looking every inch the lady, followed by pretty Lucy in an old rose gown cut after the most perfect lines, came forward to welcome her, Louise felt all at once as bashful and awkward as a girl at her first party. She was so conscious of her shabby coat and her old-fashioned flannel dress that bright red spots burned in her cheeks and she stumbled unseeingly after Lucy had led the way to the guests' rooms.

As soon as she had closed the door Louise sank upon the bed. She was going to laugh or cry, she didn't know which. Then the former emotion prevailed and she stuffed her handkerchief into her mouth while she rocked helplessly back and forth.

"Oh, Louise, you snob! snob!" she thought. "Whatever will you wear? Their gowns are perfection and this home is the most beautiful you have ever been in, and here you've got only your shabbiest duds to put on. Think of the pretty dresses and your new coat at home. Oh, mother mine, maybe if I had you to guide me I wouldn't make such mistakes. But from now on I'll appear at my best when I'm invited out and at least do honor to my hostess, whether she be princess or peasant."

When Louise took out the silk waist it looked shabbier than she had thought it to be, but she bravely donned it, resolving to make the best of her selfish mistake. Nor did it make it easier when she met Mary just before dinner and found her even more beautiful than Lucy and gowned to exactly suit her own peculiar style. But her punishment seemed complete when tall, broad-shouldered Dick came in with the desirable Donald Smith, who was supposed to be at Marie's party.

The supper was a pleasant meal. In spite of the self-consciousness regarding her clothes, Louise thoroughly enjoyed it, though she did wish she knew more about some of the subjects which they were discussing. Why had she spent so much time in silly reading and in talking over foolish nothings with nearly brainless girls, when there were such big, important things to learn about?

Louise would gladly have withheld the presents she had brought, but she dared not do so because she feared her father's displeasure. "I'm

Great Majestic
Malleable and Charcoal Iron Range

The Range With A Reputation

Buying a new range is a matter worthy of your most careful consideration. It is a mistake to buy from pretty pictures and glowing printed descriptions—very inferior ranges are plentifully applied with both. Before deciding upon a range, the wise woman will go to the local dealer handling them and examine closely into the superior points of merit of the *Great Majestic*—the range with a reputation, built on honor—of the best materials

Won't Break or Rust Like Steel—Outwears Three Ordinary Ranges

It is the ONLY range made of malleable iron and charcoal iron. Charcoal iron won't rust like steel—malleable iron can't break, and while the first cost of a *Great Majestic* may be more than others, *it outwears 3 ordinary ranges.*

All Copper Movable Reservoir

Heated through copper pocket stamped from one piece of copper, setting against fire. Holds 15 gal. By turning lever, frame and reservoir—moves away from fire—patented feature only on *Majestic.*

Perfect Baker—Fuel Saver

The *Majestic* is put together with rivets—joints and seams remain air tight.

The oven is lined with guaranteed *pure asbestos board,* put there to stay covered with an iron grate—*you can see it.* Uses but half the fuel used in other ranges, gives an absolutely even dependable baking heat.

The *Majestic* is for sale by the best dealers in nearly every county in 40 states. Write for our booklet, *"Range Comparison."*

Other Exclusive Features

All doors drop down and *form* perfect and rigid shelves. No springs anywhere to get out of fix. *Malleable oven racks* slide out automatically, holding anything they contain. *Open end ash pan*—no more shoveling ashes out of ash pit. *Ventilated ash pit* prevents floor from burning. *Ash cup* catches ashes. It's the best range at any price, and should be in YOUR kitchen. *All Malleable front insures the Majestic 300% greater strength at a point where all other ranges are weakest. One piece body, no seams. It's worth your your while to investigate.*

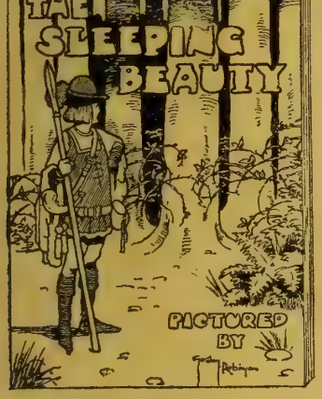
It Should Be In Your Kitchen

TOY BOOK PREMIUMS.

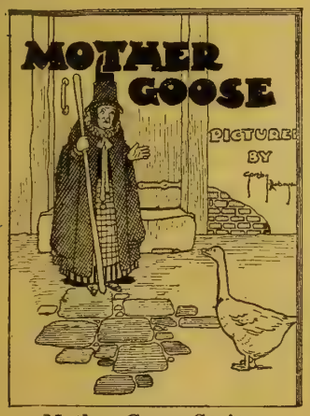
Pleasure and Instruction For Children, Especially During the Holiday Season.

We are always on the lookout for something that will please the children and at the same time be of an educational advantage to them. Our beautiful toy books, the first we have ever used as a subscription premium, are delighting the hearts of the little ones, and we are greatly pleased to consider these books as one of our very best premiums. We are issuing these toy books as supplementary premiums to The National Farmer and Stock Grower. These toy books are substantial, beautifully colored, illuminated. The illustrations are wonderfully beautiful. They are astonishing in the delightful coloring. There are four sets. They are as follows:

Animal Series.
No. 101—Three Bears.
No. 102—Three Kittens.
No. 103—Ten Little Pigs.
No. 104—Noah's Ark.



Fairy Tale Series.
No. 107—Sleeping Beauty.
No. 108—Little Tom Thumb.
No. 109—Puss in Boots.
No. 110—Little Snowdrop.



Mother Goose Series.
No. 113—Mother Goose.
No. 114—Cinderella.
No. 115—Jack and the Beanstalk.
No. 116—Little Red Riding Hood.

Little Darling Series.
No. 119—A B C at the Zoo.
No. 120—Railway A B C.
No. 121—Dainty Darlings A B C.

In offering these delightful toy books we make several propositions:

1. Send us twenty-five (25) cents for six-months' subscription to The National Farmer and Stock Grower and you can select one set of four (4) toy books.

2. Send us fifty (50) cents for one-year's subscription to The National Farmer and Stock Grower and select two sets of four (4) toy books as a premium.

3. We publish the Universal Magazine. It is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, patterns, fashions and poetry—a splendid publication. Send us twenty-five (25) cents and we will send you the Universal Magazine for one year and you can select a set of four (4) toy books as a premium.

Order toy books by numbers. Select either four you desire. Address your orders to **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

UNCLE JOE'S FOLKS.

[Concluded from the preceding page.]

going to give them to you anyway, because it's all I've got," she explained that evening, as the presents were being distributed. "Father isn't to blame. He wanted me to get everyone something nice and gave me the money. I'm just awfully ashamed, but I'm afraid I haven't been going with the right kind of girls and my head has been full of such foolish notions. Perhaps some day I'll be able to show you that I'm my father's own daughter and that I've lost all my silliness and selfishness."

A chuckle from Uncle Joe made Louise stop short.

"Are you laughing at me, Uncle Joe?" she cried.

"Not exactly," he answered. "The trouble with me is, and always was, I'm no good at concealing my feelings, and now I'll have to tell you, for it's really a pretty good joke, that "The Diseases of Live Stock" was written by Dick himself, but you probably didn't recognize Richard J. Compton as Cousin Dick. This is the fourth edition."

Louise joined in the laugh that followed, but it was with a burning face. Then she blushed still more brilliantly as she glanced at Uncle Joe and saw him gloating over an edition de luxe of Shakespeare.

"The Shakespeare Club sent it to him," said Aunt Mary, answering her look. "He's President. His old set was worn to tatters."

Though Louise could not fail to be delighted with the beautiful gifts she received, she took them with a shamed face. Aunt Mary and Uncle Joe gave her a beautiful lavalliere with a rough pearl pendant; Lucy presented her with a hand-crocheted coat set, and Mary gave her a hand-tooled leather bag. From Dick there was a five-pound box of candy.

Before retiring that night Louise confessed to her girl cousins her dilemma about dressing for dinner the next day. She had learned that there were to be several outside guests present and she did not wish to humiliate her hostess by her appearance.

"Why, I believe that you could wear one of my dresses," said Mary. "I can give you the choice of two." With a grateful heart Louise selected a white silk crepe.

"You girls have such beautiful gowns," she commented. "Do you have someone in the city to make them?"

"Oh, no," replied Lucy. "We do all of our own sewing. Mary has more dresses than I, because she needs them when she appears in public to play."

"Play?" questioned Louise.

"Sister is a violinist and is quite in demand, but I thought you knew or I wouldn't have said anything."

It was after the most wonderful Christmas day in Louise's life that she sought Aunt Mary for a final chat.

"Dear Aunt Mary, I never knew there were such happy families with so many delightful friends. Father has always wanted to meet Dr. Simpson. But no one seems to be able to meet him in the city, while here he is just a boy."

"Yes, dear," answered Aunt Mary. "His mother lived on the next farm, and he and the children have always been the best of friends. There is no harm now in telling you that Lucy is engaged to marry him. I know that she is going to ask you to be one of the bridesmaids and Donald Smith is to be best man."

"How kind of you and Lucy," cried Louise. And the thought flashed across her mind that Marie Babcock and her set were much inclined to talk about the boys who had shown them any attention, while this little dark-eyed cousin was engaged to one of the leading physicians of that part of the country and had not breathed a word about it.

"But everybody paid just as much attention to that little faded lady who used a bandana handkerchief for a muffler. Is she a celebrity, too?"

"She is just a sweet little soul who has rather a lonely time of it, so we often ask her on such occasions."

"My, what I've been missing all these years," sighed Louise. "I am going to make your home my model, Aunt Mary."

"I think Donald Smith will like that, as he is always telling Dick that he has the best home in the world," said Aunt Mary with a sly smile, for she had been observing several things during the time that her niece and Donald had been guests in the home.

"Why, Aunt Mary, I meant papa's home, for you know I'm mistress of it."

"Well, well, dear, don't let your old aunt tease you, only I know Donald is planning some calls in town, for he and your father have struck up a great friendship."

"Yes," replied Louise, "he asked me if he could come. I have known him for several months, but he never cared much about me, because he thought I went with a crowd that he detested. But I'm out of that crowd for good and all."—Janet Thomas Van Osdel.

Cheap Lands Southwest

and these cheap lands, highly productive, have brought forth a tremendous crop this year. The cash return from this great crop in many sections has paid the initial cost of the land with enough left over for a good living.

This land is as good as the land you are now farming and can be bought for $15 and up per acre. If you are renting, your rent money will buy a farm in the Southwest along

Rock Island Lines

The greatest opportunities for farming existing today are found in Kansas, Missouri, Oklahoma, Texas, the Panhandle Country, Louisiana, Arkansas and New Mexico—conditions are the most favorable in years and land is low priced.

An exhaustive study as to climate, soil, rainfall, what crops bring best returns, etc., in the various sections has been made by Prof. Cottrell, Agricultural Commissioner, Rock Island Lines and descriptive literature prepared. This will be sent free on request.

For Missouri Farm Women.

Miss Nellie Nesbitt, a graduate from the Home Economics Department of the University of Missouri, and who has had experience in the teaching of home economics, besides giving much thought and study to the problems of the home, and especially of the farm home, has recently been employed by the Missouri State Board of Agriculture. Miss Nesbitt will devote her entire time to institute and organization work. She hopes to do for the farm women of Missouri what S. H. Jordan, J. K. Wright and others employed by the Board of Agriculture have done and are doing in their work with the men on the farms. Committees desiring the services of Miss Nesbitt should communicate with the Secretary of the Missouri State Board of Agriculture at Columbia.

Kept Them Alive.

"Do you really believe, doctor, that your old medicines really keep anybody alive?" asked the skeptic.

"Surely," returned the doctor. "My prescriptions have kept three druggists and their families alive in this town for twenty years."—Harper's Weekly.

Rid Your Face Of All Pimples

Skin Cleared in a Few Days by Stuart's Calcium Wafers, the Famous Blood Purifier.

Pimples, blotches, skin eruptions of all kinds, are simply the impurities in the blood coming to the surface. All the external treatment in the world won't do a particle of good unless you purify the blood. And there's nothing so humiliating as a face that's all "broken out" and spotted.

It's a Glorious Change to Be Rid of Pimples. You Just Feel Fine.

Stuart's Calcium Wafers will clear the most obstinate complexion, because they go right into the blood and remove the cause of the trouble. The blood is cleansed of all impurities and foreign substances and these are quickly eliminated from the system. You'll notice a wonderful change in a few days—you will hardly know yourself in a week.

And Stuart's Calcium Wafers are absolutely harmless to any one. Their ingredients are just what a physician prescribes in most cases of skin eruptions and poor blood. These wafers are put up in a concentrated form, which makes them act quickly and thoroughly.

You can get Stuart's Calcium Wafers at any drug store at 50 cents a box. Begin taking them today and then look at yourself in the mirror in a few days, and find all those awful pimples, blackheads, acne, boils, liver spots, rash, eczema and that muddy complexion rapidly disappearing and your face cleared like the petal of a flower.

Motorcycle Free—Hundreds of other prizes—bicycles, cameras guns, watches, toolchests, gold rings, etc. Full information and big Premium List Free. Write me today. **E. T. Meredith**, 311 Success Bldg. Des Moines, Ia.

Native Cattle at St. Louis.

At the St. Louis market, early in December, choice to prime native steers were quoted at $10 to $10.75 per 100 pounds; good to choice steers, $9.00 to $10; medium to good steers, $7.50 to $9.00; common to medium steers, $6.50 to $7.50; common steers, 850 to 1,100 pounds, $5.50 to $6.75; choice to prime yearlings, $9.00 to $10; good to choice yearlings, $8.00 to $9.00; fair to good yearlings, $6.00 to $8.00; heavy Western steers, $7.50 to $8.25; medium Western steers, $6.25 to $7.25; light Western steers, $5.50 to $6.00—all quotations being at the price stated per 100 pounds.

Two Crops of Apples.

The Farmer and Mechanic of Raleigh, N. C., says: "John T. Spencer, who lives a little over a mile east of Lenoir, has a June apple tree on his place that produced two crops of well-matured apples this year. June apples in November is the unusual record of this tree."

MAPLE-SUGAR INDUSTRY.

Result of Investigations by the United States Department of Agriculture.

From the time the earliest explorers discovered Indians making sugar from the maple tree until the present day, the production of maple sugar has been an important industry in the United States, is the interesting information contained in Farmers' Bulletin 516, soon to be issued by Secretary Wilson. The industry is purely American, Canada being the only country outside of the United States that produces the product. The bulletin says:

"Maple sugar and maple syrup are considered delicacies and are not produced in such quantities as formerly. The aggregate of all pure maple products and the many imitations may be the same, for it is said that were all the maple trees cut down, and thus the supply of maple sap cut off, no drop in the quantity of syrup or sugar would be noted. Within the last six or seven years there has been a renewed tendency toward the production of a better grade of maple products.

"Maple syrup or maple sugar prepared by the best methods is a light-colored, pleasant-tasting product. Contrary characteristics are the result of uncleanly methods and possibly sour sap in ninety-nine cases out of a hundred, and were manufacturers to take greater care in their methods their results would show improvements. This better grade may not appeal to many people who have been accustomed to the dark, stronger grades."

In relation to the present growth of the sugar maple the bulletin states:

"Within its wide range the sugar maple appears a predominant tree only in the New England States, New York, Southern Canada, Northern and Western Pennsylvania, and in parts of Ohio, Indiana, Illinois, Michigan, Wisconsin and Minnesota. In the Southern Appalachian Mountains it occurs in scattered bodies where climate conditions are similar to those of the North. In the extreme northern part of New York state and the adjacent district of Quebec the forest growth is often almost pure maple, and even considerably farther south, where beech and birch become associate trees, the sugar maple holds its own as the dominant species. In Northern Pennsylvania, at an altitude of over 1,000 feet, the mixture is much the same as it is in New York. In Ohio, Indiana and Illinois a similar condition is found; but as the hilly country disappears the maple retreats to the richer and damper soils, leaving great areas to the oaks and chestnuts."

To obtain a copy of Bulletin No. 516, all that is necessary is to write for it to the Secretary of Agriculture, Washington, D. C.

DOLLY DIMPLE DRESSING DOLLS.

A Subscription Premium With the Universal Magazine, Published at St. Louis, Mo.

The Dolly Dimple Dressing Dolls are furnished in a cardboard box, and each box contains a cut-out doll with easel back, four dresses and four hats. The dolls are nine inches high. The names of the dolls are "Affectionate Alice," "Baby Betty," "Chubby Caroline" and "Dainty Dorothy." Nothing more satisfactory has ever been offered as a subscription premium with a publication. We have adopted the Dolly Dimple Dressing Dolls as a subscription premium. The UNIVERSAL MAGAZINE is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, patterns, fashions and poetry—a splendid publication for the money.

In offering such a premium we are actuated by a desire to place in rural homes these delightful Dolls, which gratify the children, besides having a good influence upon them.

Anyone who will send us 25 cents to pay for one-year's subscription to the UNIVERSAL MAGAZINE can select the Dolly Dimple Series of Dressing Dolls as a subscription premium, and we will send the box postage prepaid, safe delivery guaranteed.

If you don't care to obtain the set of Dolly Dimple Dressing Dolls by subscribing for the UNIVERSAL MAGAZINE, you can obtain a set by sending in 25 cents for six-months' subscription to THE NATIONAL FARMER AND STOCK GROWER, which will serve the purpose equally as well. Address,

THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

CEMENT WORKERS' HANDBOOK.

This book is designed to teach anybody how to work with cement; how to mix mortars of all kinds for all concrete purposes; how to make building blocks; how to build walls, floors, ceilings, walks, joists, cisterns, troughs, tanks, etc. It gives of mortars and concretes and all methods of house construction. It is a cloth-bound book of 100 pages and covers more than fifty most important subjects on cement and its uses and construction. This is a diamond of a book for wide-awake farmers. The price of the book alone is fifty (50) cents.

For sixty (60) cents we will credit one-year's subscription to The National Farmer and Stock Grower and send a copy of the **Cement Workers' Handbook.** Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

The Army and Navy Needle Book.

A TEN-CENT PROPOSITION WORTH TEN TIMES AS MUCH. The Army and Navy Needle Book contains five packages of Peerless Steel Needles, warranted; sizes, 8 to 9, 5 to 10, 6 to 7. Don't wait. Remember, **HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

NEW BOOK OF KNOWLEDGE

FOR HOME, FARM, RANCH, FACTORY AND OFFICE.

A Book For Boys and Men, Women and Children, Old and Young.

Now is the Accepted Time to Get This Book.

THE HANDY ALMANAC, ENCYCLOPEDIA AND ATLAS FOR THE YEAR 1913.

What is It? The answer is Diamonds.

"We are the people and our voices must and shall be heard." What we need is Knowledge, so that our voices shall speak wisdom and we shall not stand back for fear of exposing our ignorance. The wisest men read the most books. They know many things, but their greatest ability is shown when they prove what they know by the evidence as accumulated in books.

Wise men also compile books. When ten men who are specialists in certain lines of knowledge are employed for over a year in collecting the evidence in order to publish a single book the result is diamonds of fact and information.

THE HANDY ALMANAC, ENCYCLOPEDIA AND ATLAS is the product of many capable men, and yet so large is the edition that the cost has been reduced to a minimum, and although the first copy may have cost ten thousand dollars, yet a million edition will reduce the cost of a single copy so low that we are able to present it to our readers who pay only fifty (50) cents for one-year's subscription to THE NATIONAL FARMER AND STOCK GROWER, and we can also afford to pay the postage without raising the price. The book and package will weigh sixteen ounces, and the postage on each copy will be eight cents.

WHAT ARE THE CONTENTS?

There are 150 to 175 subjects in the index. Some occupy a half page, others a full page, and others several pages. Some of the contents are:

Astronomical Calculations For 1913—Eclipses in 1913—How to Foretell the Weather—Average Weather in Various States—Domestic and Foreign Postage—Weights and Measures—Interest Laws—Statute of Limitations—Tariff Law—Sherman Anti-Trust Law—Length of Railways and Telegraph Lines—Length of Ocean Cables—World's Longest Bridges—Highest Mountains in the World—Governments of the World—Sports—World's Records—Important Dates in American History—Rules For Spelling and Punctuation—Household Hints—Cooking Time Table—First Aid to the Injured—Postal Banks—Parcels Post Mail—New Pension Law—New Eight-hour Law—Highest Structures in the World—World's Crops—Olympic Records—Aeroplane Records—United States Flag Regulations—Arbitration Treaties—Explanation of Initiative, Referendum and Recall—Migration of Weeds and Vegetables—Methods of Control of Moisture—Methods of Improving Seed—Diseases in Plants—Renovation of Worn-out Soils—How to Know a Good Horse—Suggestions For Farm Buildings—The Panama Canal—The Panama Exposition—Maps of the World.

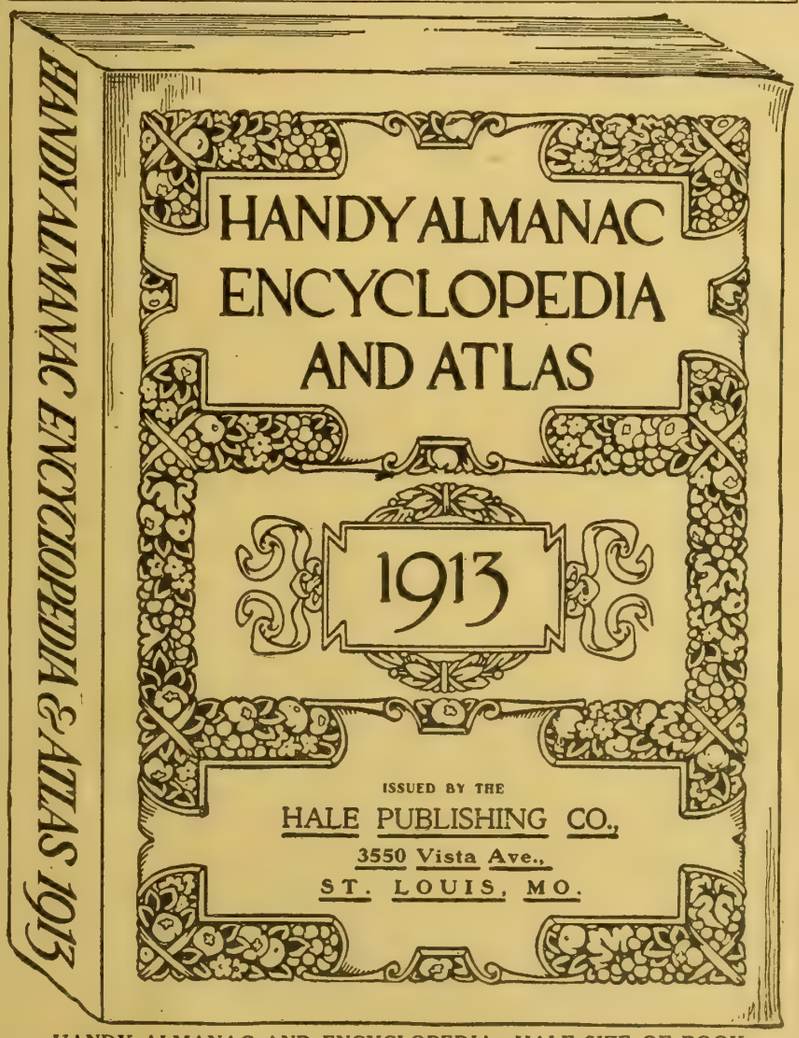
Last in the list our space will permit us to mention will be the election returns for the Presidency and other important offices. The book will not be delivered until the returns are all in, which will be most likely early in December and in ample time to start with the Almanac of the new year.

HOW ABOUT THE PAPER?

Except that this edition contains a pretty large advertisement of THE HANDY ALMANAC, ENCYCLOPEDIA AND ATLAS FOR 1913, it is a fair example of THE NATIONAL FARMER AND STOCK GROWER.

THE NATIONAL FARMER AND STOCK GROWER is not the only farm paper in the United States, but it is certainly one of the best, and has been continually engaged in advocating farmers' interests. THE NATIONAL FARMER AND STOCK GROWER was the only paper to buy and distribute seed corn and oats grown by champion corn growers, among general farmers, enabling many thousands of farmers to grow seed corn for their own use.

THE NATIONAL FARMER AND STOCK GROWER for several years offered prizes for corn and oats at every State, National and International Fair in the United States.



HANDY ALMANAC AND ENCYCLOPEDIA—HALF SIZE OF BOOK.

It was THE NATIONAL FARMER AND STOCK GROWER that first called attention to the high rates of interest on farm loans and brought about the agitation which will soon result in the improvement of farm credits.

The entire life of THE NATIONAL FARMER AND STOCK GROWER has been passed in doing good in a practical, tangible way without assistance from anyone but its own patrons.

Briefly stated, THE NATIONAL FARMER AND STOCK GROWER, issued monthly at St. Louis, Mo., is a splendid, clean, general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general grain-growing farmers, vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, horse and mule raisers and dealers, and it contains good poultry facts and market information. There are thirty-two pages, four columns to the page.

A SUBSCRIPTION PROPOSITION.

Anyone who pays fifty (50) cents for one-year's subscription to THE NATIONAL FARMER AND STOCK GROWER can select the HANDY ALMANAC, ENCYCLOPEDIA AND ATLAS as a free premium. We will send the book postage paid, safe delivery guaranteed. Money refunded if not satisfied. The book is a conditional supplement to the paper and must be sent separately at a different rate of postage. The proposition, therefore, is, that the book will be sent to those who select it as a premium.

ANOTHER PROPOSITION.

In clubs of three we will charge a dollar ($1.00) for three subscriptions and three books, thus allowing one to do the work of solicitation and the other two, to put up the money. This is a liberal club offer, but we need the money and the subscriptions. We append the subscription blanks for one or three subscribers, as the case may be.

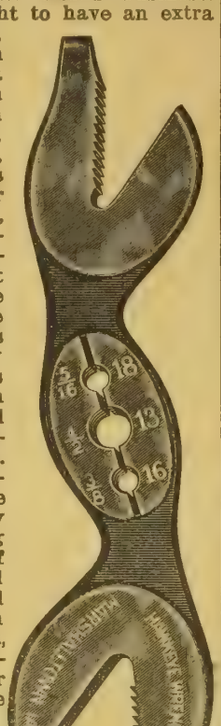
NECESSARY ON A FARM.

The Crocodile Wrench—Actually Six Handy Farm Tools in One.

Yes, an absolute necessity. The Crocodile Wrench means business. Every farm ought to have an extra wrench or two, especially when the wrench is a Crocodile Wrench premium, which is a pipe wrench, a nut wrench, has three dies for cleaning or cutting threads, and a screw-driver. The picture is small, but the Crocodile Wrench is twice as long, and it is full size for any purpose. It is drop-forged from the best tool steel, scientifically tempered. Requires no adjustment. Simple and always ready for use. Nothing to get out of order. Dies will fit threads on all standard farm machinery. Light, strong and durable. No farmer can afford to be without it.



Special Inducements.

Our Subscription Proposition: Send us One Dollar and we will send you THE NATIONAL FARMER AND STOCK GROWER for two years, and we will send you, postage paid, safe delivery guaranteed, ONE CROCODILE WRENCH. We also agree to refund money and pay return postage to anyone who is not satisfied with the bargain. Address,

THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

Highly Recommended.

Mr. T. C. Kimber, who is advertising the famous Yorkshire hog of his own breeding, is receiving many letters of congratulation from buyers in Alabama, Arkansas, Missouri, Illinois, Indiana, Kentucky and Tennessee upon the magnificent animals he has shipped them upon orders. Mr. Kimber's farm is near Ironton, Mo., on the Iron Mountain Route, but he likes to have orders sent to him at P. O. Box 1212, St. Louis, Mo.

Christmas Gifts.

These should be dictated by the time, natural ability and means of the giver; the taste and needs of the recipient. We know of one woman of wealth who always sends a check, because she feels that she does not know just what would be most pleasing, and this is sure to bring a moderate desire. But not all of us have a bank book of ample size, and the present which works in some of our own time is really a necessity.

If you are an adept with the crochet hook or needle, study the pages of some standard household and fancy-work magazine, and ideas will come fast enough. Hand work is more and more growing in appreciation, and the crash bag in striking outlines may become as artistic as the most delicate embroidery. The new punch work is effective in many ways, and the same pattern or a part of it may be used for milady's collar or for the end of a towel or pillow-case, a large initial being worked into the latter.

There are numerous forms of dainty neckwear, especially that in Irish crochet, which can be quickly done in spare moments, and a bit of bright ribbon or velvet interwoven gives the stylish touch shown in the store window. Even though you do not wish to buy, take time to look at some of the fancy work now shown, and ideas for using some of your own left-overs will be sure to come.

There are aprons of all sorts, dainty and serviceable. Bits of muslin with rounded corners and a spray of embroidery; plain checked gingham, which insures safety to the best dress when at work. One woman who last year found her Christmas allowance painfully small made small round aprons from left-over bits of light calico for some of her girl friends, and these, bordered with a narrow ruffle, were as attractive as useful.

Another covered small square pieces of board, measuring about six inches, with the best part of a discarded coat, fine cloth, and in places but little worn. Black satine was used for covering the back. Diagonally across the face of each was placed a second small square cushion covered with a "sample" piece of fancy silk bordered with a narrow ruffle of silk in a harmonizing shade, which was held in place by three brass-headed furniture tacks on each side. In the top was fixed a brass hook from which to suspend it, and at each of the other three corners were fastened similar hooks. Thus a combination where pins, scissors and needles are always at hand was the result.

For the little girls, the choice in dolls is almost endless. But if you have not the money for an expensive one, try the clothespin doll, made in some unique or grotesque form. It may be Uncle Sam, a Quaker lady, the college girl in cap and gown, or Aunt Dinah. It is quickly made, and the material used is going to waste in any home, while the surprise of the little one at the unique form will prove not a little.

From the farm home may go many luxuries to the city or town, especially since the high cost of living has been such a problem. A pound or two of butter, a can of sweet cream, a basket of nuts or apples, a jar of home-made sausage or fresh lard, honey—the possibilities are almost unlimited along this line, and in some instances a real treat may be given from the things which you would scarcely miss. If some one has a special liking for a certain product of the farm, remember this at Christmas time.

And it is the remembrance which is really the keynote of the Yuletide spirit. Not the money value so much as the thing of being in the thoughts of the giver makes us happy over the gifts. And so the bits of handiwork, the homely product, are appreciated as emblems of the "peace and good will" which should prevail.—Bessie L. Putnam.

The Real Santa Claus.

The actual presence of Santa Claus adds more to the pleasure of the little folks than some of us realize. Baby will enjoy the doll or drum found in the stocking or suspended from the tree, but his understanding of how they came there is rendered very much more acute by the actual presence of the patron saint. Even the old cloak which served to disguise Uncle Tom for the enjoyment of the children of a half century ago served its purpose well, as the stories of the little ones for months after the visit abundantly proved.

With the increased possibilities, the patron saint can now be easily represented with very little expense. Personality means much to the adult, more to the child. The kindergarten process is founded upon accomplishment rather than recital. Through the actual appearance of Santa, things comprehended only vaguely by baby resolve themselves into actual realities, and the droll and merry little figure will long be remembered with pleasure by the child. Christmas and the associations which it brings will be thrust into its hands instead of suspended on the branches just out of reach.—Bessie L. Putnam.

Get Beefsteak Prices For Your Sausage and other Pork Products—Use Enterprise Machines

Hog-raising farmers should take advantage of the big difference in market prices of pork products and hogs on the hoof. Fine country-cured sausage, such as you can make, brings about the same price as the choicest beefsteak. **An Enterprise Meat AND Food Chopper and an Enterprise Sausage Stuffer and Lard Press** are the profitable machines to use for any purpose. Great in the kitchen.

THE ENTERPRISE
Meat AND Food Chopper

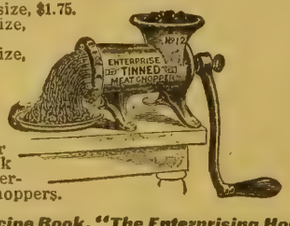
This is No. 5

cuts sausage meat slick and clean as the old-fashioned chopping knife—not the crushing and mangling, squeezing sort of chopper which is not a specially made *meat* chopper.

It is the one chopper that gives the chopping cut—does not squeeze, mangle or crush. It is a chopper that will also give you almost daily use in the household. It enables you to make an unlimited number of dainty dishes from left-overs and bits of meat that otherwise would be wasted. Its use means not only better living, but economical food cost.

The **Enterprise Meat AND Food Chopper** has a four-bladed chopping knife which with the cutting plate gives nearly 300 cuts at every turn of the handle. Made in 45 sizes and styles, for hand, steam and electric power.

No. 5, family size, $1.75.
No. 12, farm size, $2.25.
No. 22, farm size, $4.00.



These are the choppers we recommend. If you want cheaper machines, ask to see the Enterprise Food Choppers.

The ENTERPRISE
Sausage Stuffer and Lard Press
Cylinder Bored True.

The Sausage Stuffer is guaranteed to stuff casings perfectly. Air bubbles, the most frequent cause of sausage spoiling, are wholly prevented from entering the casings by our patented corrugated spout, an attachment to be had only with the Enterprise. It is patented by us and cannot be used by other makers. Bear this in mind and do not be fooled by imitation spouts which lack the essential features of the Enterprise. A few "batches" of your fine sausage thus protected from spoiling will pay for these inexpensive machines several times over.

No. 25, 4-Quart, Japanned Price, $5.50
Tinned and Japanned

These sausage stuffers are made with greatest precision. Pressure plate fits close without binding. Meat cannot squeeze out. Many other exclusive points of merit, economy and convenience. Do not let butchering time come this year without one of these Enterprise Sausage Stuffers and Lard Presses with the patented corrugated spout to work with. The change to a lard or fruit press is instantly made. Nine sizes and styles—up to eight quarts capacity. One of these will fit your needs.

Our 200-Recipe Book, "The Enterprising Housekeeper," new edition with kitchen helps, sent anywhere for the postage, 4 cents. Illustrated Catalogue of Enterprise Meat AND Food Choppers, Enterprise Sausage Stuffers and Lard Presses, and other Enterprise Specialties sent free. For sale at hardware and general stores everywhere.

THE ENTERPRISE MFG. CO. OF PENNA.

RURAL HOME COOK BOOK.

A Most Useful and Practical Premium For Use in Suburban and Country Homes.

At last we have discovered a satisfactory cook book for farmers' wives and daughters, one that is within our power to present to them as a subscription premium without any payment except the subscription price of The National Farmer and Stock Grower, which is only 50 cents a year. The Rural Home Cook Book, 328 pages, is bound with a stiff card cover, thoroughly indexed, so that each recipe can be found immediately. It was edited by Mrs. Ellen Watts McVey, Mrs. Helen M. Laughlin and Mrs. A. H. Wing, with three hundred contributions from practical housekeepers in country homes. The book is equal to all demands upon it, and we guarantee perfect satisfaction to all who receive it from us.

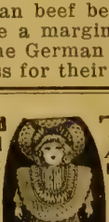
Anyone who will send 50 cents to pay for The National Farmer and Stock Grower for one year can select the Rural Home Cook Book as a free premium, and it will be sent to any address, postpaid, safe delivery and satisfaction guaranteed. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

The German Butchers.

The cost of living is high in Germany. The butchers would not sell Russian beef because they could only make a margin of 18 per cent. on it. The German butchers are not in business for their health.

FREE TO GIRLS **Talking and Sleeping Doll**

Every little girl wants this new doll that can talk and go to sleep. No difference how many dolls you have now, this one is different. Big. Nearly 2 feet tall. Stylish hat, dress, shoes and stockings. The prettiest, sweetest dolly of all. Long curls. I have one for you. Girls wild for her. Be ahead of your friends and she will say "Papa" and "Mama" for you soon. You'll love her dearly.



This Doll AND 100 PIECE

Housekeeping Set for Dolly given free to one little girl in every home where this paper goes for a little favor. Pay no attention to other offers. Mine is better. SEND NO MONEY, but send your name today and say: "I want the Talking Doll and her outfit." Address me personally.

An Extra Prize will be sent to all girls who answer this advertisement in good faith and do so promptly.

MISS GERTRUDE ALLERTON, Dept. 10, 227 W. Washington Street, Indianapolis, Ind.

Gas, Automobile and Traction Engineering

Regular Winter Quarter commences November 26. No vacation during holidays, except Christmas and New Year's Days. Special Winter Term for short course students begins Jan. 6, 1913.

The young man who completes either one of these courses is sure of a job, with good pay. In the West there is a continual demand for young men with a technical knowledge of gas, traction engines and automobiles.

Each course may be finished in three months. You can learn more about an engine at

Highland Park College

in three months than in that many years as an apprentice. Students work right in machine shops, traction engine house and auto garage. Repair and drive gas and steam engines and automobiles. Gas Engine Course may be taken with either the Traction Engine or Auto Course without extra tuition. Small tuition fees. Low cost of living. Largest garage and machine shops in the country. No entrance examinations. Send for catalogue.

O. H. LONGWELL, Pres., Highland Park College, Des Moines, Iowa

DRESSMAKING PREMIUM.

A Complete Course of Instruction at Home in Ten Weeks.

The best book we have been able to find on the subject is "Dressmaking in Ten Weeks." It is by Mrs. Edith M. Carens, who is Principal of a College of Dressmaking, and is a condensed course of twenty complete lessons, and especially arranged for home study work. Each line is the result of careful preparation by an expert. There is information found here that can be obtained nowhere else.

MRS. EDITH M. CARENS,
Author of the book entitled "Dressmaking in Ten Weeks."

The book instructs you on the buying of materials, the preparing of the cloth before it is cut, the designing, cutting, fitting and finishing of every kind of clothing in a woman's wardrobe. The size of the book is 5x8 inches, contains 127 pages, and has fifty illustrations.

Our Subscription Proposition.

What we wish to do is to please every girl and woman on the farm. We wish them to say to husband, to father, or brother, or to uncle: "I would like to subscribe for The National Farmer and Stock Grower. It pleases me and will please you. The price is 50 cents a year. It is full of good articles on general farming and stock and poultry raising in all branches. And besides all that, if you do subscribe, I will receive as a commission or premium a copy of the book 'Dressmaking in Ten Weeks,' postage free and safe delivery guaranteed. I need that book, and the best way to get it is to send 50 cents for one-year's subscription to The National Farmer and Stock Grower. Address, **THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.**

Among the Flowers.

Someone asks if a humming-bird cactus which is full of buds can be safely moved without causing the buds to drop? We have done it repeatedly with this species without noticing any bad effects; and since the querist states that her plant is in a room too cold even now for it to thrive, there is certainly nothing else to do than to change it to a warmer one. Such change, however, should be made as gently as possible. Thus, for a few days it may be placed where a door will open into a room with a fire, and then gradually accustomed to artificial heat. The plant should also be moved with as little jarring as possible and given conditions as to light and heat as nearly like those previously furnished as is practicable.

There are some types of cacti not so easily managed, the night-blooming cereus, for instance, being almost sure to drop the buds if the plant is moved after they are formed. Others are no more sensitive than a geranium, and quite as easily grown.

When digging your gladiolus bulbs you no doubt found many tiny bulblets bunched at the base of some of the large bulbs. If these are saved and sowed in rows like seed next season some of them will bloom and the others will develop into bulbs of blooming size for another summer. If you have a variety of choice colors, there are plenty of friends who will be pleased to sow some of these tiny effects and thus get a start in a handsome collection of these valuable bulbs.

When freezing weather sets in, see to it that the bulb beds and the pansy plants are well covered with leaves. Nature knows how to blanket her treasures, and we will do well to follow her example. If you carefully rake up the leaves in the yard, save a part for the poultry, but reserve enough to insure the hardy plants from the alternate freezing and thawing, which is so much more disastrous than continuous freezing. Then when warm weather is assured, work the leaves into the soil to enrich with the favorite leaf mould.

Some good plant fertilizer will be needed, especially during the winter months. Liquid manure is the best of all fertilizers, but unfortunately it is not always available in winter, neither is it the most pleasant thing to use in the house. There are several commercial substitutes in more agreeable form and nearly as effectual. A teaspoonful of ammonia to a quart of water once a week is not a complete plant food, yet it will be found quite satisfactory in many instances. Be careful about striving to stimulate ailing plants with any food. Only the robust one is able to assimilate the rich food, and the weakling may succumb under such forcing. Besides, be sure that your plant may not be in the dormant state, which nature is sure to send to some species, in which case you are doing a great wrong in trying to make it grow when complete rest is what is needed. Water the century plant and others which grow only during the summer months only very sparingly now, if at all, and do not supply a single bit of fertilizer.

When forcing the hardy bulbs, as hyacinths and narcissus, remember that nature destined them to bloom in the cool spring months. Very little or no fire is permissible; just keep them above the frost line; and, if you would have the blossoms lasting, do not keep them in the bright sunshine, though the latter is necessary to bring them out. After they are expanded, a north window is preferable.—Bessie L. Putnam.

The Girl Who Wills.

The healthy girl who is really in earnest may now have a thorough education, but in olden times she was left out of almost everything, even of the old adage, "Where there is a will there is a way." This no one recognized more keenly than little Lucy Stone, who could see no real reason why her brothers should be sent to college and she only regarded by her father as "crazy" when the mother meekly hinted to him the aspirations of his girl.

It was fortunate that she was not born a generation sooner, for then even her strong will would not have availed; but Oberlin had at this time opened her doors to women and negroes, and thither the girl directed her steps. She picked berries or chestnuts, exchanging them for books, which were studied earnestly. Later she taught, the only occupation then open to women, except that of servant or seamstress, and at twenty-five she had saved enough to warrant her starting to college. In going from Buffalo to Cleveland by way of Lake Erie, on her way to Oberlin, she slept on a pile of grain sacks among horses and freight with a few other women, who, like herself, had not the money to pay cabin passage.

To-day the high-grade schools admitting women to their highest degree are many. The self-respecting girl loses not in the esteem of her classmates by working her way through college; or, if she chooses to earn the money or a part of it before entering college, there are many ways in which she can do this. Lucy Stone went through school in spite of the opposition of custom, friends—even a father's finger was raised in scorn. To-day all the world beckons the plucky girl who wills to make the most of herself—and she almost always proves her real worth.—Bessie L. Putnam.

The Power of Mother.

Washington, Lincoln, Garfield, McKinley and many other great men will be witnesses to the power of mother's influence so long as history shall endure. The child learns a large per cent. of its knowledge in the first few years of life. "You cannot dream yourself into a character," says Froude; "you must hammer and forge one yourself."

To you is given the forming of the foundation for this character. It is yours to chisel out the granite blocks of honor, fidelity and reverence; yours to fashion them together, remembering that the masonry poorly constructed will endanger the superstructure. Some of the working tools have been given to you by the Divine hand; others you must work and earn. "One good mother," says Herbert, "is worth a hundred schoolmasters." Energy, consecration to lofty ideal, devotion, love, and the constant recognition that "only one failure in life is possible, not to be true to the best one knows," are elements to our success. And the true mother rests not upon what she already knows, but is continually groping for "more light."—Bessie L. Putnam.

Stock Joke.

"Here's an item," observed Rivers, who was looking over the exchanges, "to the effect that the King of Sweden raises prize dogs on his farm."

"I suppose he uses them," suggested Brooks, "to drive his Stockholm."—Chicago Tribune.

The St. Louis Thanksgiving market for pumpkins at wholesale was $2.50 to $3.25 per 100 pounds.

The Universal Magazine Bracelet.

This is all the rage. And Adjustable Bracelet. The most elegant design and perfectly finished. It is not solid gold, but it is washed and plated and will stand the acid test. A TEN-CENT PROPOSITION.

In the Interest of a Publication That is Rapidly Coming to the Front.

The UNIVERSAL MAGAZINE is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, patterns, fashions and poetry—a splendid publication. One thing

about the UNIVERSAL MAGAZINE is, that it is not loaded down with advertisements. Notwithstanding it is a cheap magazine, the subscription price being 25 cents a year, it was supported by subscriptions alone for five years.

The UNIVERSAL BOOK OF ORIGINAL AND SELECTED POETRY consists of one hundred pages, containing three hundred and ninety beautiful, interesting, pathetic, descriptive, humorous and delightful poems. These poems have been selected from the very best of the ancient and modern authors and the occasional pieces which have attracted favorable attention. It is a book to be kept by the bedside to compose one to sleep, a book to carry in the satchel or to read on the train and street car. It is a book for all people at all times. We issued the UNIVERSAL POETRY BOOK for the purpose of using it as a subscription premium in connection with our new successful paper, the UNIVERSAL MAGAZINE.

A TEN-CENT PROPOSITION.

Anyone who will send 10 cents to pay for four-months' trial subscription to the UNIVERSAL MAGAZINE can select one copy of the UNIVERSAL POETRY BOOK as a free premium, and we will send it by mail, prepaid, safe delivery in good order guaranteed. Address,

THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

Take Care of Your Eyes.

Eye-strain is certainly a factor in producing disease of every part of the eye, and the eyes will endure so much work and no more, and if you would keep yourself free from nervous prostration, have respect for your organs of sight, as the overworked nerves of the eyes react on on the nerves of the body and often cause a complete nervous breakdown.

In reading or writing, in either standing or sitting, the head and body should be erect. The act of bending constricts the neck veins, hindering the return of the blood from the head.

Be careful not to read lying down, as there is then too much blood pressure in the eyes and the external muscles soon become very tired; and stooping or lying down congests the eye, besides requiring unnatural work of the eye muscles.

The care of the eyes should be studied, as great damages result from carelessness, and eye-strain not only produces headache and neuralgia, but often causes vertigo, nausea, inability to apply the mind and mental depression. Don't believe that the early use of glasses is harmful in the end. When eye glasses will improve the sight they should be worn, and many persons have done great injury to their eyes by neglecting to properly clean their glasses. They should be wiped off every day with a soft cloth dipped in rain water and polished with soft tissue paper, and at least once a week they should be washed in a little soap and water to which a few drops of ammonia have been added.

The eyes should never be used when they are tired or weak from illness, nor should they be exposed to a strong light at any time. The light should always fall on the work or book from over the left shoulder.

To preserve the round shape of the eye-balls, occasionally rub them gently and always toward the nose. As one grows older, the eye-balls have a tendency to become flat. Gentle rubbing or massage helps to preserve their shape; and every morning, while washing the face, rub the eyes toward the nose gently from the side of the face.

If the eyes are inclined to be weak, bathe them at least once a day with a weak boric solution prepared by dissolving a teaspoonful of boric powder in a pint of boiled water; and if they are the least sore, they should have very careful attention, for the eye is a very delicate organ, and irremediable mischief may result if inflammation is allowed to run on. One of the best remedies for inflamed or sore eyes is made by putting one teaspoonful of the boric powder in a teacup, then adding fifteen drops of spirits of camphor and rubbing to a smooth paste and then pouring over it two-thirds of a cup of boiled water, then strain and bottle and apply with a piece of soft linen, or use a glass eye-cup.

There is nothing better for children's eyes than the weak boric solution, and if this is used every morning the eyes will be strengthened; and a soft linen cloth which is employed for no other purpose is better to use when bathing the eyes than a sponge.—Aline.

THE SEWING AWL.

A Most Useful Premium For Subscribers to The National Farmer and Stock Grower.

It is surprising how useful this little implement is. It is the Myers Famous Lock Stitch Sewing Awl. It is the only sewing awl made with a groove running the full length of the needle and has what is known as a diamond point. In order to sew leather or any heavy, thick material without breaking or cutting the thread it requires an awl with the groove running the full length of the needle. You might just as well have no groove in the needle as to have it only part of the way. With the Myers Awl you can sew old or new harness, saddles, carpets, canvas, tents, rugs, quilts, shoes, grain bags, and many other things. You can use any kind of thread in the Myers Awl and it makes a lock stitch same as a sewing machine. It is very simple; a woman can use it as well as a man. It is one of the most practical devices ever invented. They are put up with two needles—one is straight and one curved—with a small screw-driver and wrench combined; also a reel of waxed thread with each awl ready for use. Every teamster and farmer should own a Myers Lock Stitch Sewing Awl, as there is use for one in almost every household. The Myers Awl is nicely finished, the metal parts are nickel-plated, the needles and wrench are kept in the hollow handle, which has a screw top. Anyone who will send one dollar cash to pay in advance for two-years' subscription to The National Farmer and Stock Grower can select one of Myers' Lock Stitch Sewing Awls, which we will send by mail, postage paid, as a free premium. Address, **HALE PUBLISHING CO., 8550 Vista Ave., St. Louis, Mo.**

COMMERCIAL CUTS OF BEEF.

When a Beef Steer is at Its Best—Points For the Producer and Consumer.

Bulletin No. 158 of the Illinois Agricultural Experiment Station is of absorbing interest to the millions of people who would reduce the family meat bill without stinting the quantity of nourishment provided for the sustenance of the family.

In order to enlighten the producers of beef cattle on the one hand as to the period of maturity at which a beef steer is at its best, and the beef-consuming public on the other hand as to an intelligent understanding of the relative economy of the different cuts of beef offered by the butcher, three steers were slaughtered, dressed, cut up and the various portions—hide, offal, internal fat, head, feet, liver, heart, etc., as well as each kind of merchantable meat—were carefully weighed. Then each cut of meat was separated into lean, fat and bone, and these constituent portions were weighed and chemically analyzed to determine the proportion of water, digestible protein, etc., in each.

No. 1 was a choice Hereford steer, eighteen months old and weighing 902 pounds. No. 2 was a choice Aberdeen-Angus steer, twenty-four months old, and weighing 1,190 pounds. No. 3 was a prime Shorthorn steer, twenty-nine months old, and weighing 1,360 pounds—live weight in each case.

No. 1 turned out of chilled dressed beef 60.36 per cent. of his live weight; No. 2, 60.88 per cent.; and No. 3, 63.97 per cent. The quantity of internal fat was 5.15 per cent. of the live weight for No. 1; 5.97 per cent. for No. 2; and 4.71 per cent. for No. 3. The hide was 7.48 per cent. of the live weight in No. 1; 6.51 per cent. of No. 2; and 6.43 per cent. of No. 3. In like manner, No. 1 was figured with the largest percentage of head, feet and other offal, and No. 3 with the smallest.

From this data it is evident that the more mature the animal, and the better finished, the larger percentage of merchantable meat it turns out. While steer No. 3 was the fattest of the lot, its fat was distributed between the muscles, where it improved the quality of the meat and brought a high price, rather than in the hollow of the carcass, where it could only be converted into tallow and sold for a low price.

It was found that the hind quarters contained the larger per cent. of fat and smaller per cent. of bone; while the fore quarters contained the larger per cent. of lean meat. The lean meat is richer than the fat in mineral matter and also in protein, the most valuable and nutritious element of meat.

In the matter of economy, the flank ranks first, since it contains no bone and sells at a low price. The neck and chuch steak stand next in economy, since their nutritive value is very high in proportion to their cost. Round steak stands third for the same reason. Loin and porterhouse steaks are more tender and palatable, but their food value is much less in proportion to their cost. A skillful cook can render the cheaper cuts quite as tender and palatable as the more expensive cuts, particularly in the form of roasts and stews.

This bulletin is elaborately illustrated with photographs of the various cuts of meats.

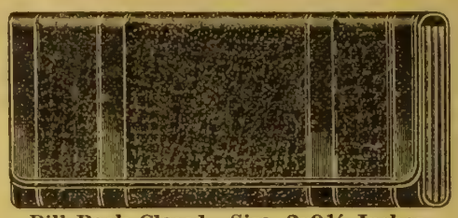
Famous Stockman Dead.

From Missoula, Montana, on November 12th, the death of John C. Burke was announced. In his day he was one of the best-known stockmen of the West, who was also one of the founders of the Chicago Stock Yards, and who was a partner of "Big Ed" Corrigan in the building and operation of Hawthorne and several well-known race tracks at Chicago. Mr. Burke had suffered from asthma for thirteen years, and went to Missoula two years ago for his health.

A Pocket Book Circulation Premium.

THE NATIONAL FARMER Folding Bill Book.

Illustration Showing Bill Book Open.



Bill Book Closed—Size, 3x8½ Inches.

Convenient to carry Currency, Bills, Notes, Receipts, Railroad Tickets, Lodge Identification Cards, Stamps, Etc.

BEST VALUE AND MOST SERVICEABLE PREMIUM EVER OFFERED.

Every Prospective Subscriber Wants One and Needs One.

National Farmer Folding Pocket Bill Book, Genuine Seal Grain Leather Cover, Very Fine Finish, Fancy Embossed, Good Quality Throughout.

Our Subscription Offer.

WE have adopted THE NATIONAL FARMER FOLDING BILL BOOK as a subscription premium with the best monthly farm paper in the United States.

The National Farmer and Stock Grower

is a nice, clean, ably-edited general farm publication, full of practical, interesting and instructive information. It contains good reading for all the family. It is very useful to general farmers, to dairymen, to vegetable and fruit growers, and especially so to cattle, hog and sheep raisers and feeders, to horse and mule raisers and dealers, and it contains more good poultry facts than most of the poultry papers. The best live stock illustrations appear in The National Farmer and Stock Grower. There are thirty-two pages, four columns to the page. It is published monthly.

What To Send Us.

Send us a postoffice money order for sixty (60) cents, or 60 cents in clean, new one-cent stamps, and we will send you the good publication, The National Farmer and Stock Grower, for one full year, and we will mail you one NATIONAL FARMER FOLDING BILL BOOK, postpaid, safe delivery and satisfaction guaranteed. Address,

THE HALE PUBLISHING CO., 3550 Vista Ave., St. Louis, Mo.

Fighting the Chinchbug With Fire.

The chinchbug cost the state of Missouri approximately $5,000,000 this year. Unless immediate steps are taken to destroy the swarms which are living over during the winter, this loss will be greatly increased next year.

In the month of December, as early as possible, all meadows, pastures, roads, waste lands and other fields which are heavily overgrown should be carefully examined for the hibernating chinchbugs. Those fields near wheat and corn fields which were infested last summer should be examined with special care. The insects hide deep down in clumps of grass, under leaves and rubbish, and in many cases their presence can be detected from the disagreeable odor of the crushed bugs, even before one finds them in their hiding places.

Wherever they are found the fields should be burned over immediately and carefully so that every possible shelter will be destroyed. The wind should not be too strong so that the heat will penetrate down into the clumps of grass and make a clean job. Farmers should cooperate in burning over all public highways and railroad right-of-ways in the infested regions. With careful, systematic burning of all harboring places in the fall, a large per cent. of the millions of hibernating bugs will be killed by the heat directly and many more left exposed to the winter. After each and every farmer has done all he can to destroy the pest during the winter, the fight will be well enough started so that, if taken up in time next summer, the injury from the pests may be greatly reduced. — L. Haseman, Missouri Agricultural College.

Cabbage Very Cheap.

St. Louis quotations: Holland seed at $8.00 to $9.00 per ton. On orders, dealers charge 75c. per 100 pounds sacked for Holland seed. Red cabbage at $18 to $20 per ton.

SELECTED POETRY.

THE MISSION OF THE FLAMES.

e Christmas eve had stepped once more
From off the sunset's gilded cars,
d on her dark blue dress she wore
The priceless jewels of the stars.
, queen of all the nights was she—
By many grateful souls caressed!
d most of all by those whom he
Took once within his arms and blessed.
e temple smiled with youthful joy,
And twice three hundred hands were there
take the gifts that hearts employ
Caresses of the heart to bear.
d on the altar's cushioned soil,
Where many happy eyes could see,
ere loomed that growth of playful toil
And toilsome play—a Christmas tree.

gloomy streets not far away,
Two foemen fought each other's life;
was the last of many a day
Of fancied wrong and frenzied strife.
ch cursed the other with his heart,
And planned a death bed o'er and o'er;
d each to do its murderous part,
The grim five-bladed dagger bore.
, Christmas—birthday of the joys
Of peace, that every bosom craves!
hy on thy eve should Passion's voice
Call yet his muster roll of slaves?
e know not: oft the brightest star
In God's sweet heaven secure and high,
dimmed by clouds from near and far,
That need a storm to brush them by.

w from the feast of joy there came
A sullen shout, a wailing cry;
e temple roof is thatched with flame!
Huge treasure torches gleam on high!
w, heroes of the human race,
If such there be within this call,
rouse and clear the child-strewn place,
Before yon gilded frescoes fall;
e swift response was strong and brave,
As ever could be said or sung;
en fight like men themselves to save,
They fight like fiends to save their young!
e swift response was strong and brave,
Strove as the unleashed whirlwind strives,
nd to an hundred parents gave
The present of their children's lives.
o stronger two than those who late
Had lurked each other's blood to claim!
ast ones they were to leave the gate
That hung on hinges forged of flame.
rsing, they met each other's view—
Looked at each other's arms and smiled—
hen met scorched hands in friendship true;
For each had saved the other's child.
—Will Carleton.

THE EFFECT AT PUNKIN HOLLOW.

ell, election day is over, and the country's
runnin' yit;
an't see any change whatever—not a solitary bit;
hen the hens lay eggs they cackle, just
the way they did before;
here are problems left to tackle and there's
trouble still in store;
zra Brown still has lumbago—just as bad
as ever, too—
o you find it makes your pay go farther
than it used to do?

eethin' babies keep on cryin', never noticin'
the change;
nd the sharpers still are tryin' swindles
that are new and strange;
eath appears to be as fatal as before the
ruction came;
ooks as though the ship of state'll keep
on floatin' just the same;
eacon Smith still tries to borrow, without
havin' much success,
nd the sun will rise to-morrow somewhere
in the east, I guess.

indows that are loose still rattle when the
wind begins to blow,
nd we have to feed the cattle, as we did a
year ago;
olks who thought we'd all face ruin if
things failed to go their way
eem to still be up and doin' if they haven't
much to say;
enry Hungerford's still settin' on a box up
to the store,
hile his wife is gettin' paler than she
was before.

till, the preachers keep on preachin', doctors, too, are on the trot;
reedy people still are reachin' for the
money that you've got;
ity fellers who are gunnin' skin their
shins on every log;
overnment keeps right on runnin', never
havin' slipped a cog;
ill Spooner's indigestion keeps a dark look
on his brow,
nd we'll have the tariff question up again
four years from now.
—Chicago Record-Herald.

SHUT IN.

he moon above the eastern wood
hone at its full; the hill range stood
ransfigured in the silver flood,
a blown snows flashing cold and keen,
ead white, save where some sharp ravine
ook shadow, of the somber green
f hemlocks turned to pitchy black
gainst the whiteness at their back,
or such a world and such a night
ost fitting that unwarming light,
hich only seemed where'er it fell
o make the coldness visible.

ut in from all the world without,
e sat the clean winged hearth about,
ntent to let the north wind roar
baffled rage at pane and door,
hile the red logs before us beat
he frost line back with tropic heat;
nd ever, when a louder blast
ook beam and rafter as it passed,

The merrier up its roaring draught
The great throat of the chimney laughed;
The house dog on his paws outspread
Laid to the fire his drowsy head:
The cat's dark silhouette on the wall,
A couchant tiger's seemed to fall;
And for the winter's fireside meet,
Between the andirons' straddling feet,
The mug of cider simmered slow,
The apples sputtered in a row,
And close at hand the basket stood
With nuts from brown October's wood.

What matter how the night behaved?
What matter how the north wind raved?
Blow high, blow low, not all its snow
Could quench our hearth fire's ready glow.
O, Time and Change—with hair as gray
As was my sire's that winter day.
How strange it seems, with so much gone
Of life and love, to still live on!
Ah, brother, only I and thou
Are left of all that circle now.
The dear home faces whereupon
That fitful firelight paled and shone,
Henceforward listen as we will,
The voices of that hearth are still;
Look where we may, the wide earth o'er,
Those lighted faces smile no more.
We tread the paths their feet have worn,
We sit beneath their orchard trees,
We hear, like them, the hum of bees
And rustle of the bladed corn;
We turn the pages that they read,
Their written words we linger o'er,
But in the sun they cast no shade,
No voice is heard, no sign is made;
No step is on the conscious floor!
Yet love will dream and Faith will trust
(Since he who knows our need is just),
That somehow, somewhere, meet we must.

Alas for him who never sees
The stars shine through the cypress trees!
Who hopeless lays his head away,
Nor looks to see the breaking day
Across the mournful marbles play!
Who hath not learned in hours of faith
The truth to flesh and sense unknown,
That life is ever lord of Death
And Love and never lose its own!
—John G. Whittier.

"WHEN THE FROST."

When the frost is on the pumpkin and the
fodder's in the shock,
And you hear the kyouck and gobble of the
struttin' turkey-cock,
And the clackin' of the guineas, and the
cluckin' of the hens,
And the rooster's hallylooyer as he tiptoes
on the fence;
Oh, it's then's the time a feller is a-feelin'
at his best,
With the risin' sun to greet him from a
night of peaceful rest,
As he leaves the house, bareheaded, and
goes out to feed the stock,
When the frost is on the pumpkin and the
fodder's in the shock.

They's somethin' kindo' hearty-like about
the atmosphere
When the heat of summer's over and the
coolin' fall is here—
Of course we miss the flowers, and the
blossoms on the trees,
And the mumble of the hummin' birds and
buzzin' of the bees;
But the air's so appetizin', and the landscape through the haze
Of a crisp and sunny morning of the airly
autumn days
Is the pictur' that no painter has the colorin'
to mock—
When the frost is on the pumpkin and the
fodder's in the shock.

The husky, rusty rustle of the tossels of the
corn,
And the raspin' of the tangled leaves, as
golden as the morn;
The stubble in the furries—kind o' lonesome-like, but still
A-preachin' sermons to us of the barns they
growed to fill;
The strawstack in the medder, and the
reaper in the shed;
The hosses in their stalls below—the clover
overhead!—
Oh, it sets my heart a-clickin' like the tickin'
of a clock
When the frost is on the pumpkin and the
fodder's in the shock.
—James Whitcomb Riley.

FATE OF THE CHRISTMAS DINNER.

The feast was spread. Mamma and cook to
other scenes retreated
When Tommy ran to take a look before the
guests were seated.
The turkey, brown as brown could be, reposed upon a platter—
And sure you need not wish to see a Christmas turkey fatter!

And Tommy waits not for the guests, who
still most sadly linger,
But right into the turkey's breast he pokes
his little finger.
He gouges out with right good will a handful of the stuffing,
And fills his little mouth until his sheeks
seem strangely puffing.

A lordly "drumstick" next he spies, and
eagerly he eyes it,
Then swiftly seizing on the prize, with willing hands he tries it.
His pinafore, a sorry sight, would drive
mamma to madness,
While nose and mouth and cheeks are quite
a-shine with grease and gladness.

But Tommy heeds not minor ills—to jelly
now he dashes,
And on the damask cloth he spills a dozen
scarlet splashes.
The plainer food he passes by, and gives his
whole attention
To tasting each and every pie—their fate I
dare not mention.

The Christmas guests had dallied long—
they dillied and they dallied—
Until at last, a merry throng, around the
board they rallied.
Alas! what havoc meets their gaze! Their
hopes now quickly failing!
As they look on in wild amaze to view the
scene appalling.

The turkey with his "drumstick" bare, his
lordly breast quite battered.
The pies no longer plump and fair, the
cloth with juice bespattered.
Alas! Alack! How eyes do snap! Poor
Tommy's fate seems certain;
But grandma takes him on her lap, and so
we drop the curtain.
—Helen Whitney Clark.

START YOUR LIBRARY.

The First Book to Buy is the Most Valuable Book Placed on the Market in Twenty Years.

Every man and boy should own a library. It is easy to obtain a nice lot of books. A splendid book to begin with is "The American Government," by Frederick J. Haskin, which is a valuable book for any American between the age of nine and ninety years.

No other book explains so clearly what our government consists of. The articles upon the Presidency, the Senate, the House of Representatives are alone sufficient to place the book on the top shelf of the home libraries, and in the 386 pages there are thirty distinct articles, each one of them complete with information concerning a government department.

The "American Government" clears the mind of many doubts and answers many questions. A Congressman serving his first term needs such a book before he goes to Washington, and Mr. Haskin has produced a book of which 175,000 copies were sold the first year.

We will recommend other books, but "The American Government" is a first-class book for No. 1 in a farm library. We have adopted "The American Government," handsome cloth-bound edition, as a subscription premium in connection with The National Farmer and Stock Grower. Anyone who will send One Dollar for two-years' subscription to The National Farmer and Stock Grower can select a copy of "The American Government" as a subscription premium, and we will send it postpaid, safe delivery and satisfaction guaranteed.

Why the Kiss Was Missing.

It had been their first separation, and during the week the young husband had sent his wife ten letters, fifteen picture postcards and four telegrams.

Why, then, this touch of coldness in her welcome on his return?

"Dearest," he whispered, "what is wrong?"

"Oh, George," she replied in broken tones, "you didn't send me a kiss in your seventh letter!"

George thought like lightning for a moment before he replied:

"I know I didn't, petsy, but I had steak and onions that night for supper, and you wouldn't like me to kiss you after eating onions, would you?"—Exchange.

Dried Fruit Market.

During the last week in November the consignments of dried fruit received upon the St. Louis market were sold as follows: Apples—Evaporated rings, inferior at 4c.; fair to prime at 4¼ to 4½c.—fancy more; chops, cores and peelings, ½ to ¾c. for sun-dried, to 1c. for bleached evaporated; sun-dried—dark and poor, 3¼ to 3½c.; large, bright quarters, 4¼c. Peaches—Sun-dried halves, 7½ to 8c. per pound.

A Merry Christmas for that Boy of Yours!

Your boy's Christmas will be the happiest ever, if you will send him THE BOYS' MAGAZINE. *It is a gift that lasts a whole year.* THE BOYS' MAGAZINE is chock full of just the kind of reading *you* want *your* boy to have. Clean, inspiring stories written by such noted boys' authors as Hugh Pendexter, Everett T. Tomlinson, Wm. Heyliger, etc. *Practical* and *instructive* departments devoted to Electricity, Mechanics, Photography, Carpentry, The Boy Scouts of America, Stamps and Coins. THE BOYS' MAGAZINE is beautifully illustrated throughout—each issue has a new handsome cover in colors.

WALTER CAMP edits THE BOYS' MAGAZINE. Mr. Camp is known everywhere as America's highest authority on Athletics. Every boy should read his ideas of true, manly sportsmanship.

SPECIAL OFFER! *FOR ONLY $1.00* we will send you THE BOYS' MAGAZINE for a whole year *and* a copy of the most useful and practical book you ever read, "Fifty Ways for Boys to Earn Money," *and* this Electric Engine. This engine is a perfect piece of workmanship. It is considerably larger than illustration. Runs 1,000 revolutions a minute on one dry battery. Safe; easy to operate. A marvel of mechanical and scientific ingenuity. Send in your subscription to-day, and the engine and book will be forwarded at once, all transportation charges prepaid. Satisfaction, or money refunded.

The Scott F. Redfield Co., 747 Main St., Smethport, Pa.
THE BOYS' MAGAZINE at all news-stands, 10c a copy.

A POPULAR PREMIUM.

The Universal Magazine is a nice, bright, cheerful, illustrated monthly magazine of thirty-two pages, three columns to the page, containing home reading, stories, patterns, fashions and poetry—a splendid publication.

When we send out the Universal Magazine we also like to send out a useful and meritorious subscription premium with it. To this end we have adopted a pair of Aluminum Salt and Pepper Shakers, regulation size, 2¾ inches, mailing weight six ounces. They are artistic and elegant, and aluminum ware is always bright, and will last a lifetime.

Universal Salt and Pepper Shakers—Reduced Size.

To anyone who will send us twenty-five (25) cents we will send the Universal Magazine for ten months, and we will send the pair of Universal Aluminum Salt and Pepper Shakers as a premium, postage paid, safe delivery and satisfaction guaranteed.

SUBSCRIPTION BLANK.

Hale Publishing Co., 3550 Vista Ave., St. Louis, Mo.:

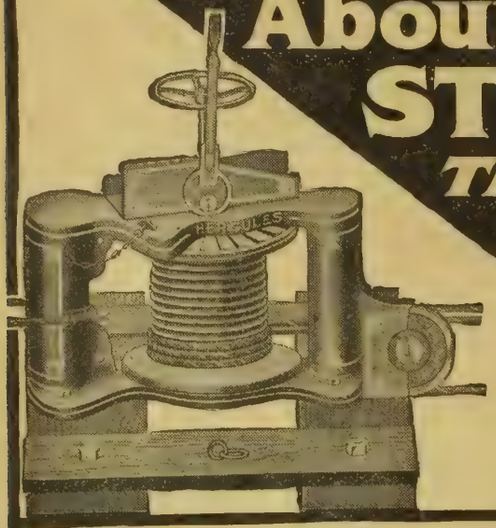
Read What These Farmers Say About The HERCULES STUMP PULLER

Then Write For My Grand Free Book About Pulling Out Stumps!



Pull Out the Stumps—and Raise Crops on Virgin Soil

Stump land robs you of *virgin soil*—the most fertile soil in the world. If you have 40 acres of stump land you're losing at least $750.00 in crops you *don't* get—and *half* the realty value of the land. You can raise a good 1500 bushels of corn on that 40 acres—you can raise a good 75 tons of hay—or 3,000 bushels of oats—or 1,000 bushels of wheat. What does it mean to *you* in dollars and cents? Doesn't it prove that

Loafer Land Doesn't Pay

Doesn't it prove that you need a Hercules Triple Power All Steel Stump Puller? I tell you friend, the sooner you get the stumps out of your field, the sooner you'll be making the *real big* farm profits. Get a Hercules. It pulls any stump in five minutes—pulls an acre of stumps a day. It can be used as a single, double or triple power machine. Its all steel construction gives it 400 per cent more strength than the next best puller and 60 per cent less weight. It is self anchored or stump anchored—built low to the ground—polished and turned to make the draft light—has *double* safety ratchets.

My New Offer Makes It Easy For You to Own a Hercules

Let me send you my fine free book and special price offer. I want you to read the facts and proof shown in my book. See the actual photographs and letters sent in by owners of the Hercules Stump Pullers. Read my thirty day trial offer—my three year guarantee against breakage from *any cause* and note the price I will make you.

Send Your Name In

Use the Rush Coupon or a postal. Send it in today. I honestly believe it is the best move you can make right now. Your copy of my catalog is ready—waiting for you to write. Do it now before you forget—or take down the name and address, and write at the first opportunity. Address me personally

B. A. FULLER, Pres.

Hercules Mfg Co.

840 21st Street

Centerville, Iowa

THESE MEN KNOW

J. W. Shealy, Ballentine, S. C., writes:
"I am only a small farmer, but I have succeeded in stumping the most of my land with the Hercules. Would not think of trading the cost of puller and expense of stumping land for the stumps as they were in the field before I used the Hercules."

Andrew Swanson, Houston, Minn., writes:
"We have been two of us and one horse working with the Hercules about 20 days and I am sure it is the best investment I ever made. I will always have a good word for the Hercules Company for honesty and a square deal."

C. W. Hadley, St. Clair, Mo., writes:
"We got the finest piece of corn in this country where there was nothing but trees and brush and stumps last year, but we cleared it out with a Hercules Machine and put it into corn."

Nicholas C. Fries, Nansville, N. Y., writes
"I purchased a Hercules Steel Puller about May 1910. I have used it on my farm with much satisfaction and have cleared about 18 acres. I think I may say it will pull anything you hitch to. I pulled some stumps that were four feet across. I can sincerely recommend this puller."

A. R. Reitz, Shady Bend, Kansas, writes:
"We have surely pulled some tough stumps with the Double and Triple Power Hercules. We pulled some Green White Oak stumps 3½ inch base diamater, cut two years ago, and all spouted out—growing. It surely surprised me to pull these with the Triple Power, Genuine Steel Puller. Some of the stumps had roots 25 feet long."

August Hanke, Wathena, Kansas, writes:
"About one year ago, I purchased from your firm, one of your Hercules Triple Power, Genuine Steel Pullers. I have placed this machine to the most severe tests and have come to the conclusion that it will do even more than you claim. With my Hercules, at odd times when the work on my farm was slack, I have cleared 10 acres of heavy brush and timberland. The stumps on this tract of land was very thick, consisting of Oaks, Linn and Elm.

I cleared this land of stumps, brush, roots and all, which left the land in a splendid tillable condition. Last spring I planted this tract of land in corn, and it yielded 450 bushels of the finest corn that has ever been seen in these parts.

I am intending to clear 20 more acres this spring, the timber on this land is so dense that it is almost impossible to work in; however I shall overcome all difficulties encountered, as my Hercules only requires a cleared circle about 24 feet in diamater, in which to commence work. If you desire to use this letter in your advertising matter, it will be perfectly satisfactory to me."

J. K. Detwiler, Bristol, Ind., writes:
"I have a Hercules Triple Power, All-Steel Stump Puller, and it gives entire satisfaction. We cleared 24 acres. It takes out the roots and all. The machine is just as good as when we commenced. It is very simple and handy, and beats dynamite all to pieces for cheapness. To have cleared my land with dynamite would have cost me about $600, but instead of that we have simply used our spare time and the stumps are out, roots and all.

Our stumps are White Oak, large center, tap-rooted. We think sometimes they come from China. No trouble. Anyone can work my Hercules. I would advise every farmer that has land to clear to get the Hercules. This year we raised great big potatoes where the stumps were last year and the land was easily cultivated."

Geo. Hugle, Nehawka, Neb., writes:
"We have pulled the stumps off four acres of ground and they were awful thick. With three men we pulled at the rate of 200 stumps a day. We are now plowing for corn and there aren't any roots to bother us, so we find the Hercules Stump Puller much cheaper, as well as safer than dynamite."
